Discontinued Ecosystem Components

Provides information about discontinued ecosystem components.

Ecosystem components can be discontinued when either of the following is true:

- Newer components are available that serve the same function but provide better features and performance.
- The Open Source community decides to retire a product.

To understand what *discontinued* and *deprecated* mean when these terms are applied to a component or EEP, see Understand the EEP Lifecycle on page 5528.

HPE uses the support advisory process to notify users in advance that a component will be discontinued. The last EEP version to support a deprecated component is the EEP version that is released at the time of the deprecation announcement. The following table lists the components that are either already discontinued or scheduled to be discontinued:

Component	Deprecated	Discontinued	Last EEP Version Supporting Component*	Suggested Replacement	Announcement
S3 Gateway on page 3959	July 31, 2022	July 31, 2023	• EEP 8.1.x • EEP 8.0.x • EEP 7.x • EEP 6.x	HPE Ezmeral Data Fabric Object Store	February 2022
Oozie on page 3989	June 30, 2022	June 30, 2023	• EEP 8.1.x • EEP 8.0.x • EEP 7.x • EEP 6.x • EEP 5.x	Apache Airflow	January 2022
Pig on page 4009	October 31, 2021	October 31, 2022	• EEP 8.0.0 • EEP 6.3.5 • EEP 5.0.7	None	October 2021

Component	Deprecated	Discontinued	Last EEP Version Supporting Component*	Suggested Replacement	Announcement
Flume on page 3367	October 31, 2021	October 31, 2022	• EEP 8.0.0 • EEP 6.3.5 • EEP 5.0.7	None	October 2021
Sqoop on page 4136	October 31, 2021	October 31, 2022	• EEP 8.0.0 • EEP 6.3.5 • EEP 5.0.7	None	October 2021
Impala	June 1, 2021	December 31, 2021	• EEP 7.1.0 • EEP 6.3.4 • EEP 5.0.7	Spark or equivalent partner product. See the HPE Technology Partner website.	June 2021
Sentry	June 1, 2021	December 31, 2021	• EEP 7.1.0 • EEP 6.3.4 • EEP 5.0.7	None	June 2021
Data Science Refinery	September 18, 2020	May 31, 2022	N/A	HPE Ezmeral ML Ops	N/A
Myriad	September 2020	See note**	• EEP 5.0.x • EEP 6.3.x	Kubernetes	MapR Marketing Newsletter
Sqoop2	September 2020	See note**	• EEP 5.0.x • EEP 6.3.x	Equivalent partner product. See the HPE Technology Partner website.	MapR Marketing Newsletter
Mahout	October 2017	April 2019	• EEP 3.0.5	None	MapR Marketing Newsletter
Mezos	October 2017	April 2019	• EEP 3.0.2	Kubernetes	MapR Marketing Newsletter
Storm	October 2017	April 2019	• EEP 3.0.5	None	MapR Marketing Newsletter
Hue-Livy	October 2017	April 2019	• EEP 3.0.5	Livy	MapR Marketing Newsletter

*Later EEPs in the same series can include a discontinued component. For example, if the last EEP version supporting a discontinued component is x.y.0, the component might be present in x.y.1, x.y.2, x.y.3, and so on. This is to ensure that upgrades complete successfully. But HPE does not support using the component in later EEPs (x.y.1, x.y.2, x.y.3, and so on), and the last supported EEP version remains x.y.0.

**Discontinued for EEP 7.0.0 and later in September 2020. To be discontinued for EEP 5.0.x and EEP 6.3.x when those EEPs reach end of life.

EEP Support and Lifecycle Status on page 5531

last-updated: Apr 11, 2022

This page shows the EEPs that are supported for different core releases and the current lifecycle status for each EEP.

Understand the EEP Lifecycle on page 5528
This page describes the EEP lifecycle and defines the lifecycle stages, which are Active, Deprecated, and Discontinued.

Component Versions for Released EEPs

The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

Components Supported by EEPs 1.x - 8.x

The following tables show the latest supported versions of each component in a EEP series. The tables reflect the component versions at release time and do not include patch versions issued between releases.

Core 7.0.0 with EEP 8.x

	EEP Series Versions

*Kafka Schema Registry 5.1.2.0 and later are provided as *general availability* software. Kafka Schema Registry 4.1.1 is *developer preview* software. Developer previews are not tested for production environments, and should be used with caution. Kafka Schema Registry packages are included in EEP 7.0.0 and later but not included in EEP 6.x.

**Beginning with EEP 4.0.0, Livy is included as its own package in MapR EEP repositories. Before EEP 4.0.0, Livy was included as mapr-hue-livy and released only as a part of Hue. For more information, see Livy on page 3839.

***Tez is supported only for use with Hive. Therefore, MapR documentation for Tez is limited when compared to the documentation for other ecosystem components. For release note information, see Tez Release Notes.

****Before using EEP 6.3.3 with release 6.1.0, you must apply the latest 6.1.0 patch.

last-updated: Apr 11, 2022

Related concepts

Understand MapR Versions on page 5519
Understanding the version numbers used by MapR core, MapR Ecosystem Packs (EEPs), EEP components, and MapR patches can help you keep your software up to date and plan for upgrades.

EEP Support and Lifecycle Status on page 5531
This page shows the EEPs that are supported for different core releases and the current lifecycle status for each EEP.

CSI Version Compatibility

This matrix shows the released versions of the Container Storage Interface (CSI) storage plugin and their compatibility with other components in a Kubernetes environment.

CSI Storage Plugin	Version Compatibility						
	FUSE or Loopback NFS	Kubernetes	CSI Spec	MapR Core	OS for Kubernetes Nodes	OpenShift	HPE Ezmeral Runtime Enterprise
1.0.x[1]	Loopback NFS	1.17 and later[2]	1.3.0	Release 6.1.0 and later[3]	• RHEL • CentOS • Ubuntu	4.4, 4.5, 4.6, 4.7[2], 4.8[2], 4.9, 4.10	5.3.x, 5.4
1.2.x[1]	FUSE	1.17 and later[2]	1.3.0	Release 6.1.0 and later[3]	• RHEL • CentOS • Ubuntu	4.4, 4.5, 4.6, 4.7[2], 4.8[2], 4.9, 4.10	5.3.x, 5.4
1.1.0	FUSE	1.16 and later	1.3.0	Release 6.1.0 and later[3]	• RHEL • CentOS • Ubuntu	4.2 and 4.3	5.0 and 5.1
1.0.2	FUSE	1.13 and later	1.0.0	Release 6.1.0 and later[3]	• RHEL • CentOS • Ubuntu	4.1 and 4.2	5.0 and 5.1
1.0.0	FUSE	1.13 and later	1.0.0	Release 6.1.0 and later[3]	• RHEL • CentOS • Ubuntu	4.1 and 4.2	5.0 and 5.1

[1]Supports Raw Block Volumes on page 670.

[2]If your environment uses Kubernetes 1.20+ and OpenShift 4.7+, you must use FUSE 1.2.1+ and Loopback NFS 1.0.1+.

[3]In a release 7.0.0 environment, you must use Fuse 1.2.7+ and Loopback NFS 1.0.7+.

JDK Support Matrix

This matrix shows the Java Development Kit versions supported by different MapR Data Platform releases.

last-updated: Apr 11, 2022

Only the Oracle and OpenJDK Java engines are supported.

JDK/ MapR Release	MapR 6.1.x	MapR 6.0.x	MapR 5.2.x	MapR 5.1.0	MapR 5.0.0	MapR 4.1.0	MapR 4.0.x	MapR 3.1.x	MapR 3.0.x
JDK 8	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	No
JDK 7	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes
JDK 6	No	No	No	No	No	No	No	Yes	Yes

Change Control Notes

Updated Feb. 21, 2021 (added MapR 6.1.x).

Updated Sep. 27, 2018 (added MapR 6.1.0).

JDK / JRE Support
This page shows the JDK and JRE versions for which data-fabric releases provide build-time and run-time support.

JDK Build-Time Support

	Release		
JDK Version	7.0.0	6.2.0	6.1.0
JDK 11	Yes	Yes	No
Amazon Corretto 11	Yes	Yes	No
JDK Azul	No	No	No
JDK 8	No	No	Yes
JDK 7	No	No	No
JDK 6	No	No	No

JRE Support (Run-Time Support)

JRE Version	Release 7.0.0	Release 6.2.0	Release 6.1.x	Release 6.0.x	Release 5.2.x
Open JRE 11	Yes	Yes	No	Yes	No
(Oracle Sun) JRE 11	Yes (implied)	Yes (implied)	No	No	No
Amazon Corretto (11)	Yes	Yes	No	No	No
JRE Azul	No	No	No	No	No
JRE 8	No	No	Yes	Yes	Yes
JRE 7	No	No	No	No	Yes
JRE 6	No	No	No	No	No

Hadoop Protocol Versions for MapR Software

Shows the Hadoop RPC protocol version and compatible MapR client versions for each MapR release.

Each MapR Cluster version is associated with a Hadoop RPC protocol version. The JobTrackers or ResourceManagers in a given cluster accept only the jobs submitted from clients with a compatible protocol version.

The following table shows the Hadoop RPC protocol version, and compatible MapR client versions for each MapR release:

Core Version	EEP	Hadoop Version	RPC Protocol	Compatible with Data Fabric Client Version
7.0.0	8.1.0	2.7.6.200	9	7.0.0.0
	8.0.0	2.7.6.100	9	7.0.0.0
6.2.x	8.1.0	2.7.6.200	9	6.2.x, 6.1.x[3]
	8.0.0	2.7.6.100	9	6.2.x, 6.1.x[3]
	7.1.1[1]	2.7.5.0	9	6.2.x, 6.1.x[3]
	7.1.0[1]	2.7.5.0	9	6.2.x, 6.1.x[3]
	7.0.1	2.7.4.100	9	6.2.x, 6.1.x[3]
	7.0.0	2.7.4.0	9	6.2.x, 6.1.x[3]
6.1.x	N/A	2.7.0	9	6.1.0, 6.0.x, 5.2.x
6.0.x	N/A	2.7.0	9	6.0.0, 5.2.0, 5.1.0, 5.0.0, 4.1.0, 4.0.2, 4.0.1[4]
5.2.x	N/A	2.7.0	9[2]	5.2.0, 5.1.0, 5.0.0, 4.1.0, 4.0.2, 4.0.1[4]
5.1.0	N/A	N/A	9[2]	5.1.0, 5.0.0, 4.1.0, 4.0.2, 4.0.1[4]
5.0.0	N/A	N/A	9[2]	5.0.0, 4.1.0, 4.0.2, 4.0.1[4]
4.1.0	N/A	N/A	9[2]	4.1, 4.0.2, 4.0.1[4]
4.0.x	N/A	N/A	9[2]	4.0.x[5]
3.1.x	N/A	N/A	4	3.1.x
3.0.x	N/A	N/A	5	3.0.x, 2.1.x
2.1.x	N/A	N/A	5	3.0.x, 2.1.x
2.0.x	N/A	N/A	4	3.1.x, 2.0.x

[1]Release 6.2.0.5 and later.

[2]MapReduce version 1 and version 2 use the same protocol version.

[3]Release 6.1 client support is limited if applications submitting jobs to release 6.2 clusters are developed in JDK 1.8. Jars used by the client application should not use features made obsolete in JDK 11.

[4]A release 4.0.2 client can submit MRv2 jobs to a release 4.1, 5.0, or 5.1 cluster configured with zero-configuration ResourceManager failover (RM HA) as long as the client is also configured with zero-configuration RM HA.

[5]If you want to submit MapReduce v2 jobs to a release 4.0.x cluster configured with zero-configuration RMHA, you must use a release 4.0.2 client on a release 4.0.2 cluster.

MapR Client Support Matrix

This matrix shows which MapR releases are compatible with different MapR client OS versions.

For a list of the MapR client versions that are compatible with each release, see Hadoop Protocol Versions for MapR Software on page 5597.

last-updated: Apr 11, 2022

Client OS	Version	MapR 6.1.x	MapR 6.0.x	MapR 5.2.x	MapR 5.1.0	MapR 5.0.0	MapR 4.1.0	MapR 4.0.x	MapR 3.1.x	MapR 3.0.x
Windows 64-bit	10	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
	7	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
	2012	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
	2008	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
	8	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No
Windows 32-bit	7	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes
	2008	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes
	8	No	No	Yes	Yes	Yes	Yes	Yes	No	No
Mac OS	10.8.x	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Linux 64-bit	See Operating System Support Matrix on page 5522	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Change Control Notes

Updated January 8, 2021 (changed "N/A" entries to "No" entries).

Updated June 27, 2018 (added column for MapR 6.1.x).

MapR Installer Support Matrix

This matrix shows the operating systems that are supported by the MapR Installer.

OS Version Support

Release Version/ Installer Version	Installer 1.17.0.0 Supported	Installer 1.16.0.x Supported	Installer 1.15.0.x Supported	Installer 1.14.0.x Supported	Installer 1.13.0.0 Supported	Installer 1.12.0.0 Supported	Installer 1.11.0.0 Supported

last-updated: Apr 11, 2022

RHEL / CentOS (64bit)	8.4	Yes[1]	Yes[1]	No	No	No	No	No
	8.3	Yes	Yes	Yes	No	No	No	No
	8.2	Yes	Yes	Yes	Yes	No	No	No
	8.1	Yes	Yes	Yes	Yes	No	No	No

	11 SP2	No	No	No	No	No	No	No
	11 SP1	No	No	No	No	No	No	No

[1]Supported on RHEL but not on CentOS.

last-updated: Apr 11, 2022

[2]The Installer only supports upgrades for this OS version. See Selecting an Installer Version to Use on page 5402.

[3]Before using Installer 1.14 on Ubuntu 16.04 nodes, you must manually install Java JDK 11. If you are using Installer 1.14 on RHEL/CentOS or SLES, the Installer installs Java JDK11 for you.

[4]Before using the Installer to install Release 6.0 or later on Ubuntu 14.04, you must upgrade to Java 1.8 on the cluster nodes. See IN-553 in Installer Known Issues.

[5]Requires Installer 1.14.0.1 or later. Installer 1.14.0.1 supports Oracle Enterprise Linux 7.8 only on release 6.1.0 and does not support ecosystem components for release 6.1.0.

MapR Version Support

Data Fabric Version/ Installer Version	Installer 1.17.0.0 Supported	Installer 1.16.0.x Supported	Installer 1.15.0.x Supported	Installer 1.14.0.0 Supported	Installer 1.13.0.0 Supported	Installer 1.12.0.0 Supported	Installer 1.11.0.0 Supported
6.2.0	Yes	Yes	Yes	Yes	No	No	No
MapR 6.1.1	Yes*	Yes*	Yes*	Yes	Yes	Yes	Yes
MapR 6.1.0**	No	No	No	No	No	No	No
MapR 6.0.1	Yes	Yes	Yes	Yes	Yes	Yes	Yes
MapR 6.0.0	Yes	Yes	Yes	Yes	Yes	Yes	Yes
MapR 5.2.x	No	No	No	No	No	No***	Yes
MapR 5.1	No	No	No	No	No	No***	Yes
MapR 5.0	No	No	No	No	No	No***	Yes

*The Installer does not support new installations of release 6.1.0 on RHEL / CentOS 8.1.

**New installations of release 6.1.0 are no longer supported. Install release 6.1.1 or release 6.2.0 instead.

***The Installer only supports upgrades for this OS version. See Selecting an Installer Version to Use on page 5402.

Change Control Notes

- Updated October 15, 2021 (added Installer 1.17.0.0 information).
- Updated October 1, 2021 (added RHEL 8.4 support).
- Updated August 29, 2021 (added Installer 1.16.0.x information).
- Updated April 16, 2020 (added Installer 1.16.0.0 information).
- Updated February 20, 2020 (added Installer 1.15.0.1 and release 6.1.1 information).
- Updated January 16, 2020 (added Installer 1.15.0.0 information and support for Oracle Enterprise Linux 8.2).
- Updated October 28, 2020 (added support for RHEL 7.9 and removed column for Installer 1.8.0).
- Updated October 16, 2020 (added support for RHEL / CentOS 8.2 and Oracle Enterprise Linux 7.8).
- Updated September. 8, 2020 (Installer 1.14.0.0 added).

last-updated: Apr 11, 2022

- Updated June 17, 2020 (rows added for RHEL / CentOS 7.8). Changed RHEL / CentOS 6.x values from Yes to No where only upgrades are supported.
- Updated November 30, 2019 (Installer 1.13.0.0 added, rows for RHEL / CentOS 7.7 and Ubuntu 18.04 added).
- Updated May 1, 2019 (Installer 1.12.0.0 added, rows for RHEL / CentOS 7.0, 7.1, and 7.2 removed).
- Updated January 2, 2019 (Installer 1.11.0.0 added).
- Updated Jul 27, 2018 (Installer 1.10.0 added).
- Updated March 30, 2018 (Installer 1.9.0 added). Corrected support for Ubuntu 11.04.
- Updated January 7, 2018 (Installer 1.8.0 added).
- Updated September 8, 2017 (Installer 1.7 added, release 6.0.x added).
- Updated July 31, 2017 (Installer 1.6 added, SLES 12 SP2 support added, older installer information removed).
- Updated April 6, 2017 (Installer 1.5 added, RHEL / CentOS 7.3 added, SLES 12 SP1 added, releases 2.x, 3.x, and 4.x removed).
- Updated December 8, 2016 (Installer 1.4 added).
- Updated August 19, 2016 (Installer 1.3 and release 5.2 added).
- Updated February 5, 2016 (Installer 1.2 and release 5.1 added).

MapR Installer EEP Support

This matrix shows which MapR Installer versions support each MapR Ecosystem Pack (EEP) version.

MapR Installer EEP Support

To understand which EEP versions are supported with different versions of data-fabric core, see EEP Support and Lifecycle Status on page 5531.

EEP	Installer 1.17.0.x	Installer 1.16.0.x	Installer 1.15.0.x	Installer 1.14.0.0	Installer 1.13.0.0	Installer 1.12.0.0	Installer 1.11.0.0	Installer 1.10.0	Installer 1.9.0
8.x.y	Yes	No	No	No	No	No	No	No	No
7.x.y	Yes	Yes	Yes	Yes	No	No	No	No	No
6.x.y	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No
5.x.y	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
4.x.y	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
3.x.y	No	No	No	No	No	No	Yes	Yes	Yes
2.x.y	No	No	No	No	No	No	Yes	Yes	Yes
1.x.y	No	No	No	No	No	No	Yes	Yes	Yes

For a list of released Installer versions, see MapR Installer Updates on page 5481.

MapR Security Support Matrix

The tables in this section show component support for authentication, impersonation, and wire-level encryption.

Information is provided for the MapR 6.1 and MapR 6.0.1 releases. See these sections:

- Table 1 - Authentication in MapR 6.1 on page 5603
- Table 2 - Impersonation and Wire-Level Encryption in MapR 6.1 on page 5609
- Table 3 - Authentication in MapR 6.0.1 on page 5614
- Table 4 - Impersonation and Wire-Level Encryption in MapR 6.0.1 on page 5619

Tables 1 and 3 show component support for authentication using MapR-SASL, Kerberos, and PAM.

Tables 2 and 4 show component support for impersonation and wire-level encryption.

Table Symbols

The tables in this section use dashes to indicate non-support and directional arrows to convey inbound and outbound communication:

- A dash (—) indicates that the feature is currently not supported, not needed, or not applicable.
- A right arrow (A ⇾ B) means OUTBOUND from A and INBOUND to B.
- A double arrow (A ⇾⇽ B) means OUTBOUND from A and INBOUND to B, and vice versa.
- No arrow indicates OUTBOUND communication from the subcomponent to all components with which it communicates.

Authentication in MapR 6.1

Table

Main Component	Subcomponent	Authentication		
		MapR-SASL	Kerberos	PAM[1]
CORE COMPONENTS				
Data Fabric for Kubernetes	N/A	—	—	—
FUSE POSIX Client	N/A	—	—	—
JobClient to Resource Manager	N/A	Yes	Yes	—
MapR Installer	N/A	—	—	Yes

Table (Continued)

Main Component	Subcomponent	Authentication		
		MapR-SASL	Kerberos	PAM[1]
MapR File System	FileClient C ⅓ MapR File System	Yes	—	—

	Oozie Server ⅓ Beeline-HS2	Yes	Yes	Yes
	Oozie Server ⅓ Hive	Yes	Yes	—

last-updated: Apr 11, 2022

Table (Continued)

Main Component	Subcomponent	Authentication		
		MapR-SASL	Kerberos	PAM[1]
Spark	Web Clients ⅓ Spark Component UI	No, but uses Spark's shared secret with DIGEST-MD5		
	Spark Driver ⅓ Executor	No, but uses Spark's shared secret with DIGEST-MD5		
	Spark Job Using Connector ⅓ MapR Database	Yes	—	—
	Spark Job Using Connector ⅓ MapR-Streams	Yes	Yes	—
	JDBC Client ⅓ Spark Thrift Server	Yes	Yes	Yes
	ODBC Client ⅓ Spark Thrift Server	–	Yes	Yes
Sqoop 2[16]	REST API, Hue, Sqoop 2 Client ⅓ Sqoop 2 Server	Yes	Yes	—
YARN	REST/Browser ⅓ RM/JHS/ATS	–	Yes	Yes
	Internal communication (RM/NM/JHS)	Yes	Yes	—
	Containers ⅓ YARN Services (RM/NM)	No, but uses YARN's shared secret with DIGEST-MD5		
	Timeline Server	Yes	Yes	—

[1]If LDAP is required, LDAP can be supported through PAM.

[2] Kerberos support is provided by implicit conversion of Kerberos tickets to MapR tickets.

[3]Payload not encrypted by default.

[4]All data exchanged with CLDB is in protobufs only and hence encrypted in secure clusters.

[5]Only admin ops to CLDB are audited. NFSv3 communication with CLDB is usually not admin-related.

[6]Accessed through the MapR client, which reads security settings from `/opt/mapr/conf/mapr-clusters.conf`; hence, this interface follows the secure-by-default model.

[7]MapR-SASL is supported but not enabled during installation.

[8]The MapR Control System is secure between client and webserver (API Server). The server may invoke other commands through the `maprcli` interface that themselves do not use secure communication.

[9]MapR uses MapR-SASL for communication with ZooKeeper.

[10]Includes a FUSE POSIX client, YARN client, and other client components.

[11]Support for Kerberos has not been verified, but SPNEGO can be used in conjunction with HTTPS.

[12]Flume agents can't be started automatically after installation. Manual configuration is required.

[13]Auditing user administration operations with Hue.

[14]A custom authentication filter can be configured.

[15]Oozie orchestrates Spark/Sqoop jobs using the Spark/Sqoop native client, so security is the same as Spark/Sqoop.

[16]SSL added to Sqoop 1.99.7. Basic access authentication is enabled by default.

Impersonation and Wire-Level Encryption in MapR 6.1

	Containers ⅓ YARN Services (RM/NM)	No, but uses YARN's shared secret with DIGEST-MD5		
	Timeline Server	Yes	Yes	—

[1]If LDAP is required, LDAP can be supported through PAM.

[2] Kerberos support is provided by implicit conversion of Kerberos tickets to MapR tickets.

[3]Payload not encrypted by default.

[4]All data exchanged with CLDB is in protobufs only and hence encrypted in secure clusters.

[5]Only admin ops to CLDB are audited. NFSv3 communication with CLDB is usually not admin-related.

[6]Accessed through the MapR client, which reads security settings from `/opt/mapr/conf/mapr-clusters.conf`; hence, this interface follows the secure-by-default model.

[7]MapR-SASL is supported but not enabled during installation.

[8]The MapR Control System is secure between client and webserver (API Server). The server may invoke other commands through the `maprcli` interface that themselves do not use secure communication.

[9]MapR uses MapR-SASL for communication with ZooKeeper.

[10]Support for Kerberos has not been verified, but SPNEGO can be used in conjunction with HTTPS.

[11]Flume agents can't be started automatically after installation. Manual configuration is required.

[12]Auditing user administration operations with Hue.

[13]A custom authentication filter can be configured.

[14]Oozie orchestrates Spark/Sqoop jobs using the Spark/Sqoop native client, so security is the same as Spark/Sqoop.

[15]SSL added to Sqoop 1.99.7. Basic access authentication is enabled by default.

3.0.3	1803	April 6, 2018
3.0.2	1710	November 21, 2017
3.0.1	1707	August 2, 2017

last-updated: Apr 11, 2022

EEP	Release Date Identifier*	Release Date
3.0	1703	April 6, 2017
2.0.3	1710	November 21, 2017
2.0.2	1707	August 2, 2017
2.0.1	1703	April 6, 2017
2.0	1611	December 21, 2016
1.1.4	1710	November 21, 2017
1.1.3	1707	August 2, 2017
1.1.2	1703	April 6, 2017
1.1.1	1611	December 9, 2016
1.1.0	1609	September 29, 2016
1.0	1608	September 2, 2016

*The release date identifier is a four-digit number that appears in release notes and provides an approximate indication of the release date for a component. For example, in the string Hive 2.3.3 - 1808, 2.3.3 refers to the Hive version number, and 1808 indicates an August 2018 release. Note that last-minute changes in the release date can result in a slight mismatch between the release date identifier and the actual month of the release.

Ecosystem Support Matrix (Pre-5.2 releases)

This section provides support matrices for key ecosystem components for pre-5.2 releases.

The following table shows the compatibility of ecosystem products with MapR Converged Data Platform version 5.1 and below. For more recent versions of MapR, see the EEP Components and OS Support on page 5536.

Note: In the MapR Version column, JT stands for JobTracker.

Ecosystem Component/ MapR Version		MapR 3.0.x	MapR 3.1.x	MapR 4.0.1 (JT)	MapR 4.0.1 (YARN)	MapR 4.0.2 (JT)	MapR 4.0.2 (YARN)	MapR 4.1.0 (JT)	MapR 4.1.0 (YARN)	MapR 5.0.0 (JT)	MapR 5.0.0 (YARN)	MapR 5.1.0 (JT)	MapR 5.1.0 (YARN)

[1] Hue 3.7 with MapR 3.1.x does not work with MapR Security. Only CentOS 6.x and 7.x are supported.

[2] Please make sure to pick the latest patched Oozie 4.0.1 version from monthly release 1502 or later (Oozie Release Notes on page 6267).

[3] Drill 0.9 and later versions do not work with MapR Database in Version 3.1.x.

[4] The Tez development preview has been withdrawn.

[5] Impala does not use the JobTracker service, but can run in a cluster running JobTracker.

[6] You cannot run Impala as a YARN application, however Impala can run in a YARN cluster.

Change Control Notes

- This matrix was updated on February 8, 2017 (Apache MapReduce API correction).
- This matrix was updated on September 12, 2016 (Drill 1.8.0).
- This matrix was updated on April 4, 2016 (AsyncHBase 1.7).
- This matrix was updated on March 18, 2016 (Impala updates).
- This matrix was updated on February 29, 2016 (MapR 5.1 updates).
- This matrix was updated on Jan 20, 2016 (Drill 0.9 removed).
- This matrix was updated on Jan 12, 2016 (Drill 1.3, 1.4).
- This matrix was updated on Dec 21, 2015 (Spark 1.5.2).
- This matrix was updated on Oct 28, 2015 (Tez 0.5.3).
- This matrix was updated on Oct 4, 2015 (Flume 1.6 and Mahout 0.11).
- This matrix was updated on September 25, 2015 (Hive 1.2.1 and Oozie 4.2.0).
- This matrix was updated on September 9, 2015 (Pig 15 and Spark 1.4.1).
- This matrix was updated on August 4, 2015 (Hue 3.8.1 and Sqoop 2 1.99.6).
- This matrix was updated on July 24, 2015 (Sqoop and Sqoop2).

For interoperability among specific groups of ecosystem products, see the following subsections.

Drill Support Matrix
This matrix shows the interoperability between Drill and other ecosystem products.

For MapR Converged Data Platform releases beyond 5.1, you may also want to view EEP Components and OS Support on page 5536.

Compatible Product	Version	Drill 1.0	Drill 1.1	Drill 1.2	Drill 1.3 dev preview	Drill 1.4	Drill 1.5 dev preview	Drill 1.6	Drill 1.7 dev preview	Drill 1.8	Drill 1.9	Drill 1.10

[1] By default, Oozie 4.2.0 includes Hive 1.2.1 shared libraries. To use Oozie with other compatible versions of Hive, see MapR's Oozie documentation.

[2] When you use Spark 1.5.2 with Hive 0.13 or Hive 1.0, Spark SQL insert overwrite operations on Hive tables are not supported for the ORC, RC, and AVRO formats. For more information, see the Spark documentation.

[3] By default, Oozie 4.1.0 includes Hive 0.13 shared libraries. To use Oozie with other compatible versions of Hive, see MapR's Oozie documentation.

Change Control Notes

[1] Loading examples with HBase 94.x do not work (because of the difference in Thrift version between HBase 94 and Hue).

[2] Not supported on CentOS 5.x.

[3] Pig jobs in Hue are run through Oozie. Oozie 4.0.1 and 4.1.0 bundle Pig 0.12 by default.

[4] On MapR 4.1, Hue 3.8.1 does not work with Sqoop2. To use Sqoop2 and Hue on MapR 4.1, consider using Hue 3.7.

[5] The Spark Notebook UI in Hue is a Beta feature.

[6]Hue 3.8/3.9 and Hive 1.0 require MapR 5.0.0. (This combination is not supported on MapR 5.1.0.)

Change Control Notes

last-updated: Apr 11, 2022

Oozie Support Matrix

This matrix shows the interoperability between Oozie and other ecosystem products.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

This page shows the versions of Oozie that work with other ecosystem components and it applies to MapR versions 5.1 and below. For more recent MapR versions, see the EEP Components and OS Support on page 5536.

Compatible Product	Oozie 4.1.0	Oozie 4.2.0
Hive		0.13[1], 1.0[1], 1.2.1
Hue	3.8.1, 3.9.0	3.8.1, 3.9.0
Pig		0.14, 0.15
Spark	1.5.2, 1.6.1	1.3.1, 1.4.1, 1.5.2, 1.6.1
Sqoop		1.4.6

[1] By default, Oozie 4.2 includes Hive 1.2.1 shared libraries. To use Oozie with other compatible versions of Hive, see the MapR Oozie documentation.

Change Control Notes

- This matrix was last updated on February 5, 2016 (Oozie 4.1.0 column added).

Spark Support Matrix

This matrix shows the interoperability between Spark and other ecosystem products.

This page shows the version of Spark that works with other ecosystem components, and it applies to MapR versions 5.1 and below. See also Hive and HCatalog Support Matrix on page 5631. For more recent versions of MapR, see the EEP Components and OS Support on page 5536.

Compatible Product	Product Version	Spark 0.9.2	Spark 1.0.2	Spark 1.1	Spark 1.2.1	Spark 1.3.1	Spark 1.4.1	Spark 1.5.2	Spark 1.6.1

[1] The Spark Notebook UI in Hue is a beta feature.

[2] When you use Spark 1.5.2 with Hive 0.13 or Hive 1.0, Spark SQL insert overwrite operations on Hive tables are not supported for the ORC, RC, and AVRO formats. For more information, see the Spark documentation.

[3]This combination is supported as of Mahout 0.11.0-1601.

[4]Livy version is a snapshot.

[5]EEP 2.0 only.

Change Control Notes

- This matrix was last updated on December 8, 2016 (Mahout 0.12).

MapR Data Science Refinery Release Notes

This section contains release notes for the MapR Data Science Refinery.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Important: If you downloaded a copy of the MapR Data Science Refinery prior to **May 30, 2018**, you may need to update your Docker image. Read the following section to learn more.

Older Releases of the MapR Data Science Refinery

Version 1.0 and earlier instances of the 1.1 and 1.2 versions of the Data Science Refinery have a security vulnerability. The vulnerability allows users, other than the one you have configured, to access the Zeppelin UI. To determine if you are using an image that has this vulnerability, check the id of your Docker image by running the following command:

```
docker images
```

The following is sample output from the command. The third column corresponds to the image id:

```
REPOSITORY                          TAG                           IMAGE
ID            CREATED             SIZE
maprtech/data-science-refinery      v1.2_6.0.1_5.0.0_centos7
fb10d575b45f        5 days ago          3.94GB
```

last-updated: Apr 11, 2022

If your image id matches any of the ids shown in the following table, then you must pull a newer version of the Docker image.

Data Science Refinery Version Number	Operating System	Vulnerable Image Id
1.2	Ubuntu 16	fab3fc7a719e
	CentOS 7	0e746a584940
1.1	Ubuntu 16	310a209f8089
	CentOS 7	2caf2307bb0b
1.0	All operating systems	All ids

See Accessing the Zeppelin Docker Image on page 3034 for instructions on how to download the latest image.

For more information about this security vulnerability, see Zeppelin Authentication: Passwords in Shiro are overwritten.

MapR Data Science Refinery Support by MapR Core Version

This topic provides general guidance about the MapR core versions you can use with various versions of MapR Data Science Refinery. It also lists features that are exceptions to the general rule.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Each MapR Data Science Refinery release has a corresponding MapR Ecosystem Pack (EEP) release:

MapR Data Science Refinery Version Number	Corresponding EEP Version
1.4.1	6.3.0
1.4	6.2.0
1.3.2	6.1.0
1.3	6.0.0
1.2	5.0.0
1.1	4.1.0
1.0	4.0.0

In addition, each MapR core version supports a set of EEP releases. EEP Support and Lifecycle Status on page 5531 shows the support matrix.

In general, you can use MapR Data Science Refinery with the MapR core version supported by the corresponding EEP release, as well as newer MapR core versions. For example, because MapR Data Science Refinery 1.3 corresponds with EEP 6.0, which supports MapR core 6.1, unless otherwise noted, you can use MapR Data Science Refinery 1.3 to access a MapR core 6.1 (or later) cluster.

However, there are some exceptions to this general guidance. Some Zeppelin interpreters do not support certain features when using specific MapR core versions. The following table highlights those exceptions. It includes the version combinations, which are supported for those exception features, to show which MapR core version you need to use.

Zeppelin Interpreter Feature	MapR Data Science Refinery Version	MapR Core Version		
		6.0.0	6.0.1	6.1
Hive interpreter accessing a secure MapR cluster	1.0	Y	Y	N
	1.1	Y	Y	N
	1.2	N	Y	N
	1.3	N	N	Y
	1.4	N	N	Y
Livy and Spark interpreters accessing MapR Event Store	1.0 *	Y	Y	N
	1.1	Y	Y	N
	1.2	N	Y	N
	1.3	N	N	Y
	1.4	N	N	Y

* Not applicable for the Spark interpreter since it was introduced in MapR Data Science Refinery 1.1

What's New in MapR Data Science Refinery 1.4.1

Provides a summary of the new functionality in MapR Data Science Refinery 1.4.1.

MapR Data Science Refinery 1.4.1 includes the following new features:

- Zeppelin is updated to 0.8.2 patch release.
- Zeppelin is now compatible with Spark 2.4.4.
- Updated list of available Helium plugins to most recent version.
- Updated joda-time library to 2.10.3.

What's New in MapR Data Science Refinery 1.4

Provides a summary of the new functionality in MapR Data Science Refinery 1.4.

MapR Data Science Refinery 1.4 includes the following new features:

- Zeppelin has been updated to 0.8.1 patch release.
- Zeppelin is now compatible with Spark 2.4.
- Zeppelin can now be built from MapR Data Science Refinery Docker files that use Docker multi-stage build, rather than downloading Zeppelin RPM/DEB packages from corresponding repositories on https://package.mapr.hpe.com/.

What's New in MapR Data Science Refinery 1.3

MapR Data Science Refinery 1.3 introduces new features and some changes in behavior for existing features from prior releases. This release requires that you connect to a MapR 6.1.0 (or later) cluster.

New Features

The following are new features in this release:

Interpreter Lifecycle Management	Prior to the 1.3 release, if a Zeppelin interpreter is idle and using excessive resources, you must either restart or kill the interpreter to reclaim resources. Starting

last-updated: Apr 11, 2022

	in 1.3, MapR Data Science Refinery terminates interpreters that have been idle for an hour. You can configure this timeout threshold. For details, see the Idle Interpreter Timeout Threshold in Understanding Zeppelin Docker Parameters on page 3036.
Helium Repository Browser	Starting with the 1.3 release, MapR Data Science Refinery supports the Helium repository browser for enabling Zeppelin visualization packages. This provides a simpler procedure for enabling these packages. See Using Visualization Packages in Zeppelin on page 3084 for detailed instructions.
Configuration Storage	Starting with the MapR Data Science Refinery 1.3 release, you can store certain Zeppelin configuration files in MapR File System, which enables you to share them across multiple containers. For details, see Configuration Storage in Understanding Zeppelin Docker Parameters on page 3036.
Default Drill JDBC Connection String	Starting with MapR Data Science Refinery 1.3, you can configure the default Drill JDBC connection URL. For more information, see Default Drill JDBC Connection URL in Understanding Zeppelin Docker Parameters on page 3036.
Building your own Docker Image	Starting with the 1.3 release, you can build your own custom Docker image of MapR Data Science Refinery. See Building your own MapR Data Science Refinery Docker Image on page 3103 for more information.

Changes in Existing Features

The following describe changes in behavior from prior releases:

YARN Cluster Mode for Spark Interpreter Jobs	Prior to the 1.3 release, Spark interpreter jobs run in YARN client mode. The interpreter now runs in cluster mode. This mode reduces Spark resource utilization on the host machine of your MapR Data Science Refinery container. See Understanding Zeppelin Interpreters on page 3059 for details.
Shared Livy Sessions	In prior releases, the Livy interpreter uses separate Livy sessions for Spark, PySpark, and SparkR jobs. Starting in the 1.3 release, it uses a shared Livy session to run all Spark variations. This reduces resource utilization in your MapR cluster.
Sequential Execution of Notebook Paragraphs	Starting with the 1.3 release, MapR Data Science Refinery runs paragraphs in a notebook sequentially rather than in parallel. This allows paragraphs to run properly when they have dependencies on earlier paragraphs in the same notebook.
Hive JDBC Interpreter and Secure MapR Clusters	Starting with the 1.3 release, you must specify `ssl=true` in your Hive JDBC URL when connecting to a secure MapR cluster. See Installing Custom Packages for PySpark Using Conda on page 3068 for an example.
Python Versions with the Livy Interpreter	Starting with the 1.3 release, you no longer can run both Python 2 and Python 3 with the Livy interpreter. You can run only one or the other. By default, the

	interpreter runs Python 2. To switch to Python 3, see Python Version in Understanding Zeppelin Docker Parameters on page 3036. The limitation also applies if you are installing custom Python packages. See Installing Custom Packages for PySpark Using Conda on page 3068 for instructions on how to install Python 2 vs Python 3 custom packages.
Running Zeppelin as a Kubernetes Service	The `DEPLOY_MODE` parameter is your Kubernetes pod manifest file has been renamed to `ZEPPELIN_DEPLOY_MODE`. You can still use `DEPLOY_MODE`, but MapR Data Science Refinery 1.3 returns a warning, indicating the parameter is deprecated. See Running MapR Data Science Refinery as a Kubernetes Service on page 3049 for an example of a pod manifest file.
Notebook Storage Using MapR File System	Starting with the 1.3 release, to store your notebooks in MapR File System, you no longer need to use the FUSE-based POSIX client. See Understanding Zeppelin Docker Parameters on page 3036 for details.

Zeppelin 0.8.0-1808 Release Notes on page 5647

What's New in MapR Data Science Refinery 1.2

Provides a summary of the new functionality in MapR Data Science Refinery 1.2

Data Science Refinery 1.2 includes the following new features:

- Support for the MapR Database Shell interpreter that allows you to run MapR Database Shell commands in Zeppelin
- Support for deploying the Data Science Refinery on a MapR cluster node

What's New in MapR Data Science Refinery 1.1

Provides a summary of the new functionality in MapR Data Science Refinery 1.1

Data Science Refinery 1.1 includes the following new features in Zeppelin on MapR:

- Support for the Spark interpreter, configured to launch Spark jobs in YARN client mode
- Enhancements in installing custom Python environments for the Livy and Spark interpreters
- Improvements in launching multiple Zeppelin containers on the same host

Zeppelin Release Notes

The release notes for the Zeppelin component (included in the MapR Data Science Refinery) contain notes specific to the MapR release of Zeppelin.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following table shows the mapping between the Zeppelin and Data Science Refinery version numbers:

Zeppelin Version Number	MapR Data Science Refinery Version Number
0.8.2-1912	1.4.1
0.8.1-1904	1.4.0

last-updated: Apr 11, 2022

Zeppelin Version Number	MapR Data Science Refinery Version Number
0.8.0-1901	1.3.2
0.8.0-1808	1.3
0.7.2-1803	1.2
0.7.2-1801	1.1
0.7.2-1710	1.0

Zeppelin 0.8.2-1912 Release Notes

Zeppelin on MapR is a component of the MapR Data Science Refinery. This release of Zeppelin is in version 1.4.1 of the MapR Data Science Refinery.

The Data Science Refinery is packaged as a Docker container. MapR ecosystem components included in the Docker image are the same as those in the EEP 6.3.0 release. For product version details, see EEP 6.3.0 Components and OS Support on page 5549.

You can run the Docker image on the following operating systems:

- Linux (CentOS 7.x, Ubuntu 14, Ubuntu 16)
- Windows 10 Pro (64-bit)
- Mac OS X 10.11

The following are the verified browsers:

- Chrome 57

- Firefox 56.0
- Microsoft Edge 40
- Safari 9.0

The MapR product documentation is available at Zeppelin on MapR on page 3033.

New in this Release

Zeppelin in MapR Data Science Refinery 1.4.1 has updated dependencies to be compatible with EEP 6.3.0. Specifically:

- Zeppelin is updated to 0.8.2 patch release.
- Zeppelin is now compatible with Spark 2.4.4.
- Updated list of available Helium plugins to most recent version.
- Updated joda-time library to 2.10.3.

Fixes

This release of MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
c5f52f2	2019-10-22	Change zeppelin.server.addr back to 0.0.0.0 after ZEPPELIN-4166
fbba6a5	2019-11-18	[ZEPPELIN-4214]. Spark Web UI is displayed in the wrong paragraph
be3bea6	2019-11-19	CORE-332 Joda Time Library for Brazil
444c1c6	2019-11-19	DSR-94 Update list of Helium plugins to recent version
80a5809	2019-11-21	MZEP-182 Install git package in DSR images

Known Issues and Limitations

- MZEP-17: The HBase interpreter cannot be used to query MapR Database Binary tables
- MZEP-79: Legends in plots do not display correctly when running the Matplotlib (Python/PySpark) example from the Zeppelin Tutorial
- MD-2397: Zeppelin cannot connect to Drill through the JDBC driver on a secure MapR cluster when Zeppelin has Kerberos authentication enabled
- MZEP-86: You cannot run Zeppelin as user 'root'
- MZEP-110: You cannot use a custom R environment with Zeppelin
- DSR-27: You cannot access MapR Event Store For Apache Kafka using either the Livy or Spark interpreters with Data Science Refinery 1.2, if you are connecting to a MapR cluster older than version 6.0.1.

last-updated: Apr 11, 2022

- DSR-62: You cannot access MapR Event Store For Apache Kafka using either the Livy or Spark interpreters with MapR Data Science Refinery 1.1 and 1.2, if you are connecting to a MapR 6.1.0 cluster.
- ZEPPELIN-1904 - Pandas `dataframe.plot` does not work in the Python and PySpark interpreters

For issues that apply to running MapR Docker images, see MapR PACC Known Issues on page 417.

Zeppelin 0.8.1-1904 Release Notes

Zeppelin on MapR is a component of the MapR Data Science Refinery. This release of Zeppelin is in version 1.4.0 of the MapR Data Science Refinery.

The Data Science Refinery is packaged as a Docker container. MapR ecosystem components included in the Docker image are the same as those in the EEP 6.2 release. See EEP 6.2.0 Components and OS Support on page 5550 for details on product version numbers.

You can run the Docker image on the following operating systems:

- Linux (CentOS 7.x, Ubuntu 14, Ubuntu 16)
- Windows 10 Pro (64-bit)
- Mac OS X 10.11

The following are the verified browsers:

- Chrome 57
- Firefox 56.0
- Microsoft Edge 40
- Safari 9.0

The MapR product documentation is available at Zeppelin on MapR on page 3033.

last-updated: Apr 11, 2022

New in this Release

Zeppelin in MapR Data Science Refinery 1.4.0 has updated dependencies to be compatible with MEP-6.2.0. Specifically:

- Zeppelin is updated to 0.8.1 patch release.
- Zeppelin is now compatible with Spark 2.4.
- Zeppelin can be built from MapR Data Science Refinery Docker files that use Docker multi-stage build instead of downloading Zeppelin RPM/DEB packages from corresponding repositories on https://package.mapr.hpe.com/.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
`706f3c3`	2019-03-14	DSR-84: Switched to Docker multi-stage build
`2a6ed4f`	2019-04-09	DSR-88: Refactored Spark MapR-DB Binary tutorials notebook according to ZEPPELIN-3587

Known Issues and Limitations

- MZEP-17: The HBase interpreter cannot be used to query MapR Database Binary tables
- MZEP-79: Legends in plots do not display correctly when running the Matplotlib (Python/PySpark) example from the Zeppelin Tutorial
- MD-2397: Zeppelin cannot connect to Drill through the JDBC driver on a secure MapR cluster when Zeppelin has Kerberos authentication enabled
- MZEP-86: You cannot run Zeppelin as user 'root'
- MZEP-110: You cannot use a custom R environment with Zeppelin
- DSR-27: You cannot access MapR Event Store using either the Livy or Spark interpreters with Data Science Refinery 1.2, if you are connecting to a MapR cluster older than version 6.0.1.
- DSR-62: You cannot access MapR Event Store using either the Livy or Spark interpreters with MapR Data Science Refinery 1.1 and 1.2, if you are connecting to a MapR 6.1.0 cluster.
- MZEP-154: You cannot log into the Zeppelin UI using Firefox on Ubuntu 18.04.
- ZEPPELIN-1904 - Pandas `dataframe.plot` does not work in the Python and PySpark interpreters

See MapR PACC Known Issues on page 417 for issues that apply to running MapR Docker images.

Zeppelin 0.8.0-1901 Release Notes

The notes below relate specifically to the MapR distribution of Apache Zeppelin. You may also be interested in the Apache Zeppelin 0.8.0 changelog and the Apache Zeppelin project homepage.

Version	0.8.0
Release Date	February 2019

<table>

</td></tr>
</table>

Zeppelin on MapR is a component of the MapR Data Science Refinery. This release of Zeppelin is in version 1.3.2 of the MapR Data Science Refinery.

The Data Science Refinery is packaged as a Docker container. MapR ecosystem components included in the Docker image are the same as those in the EEP 6.1 release. See EEP 6.1.0 Components and OS Support on page 5552 for details on product version numbers.

You can run the Docker image on the following operating systems:

- Linux (CentOS 7.x, Ubuntu 14, Ubuntu 16)
- Windows 10 Pro (64-bit)
- Mac OS X 10.11

The following are the verified browsers:

- Chrome 57
- Firefox 56.0
- Microsoft Edge 40
- Safari 9.0

The MapR product documentation is available at .Zeppelin on MapR on page 3033

New in this Release

- Zeppelin in MapR Data Science Refinery 1.3.2 has updated dependencies to be compatible with MEP-6.1.0.
- Cron Scheduler feature is now enabled by default in Zeppelin UI.

See What's New in MapR Data Science Refinery 1.3 on page 5639 for the list of new Zeppelin features in 1.3 release.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
0345bf4	2018-09-25	DSR-70: Fix for DRILL_HOME warning

Commit	Date (YYYY-MM-DD)	Comment
97da759	2018-10-01	DSR-70: Use HTTPs APT repositories on Ubuntu
9bc5343	2018-10-29	DSR-74: New Drill Simba Driver for MapR Data Science Refinery 1.3
8878608	2019-01-25	DSR-76: Enable the cron scheduler in Zeppelin

Known Issues

See Known Issues and Limitations on page 5649 in the Zeppelin 0.8.0-1808 Release Notes on page 5647 for the list of known issues and limitations in this release. See also MapR PACC Known Issues on page 417 for issues that apply to running MapR Docker images.

Zeppelin 0.8.0-1808 Release Notes

The notes below relate specifically to the MapR distribution of Apache Zeppelin. You may also be interested in the Apache Zeppelin 0.8.0 changelog and the Apache Zeppelin project homepage.

<table>
<tr><td>Version</td><td>0.8.0</td></tr>
<tr><td>Release Date</td><td>September 2018</td></tr>

Zeppelin on MapR is a component of the MapR Data Science Refinery. This release of Zeppelin is in version 1.3 of the Data Science Refinery.

The Data Science Refinery is packaged as a Docker container. MapR ecosystem components included in the Docker image are the same as those in the EEP 6.0 release. See EEP 6.0.0 Components and OS Support on page 5555 for details on product version numbers.

You can run the Docker image on the following operating systems:

- Linux (CentOS 7.x, Ubuntu 14, Ubuntu 16)
- Windows 10 Pro (64-bit)
- Mac OS X 10.11

The following are the verified browsers:

- Chrome 57
- Firefox 56.0
- Microsoft Edge 40

- Safari 9.0

The MapR product documentation is available at Zeppelin on MapR on page 3033.

New in this Release

See What's New in MapR Data Science Refinery 1.3 on page 5639 for the list of new Zeppelin features in this release.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

The following table lists the fixes for Zeppelin:

Commit	Date (YYYY-MM-DD)	Comment
29b0c56	2018-07-25	MZEP-145: Configure interpreter callback host and ports
2fd4269	2018-08-09	MZEP-152: Fix Spark interpreter start-up when Spark is not installed on the cluster
a010939	2018-08-09	MZEP-151: Enable multi-command Drill and Hive SQL execution
3155d5a	2018-08-09	MZEP-156: Fix problem in Spark interpreter start-up, due to timeout
07887f9	2018-08-09	MZEP-153: Pre-populate `default.user` for Drill and Hive in the interpreter page
0c718e4	2018-08-10	MZEP-146: Fix issues with Zeppelin tutorial examples
6bf403d	2018-08-16	MZEP-149: Update Hive JDBC driver version
4913932	2018-08-20	MZEP-146: Fix issues with Zeppelin tutorial examples
dd49cfa	2018-08-21	MZEP-148: Fix start-up failures with `%livy.pyspark` and `%spark.pyspark` interpreters
e971e68	2018-08-21	MZEP-149: Fix issue with Hive interpreter
a9cf841	2018-08-21	MZEP-161: Disable interpreter support in Helium
3d5a928	2018-08-21	MZEP-164: Disable Zeppelin credential page
df5c720	2018-08-21	MZEP-162: Disable Livy UI in MapR Data Science Refinery
dd29624	2018-08-23	MZEP-160: Fix error when enabling Helium plugins on Ubuntu
2dcc495	2018-08-23	DSR-42: Properly set Spark interpreter `deploy-mode` in a Kubernetes environment
3d53808	2018-08-28	MZEP-147: Correct redirection in Spark job UI
40e62a9	2018-08-29	MZEP-137: Add IPython interpreter
0ba1ac0	2018-08-31	MZEP-52: Use Hadoop libraries from `/opt/mapr/lib`
eded152	2018-09-03	MZEP-140: Add support for Zeppelin config storage
0a1cbaf	2018-09-03	MZEP-52 Remove R package from MapR Data Science Refinery
6af200a	2018-09-03	MZEP-140: Add `HADOOP_CONF_DIR` to `zeppelin-env.sh`
a31dd4	2018-09-04	MZEP-140: Support `ZEPPELIN_CONFIG_FS_DIR` and `ZEPPELIN_NOTEBOOK_DIR` with MapR File System
c493470	2018-09-05	MZEP-139: Enable Interpreter Lifecycle Manager by default

Commit	Date (YYYY-MM-DD)	Comment
8256a32	2018-09-05	MZEP-165: Fix failure to initialize `matplotlib` in Spark
89b1edd	2018-09-06	MZEP-137: Disable IPython by default
c1c9047	2018-09-06	DSR-61: Support configuration of the Drill interpreter connection string
0897390	2018-09-06	DSR-61: Update default hostnames in Drill and Hive JDBC URLs
8ebcd0e	2018-09-07	DSR-61: Fix incorrect setting of Drill JDBC URL
81e67fb	2018-09-07	DSR-67: Correct empty Helium page when config storage is enabled and there are no available plugins
78a5aef	2018-09-11	MZEP-171: Permanent fix for MZEP-59
2062eb7	2018-09-11	MZEP-167: Support only verified and working versions of Helium plugins
0f22f82	2018-09-11	DSR-61: Fix Drill JDBC URL for Zookeeper connections
1c84a99	2018-09-12	MZEP-140: Ensure that config storage directory exists in local filesystem
8ba3312	2018-09-12	DSR-67: Use system wide Java TrustStore
633f5a5	2018-09-13	ZEP-172: Fix Zeppelin internal tests so they run on MapR
70a5a2c	2018-09-14	Replace Hadoop `SNAPSHOT` dependencies with release versions
e3d53ad	2018-09-20	DSR-70: Prepare Docker files for publishing
b00a771	2018-09-20	DSR-61: Support `MAPR_DRILLBITS_HOSTS` and `MAPR_ZK_QUORUM` without ports
ac5da95	2018-09-20	MZEP-174: Change default name of Zeppelin Spark session

Known Issues and Limitations

- MZEP-17: The HBase interpreter cannot be used to query MapR Database Binary tables
- MZEP-79: Legends in plots do not display correctly when running the Matplotlib (Python/PySpark) example from the Zeppelin Tutorial
- MD-2397: Zeppelin cannot connect to Drill through the JDBC driver on a secure MapR cluster when Zeppelin has Kerberos authentication enabled
- MZEP-86: You cannot run Zeppelin as user 'root'
- MZEP-110: You cannot use a custom R environment with Zeppelin
- DSR-27: You cannot access MapR Event Store using either the Livy or Spark interpreters with Data Science Refinery 1.2, if you are connecting to a MapR cluster older than version 6.0.1.
- DSR-62: You cannot access MapR Event Store using either the Livy or Spark interpreters with MapR Data Science Refinery 1.1 and 1.2, if you are connecting to a MapR 6.1.0 cluster.
- MZEP-154: You cannot log into the Zeppelin UI using Firefox on Ubuntu 18.04.
- ZEPPELIN-1904 - Pandas `dataframe.plot` does not work in the Python and PySpark interpreters
- See MapR PACC Known Issues on page 417 for issues that apply to running MapR Docker images.

last-updated: Apr 11, 2022

Zeppelin 0.7.2-1803 Release Notes

The notes below relate specifically to the MapR distribution of Apache Zeppelin. You may also be interested in the Apache Zeppelin 0.7.2 changelog and the Apache Zeppelin project homepage.

<table>

<tr><td rowspan="2">maprtech/data-science-refinery</td><td>CentOS 7.4</td><td>v1.2_6.0.1_5.0.0_centos7</td></tr>
<tr><td>Ubuntu 16.04</td><td>v1.2_6.0.1_5.0.0_ubuntu16</td></tr>
</table>
</td></tr>
</table>

Zeppelin on MapR is a component of the MapR Data Science Refinery. This release of Zeppelin is in version 1.2 of the Data Science Refinery.

The Data Science Refinery is packaged as a Docker container. MapR ecosystem components included in the Docker image are the same as those in the EEP 5.0 release. See EEP 5.0.0 Components and OS Support on page 5563 for details on product version numbers.

You can run the Docker image on the following operating systems:

- Linux (CentOS 7.x, Ubuntu 14, Ubuntu 16)
- Windows 10 Pro (64-bit)
- Mac OS X 10.11

The following are the verified browsers:

- Chrome 57
- Firefox 56.0
- Microsoft Edge 40
- Safari 9.0

The MapR product documentation is available at Zeppelin on MapR on page 3033.

New in this Release

- Support for the MapR Database Shell Interpreter that allows you to run MapR Database Shell commands in Zeppelin
- Support for deploying the Data Science Refinery on a MapR cluster node

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

The following table lists the fixes for Zeppelin:

Commit	Date (YYYY-MM-DD)	Comment
6ad375f	2018-03-26	MZEP-124: Fix Livy and Spark R interpreters so they work with 'googleVis' package
ef817af	2018-03-23	MZEP-124: Fix package and namespace load failures for 'googleVis' when using `livy.sparkr` and `spark.r` interpreters
20c571c	2018-03-16	DSR-21: Fix Spark interpreter so it does not fail when `zeppelin.spark.useHiveContext` is set to true
552b84b	2018-03-13	ZEPPELIN-2377: Fix Hive support so it can be enabled in Spark master
8d02402	2018-03-07	DSR-20: Fix `NullPointerException` when starting Spark shell inside PACC
45973ee	2018-03-05	DSR-18: Update DSR image with the latest Drill JDBC 1.13 driver
a87ebdb	2018-02-27	MZEP-121: Fix Zeppelin so it can launch Spark jobs with Spark 2.2.1
eee0429	2018-02-27	DSR-17: Create maven profile for MEP-5.0.0
93563b7	2018-02-27	DSR-17: Update version to v1.2_6.0.1_5.0.0
dad374e	2018-02-22	DSR-15: Move `spark-defaults` modification to Livy
06bc368	2018-02-21	MZEP-11: Support MapR Database shell in Zeppelin
21a3343	2018-02-08	DSR-12: Fix Spark interpreter so it works with bridge networking
223945b	2018-02-02	MZEP-116: Add MapR Database Binary RDD example
4cf60c8	2018-01-29	MZEP-116: Add Spark MapR Database examples
cd11f79	2018-01-29	DSR-2: Fix DSR so it does not exit immediately in Kubernetes
8d0e8d9	2018-01-24	MZEP-110: Include R interpreter in DSR container

The following table lists fixes for Livy:

Commit	Date (YYYY-MM-DD)	Comment
a556425	2018-03-16	MLIVY-21: Fix errors in Livy after installation
2f51b41	2018-03-15	MLIVY-20: Fix failure to start after upgrade

Commit	Date (YYYY-MM-DD)	Comment
d8463f2	2018-03-14	MZEP-127: Fixes to allow Livy to work correctly when DSR is installed on a MapR cluster node
addd85	2018-03-09	DSR-9: Fix spelling error in console output
4141b70	2018-03-02	IN-1317: Implement packaging improvements for restart and security
d778404	2018-02-27	MLIVY-19: Fix file path to `warden.livy.conf`
f41ff88	2018-02-26	DSR-15: Log an error message when Python archive setup fails
73f2e22	2018-02-22	Clean up `configure.sh`
df7a030	2018-02-22	DSR-15: Propagate `spark-defaults` modifications to Livy
7f690bf	2018-02-22	LIVY-19: Fix Livy so it can start with spark 2.2.1

Known Issues and Limitations

- MZEP-17: The HBase interpreter cannot be used to query MapR Database Binary tables
- MZEP-79: Legends in plots do not display correctly when running the Matplotlib (Python/PySpark) example from the Zeppelin Tutorial
- MD-2397: Zeppelin cannot connect to Drill through the JDBC driver on a secure MapR cluster when Zeppelin has Kerberos authentication enabled
- MZEP-86: You cannot run Zeppelin as user 'root'
- MZEP-110: You cannot use a custom R environment with Zeppelin
- DSR-27: You cannot access MapR Event Store using either the Livy or Spark interpreters with Data Science Refinery 1.2, if you are connecting to a MapR cluster older than version 6.0.1.
- See MapR PACC Known Issues on page 417 for issues that apply to running MapR Docker images.

Zeppelin 0.7.2-1801 Release Notes

The notes below relate specifically to the MapR distribution of Apache Zeppelin. You may also be interested in the Apache Zeppelin 0.7.2 changelog and the Apache Zeppelin project homepage.

Version	0.7.2
Release Date	February 2018
Source on GitHub	https://github.com/mapr/zeppelin, https://github.com/mapr/livy
GitHub Release Tag	0.7.2-mapr-1801

Docker Image Name and Tags

Image Name	Operating System Version of the Running Container	Tag
maprtech/ data-science-refinery	CentOS 7.4	v1.1_6.0.0_4.1.0 _centos7
	Ubuntu 16.04	v1.1_6.0.0_4.1.0 _ubuntu16

Zeppelin on MapR is a component of the MapR Data Science Refinery. This release of Zeppelin is in version 1.1 of the Data Science Refinery.

The Data Science Refinery is packaged as a Docker container. MapR ecosystem components included in the Docker image are the same as those in the EEP 4.1 release. See EEP 4.1.0 Components and OS Support on page 5568 for details on product version numbers.

You can run the Docker image on the following operating systems:

- Linux (CentOS 7.x, Ubuntu 14, Ubuntu 16)
- Windows 10 Pro (64-bit)
- Mac OS X 10.11

The following are the verified browsers:

- Chrome 57
- Firefox 56.0
- Microsoft Edge 40
- Safari 9.0

The MapR product documentation is available at Zeppelin on MapR on page 3033.

New in this Release

This release of Zeppelin on MapR includes the following new features:

- Support for the Spark interpreter, configured to launch Spark jobs in YARN client mode
- Enhancements in installing custom Python environments for the Livy and Spark interpreters
- Improvements in launching multiple Zeppelin containers on the same host

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

The following table lists the fixes for Zeppelin:

Commit	Date (YYYY-MM-DD)	Comment
625acf6	2018-01-11	MZEP-94: Support for different versions of Python for the Spark interpreter
aaa8e92	2018-01-11	PACC-18: Fix regression for PACC-12

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
dc9cb61	2018-01-09	PACC-18: Fix incorrect home directory after `docker exec` run on Ubuntu
8297a9e	2017-12-25	PACC-12: Remove obsolete fix for MZEP-66
3698203	2017-12-25	MZEP-97: Enable Spark interpreter to run in YARN client mode
1e6ccc0	2017-12-14	Restore Core 6.0.0 version in Dockerfile
0418ced	2017-12-13	Update EEP and MapR core versions in Dockerfiles
c6538ab	2017-12-12	MZEP-99: Fix no graphs being displayed the first time the Spark Pyspark Tutorial examples are opened
ee11e2f	2017-12-07	MZEP-98: Restore default examples in the Zeppelin Tutorial
7d15fd9	2017-12-05	MZEP-63: Explicitly set Zeppelin working directory
0fc3079	2017-12-01	Fix `mapr-setup.sh` URL in PACC build scripts
b8152f2	2017-11-30	MZEP-63: Enable Spark interpreter
b8e6693	2017-11-27	Refactor the script that builds Docker images

The following table lists fixes for Livy:

Commit	Date (YYYY-MM-DD)	Comment
bbf0155	2018-01-15	MZEP-102: Fix issue when no `LIVY_RSC_PORT_RANGE` is specified
90bd035	2018-01-12	MZEP-102: Provide ability to specify custom port range in `livy.rsc.launcher.port.range`
528e2b7	2018-01-11	MZEP-94: Support different versions of Python for the Spark interpreter
bef6778	2017-12-07	MZEP-65: Minor fix in `start-in-container.sh`
ccaed0f	2017-12-05	MZEP-63: Explicitly set Livy working directory
c2ddf74	2017-11-24	Fixes needed to set up a Conda environment for PySpark

Known Issues and Limitations

- MZEP-17: The HBase interpreter cannot be used to query MapR Database Binary tables
- MZEP-79: Legends in plots do not display correctly when running the Matplotlib (Python/PySpark) example from the Zeppelin Tutorial

- MD-2397: Zeppelin cannot connect to Drill through the JDBC driver on a secure MapR cluster when Zeppelin has Kerberos authentication enabled
- MZEP-86: You cannot run Zeppelin as user 'root'
- MZEP-110: You cannot use a custom R environment with Zeppelin
- See MapR PACC Known Issues on page 417 for issues that apply to running MapR Docker images.

Zeppelin 0.7.2-1710 Release Notes

</table>
</td></tr>
</table>

New in this Release

This is the first MapR release of Apache Zeppelin. The following are important product notes:

- Apache Zeppelin on MapR is packaged as a Docker container.
- The Docker container includes the following preconfigured interpreters:
  - Livy
  - JDBC (Drill and Hive)
  - Pig
  - Shell
- MapR does not support the HBase and Spark interpreters. Support for Spark is available through the Livy interpreter.
- MapR ecosystem components included in the Docker image are the same as those in the EEP 4.0 release. See EEP 4.0.0 Components and OS Support on page 5569 for details on product version numbers.
- You can run the Zeppelin Docker image on the following operating systems:
  - Linux (CentOS 7.x, Ubuntu 14, Ubuntu 16)
  - Windows 10 Pro (64-bit)
  - Mac OS X 10.11

last-updated: Apr 11, 2022

- Verified browsers:
  - Chrome 57
  - Firefox 56.0
  - Microsoft Edge 40
  - Safari 9.0

The MapR product documentation is available at Zeppelin on MapR on page 3033.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
31a59b9	2017-11-16	MZEP-40: Update Docker files to use default MapR repositories
f4b2a58	2017-11-13	MZEP-40: Update Docker files to use stable Zeppelin repository
43afedd	2017-11-13	MZEP-67: Fix Zeppelin Pig Tutorial so it works on Ubuntu
fed5270	2017-11-13	MZEP-66: Set default working directory to avoid errors in PySpark and Spark Shell
ed7c061	2017-11-11	MZEP-67: Fix failures in second paragraph of Pig Tutorial
fb8df9a	2017-11-10	MZEP-73: Set default username for Drill interpreter on non-secure clusters
d19616a	2017-11-10	MZEP-72: Fix failures in PySpark example in Zeppelin Tutorial
f78e4e4	2017-11-03	MZEP-46: Explicitly set interpreters in code snippets from Zeppelin Tutorial
647a137	2017-11-03	MZEP-60: Increase Livy timeout parameters for Spark YARN configuration
d9e4a06	2017-11-03	MZEP-59: Suppress `DRILL_HOME` warning
54cfeef	2017-11-01	MZEP-46: Modify output from PySpark and SparkR examples
f74e216	2017-10-27	MZEP-46: Fix the Docker image so it runs on Ubuntu16
b90a313	2017-10-27	MZEP-46: Fix the Python, PySpark, and SparkR tutorials so they run in a MapR environment
fcf1cce	2017-10-23	MZEP-48: Include `mapr-hbase` package so Spark Connector for MapR Database runs with the Livy interpreter

Commit	Date (YYYY-MM-DD)	Comment
e33773e	2017-10-23	MZEP-46: Modify Zeppelin Tutorial so it works in a MapR environment
c5f8024	2017-10-22	MSPARK-99: Add `SparkVersion` file to `/opt/mapr/spark`
8aba877	2017-10-21	MZEP-39: Include Kafka client jar
39c74c6	2017-10-18	MZEP-29: Include `ZEPPELIN_DRILL_CLASSPATH` in Drill interpreter settings
da4603d	2017-10-18	MZEP-40: Publish Zeppelin Docker image on dockerhub
185b313	2017-10-17	MZEP-29: Include Drill and Hive JDBC
66acd0a	2017-10-10	MZEP-38: Fix dependency problems to address build issues
0cdd0c9	2017-10-10	MZEP-38: Fix dependency problems to address build issues
7bbf433	2017-10-10	MZEP-14: Fix port collisions for certain components
2e15609	2017-10-10	MZEP-38: Add Hive and Drill as separate interpreters to interpreters list
4babf22	2017-10-04	MZEP-30: Enable HTTPS by default for Zeppelin UI
4af55cc	2017-10-02	MZEP-31: Move maven arguments to profile
9cfc4bd	2017-10-02	MZEP-31: Move maven arguments to profile
2eefc6d	2017-09-21	Fix `shiro.ini` to allow users to log in to Docker environment
462889f	2017-09-01	MZEP-18: Add PID for Zeppelin service
733a624	2017-08-28	MZEP-13: Fix Zeppelin service so it starts with MapR core 6.0
3ccf3ee	2017-08-18	MZEP-4: Add MapR classpath to interpreter classpath
4e26f4b	2017-08-18	MZEP-4 : Implement impersonation in the interpreters using `sudo` instead of `ssh`
5d6384c	2017-08-18	MZEP-4: Use PAM by default
6432602	2017-08-17	MZEP-4: Add `configure.sh` and Warden configuration
6e69cc4	2017-08-17	MZEP-4: Allow root user to build Zeppelin
1a36f87	2017-08-17	MZEP-4: Add MapR repository to `pom.xml`
3ccf3ee	2017-08-17	MZEP-4: Package Zeppelin to run against MapR clusters

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
462889ff	2017-09-01	MZEP-18: Add PID for Zeppelin service

Known Issues and Limitations

- MZEP-17: The HBase interpreter cannot be used to query MapR Database Binary tables.
- MZEP-79: Legends in plots do not display correctly when running the Matplotlib (Python/PySpark) example from the Zeppelin Tutorial.
- MD-2397: Zeppelin cannot connect to Drill through the JDBC driver on a secure MapR cluster when Zeppelin has Kerberos authentication enabled.
- MZEP-86: You cannot run Zeppelin as user 'root'.
- See MapR PACC Known Issues on page 417 for issues that apply to running MapR Docker images.

Ecosystem Component Release Notes

The following release notes contain information for the components included in the MapR Data Platform.

Note that the *MapR Ecosystem Pack (MEP)* has been renamed as the *Ezmeral Ecosystem Pack (EEP)*. For more information about MapR Data Platform terminology, see Documentation Enhancements in What's New in Version 6.1.0 on page 34.

Be sure to review these considerations for using ecosystem component release notes:

- Ecosystem component release notes contain HPE-specific information; they do not duplicate release note information on open-source websites.
- Ecosystem component release notes are not necessarily cumulative in nature. For example, if you need to upgrade from version 1.x of a MapR product to version 4.x, be sure to review the release notes for versions 2.x, 3.x, and 4.x to become familiar with new features and known issues that might be relevant to version 4.x.
- To view individual product versions organized by EEP and core version, see Component Versions for Released MEPs.

EEP Release Notes

Provides release-note information for MapR Ecosystem Packs (EEPs).

MapR Ecosystem Pack 8.1.0 Release Notes
This topic contains information about the components included in MapR Ecosystem Pack 8.1.0.

Release Date	January 2022
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]EEPs are contained in the `MEP-<version>` directory. The `MEP-version` directory can be represented by a 2-digit number or a 3-digit number (for example, `MEP-6.0` or `MEP-6.0.0`). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 8.1.0 can be used with core 7.0.0 and core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

last-updated: Apr 11, 2022

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.8-2104, 2.3.8 refers to the Hive version number, and 2104 typically indicates an April 2021 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 8.1.0 did not introduce any changes that affect application backward compatibility.

EEP 8.1.0 Components

The EEP 8.1.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
Airflow 2.2.1.0	Airflow 2.2.1.0 - 2201 (EEP 6.2.0-8.1.0) Release Notes on page 5738
AsyncHBase 1.8.2	AsyncHBase 1.8.2-2009 Release Notes on page 5739
Data Access Gateway 4.0.0.0	Data Access Gateway 4.0 Release Notes on page 5743
Drill 1.16.1.400[1]	Drill 1.16.1.400-2201 (EEP 8.1.0) Release Notes on page 5747
Hadoop 2.7.6.200	Hadoop 2.7.6.200 - 2201 (EEP 8.1.0) Release Notes on page 5834
HBase 1.4.13.200	HBase 1.4.13.200 - 2201 (EEP 8.1.0) Release Notes on page 5855
Hive 2.3.9	Hive 2.3.9.0 - 2201 (EEP 8.1.0) Release Notes on page 5883
HttpFS 1.1.0.200	HttpFS 1.1.0.200 - 2201 (EEP 8.1.0) Release Notes on page 6050
Hue 4.6.0.300[2]	Hue 4.6.0.300 - 2201 (EEP 8.1.0) Release Notes on page 6070
Livy 0.7.0.100	Livy 0.7.0.200 - 2201 (EEP 8.1.0) Release Notes on page 6155
Monitoring	Monitoring Components - EEP 8.1.0 Release Notes on page 6234
Oozie 5.2.1.200	Oozie 5.2.1.200 - 2201 (EEP 8.1.0) Release Notes on page 6267
S3 Gateway 2.2.0.0	S3 Gateway 2.2.0.0 - 2110 (EEP 8.0.0) Release Notes on page 6260
Spark 3.2.0.0	Spark 3.2.0.0 - 2201 (EEP 8.1.0) Release Notes on page 6344
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167

last-updated: Apr 11, 2022

Component	Release Notes
Streams Tools	Kafka Streams 2.6.1.100 - 2201 (EEP 8.1.0) Release Notes on page 6170 KSQL 6.0.0.100 - 2201 (EEP 8.1.0) Release Notes on page 6183 Kafka Connect HDFS 10.0.0.100 - 2201 (EEP 8.1.0) Release Notes on page 6192 Kafka Connect JDBC 10.0.1.100 - 2201 (EEP 8.1.0) Release Notes on page 6201 Kafka Connect 10.0.0.100 - 2201 (EEP 8.1.0) Release Notes on page 6207 Kafka REST Proxy 6.0.0.100 - 2201 (EEP 8.1.0) Release Notes on page 6213 Kafka Schema Registry 6.0.0.100 - 2201 (EEP 8.1.0) Release Notes on page 6228
Tez 0.9.2	Tez 0.9.2 - 2201 (EEP 8.1.0) Release Notes on page 6481

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

The EEP 8.1.0 repository contains the following ecosystem components that are supported for internal data-fabric monitoring use cases only:

- Collectd 5.12.0.400
- Elasticsearch 6.8.8.500
- Fluentd 1.10.3.400
- Grafana 7.5.10.400
- Kibana 6.8.8.500
- OpenTSDB 2.4.1.400

MapR Ecosystem Pack 8.0.0 Release Notes
This topic contains information about the components included in MapR Ecosystem Pack 8.0.0.

Notice: HPE recommends using EEP 8.1.0 instead of EEP 8.0.0. For more information about EEP 8.1.0, see EEP 8.1.0 Reference Information on page 6504.

Release Date	October 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]EEPs are contained in the `MEP-<version>` directory. The `MEP-version` directory can be represented by a 2-digit number or a 3-digit number (for example, `MEP-6.0` or `MEP-6.0.0`). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 8.0.0 can be used with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

last-updated: Apr 11, 2022

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.8-2104, 2.3.8 refers to the Hive version number, and 2104 typically indicates an April 2021 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 8.0.0 did not introduce any changes that affect application backward compatibility.

EEP 8.0.0 Components

The EEP 8.0.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.8.2	AsyncHBase 1.8.2-2009 Release Notes on page 5739
Data Access Gateway 3.0.0.0	Data Access Gateway 3.0 Release Notes on page 5744
Drill 1.16.1.300[1]	Drill 1.16.1.300-2110 (EEP 8.0.0) Release Notes on page 5748
Flume 1.9.0.200	Flume 1.9.0.200-2110 (EEP 8.0.0) Release Notes on page 5819
Hadoop 2.7.6.100	Hadoop 2.7.6.100 - 2110 (EEP 8.0.0) Release Notes on page 5836
HBase 1.4.13.100	HBase 1.4.13.100 - 2110 (EEP 8.0.0) Release Notes on page 5856
Hive 2.3.9	Hive 2.3.9 - 2110 (EEP 8.0.0) Release Notes on page 5890
HttpFS 1.1.0.100	HttpFS 1.1.0.100 - 2110 (EEP 8.0.0) Release Notes on page 6051
Hue 4.6.0.200[2]	Hue 4.6.0.200 - 2110 (EEP 8.0.0) Release Notes on page 6072
Livy 0.7.0.100	Livy 0.7.0.100 - 2110 (EEP 8.0.0) Release Notes on page 6156
Monitoring	Monitoring Components - EEP 8.0.0 Release Notes on page 6235
Oozie 5.2.1.100	Oozie 5.2.1.100 - 2110 (EEP 8.0.0) Release Notes on page 6270
Pig 0.17.0.100	Pig 0.17.0.100 - (EEP 8.0.0) 2110 Release Notes on page 6314
S3 Gateway	S3 Gateway 2.2.0.0 - 2110 (EEP 8.0.0) Release Notes on page 6260
Spark 3.1.2.0	Spark 3.1.2.0 - 2110 (EEP 8.0.0) Release Notes on page 6347
Sqoop 1.4.7	Sqoop 1.4.7 - 2110 (EEP 8.0.0) Release Notes on page 6448

last-updated: Apr 11, 2022

Component	Release Notes
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
Streams Tools	Kafka Streams 2.6.1.0 - 2110 (EEP 8.0.0) Release Notes on page 6172 KSQL 6.0.0.0 - 2110 (EEP 8.0.0) Release Notes on page 6185 Kafka Connect HDFS 10.0.0.0 - 2110 (EEP 8.0.0) Release Notes on page 6193 Kafka Connect JDBC 10.0.1.0 - 2110 (EEP 8.0.0) Release Notes on page 6202 Kafka REST Proxy 6.0.0.0 - 2110 (EEP 8.0.0) Release Notes on page 6214 Kafka Schema Registry 6.0.0.0 - 2110 (EEP 8.0.0) Release Notes on page 6229
Tez 0.9.2	Tez 0.9.2 - 2110 (EEP 8.0.0) Release Notes on page 6482

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

The EEP 8.0.0 repository contains the following ecosystem components that are supported for internal data-fabric monitoring use cases only:

- Collectd 5.12.0.300
- Elasticsearch 6.8.8.400
- Fluentd 1.10.3.300
- Grafana 7.5.10.300
- Kibana 6.8.8.400
- OpenTSDB 2.4.1.300

MapR Ecosystem Pack 7.1.1 Release Notes
This topic contains information about the components included in MapR Ecosystem Pack 7.1.1.

Release Date	October 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]EEPs are contained in the `MEP-<version>` directory. The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 7.1.1 can be used with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

EEP 7.1.1 is identical to EEP 7.1.0 except for changes to the monitoring (Spyglass) components. For a list of monitoring fixes in EEP 7.1.1, see Monitoring Components - EEP 7.1.1 Release Notes on page 6236.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.8-2104, 2.3.8 refers to the Hive version number, and 2104 typically indicates an April 2021 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 7.1.1 did not introduce any changes that affect application backward compatibility.

Impala SLES 15 Support

Though there are no code changes for Impala in this release, new Impala packages are available. These new Impala packages include support for SLES 15.

EEP 7.1.1 Components

The EEP 7.1.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.8.2	AsyncHBase 1.8.2-2009 Release Notes on page 5739
Data Access Gateway 3.0.0.0	Data Access Gateway 3.0 Release Notes on page 5744
Drill 1.16.1.200[1]	Drill 1.16.1.200-2104 (MEP 7.1.0) Release Notes
Flume 1.9.0.100	Flume 1.9.0.100-2101 (EEP 7.0.1) Release Notes on page 5820
Hadoop 2.7.5.0	Hadoop 2.7.5.0 - 2104 (MEP 7.1.0) Release Notes
HBase 1.4.13.0	HBase 1.4.13.0 - 2104 (MEP 7.1.0) Release Notes
Hive 2.3.8	Hive 2.3.8 - 2104 (MEP 7.1.0) Release Notes
HttpFS 1.1.0.0	HttpFS 1.1.0.0 - 2104 (MEP 7.1.0) Release Notes
Hue 4.6.0.0[2]	Hue 4.6.0.0 - 2104 (MEP 7.1.0) Release Notes
Impala 2.12.0.500	Impala 2.12.0.400 - 2101 (EEP 7.0.1) Release Notes on page 6139
Livy 0.7.0.0	Livy 0.7.0.0 - 2104 (MEP 7.1.0) Release Notes
Monitoring	Monitoring Components - EEP 7.1.1 Release Notes on page 6236
S3 Gateway 2.1.0.0	Object Store with S3-Compatible API 2.1.0.0 - 2104 (MEP 7.1.0) Release Notes
Oozie 5.2.1.0	Oozie 5.2.1.0 - 2104 (MEP 7.1.0) Release Notes
Pig 0.17.0.0	Pig 0.17.0.0 Release Notes on page 6314
Sentry 1.7.0	Sentry 1.7.0 - 2101 (MEP 7.0.1) Release Notes on page 6330
Spark 2.4.7.100	Spark 2.4.7.100 - 2104 (MEP 7.1.0) Release Notes
Sqoop 1.4.7	Sqoop 1.4.7 - 2104 (MEP 7.1.0) Release Notes

last-updated: Apr 11, 2022

Component	Release Notes
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
Streams Tools	Kafka Streams 2.1.1.200 - 2104 (MEP 7.1.0) Release Notes KSQL 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes Kafka Connect 5.1.2.0 - 2009 (EEP 7.0.0) Release Notes on page 6208 Kafka Connect HDFS 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes Kafka Connect JDBC 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes on page 6203 Kafka REST Proxy 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes Kafka Schema Registry 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes
Tez 0.9.2	Tez 0.9.2 - 2104 (MEP 7.1.0) Release Notes

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]Support for Sentry is limited to Impala users.

The EEP 7.1.1 repository contains the following ecosystem components that are supported for internal data-fabric monitoring use cases only:

- Collectd 5.10.0.0
- Elasticsearch 6.8.8.300
- Fluentd 1.10.3.200
- Grafana 7.5.2.200
- Kibana 6.8.8.300
- OpenTSDB 2.4.0

MapR Ecosystem Pack 7.1.0 Release Notes

This topic contains information about the components included in MapR Ecosystem Pack 7.1.0.

Release Date	April 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 7.1.0 can be used with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.8-2104, 2.3.8 refers to the Hive version number, and 2104 typically indicates an April 2021 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 7.1.0 did not introduce any changes that affect application backward compatibility.

Impala SLES 15 Support

Though there are no code changes for Impala in this release, new Impala packages are available. These new Impala packages include support for SLES 15.

EEP 7.1.0 Components

The EEP 7.1.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.8.2	AsyncHBase 1.8.2-2009 Release Notes on page 5739
Data Access Gateway 3.0	Data Access Gateway 3.0 Release Notes on page 5744
Drill 1.16.1.200[1]	Drill 1.16.1.200-2104 (MEP 7.1.0) Release Notes
Flume 1.9.0.100	Flume 1.9.0.100-2101 (EEP 7.0.1) Release Notes on page 5820
Hadoop 2.7.5.0	Hadoop 2.7.5.0 - 2104 (MEP 7.1.0) Release Notes
HBase 1.4.13.0	HBase 1.4.13.0 - 2104 (MEP 7.1.0) Release Notes
Hive 2.3.8	Hive 2.3.8 - 2104 (MEP 7.1.0) Release Notes
HttpFS 1.1.0.0	HttpFS 1.1.0.0 - 2104 (MEP 7.1.0) Release Notes
Hue 4.6.0.0[2]	Hue 4.6.0.0 - 2104 (MEP 7.1.0) Release Notes
Impala 2.12.0.500	Impala 2.12.0.400 - 2101 (EEP 7.0.1) Release Notes on page 6139
Livy 0.7.0.0	Livy 0.7.0.0 - 2104 (MEP 7.1.0) Release Notes
Monitoring	Monitoring Components - MEP 7.1.0 Release Notes
S3 Gateway 2.1.0.0	Object Store with S3-Compatible API 2.1.0.0 - 2104 (MEP 7.1.0) Release Notes
Oozie 5.2.1.0	Oozie 5.2.1.0 - 2104 (MEP 7.1.0) Release Notes
Pig 0.17.0.0	Pig 0.17.0.0 Release Notes on page 6314
Sentry 1.7.0	Sentry 1.7.0 - 2101 (MEP 7.0.1) Release Notes on page 6330
Spark 2.4.7.100	Spark 2.4.7.100 - 2104 (MEP 7.1.0) Release Notes
Sqoop 1.4.7	Sqoop 1.4.7 - 2104 (MEP 7.1.0) Release Notes

last-updated: Apr 11, 2022

Component	Release Notes
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167

Tez 0.9.2	Tez 0.9.2 - 2104 (MEP 7.1.0) Release Notes

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]Support for Sentry is limited to Impala users.

The EEP 7.1.0 repository contains the following ecosystem components that are supported for internal data-fabric monitoring use cases only:

- Collectd 5.10.0.0
- Elasticsearch 6.8.8.300
- Fluentd 1.10.3.0
- Grafana 7.5.2.200
- Kibana 6.8.8.300
- OpenTSDB 2.4.0

MapR Ecosystem Pack 7.0.1 Release Notes

This topic contains information about the components included in MapR Ecosystem Pack 7.0.1.

Release Date	January 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 7.0.1 can be used with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 7.0.1 did not introduce any changes that affect application backward compatibility.

EEP 7.0.1 Components

The EEP 7.0.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.8.2.0	AsyncHBase 1.8.2-2009 Release Notes on page 5739
Data Access Gateway 3.0.0.0	Data Access Gateway 3.0 Release Notes on page 5744

Component	Release Notes
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
Streams Tools	Kafka Streams 2.1.1.100 - 2101 (MEP 7.0.1) Release Notes on page 6175 KSQL 5.1.2.100 - 2101 (MEP 7.0.1) Release Notes on page 6187 Kafka Connect HDFS 5.1.2.100 - 2101 (EEP 7.0.1) Release Notes on page 6195 Kafka Connect JDBC 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes on page 6203 Kafka REST Proxy 5.1.2.100 - 2101 (MEP 7.0.1) Release Notes on page 6216 Kafka Schema Registry 5.1.2.100 - 2101 (MEP 7.0.1) Release Notes on page 6231
Tez 0.9.2	Tez 0.9.2 - 2101 (EEP 7.0.1) Release Notes on page 6485

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]Support for Sentry is limited to Impala users.

The EEP 7.0.1 repository contains the following ecosystem components that are supported for internal data-fabric monitoring use cases only:

- Collectd 5.10.0.0
- Elasticsearch 6.8.8.0
- Fluentd 1.10.3.0
- Grafana 6.7.4.0
- Kibana 6.8.8.0
- OpenTSDB 2.4.0

MapR Ecosystem Pack 7.0.0 Release Notes

This topic contains information about the components included in MapR Ecosystem Pack 7.0.0.

Release Date	September 2020
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 7.0.0 can be used with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

last-updated: Apr 11, 2022

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 7.0.0 did not introduce any changes that affect application backward compatibility.

EEP 7.0.0 Components

The EEP 7.0.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.8.2.0	AsyncHBase 1.8.2-2009 Release Notes on page 5739
Data Access Gateway 3.0.0.0	Data Access Gateway 3.0 Release Notes on page 5744
Drill 1.16.1.0[1]	Drill 1.16.1.0-2009 (EEP 7.0.0) Release Notes on page 5753
Flume 1.9.0.0	Flume 1.9.0.0-2009 Release Notes on page 5821
Hadoop 2.7.4.0	Hadoop 2.7.4.0-2009 (EEP 7.0.0) Release Notes on page 5843
HBase 1.4.12.0	HBase 1.4.12.0-2009 (EEP 7.0.0) Release Notes on page 5861
Hive 2.3.7	Hive 2.3.7-2009 (EEP 7.0.0) Release Notes on page 5906
HttpFS 1.0	HttpFS 1.0 - 2009 (EEP 7.0.0) Release Notes on page 6055
Hue 4.6.0.0[2]	Hue 4.6.0.0 - 2009 (EEP 7.0.0) Release Notes on page 6075
Impala 2.12.0.200	Impala 2.12.0.200 - 2009 Release Notes on page 6140
Monitoring	MapR Monitoring Components - EEP 7.0.0 Release Notes on page 6240
S3 Gateway 2.0.0.0	S3 Gateway 2.0.0.0 - 2009 (EEP 7.0.0) Release Notes on page 6262
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167

last-updated: Apr 11, 2022

Component	Release Notes
Streams Tools	Kafka Connect 5.1.2.0 - 2009 (EEP 7.0.0) Release Notes on page 6208 Kafka Connect HDFS 5.1.2.0 - 2009 (EEP 7.0.0) Release Notes on page 6195 Kafka Connect JDBC 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes on page 6203 Kafka REST Proxy 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes on page 6217 Kafka Schema Registry 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes on page 6232 Kafka Streams 2.1.1.0 - 2009 (MEP 7.0.0) Release Notes on page 6176 KSQL 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes on page 6188
Oozie 5.2.0.0	Oozie 5.2.0.0 - 2009 (EEP 7.0.0) Release Notes on page 6274
Pig 0.17.0.0	Pig 0.17.0.0 Release Notes on page 6314
Sentry 1.7.0	Sentry 1.7.0 - 2009 (MEP 7.0.0) Release Notes on page 6331
Spark 2.4.5.0	Spark 2.4.5-2009 (EEP 7.0.0) Release Notes on page 6355
Sqoop 1.4.7	Sqoop 1.4.7 - 2009 (EEP 7.0.0) Release Notes on page 6452
Tez 0.9.2.0	Tez 0.9.2-2009 (EEP 7.0.0) Release Notes on page 6487

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]Support for Sentry is limited to Impala users.

The EEP 7.0.0 repository contains the following ecosystem components that are supported for internal data-fabric monitoring use cases only:

- Collectd 5.10.0.0
- Elasticsearch 6.8.8.0
- Fluentd 1.10.3.0
- Grafana 6.7.4.0
- Kibana 6.8.8.0
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.3.6 Release Notes
This topic contains information about the components included in MapR Ecosystem Pack 6.3.6.

CAUTION: EEP 6.3.6 requires a core patch to resolve a Warden defect. The defect is fixed in `mapr-patch-6.1.0.20180926230239.GA-20210512163609.x86_64` and later. Before upgrading to EEP 6.3.6, you must apply the patch. See Patches and Documentation for MapR 6.1.1 on page 96.

last-updated: Apr 11, 2022

Notice: Currently, no version of the Installer supports installing or upgrading to EEP 6.3.6. Manual installations and upgrades are required until a new version of the Installer is released.

Release Date	January 2022
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]EEPs are contained in the `MEP-<version>` directory. The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.x. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.3.6 did not introduce any changes that affect application backward compatibility.

EEP 6.3.6 Components

The EEP 6.3.6 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7.0	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
Drill 1.16.0.400[1]	Drill 1.16.0.400-2201 (EEP 6.3.6) Release Notes on page 5756
Flume 1.8.0	Flume 1.8.0-2201 (EEP 6.3.6) Release Notes on page 5822
HBase 1.1.13.500	HBase 1.1.13.500-2201 (EEP 6.3.6) Release Notes on page 5863
Hive 2.3 (with patches from 2.3.6)	Hive 2.3.6 - 2201 (EEP 6.3.6) Release Notes on page 5916
HttpFS 1.0	HttpFS 1.0 - 2201 (EEP 6.3.6) Release Notes on page 6056
Hue 4.3.0.500[2]	Hue 4.3.0.500 - 2201 (EEP 6.3.6) Release Notes on page 6078
Impala 2.12.0.650[1]	Impala 2.12.0.600 - 2110 (EEP 6.3.5) Release Notes on page 6138
Livy 0.5.0	Livy 0.5.0 - 2201 (EEP 6.3.6) Release Notes on page 6159
Monitoring	Monitoring Components - EEP 6.3.6 Release Notes on page 6241

last-updated: Apr 11, 2022

MapR Ecosystem Pack 6.3.5 Release Notes

This topic contains information about the components included in MapR Ecosystem Pack 6.3.5.

CAUTION: EEP 6.3.5 requires a core patch to resolve a Warden defect. The defect is fixed in `mapr-patch-6.1.0.20180926230239.GA-20210512163609.x86_64` and later. Before upgrading to EEP 6.3.5, you must apply the patch. See Patches and Documentation for MapR 6.1.1 on page 96.

Release Date	October 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]EEPs are contained in the `MEP-<version>` directory. The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.x. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.3.5 did not introduce any changes that affect application backward compatibility.

EEP 6.3.5 Components

The EEP 6.3.5 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7.0	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
Drill 1.16.0.300[1]	Drill 1.16.0.300-2110 (EEP 6.3.5) Release Notes on page 5757
Flume 1.8.0	Flume 1.8.0-2104 (EEP 6.3.4) Release Notes on page 5823
HBase 1.1.13.400	HBase 1.1.13.400-2110 (EEP 6.3.5) Release Notes on page 5864

Tez 0.9.1	Tez 0.9.1 - 2104 (EEP 6.3.4) Release Notes on page 6491

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]MapR support for Sentry is limited to Impala users.

The EEP 6.3.4 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.1.201
- Elasticsearch 6.8.8.100

last-updated: Apr 11, 2022

- Fluentd 1.10.3.100
- Grafana 7.5.2.100
- Kibana 6.8.8.100
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.3.3 Release Notes
This topic contains information about the components included in MapR Ecosystem Pack 6.3.3.

Release Date	March 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.x. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.3.3 did not introduce any changes that affect application backward compatibility.

EEP 6.3.3 Components

The EEP 6.3.3 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7.0	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
Drill 1.16.0.100[1]	Drill 1.16.0.100-2101 (EEP 6.3.2) Release Notes on page 5759
Flume 1.8.0	Flume 1.8.0-2101 (EEP 6.3.2) Release Notes on page 5824
HBase 1.1.13.200	HBase 1.1.13.200-2101 (EEP 6.3.2) Release Notes on page 5867
Hive 2.3 (with patches from 2.3.6)	Hive 2.3.6 - 2101 (EEP 6.3.2) Release Notes on page 5928
HttpFS 1.0	HttpFS 1.0 - 2101 (EEP 6.3.2) Release Notes on page 6058
Hue 4.3.0.300[2]	Hue 4.3.0.300 - 2101 (EEP 6.3.2) Release Notes on page 6081
Impala 2.12.0.300[1]	Impala 2.12.0.300 - 2101 (EEP 6.3.2) Release Notes on page 6139

last-updated: Apr 11, 2022

Component	Release Notes
Monitoring	MapR Monitoring Components - EEP 6.3.3 Release Notes on page 6245
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Streams 1.1.1 - 2101 (MEP 6.3.2) Release Notes on page 6179 Kafka Connect HDFS 4.1.0 - 2101 (EEP 6.3.2) Release Notes on page 6198 Kafka Connect JDBC 4.1.0 - 2101 (EEP 6.3.2) Release Notes on page 6204 Kafka REST 4.1.0 - 2101 (MEP 6.3.2) Release Notes on page 6219 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 5.1.0.500	Oozie 5.1.0.500 - 2101 (EEP 6.3.2) Release Notes on page 6279
Pig 0.16	Pig 0.16.0 - 2009 (EEP 6.3.1) Release Notes on page 6317
Sentry 1.7.0[3]	Sentry 1.7.0 - 2101 (MEP 6.3.2) Release Notes on page 6332
Spark 2.4.4.200	Spark 2.4.4.200 - 2101 (EEP 6.3.2) Release Notes on page 6363
Sqoop 1.4.7	Sqoop 1.4.7 - 2101 (EEP 6.3.2) Release Notes on page 6455
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469
Tez 0.9.1	Tez 0.9.1 - 2101 (EEP 6.3.2) Release Notes on page 6492

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]MapR support for Sentry is limited to Impala users.

The EEP 6.3.3 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.1.201
- Elasticsearch 6.8.8.100
- Fluentd 1.10.3.100
- Grafana 6.7.4.100

last-updated: Apr 11, 2022

- Kibana 6.8.8.100
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.3.2 Release Notes
This topic contains information about the components included in MapR Ecosystem Pack 6.3.2.

Release Date	January 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.3.2 did not introduce any changes that affect application backward compatibility.

EEP 6.3.2 Components

The EEP 6.3.2 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7.0	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
Drill 1.16.0.100[1]	Drill 1.16.0.100-2101 (EEP 6.3.2) Release Notes on page 5759
Flume 1.8.0	Flume 1.8.0-2101 (EEP 6.3.2) Release Notes on page 5824
HBase 1.1.13.200	HBase 1.1.13.200-2101 (EEP 6.3.2) Release Notes on page 5867
Hive 2.3 (with patches from 2.3.6)	Hive 2.3.6 - 2101 (EEP 6.3.2) Release Notes on page 5928
HttpFS 1.0	HttpFS 1.0 - 2101 (EEP 6.3.2) Release Notes on page 6058
Hue 4.3.0.300[2]	Hue 4.3.0.300 - 2101 (EEP 6.3.2) Release Notes on page 6081
Impala 2.12.0.300[1]	Impala 2.12.0.300 - 2101 (EEP 6.3.2) Release Notes on page 6139
Monitoring	MapR Monitoring Components - EEP 6.3.2 Release Notes on page 6246
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264

last-updated: Apr 11, 2022

Component	Release Notes
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Streams 1.1.1 - 2101 (MEP 6.3.2) Release Notes on page 6179 Kafka Connect HDFS 4.1.0 - 2101 (EEP 6.3.2) Release Notes on page 6198 Kafka Connect JDBC 4.1.0 - 2101 (EEP 6.3.2) Release Notes on page 6204 Kafka REST 4.1.0 - 2101 (MEP 6.3.2) Release Notes on page 6219 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 5.1.0.500	Oozie 5.1.0.500 - 2101 (EEP 6.3.2) Release Notes on page 6279
Pig 0.16	Pig 0.16.0 - 2009 (EEP 6.3.1) Release Notes on page 6317
Sentry 1.7.0[3]	Sentry 1.7.0 - 2101 (MEP 6.3.2) Release Notes on page 6332
Spark 2.4.4.200	Spark 2.4.4.200 - 2101 (EEP 6.3.2) Release Notes on page 6363
Sqoop 1.4.7	Sqoop 1.4.7 - 2101 (EEP 6.3.2) Release Notes on page 6455
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469
Tez 0.9.1	Tez 0.9.1 - 2101 (EEP 6.3.2) Release Notes on page 6492

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]MapR support for Sentry is limited to Impala users.

The EEP 6.3.2 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.1.201
- Elasticsearch 6.8.8.100
- Fluentd 1.10.3.100
- Grafana 6.7.4.100
- Kibana 6.8.8.100
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.3.1 Release Notes

This topic contains information about the components included in MapR Ecosystem Pack 6.3.1.

Release Date	September 2020
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.3.1 did not introduce any changes that affect application backward compatibility.

EEP 6.3.1 Components

The EEP 6.3.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7.0	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
Drill 1.16.0.22[1]	Drill 1.16.0.22-2009 (EEP 6.3.1) Release Notes on page 5761
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase 1.1.13.0	HBase 1.1.13.100-2009 (EEP 6.3.1) Release Notes on page 5868
Hive 2.3 (with patches from 2.3.6)	Hive 2.3.6-2009 (EEP 6.3.1) Release Notes on page 5931
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 4.3.0.200[2]	Hue 4.3.0.200 - 2009 (EEP 6.3.1) Release Notes on page 6083
Impala 2.12.0.100[1]	Impala 2.12.0.100-1912 Release Notes on page 6141
MapR Monitoring	MapR Monitoring Components - EEP 6.3.1 Release Notes on page 6246
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264

last-updated: Apr 11, 2022

Component	Release Notes
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Connect JDBC 4.1.0-1808 Release Notes on page 6205 Kafka Connect HDFS 4.1.0-1808 Release Notes on page 6199 Kafka Connect 4.1.0-1808 Release Notes on page 6209 Kafka REST Proxy 4.1.0 - 2009 (MEP 6.3.1) Release Notes on page 6221 Kafka Schema Registry 4.1.1-1901 Release Notes on page 6233 Kafka Streams 1.1 - 2009 (MEP 6.3.1) Release Notes on page 6180 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 5.1.0.300	Oozie 5.1.0.400 - 2009 (EEP 6.3.1) Release Notes on page 6280
Pig 0.16	Pig 0.16.0 - 2009 (EEP 6.3.1) Release Notes on page 6317
Sentry 1.7.0[3]	Sentry 1.7.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6335
Spark 2.4.4.0	Spark 2.4.4.0-1912 Release Notes on page 6368
Sqoop 1.4.7	Sqoop 1.4.7 - 2009 (EEP 7.0.0) Release Notes on page 6452
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469
Tez 0.9.1	Tez 0.9.1-2009 (EEP 6.3.1) Release Notes on page 6493

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]MapR support for Sentry is limited to Impala users.

The EEP 6.3.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.1.200
- Elasticsearch 6.8.8.100
- Fluentd 1.10.3.100
- Grafana 6.0.2.200
- Kibana 6.8.8.100
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.3.0 Release Notes

This topic contains information about the components included in MapR Ecosystem Pack 6.3.0.

Release Date	December 2019
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.3.0 did not introduce any changes that affect application backward compatibility.

EEP 6.3.0 Components

The EEP 6.3.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.16.0.10[1]	Drill 1.16.0.10-1912 (EEP 6.3.0) Release Notes on page 5762
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase 1.1.13.0	HBase 1.1.13.0-1912 (EEP 6.3.0) Release Notes on page 5871
Hive 2.3.6	Hive 2.3.6-1912 (EEP 6.3.0) Release Notes on page 5936
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 4.3.0.100[2]	Hue 4.3.0.100-1912 (EEP 6.3.0) Release Notes on page 6085
Impala 2.12.0.100[1]	Impala 2.12.0.100-1912 Release Notes on page 6141
MapR Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
MapR Monitoring	MapR Monitoring Components - EEP 6.3.0 Release Notes on page 6247
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264

last-updated: Apr 11, 2022

Component	Release Notes
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Connect JDBC 4.1.0-1808 Release Notes on page 6205 Kafka Connect HDFS 4.1.0-1808 Release Notes on page 6199 Kafka Connect 4.1.0-1808 Release Notes on page 6209 Kafka REST Proxy 4.1.0-1912 Release Notes on page 6221 Kafka Schema Registry 4.1.1-1901 Release Notes on page 6233 Kafka Streams 1.1-1912 Release Notes on page 6181 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 5.1.0.300	Oozie 5.1.0.300-1912 (EEP 6.3.0) Release Notes on page 6281
Pig 0.16	Pig 0.16.0-1912 Release Notes on page 6318
Sentry 1.7.0[3]	Sentry 1.7.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6335
Spark 2.4.4.0	Spark 2.4.4.0-1912 Release Notes on page 6368
Sqoop 1.4.7	Sqoop 1.4.7-1904 Release Notes on page 6457
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469
Tez 0.9.1	Tez 0.9.1-1912 (EEP 6.3.0) Release Notes on page 6494

[1]Support for this component is subject to your license agreement.

[2]The Spark Notebook UI in Hue is a beta feature.

[3]MapR support for Sentry is limited to Impala users.

The EEP 6.3.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.1.200
- Elasticsearch 6.5.3.200
- Fluentd 1.4.0.100
- Grafana 6.0.2.100
- Kibana 6.5.3.200
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.2.0 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 6.2.0.

Release Date	May 2019
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.2.0 did not introduce any changes that would impact application backward compatibility.

EEP 6.2.0 Components

The EEP 6.2.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.16.0.0[1]	Drill 1.16.0.0-1904 (EEP 6.2.0) Release Notes on page 5763
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase-compatible API[2]	HBase 1.1.8-1904 Release Notes on page 5874
Hive 2.3.3	Hive 2.3.3-1904 (EEP 6.2.0, EEP 6.1.1, and EEP 6.0.2) Release Notes on page 5943
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 4.3.0.0[3]	Hue 4.3.0-1904 (EEP 6.2.0) Release Notes on page 6087
Impala 2.12.0.0[1]	Impala 2.12-1904 Release Notes on page 6142
MapR Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
MapR Monitoring	MapR Monitoring Components - EEP 6.2.0 Release Notes on page 6248
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167

last-updated: Apr 11, 2022

Component	Release Notes
MapR Streams Tools	Kafka Connect JDBC 4.1.0-1808 Release Notes on page 6205 Kafka Connect HDFS 4.1.0-1808 Release Notes on page 6199 Kafka Connect 4.1.0-1808 Release Notes on page 6209 Kafka REST 4.1.0-1808 Release Notes on page 6222 Kafka Schema Registry 4.1.1-1901 Release Notes on page 6233 Kafka Streams 1.1-1808 Release Notes on page 6182 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 5.1.0.200	Oozie 5.1.0.200-1904 (EEP 6.2.0) Release Notes on page 6282
Pig 0.16	Pig 0.16.0-1901 Release Notes on page 6319
Sentry 1.7.0[4]	Sentry 1.7.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6335
Spark 2.4.0.0[1]	Spark 2.4.0.0-1904 (EEP 6.2.0) Release Notes on page 6370
Sqoop 1.4.7	Sqoop 1.4.7-1904 Release Notes on page 6457
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

[1]Support for this component is subject to your license agreement.

[2]For use only with MapR Database binary tables.

[3]The Spark Notebook UI in Hue is a beta feature.

[4]MapR support for Sentry is limited to Impala users.

The EEP 6.2.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.1.100
- Elasticsearch 6.5.3.100
- Fluentd 1.4.0.0
- Grafana 6.0.2.0
- Kibana 6.5.3.100
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.1.1 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 6.1.1.

Release Date	May 2019
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

last-updated: Apr 11, 2022

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.1.1 did not introduce any changes that would impact application backward compatibility.

EEP 6.1.1 Components

The EEP 6.1.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.15.0.7[1]	Drill 1.15.0.0-1901 (EEP 6.1.0) Release Notes on page 5768
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase-compatible API[1]	HBase 1.1.8-1904 Release Notes on page 5874
Hive 2.3.3	Hive 2.3.3-1904 (EEP 6.2.0, EEP 6.1.1, and EEP 6.0.2) Release Notes on page 5943
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 4.2	Hue 4.2.0-1904 Release Notes on page 6090
Impala 2.10.0[1]	Impala 2.10.0-1808 Release Notes on page 6144
MapR Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
MapR Monitoring	MapR Monitoring Components - EEP 6.1.0 Release Notes on page 6249
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167

last-updated: Apr 11, 2022

Component	Release Notes
MapR Streams Tools	Kafka Connect JDBC 4.1.0-1808 Release Notes on page 6205 Kafka Connect HDFS 4.1.0-1808 Release Notes on page 6199 Kafka Connect 4.1.0-1808 Release Notes on page 6209 Kafka REST 4.1.0-1808 Release Notes on page 6222 Kafka Schema Registry 4.1.1-1901 Release Notes on page 6233 Kafka Streams 1.1-1808 Release Notes on page 6182 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 5.1.0.100	Oozie 5.1.0-1904 (EEP 6.1.1) Release Notes on page 6283
Pig 0.16	Pig 0.16.0-1901 Release Notes on page 6319
Sentry 1.7.0[2]	Sentry 1.7.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6335
Spark 2.3.3.100[1]	Spark 2.3.3.0-1904 (EEP 6.1.1 and EEP 6.0.2) Release Notes on page 6374
Sqoop 1.4.7	Sqoop 1.4.7-1904 Release Notes on page 6457
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 6.1.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.1.1
- Elasticsearch 6.5.3.1
- Fluentd 1.3.2.1
- Grafana 5.4.2.1
- Kibana 6.5.3.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.1.0 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 6.1.0.

Release Date	February 2019
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

last-updated: Apr 11, 2022

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 6.1.0 Components

The EEP 6.1.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.15.0.0[1]	Drill 1.15.0.0-1901 (EEP 6.1.0) Release Notes on page 5768
Flume 1.8	Flume 1.8.0-1901 Release Notes on page 5825
HBase-compatible API[2]	HBase 1.1.8-1901 Release Notes on page 5875
Hive 2.3.3[3]	Hive 2.3.3-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 5947
HttpFS 1.0	HttpFS-1.0-1901 (EEP 6.1.0) Release Notes on page 6061
Hue 4.2	Hue 4.2.0-1901 (EEP 6.1.0) Release Notes on page 6092
Impala 2.10.0[1]	Impala 2.10.0-1808 Release Notes on page 6144
MapR Data Access Gateway 2.0	MapR Data Access Gateway 2.0 Release Notes on page 5745
MapR Monitoring	MapR Monitoring Components - EEP 6.1.0 Release Notes on page 6249
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Connect JDBC 4.1.0-1808 Release Notes on page 6205 Kafka Connect HDFS 4.1.0-1808 Release Notes on page 6199 Kafka Connect 4.1.0-1808 Release Notes on page 6209 Kafka REST 4.1.0-1808 Release Notes on page 6222 Kafka Schema Registry 4.1.1-1901 Release Notes on page 6233 Kafka Streams 1.1-1808 Release Notes on page 6182 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265

last-updated: Apr 11, 2022

Component	Release Notes
Oozie 5.1.0.0	Oozie 5.1.0.0-1901 (EEP 6.1.0) Release Notes on page 6284
Pig 0.16	Pig 0.16.0-1901 Release Notes on page 6319
Sentry 1.7.0[4]	Sentry 1.7.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6335
Spark 2.3.2.0[1]	Spark 2.3.2.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6383
Sqoop 1.4.7	Sqoop 1.4.7-1808 (EEP 6.0.0) Release Notes on page 6458
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

[1]Support for this component is subject to your license agreement.

[2]For use only with MapR Database binary tables.

[3]MapR Hive 2.3.3 is equivalent to Apache Hive 2.3.4.

[4]MapR support for Sentry is limited to Impala users.

The EEP 6.1.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.1.0
- Elasticsearch 6.5.3.0
- Fluentd 1.3.2.0
- Grafana 5.4.2.0
- Kibana 6.5.3.0
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.0.2 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 6.0.2.

Release Date	May 2019
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-6.0 or MEP-6.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

EEP 6.0.2 did not introduce any changes that would impact application backward compatibility.

EEP 6.0.2 Components

The EEP 6.0.2 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.14	Drill 1.14.0-1901 (EEP 6.0.1) Release Notes on page 5773
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase-compatible API[1]	HBase 1.1.8-1904 Release Notes on page 5874
Hive 2.3.3	Hive 2.3.3-1904 (EEP 6.2.0, EEP 6.1.1, and EEP 6.0.2) Release Notes on page 5943
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 4.2	Hue 4.2.0-1904 Release Notes on page 6090
Impala 2.10.0	Impala 2.10.0-1808 Release Notes on page 6144
MapR Data Access Gateway	MapR Data Access Gateway 2.0 Release Notes on page 5745
MapR Monitoring	MapR Monitoring Components - EEP 6.0.0 Release Notes on page 6250
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Connect JDBC 4.1.0-1808 Release Notes on page 6205 Kafka Connect HDFS 4.1.0-1808 Release Notes on page 6199 Kafka Connect 4.1.0-1808 Release Notes on page 6209 Kafka REST 4.1.0-1808 Release Notes on page 6222 Kafka Streams 1.1-1808 Release Notes on page 6182 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1904 (EEP 6.0.2) Release Notes on page 6287
Pig 0.16	Pig 0.16.0-1901 Release Notes on page 6319
Sentry 1.7.0[2]	Sentry 1.7.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6335
Spark 2.3.3.0	Spark 2.3.3.0-1904 (EEP 6.1.1 and EEP 6.0.2) Release Notes on page 6374
Sqoop 1.4.7	Sqoop 1.4.7-1904 Release Notes on page 6457
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

last-updated: Apr 11, 2022

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 6.0.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.0
- Elasticsearch 6.2.3
- Fluentd 1.1.2
- Grafana 4.6.5
- Kibana 6.2.3
- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.0.1 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 6.0.1.

Release Date	February 2019
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 6.0.1 Components

The EEP 6.0.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.14[1]	Drill 1.14.0-1901 (EEP 6.0.1) Release Notes on page 5773
Flume 1.8	Flume 1.8.0-1901 Release Notes on page 5825
HBase-compatible API[2]	HBase 1.1.8-1901 Release Notes on page 5875
Hive 2.3[3]	Hive 2.3.3-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 5947
HttpFS 1.0	HttpFS-1.0-1901 (EEP 6.1.0) Release Notes on page 6061
Hue 4.2	Hue 4.2.0-1808 (EEP 6.0.0) Release Notes on page 6093
Impala 2.10.0[1]	Impala 2.10.0-1808 Release Notes on page 6144

Component	Release Notes
MapR Data Access Gateway	MapR Data Access Gateway 2.0 Release Notes on page 5745
MapR Monitoring	MapR Monitoring Components - EEP 6.0.0 Release Notes on page 6250
MapR Object Store 1.0.1	S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6264
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167

Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1901 Release Notes on page 6290
Pig 0.16	Pig 0.16.0-1901 Release Notes on page 6319
Sentry 1.7.0[4]	Sentry 1.7.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6335
Spark 2.3.2.0[1]	Spark 2.3.2.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6383
Sqoop 1.4.7	Sqoop 1.4.7-1808 (EEP 6.0.0) Release Notes on page 6458
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

[1]Support for this component is subject to your license agreement.

[2]For use only with MapR Database binary tables.

[3]MapR Hive 2.3.0 is equivalent to Apache Hive 2.3.3.

[4]MapR support for Sentry is limited to Impala users.

The EEP 6.0.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.0
- Elasticsearch 6.2.3
- Fluentd 1.1.2
- Grafana 4.6.1
- Kibana 6.2.3

last-updated: Apr 11, 2022

- OpenTSDB 2.4.0

MapR Ecosystem Pack 6.0.0 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 6.0.0.

Release Date	September 2018
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 6.0.0 Components

The EEP 6.0.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.14[1]	Drill 1.14.0-1808 (EEP 6.0.0) Release Notes on page 5775
Flume 1.8	Flume 1.8.0-1808 Release Notes on page 5826
HBase-compatible API[2]	HBase 1.1.8-1808 Release Notes on page 5876
Hive 2.3[3]	Hive 2.3.3-1808 (EEP 6.0.0) Release Notes on page 5953
HttpFS 1.0	HttpFS-1.0-1808 (EEP 6.0.0) Release Notes on page 6061
Hue 4.2	Hue 4.2.0-1808 (EEP 6.0.0) Release Notes on page 6093
Impala 2.10.0[1]	Impala 2.10.0-1808 Release Notes on page 6144
MapR Data Access Gateway	MapR Data Access Gateway 2.0 Release Notes on page 5745
MapR Monitoring	MapR Monitoring Components - EEP 6.0.0 Release Notes on page 6250
MapR Object Store 1.0.0	S3 Gateway 1.0.0-1808 (EEP 6.0.0) Release Notes on page 6264
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167

Component	Release Notes
MapR Streams Tools	Kafka Connect JDBC 4.1.0-1808 Release Notes on page 6205 Kafka Connect HDFS 4.1.0-1808 Release Notes on page 6199 Kafka Connect 4.1.0-1808 Release Notes on page 6209 Kafka REST 4.1.0-1808 Release Notes on page 6222 Kafka Streams 1.1-1808 Release Notes on page 6182 KSQL 4.1.1-1808 Release Notes on page 6191
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1808 (EEP 6.0.0) Release Notes on page 6291
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[4]	Sentry 1.7.0-1808 (EEP 6.0.0) Release Notes on page 6337
Spark 2.3.1[1]	Spark 2.3.1-1808 (EEP 6.0.0) Release Notes on page 6385
Sqoop 1.4.7	Sqoop 1.4.7-1808 (EEP 6.0.0) Release Notes on page 6458
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

[1]Support for this component is subject to your license agreement.

[2]For use only with MapR Database binary tables.

[3]MapR Hive 2.3.0 is equivalent to Apache Hive 2.3.3.

[4]MapR support for Sentry is limited to Impala users.

The EEP 6.0.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.8.0
- Elasticsearch 6.2.3
- Fluentd 1.1.2
- Grafana 4.6.1
- Kibana 6.2.3
- OpenTSDB 2.4.0

MapR Ecosystem Pack 5.0.7 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 5.0.7.

Release Date	May 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-5.0 or MEP-5.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

last-updated: Apr 11, 2022

To understand which core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

MEP 5.0.7 did not introduce any changes that would impact application backward compatibility.

EEP 5.0.7 Components

The EEP 5.0.7 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.13.0	Drill 1.13.0-2009 (EEP 5.0.5) Release Notes on page 5779
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase-compatible API[1]	HBase 1.1.8-2101 (EEP 5.0.6) Release Notes on page 5870
Hive 2.1.1	Hive 2.1.1-2009 (EEP 5.0.5) Release Notes on page 5958
HttpFS 1.0	HttpFS 1.0 - 2101 (EEP 5.0.6) Release Notes on page 6058
Hue 3.12.0	Hue 3.12.0 - 2009 (EEP 5.0.5) Release Notes on page 6098
Impala 2.10.0	Impala 2.10.0-1803 Release Notes on page 6145
Monitoring	MapR Monitoring Components - EEP 5.0.6 Release Notes on page 6252
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0 - 2009 (EEP 5.0.5) Release Notes on page 6286
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0 - 2009 (MEP 5.0.5) Release Notes on page 6335
Spark 2.2.1	Spark 2.2.1-2009 (EEP 5.0.5) Release Notes on page 6378
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

last-updated: Apr 11, 2022

Component	Release Notes
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
Streams Tools	Kafka Connect HDFS 4.0.0-1808 Release Notes on page 6199 Kafka Connect JDBC 4.0.0-1803 Release Notes on page 6206 Kafka REST 4.0.0-1803 Release Notes on page 6223
Tez 0.8.4	Tez 0.8.4-2009 (EEP 5.0.5) Release Notes on page 6498

[1]For use only with MapR Database binary tables.

[2]Support for Sentry is limited to Impala users.

The EEP 5.0.7 repository contains the following ecosystem components that are supported for internal Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 7.5.2.0
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 5.0.6 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 5.0.6.

Release Date	January 2021
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-5.0 or MEP-5.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

MEP 5.0.6 did not introduce any changes that would impact application backward compatibility.

EEP 5.0.6 Components

The EEP 5.0.6 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.13.0	Drill 1.13.0-2009 (EEP 5.0.5) Release Notes on page 5779
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase-compatible API[1]	HBase 1.1.8-2101 (EEP 5.0.6) Release Notes on page 5870
Hive 2.1.1	Hive 2.1.1-2009 (EEP 5.0.5) Release Notes on page 5958
HttpFS 1.0	HttpFS 1.0 - 2101 (EEP 5.0.6) Release Notes on page 6058
Hue 3.12.0	Hue 3.12.0 - 2009 (EEP 5.0.5) Release Notes on page 6098
Impala 2.10.0	Impala 2.10.0-1803 Release Notes on page 6145
Monitoring	MapR Monitoring Components - EEP 5.0.6 Release Notes on page 6252
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0 - 2009 (EEP 5.0.5) Release Notes on page 6286
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0 - 2009 (MEP 5.0.5) Release Notes on page 6335
Spark 2.2.1	Spark 2.2.1-2009 (EEP 5.0.5) Release Notes on page 6378
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
Streams Tools	Kafka Connect HDFS 4.0.0-1808 Release Notes on page 6199 Kafka Connect JDBC 4.0.0-1803 Release Notes on page 6206 Kafka REST 4.0.0-1803 Release Notes on page 6223
Tez 0.8.4	Tez 0.8.4-2009 (EEP 5.0.5) Release Notes on page 6498

[1]For use only with MapR Database binary tables.

[2]Support for Sentry is limited to Impala users.

last-updated: Apr 11, 2022

The EEP 5.0.6 repository contains the following ecosystem components that are supported for internal Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.6.5
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 5.0.5 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 5.0.5.

Release Date	September 2020
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-5.0 or MEP-5.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

MEP 5.0.5 did not introduce any changes that would impact application backward compatibility.

EEP 5.0.5 Components

The EEP 5.0.5 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.13.0	Drill 1.13.0-2009 (EEP 5.0.5) Release Notes on page 5779
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase-compatible API[1]	HBase 1.1.8-2009 (EEP 5.0.5) Release Notes on page 5871
Hive 2.1.1	Hive 2.1.1-2009 (EEP 5.0.5) Release Notes on page 5958
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 3.12.0	Hue 3.12.0 - 2009 (EEP 5.0.5) Release Notes on page 6098

last-updated: Apr 11, 2022

Component	Release Notes
Impala 2.10.0	Impala 2.10.0-1803 Release Notes on page 6145
Monitoring	MapR Monitoring Components - EEP 5.0.5 Release Notes on page 6253
Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
Streams Tools	Kafka Connect HDFS 4.0.0-1808 Release Notes on page 6199 Kafka Connect JDBC 4.0.0-1803 Release Notes on page 6206 Kafka REST 4.0.0-1803 Release Notes on page 6223
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0 - 2009 (EEP 5.0.5) Release Notes on page 6286
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0 - 2009 (MEP 5.0.5) Release Notes on page 6335
Spark 2.2.1	Spark 2.2.1-2009 (EEP 5.0.5) Release Notes on page 6378
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469
Tez 0.8.4	Tez 0.8.4-2009 (EEP 5.0.5) Release Notes on page 6498

[1]For use only with MapR Database binary tables.

[2]Support for Sentry is limited to Impala users.

The EEP 5.0.5 repository contains the following ecosystem components that are supported for internal Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.6.5
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 5.0.4 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 5.0.4.

Release Date	December 2019

last-updated: Apr 11, 2022

Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-5.0 or MEP-5.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

MEP 5.0.4 did not introduce any changes that would impact application backward compatibility.

EEP 5.0.4 Components

The EEP 5.0.4 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.13	Drill 1.13.0-1912 (EEP 5.0.4) Release Notes on page 5780
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase-compatible API[1]	HBase 1.1.8-1904 Release Notes on page 5874
Hive 2.1.1	Hive 2.1.1-1912 (EEP 5.0.4) Release Notes on page 5960
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 3.12	Hue 3.12.0-1912 (EEP 5.0.4) Release Notes on page 6100
Impala 2.10.0	Impala 2.10.0-1803 Release Notes on page 6145
MapR Monitoring	MapR Monitoring Components - EEP 5.0.0 Release Notes on page 6254
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Connect HDFS 4.0.0-1808 Release Notes on page 6199 Kafka Connect JDBC 4.0.0-1803 Release Notes on page 6206 Kafka REST 4.0.0-1803 Release Notes on page 6223
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265

last-updated: Apr 11, 2022

Component	Release Notes
Oozie 4.3.0	Oozie 4.3.0-1912 (EEP 5.0.4) Release Notes on page 6286
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1901 (EEP 5.0.1, EEP 4.1.3, and EEP 3.0.5) Release Notes on page 6336
Spark 2.2.1	Spark 2.2.1-1912 (EEP 5.0.4) Release Notes on page 6379
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469
Tez 0.8.4	Tez 0.8.4-1912 (EEP 5.0.4) Release Notes on page 6498

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 5.0.4 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.6.5
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 5.0.3 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 5.0.3.

Release Date	May 2019
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-5.0 or MEP-5.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

MEP 5.0.3 did not introduce any changes that would impact application backward compatibility.

EEP 5.0.3 Components

The EEP 5.0.3 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.13	Drill 1.13.0-1901 (EEP 5.0.2) Release Notes on page 5782
Flume 1.8	Flume 1.8.0-1904 Release Notes on page 5825
HBase-compatible API[1]	HBase 1.1.8-1904 Release Notes on page 5874
Hive 2.1.1	Hive 2.1.1-1904 (EEP 5.0.3 and EEP 4.1.4) Release Notes on page 5962
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 3.12	Hue 3.12.0-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 6101
Impala 2.10.0	Impala 2.10.0-1803 Release Notes on page 6145
MapR Monitoring	MapR Monitoring Components - EEP 5.0.0 Release Notes on page 6254
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Connect HDFS 4.0.0-1808 Release Notes on page 6199 Kafka Connect JDBC 4.0.0-1803 Release Notes on page 6206 Kafka REST 4.0.0-1803 Release Notes on page 6223
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1904 (EEP 5.0.3) Release Notes on page 6288
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1901 (EEP 5.0.1, EEP 4.1.3, and EEP 3.0.5) Release Notes on page 6336
Spark 2.2.1	Spark 2.2.1-1904 (EEP 5.0.3) Release Notes on page 6381
Sqoop 1.4.6	Sqoop 1.4.6-1904 (EEP 5.0.3 and EEP 4.1.4) Release Notes on page 6459
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 5.0.3 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2

last-updated: Apr 11, 2022

- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.6.5
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 5.0.2 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 5.0.2.

Release Date	February 2019
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 5.0.2 Components

The EEP 5.0.2 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.13	Drill 1.13.0-1901 (EEP 5.0.2) Release Notes on page 5782
Flume 1.8	Flume 1.8.0-1803 Release Notes on page 5827
HBase-compatible API[1]	HBase 1.1.8-1901 Release Notes on page 5875
Hive 2.1	Hive 2.1.1-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 5964
HttpFS 1.0	HttpFS-1.0-1901 (EEP 6.1.0) Release Notes on page 6061
Hue 3.12	Hue 3.12.0-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 6101
Impala 2.10.0	Impala 2.10.0-1803 Release Notes on page 6145
MapR Monitoring	MapR Monitoring Components - EEP 5.0.0 Release Notes on page 6254

Component	Release Notes
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Connect HDFS 4.0.0-1808 Release Notes on page 6199 Kafka Connect JDBC 4.0.0-1803 Release Notes on page 6206 Kafka REST 4.0.0-1803 Release Notes on page 6223
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1901 Release Notes on page 6290

Sentry 1.7.0[2]	Sentry 1.7.0-1901 (EEP 5.0.1, EEP 4.1.3, and EEP 3.0.5) Release Notes on page 6336
Spark 2.2.1	Spark 2.2.1-1901 (EEP 5.0.2) Release Notes on page 6389
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 5.0.2 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.6.1
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 5.0.1 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 5.0.1.

Release Date	September 2018
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

last-updated: Apr 11, 2022

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 5.0.1 Components

The EEP 5.0.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.13	Drill 1.13.0-1808 Release Notes on page 5783
Flume 1.8	Flume 1.8.0-1803 Release Notes on page 5827
HBase-compatible API[1]	HBase 1.1.8-1808 Release Notes on page 5876
Hive 2.1	Hive 2.1.1-1808 (EEP 4.1.2 and EEP 5.0.1) Release Notes on page 5971
HttpFS 1.0	HttpFS-1.0-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 6063
Hue 3.12	Hue 3.12.0-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6102
Impala 2.10.0	Impala 2.10.0-1803 Release Notes on page 6145
MapR Monitoring	MapR Monitoring Components - EEP 5.0.0 Release Notes on page 6254
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 and MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 and MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167
MapR Streams Tools	Kafka Connect HDFS 4.0.0-1808 Release Notes on page 6199 and Kafka Connect JDBC 4.0.0-1803 Release Notes on page 6206 and Kafka REST 4.0.0-1803 Release Notes on page 6223
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6292
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1803 Release Notes on page 6338
Spark 2.2.1	Spark 2.2.1-1808 (EEP 5.0.1) Release Notes on page 6391
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469

[1]For use only with MapR Database binary tables.

last-updated: Apr 11, 2022

[2]MapR support for Sentry is limited to Impala users.

The EEP 5.0.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.6.1
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 5.0.0 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 5.0.0.

Release Date	March 2018
Repository Location	`https://package.mapr.hpe.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 5.0.0 Components

The EEP 5.0.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.13	Drill 1.13-1803 Release Notes on page 5784
Flume 1.8	Flume 1.8.0-1803 Release Notes on page 5827
HBase-compatible API[1]	HBase 1.1.8-1710 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 5978
HttpFS 1.0	HttpFS-1.0-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 6063
Hue 3.12	Hue 3.12.0-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 6104
Impala 2.10.0	Impala 2.10.0-1803 Release Notes on page 6145
MapR Monitoring	MapR Monitoring Components - EEP 5.0.0 Release Notes on page 6254

Component	Release Notes
MapR Streams Tools	Kafka Connect HDFS 4.0.0-1803 Release Notes on page 6200 and Kafka Connect JDBC 4.0.0-1803 Release Notes on page 6206 and Kafka REST 4.0.0-1803 Release Notes on page 6223
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1803 (EEP 5.0.0) Release Notes on page 6293
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1803 Release Notes on page 6338
Spark 2.2.1	Spark 2.2.1-1803 (EEP 5.0.0) Release Notes on page 6397
Sqoop 1.4.6	Sqoop 1.4.6-1803 Release Notes on page 6461
Sqoop2 1.99.7	Sqoop2 1.99.7-1803 Release Notes on page 6469
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes on page 6166 and MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes on page 6167 and MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes on page 6167

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 5.0.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.6.1
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 4.1.4 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 4.1.4.

Release Date	May 2019
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-4.0 or MEP-4.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on the version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release,

but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

Backward Compatibility

MEP 4.1.4 did not introduce any changes that would impact application backward compatibility.

EEP 4.1.4 Components

The EEP 4.1.4 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.12	Drill 1.12.0-1901 (EEP 4.1.3) Release Notes on page 5788
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase-compatible API[1]	HBase 1.1.8-1904 Release Notes on page 5874
Hive 2.1.1	Hive 2.1.1-1904 (EEP 5.0.3 and EEP 4.1.4) Release Notes on page 5962
HttpFS 1.0	HttpFS-1.0-1904 Release Notes on page 6060
Hue 3.12	Hue 3.12.0-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 6101
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
MapR Monitoring	MapR Monitoring Components - EEP 4.1.0 Release Notes on page 6255
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169
MapR Streams Tools	Kafka Connect 2.0.1-1801 Release Notes on page 6210 Kafka REST 2.0.1-1803 Release Notes on page 6224
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1904 (EEP 4.1.4) Release Notes on page 6289
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1901 (EEP 5.0.1, EEP 4.1.3, and EEP 3.0.5) Release Notes on page 6336
Spark 2.1.1	Spark 2.1.0-1904 (EEP 4.1.4) Release Notes on page 6393
Sqoop 1.4.6	Sqoop 1.4.6-1904 (EEP 5.0.3 and EEP 4.1.4) Release Notes on page 6459
Sqoop2 1.99.7	Sqoop2 1.99.7-1710 Release Notes on page 6470

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 4.1.4 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

last-updated: Apr 11, 2022

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.6.5
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 4.1.3 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 4.1.3.

Release Date	February 2019
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 4.1.3 Components

The EEP 4.1.3 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.12	Drill 1.12.0-1901 (EEP 4.1.3) Release Notes on page 5788
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase-compatible API[1]	HBase 1.1.8-1901 Release Notes on page 5875
Hive 2.1	Hive 2.1.1-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 5964
HttpFS 1.0	HttpFS-1.0-1901 (EEP 6.1.0) Release Notes on page 6061
Hue 3.12	Hue 3.12.0-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 6101
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
MapR Monitoring	MapR Monitoring Components - EEP 4.1.0 Release Notes on page 6255

Component	Release Notes
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169
MapR Streams Tools	Kafka Connect 2.0.1-1801 Release Notes on page 6210 Kafka REST 2.0.1-1803 Release Notes on page 6224
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1901 Release Notes on page 6290
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1901 (EEP 5.0.1, EEP 4.1.3, and EEP 3.0.5) Release Notes on page 6336
Spark 2.1	Spark 2.1.0-1901 (EEP 4.1.3 and EEP 3.0.5) Release Notes on page 6394
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1710 Release Notes on page 6470

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 4.1.3 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.4.2
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 4.1.2 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 4.1.2.

Release Date	September 2018
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but

last-updated: Apr 11, 2022

last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 4.1.2 Components

The EEP 4.1.2 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.12	Drill 1.12.0-1808 Release Notes on page 5789
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase-compatible API[1]	HBase 1.1.8-1808 Release Notes on page 5876
Hive 2.1	Hive 2.1.1-1808 (EEP 4.1.2 and EEP 5.0.1) Release Notes on page 5971
HttpFS 1.0	HttpFS-1.0-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 6063
Hue 3.12	Hue 3.12.0-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6102
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
MapR Monitoring	MapR Monitoring Components - EEP 4.1.0 Release Notes on page 6255
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169
MapR Streams Tools	Kafka Connect 2.0.1-1801 Release Notes on page 6210 and Kafka REST 2.0.1-1803 Release Notes on page 6224
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6292
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1803 Release Notes on page 6338
Spark 2.1	Spark 2.1.0-1808 (EEP 3.0.4 and EEP 4.1.2) Release Notes on page 6395
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1710 Release Notes on page 6470

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 4.1.2 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20

- Grafana 4.4.2
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 4.1.1 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 4.1.1.

Release Date	March 2018
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 4.1.1 Components

The EEP 4.1.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.12	Drill 1.12.0-1801 Release Notes on page 5790
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase-compatible API[1]	HBase 1.1.8-1710 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 5978
HttpFS 1.0	HttpFS-1.0-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 6063
Hue 3.12	Hue 3.12.0-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 6104
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
MapR Monitoring	MapR Monitoring Components - EEP 4.1.0 Release Notes on page 6255
MapR Streams Tools	Kafka Connect 2.0.1-1801 Release Notes on page 6210 and Kafka REST 2.0.1-1803 Release Notes on page 6224
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1803 (EEP 4.1.1) Release Notes on page 6294
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1803 Release Notes on page 6338

last-updated: Apr 11, 2022

Component	Release Notes
Spark 2.1	Spark 2.1.0-1803 (EEP 4.1.1) Release Notes on page 6400
Sqoop 1.4.6	Sqoop 1.4.6-1803 Release Notes on page 6461
Sqoop2 1.99.7	Sqoop2 1.99.7-1710 Release Notes on page 6470
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 4.1.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.4.2
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 4.1.0 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 4.1.0.

Release Date	February 2018
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 4.1.0 Components

The EEP 4.1.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.12	Drill 1.12.0-1801 Release Notes on page 5790
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828

Component	Release Notes
HBase-compatible API[1]	HBase 1.1.8-1710 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1710 Release Notes on page 5984
HttpFS 1.0	HttpFS-1.0-1710 Release Notes on page 6065
Hue 3.12	Hue 3.12.0-1710 Release Notes on page 6106
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
MapR Monitoring	MapR Monitoring Components - EEP 4.1.0 Release Notes on page 6255
MapR Streams Tools	Kafka Connect 2.0.1-1801 Release Notes on page 6210 and Kafka REST 2.0.1-1710 Release Notes on page 6225
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1801 Release Notes on page 6296
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1703 Release Notes on page 6339
Spark 2.1	Spark 2.1.0-1801 Release Notes on page 6403
Sqoop 1.4.6	Sqoop 1.4.6-1710 Release Notes on page 6462
Sqoop2 1.99.7	Sqoop2 1.99.7-1710 Release Notes on page 6470
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 4.1.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1
- Fluentd 0.14.20
- Grafana 4.4.2
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 4.0.0 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 4.0.0.

Release Date	November 2017
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

last-updated: Apr 11, 2022

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 4.0.0 Components

The EEP 4.0.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.11	Drill 1.11.0-1710 Release Notes on page 5794
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase-compatible API[1]	HBase 1.1.8-1710 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1710 Release Notes on page 5984
HttpFS 1.0	HttpFS-1.0-1710 Release Notes on page 6065
Hue 3.12	Hue 3.12.0-1710 Release Notes on page 6106
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
MapR Monitoring	MapR Monitoring Components - EEP 4.0 Release Notes on page 6256
MapR Streams Tools	Kafka Connect HDFS 2.0.1-1710 Release Notes on page 6201 and Kafka REST 2.0.1-1710 Release Notes on page 6225
Myriad 0.2	Myriad 0.2-1710 Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1710 Release Notes on page 6297
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[2]	Sentry 1.7.0-1703 Release Notes on page 6339
Spark 2.1	Spark 2.1.0-1710 Release Notes on page 6405
Sqoop 1.4.6	Sqoop 1.4.6-1710 Release Notes on page 6462
Sqoop2 1.99.7	Sqoop2 1.99.7-1710 Release Notes on page 6470
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169

[1]For use only with MapR Database binary tables.

[2]MapR support for Sentry is limited to Impala users.

The EEP 4.0.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.2
- Elasticsearch 5.4.1

- Fluentd 0.14.20
- Grafana 4.4.2
- Kibana 5.4.1
- OpenTSDB 2.4.0

MapR Ecosystem Pack 3.0.5 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 3.0.5.

Release Date	February 2019
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 3.0.5 Components

The EEP 3.0.5 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.10	Drill 1.10.0-1808 Release Notes on page 5799
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1901 (EEP 3.0.5) Release Notes on page 5968
HttpFS 1.0	HttpFS-1.0-1803 (EEP 3.0.3) Release Notes on page 6064
Hue 3.12	Hue 3.12.0-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6102
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
Mahout 0.12.0[2]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Monitoring	MapR Monitoring Components - EEP 3.x.x Release Notes on page 6257
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169

last-updated: Apr 11, 2022

Component	Release Notes
MapR Streams Tools	Kafka Connect 2.0.1-1707 Release Notes on page 6211 Kafka REST 2.0.1-1707 Release Notes on page 6226
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1901 Release Notes on page 6290
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[3]	Sentry 1.7.0-1901 (EEP 5.0.1, EEP 4.1.3, and EEP 3.0.5) Release Notes on page 6336
Spark 2.1	Spark 2.1.0-1901 (EEP 4.1.3 and EEP 3.0.5) Release Notes on page 6394
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[4]	Storm 0.10.0-1703 Release Notes on page 6475

[2]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[3]MapR support for Sentry is limited to Impala users.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 3.0.5 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 3.0.4 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 3.0.4.

Release Date	September 2017
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 3.0.4 Components

The EEP 3.0.4 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1808 Release Notes on page 5739
Drill 1.10	Drill 1.10.0-1808 Release Notes on page 5799
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1808 (EEP 3.0.4) Release Notes on page 5975
HttpFS 1.0	HttpFS-1.0-1803 (EEP 3.0.3) Release Notes on page 6064
Hue 3.12	Hue 3.12.0-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6102
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
Mahout 0.12.0[2]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Monitoring	MapR Monitoring Components - EEP 3.x.x Release Notes on page 6257
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169
MapR Streams Tools	Kafka Connect 2.0.1-1707 Release Notes on page 6211 and Kafka REST 2.0.1-1707 Release Notes on page 6226
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6292
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[3]	Sentry 1.7.0-1803 Release Notes on page 6338
Spark 2.1	Spark 2.1.0-1808 (EEP 3.0.4 and EEP 4.1.2) Release Notes on page 6395
Sqoop 1.4.6	Sqoop 1.4.6-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes on page 6460
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[4]	Storm 0.10.0-1703 Release Notes on page 6475

[2]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[3]MapR support for Sentry is limited to Impala users.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 3.0.4 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3

- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 3.0.3 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 3.0.3.

Release Date	March 2017
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 3.0.3 Components

The EEP 3.0.3 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.10	Drill 1.10.0-1707 Release Notes on page 5801
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1803 (EEP 3.0.3) Release Notes on page 5982
HttpFS 1.0	HttpFS-1.0-1803 (EEP 3.0.3) Release Notes on page 6064
Hue 3.12	Hue 3.12.0-1803 (EEP 3.0.3) Release Notes on page 6105
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
Mahout 0.12.0[2]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Monitoring	MapR Monitoring Components - EEP 3.x.x Release Notes on page 6257
MapR Streams Tools	Kafka Connect 2.0.1-1707 Release Notes on page 6211 and Kafka REST 2.0.1-1707 Release Notes on page 6226
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1803 (EEP 3.0.3) Release Notes on page 6295

Component	Release Notes
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[3]	Sentry 1.7.0-1803 Release Notes on page 6338
Spark 2.1	Spark 2.1.0-1803 (EEP 3.0.3) Release Notes on page 6401
Sqoop 1.4.6	Sqoop 1.4.6-1803 Release Notes on page 6461
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[4]	Storm 0.10.0-1703 Release Notes on page 6475
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169

[2]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[3]MapR support for Sentry is limited to Impala users.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 3.0.3 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 3.0.2 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 3.0.2.

Release Date	November 2017
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 3.0.2 Components

The EEP 3.0.2 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.10	Drill 1.10.0-1707 Release Notes on page 5801
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1710 Release Notes on page 5984
HttpFS 1.0	HttpFS-1.0-1710 Release Notes on page 6065
Hue 3.12	Hue 3.12.0-1710 Release Notes on page 6106
Impala 2.7.0	Impala 2.7.0-1710 Release Notes on page 6146
Mahout 0.12.0[2]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Monitoring	MapR Monitoring Components - EEP 3.x.x Release Notes on page 6257
MapR Streams Tools	Kafka Connect 2.0.1-1707 Release Notes on page 6211 and Kafka REST 2.0.1-1707 Release Notes on page 6226
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1710 Release Notes on page 6297
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[3]	Sentry 1.7.0-1703 Release Notes on page 6339
Spark 2.1	Spark 2.1.0-1710 Release Notes on page 6405
Sqoop 1.4.6	Sqoop 1.4.6-1710 Release Notes on page 6462
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[4]	Storm 0.10.0-1703 Release Notes on page 6475
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169

[2]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[3]MapR support for Sentry is limited to Impala users.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 3.0.2 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

last-updated: Apr 11, 2022

MapR Ecosystem Pack 3.0.1 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 3.0.1.

Release Date	August 2017
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 3.0.1 Components

The EEP 3.0.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.10	Drill 1.10.0-1707 Release Notes on page 5801
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 2.1	Hive 2.1.1-1707 Release Notes on page 5987
HttpFS 1.0	HttpFS 1.0-1703 Release Notes on page 6066
Hue 3.12	Hue 3.12.0-1707 Release Notes on page 6109
Impala 2.7.0	Impala 2.7.0-1707 Release Notes on page 6147
Mahout 0.12.0[2]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Monitoring	MapR Monitoring Components - EEP 3.x.x Release Notes on page 6257
MapR Streams Tools	Kafka Connect 2.0.1-1707 Release Notes on page 6211 and Kafka REST 2.0.1-1707 Release Notes on page 6226
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1707 Release Notes on page 6298
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[3]	Sentry 1.7.0-1703 Release Notes on page 6339
Spark 2.1	Spark 2.1.0-1707 Release Notes on page 6407
Sqoop 1.4.6	Sqoop 1.4.6-1707 Release Notes on page 6464
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[4]	Storm 0.10.0-1703 Release Notes on page 6475

last-updated: Apr 11, 2022

Component	Release Notes
MapR Streams Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes on page 6169

[2]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[3]MapR support for Sentry is limited to Impala users.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 3.0.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 3.0 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 3.0.

Release Date	April 2017
Repository Location	https://package.mapr.com/releases/MEP/[1]

[1]The MEP-<version> directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). The three-digit EEP directory contains a fixed EEP version with patches. Use this EEP version if you prefer to do manual installs and do not require patch updates.

The two-digit EEP directory contains the latest EEP and patches and is continuously updated. The MapR installer uses the two-digit EEP directory to make new patches available automatically without the need for system reconfiguration.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.3.3-1808, 2.3.3 refers to the Hive version number, and 1808 typically indicates an August 2018 release, but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 3.0 Components

The EEP 3.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.10	Drill 1.10.0-1703 Release Notes on page 5802

Component	Release Notes
Flume 1.7	Flume 1.7.0-1703 Release Notes on page 5828
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 2.1	Hive 2.1-1703 Release Notes on page 5992
HttpFS 1.0	HttpFS 1.0-1703 Release Notes on page 6066
Hue 3.12	Hue 3.12.0-1703 Release Notes on page 6111
Impala 2.7.0	Impala 2.7.0 - 1703 Release Notes on page 6148
Mahout 0.12.0[2]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Monitoring	MapR Monitoring Components - EEP 3.x.x Release Notes on page 6257
MapR Event Store For Apache Kafka Tools	Kafka Connect 2.0.1-1703 (EEP 3.x) Release Notes on page 6211 and Kafka REST 2.0.1-1703 Release Notes on page 6227
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.3.0	Oozie 4.3.0-1703 Release Notes on page 6298
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.7.0[3]	Sentry 1.7.0-1703 Release Notes on page 6339
Spark 2.1	Spark 2.1.0-1703 Release Notes on page 6412
Sqoop 1.4.6	Sqoop 1.4.6-1703 Release Notes on page 6465
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[4]	Storm 0.10.0-1703 Release Notes on page 6475
MapR Event Store For Apache Kafka Clients	MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes on page 6168 and MapR Event Store For Apache Kafka Python Client 0.9.2 - 1703 Release Notes on page 6169

[2]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[3]MapR support for Sentry is limited to Impala users.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 3.0 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 2.0.3 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 2.0.3.

Release Date	November 2017

last-updated: Apr 11, 2022

Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 2.0.3 Components

The EEP 2.0.3 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.9	Drill 1.9.0-1703 Release Notes on page 5803
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 1.2.1[2]	Hive 1.2.1-1710 Release Notes on page 5995
HttpFS 1.0	HttpFS 1.0-1703 Release Notes on page 6066
Hue 3.10	Hue 3.10.0-1707 Release Notes on page 6115
Impala 2.5.0	Impala 2.5.0-1703 Release Notes on page 6149
Mahout 0.12.0[3]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Streams Tools	Kafka Connect 2.0.1-1707 Release Notes on page 6211 and Kafka REST 2.0.1-1707 Release Notes on page 6226
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.2.0	Oozie 4.2.0-1710 (EEP 2.x) Release Notes on page 6299
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.6.0	Sentry 1.6.0-1707 Release Notes on page 6340
Spark 2.0.1[4]	Spark 2.0.1-1707 Release Notes on page 6416
Sqoop 1.4.6	Sqoop 1.4.6-1710 Release Notes on page 6462
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[5]	Storm 0.10.0-1611 Release Notes on page 6476

[2]Hive 1.2.1 includes backports of specific patches contained in Apache Hive 1.2.2. For details see the Hive 1.2.1-1703 Release Notes on page 5999.

[3]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[4]Spark 2.0.1-1703 includes backports of all the patches contained in Apache Spark 2.0.2.

[5]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 2.0.2 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 2.0.2 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 2.0.2.

Release Date	August 2017
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 2.0.2 Components

The EEP 2.0.2 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.9	Drill 1.9.0-1703 Release Notes on page 5803
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 1.2.1[2]	Hive 1.2.1-1707 Release Notes on page 5996
HttpFS 1.0	HttpFS 1.0-1703 Release Notes on page 6066
Hue 3.10	Hue 3.10.0-1707 Release Notes on page 6115
Impala 2.5.0	Impala 2.5.0-1703 Release Notes on page 6149
Mahout 0.12.0[3]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Streams Tools	Kafka Connect 2.0.1-1707 Release Notes on page 6211 and Kafka REST 2.0.1-1707 Release Notes on page 6226
Myriad 0.1	Myriad Release Notes on page 6265

Component	Release Notes
Oozie 4.2.0	Oozie 4.2.0-1707 (EEP 2.x) Release Notes on page 6301
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.6.0	Sentry 1.6.0-1707 Release Notes on page 6340
Spark 2.0.1[4]	Spark 2.0.1-1707 Release Notes on page 6416
Sqoop 1.4.6	Sqoop 1.4.6-1707 Release Notes on page 6464
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[5]	Storm 0.10.0-1611 Release Notes on page 6476

[2]Hive 1.2.1 includes backports of specific patches contained in Apache Hive 1.2.2. For details see the Hive 1.2.1-1703 Release Notes on page 5999.

[3]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[4]Spark 2.0.1-1703 includes backports of all the patches contained in Apache Spark 2.0.2.

[5]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 2.0.2 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 2.0.1 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 2.0.1.

Release Date	April 2017
Repository Location	https://package.mapr.com/releases/MEP/[1]

[1]The MEP-<version> directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). The three-digit EEP directory contains a fixed EEP version with patches. Use this EEP version if you prefer to do manual installs and do not require patch updates.

The two-digit EEP directory contains the latest EEP and patches and is continuously updated. The MapR installer uses the two-digit EEP directory to make new patches available automatically without the need for system reconfiguration.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 2.0.1 Components

The EEP 2.0.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.9	Drill 1.9.0-1703 Release Notes on page 5803
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 1.2.1[2]	Hive 1.2.1-1703 Release Notes on page 5999
HttpFS 1.0	HttpFS 1.0-1703 Release Notes on page 6066
Hue 3.10	Hue 3.10.0-1703 Release Notes on page 6116
Impala 2.5.0	Impala 2.5.0-1703 Release Notes on page 6149
Mahout 0.12.0[3]	Mahout 0.12.0-1611 Release Notes on page 6161
MapR Event Store For Apache Kafka Tools	Kafka Connect 2.0.1-1703 (EEP 2.x) Release Notes on page 6212 and Kafka REST 2.0.1-1703 Release Notes on page 6227
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.2.0	Oozie 4.2.0-1703 (EEP 2.x) Release Notes on page 6302
Pig 0.16	Pig 0.16.0-1703 Release Notes on page 6320
Sentry 1.6.0	Sentry 1.6.0-1606 Release Notes on page 6341
Spark 2.0.1[4]	Spark 2.0.1-1703 Release Notes on page 6419
Sqoop 1.4.6	Sqoop 1.4.6-1703 Release Notes on page 6465
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes on page 6471
Storm 0.10.0[5]	Storm 0.10.0-1611 Release Notes on page 6476

[2]Hive 1.2.1 includes backports of specific patches contained in Apache Hive 1.2.2. For details see the Hive 1.2.1-1703 Release Notes on page 5999.

[3]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[4]Spark 2.0.1-1703 includes backports of all the patches contained in Apache Spark 2.0.2.

[5]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 2.0.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.5.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 2.0 Release Notes

This topic contains information about the components included with the MapR Ecosystem Pack 2.0.

last-updated: Apr 11, 2022

Release Date	December 8, 2016
Repository Location	https://package.mapr.com/releases/MEP/[1]

[1]The MEP-<version> directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). The three-digit EEP directory contains a fixed EEP version with patches. Use this EEP version if you prefer to do manual installs and do not require patch updates.

The two-digit EEP directory contains the latest EEP and patches and is continuously updated. The MapR installer uses the two-digit EEP directory to make new patches available automatically without the need for system reconfiguration.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 2.0 Components

The EEP 2.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.9	Drill 1.9 Release Notes
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1.1	HBase 1.1-1602 Release Notes on page 5878
Hive 1.2.1	Hive 1.2.1-1611 Release Notes
HttpFS 1.0	HttpFS 1.0-1609 Release Notes
Hue 3.10	Hue 3.10.0-1611 Release Notes
Impala 2.5.0	Impala 2.5.0 - 1606 Release Notes on page 6149
Mahout 0.12.0[2]	Mahout 0.12.0-1611 Release Notes
MapR Event Store For Apache Kafka Tools	Kafka REST 2.0.1-1611 Release Notes on page 6227 Kafka Connect 2.0.1-1611 Release Notes on page 6212
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.2.0	Oozie 4.2.0-1611 (EEP 2.x) Release Notes
Pig 0.16	Pig 0.16.0-1611 Release Notes
Sentry 1.6.0	Sentry 1.6.0-1606 Release Notes on page 6341
Spark 2.0.1	Spark 2.0.1-1611 Release Notes
Sqoop 1.4.6	Sqoop 1.4.6-1611 Release Notes
Sqoop2 1.99.7	Sqoop2 1.99.7-1611 Release Notes
Storm 0.10.0[3]	Storm 0.10.0-1611 Release Notes

[2]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[3]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 2.x repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.5.1
- Elasticsearch 2.3.3
- Fluentd 0.14.60
- Grafana 3.1.1
- Kibana 4.5.1
- OpenTSDB 2.2.1

MapR Ecosystem Pack 1.1.4 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 1.1.4.

Release Date	November 2017
Repository Location	`https://package.mapr.com/releases/MEP/`[1]

[1]The `MEP-<version>` directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 1.1.4 Components

The EEP 1.1.3 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.8	Drill 1.8.0-1703 Release Notes on page 5806
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 1.2.1[2]	Hive 1.2.1-1703 Release Notes on page 5999
HttpFS 1.0	HttpFS 1.0-1703 Release Notes on page 6066
Hue 3.9	Hue 3.9.0-1707 Release Notes on page 6118
Impala 2.5.0	Impala 2.5.0-1703 Release Notes on page 6149
Mahout 0.12.0[3]	Mahout 0.12.0-1609 Release Notes on page 6161
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.2.0	Oozie 4.2.0-1710 (EEP 1.x) Release Notes on page 6300
Pig 0.15	Pig 0.15.0-1703 Release Notes on page 6322

Component	Release Notes
Sentry 1.6.0	Sentry 1.6.0-1707 Release Notes on page 6340
Spark 1.6.1	Spark 1.6.1-1707 Release Notes on page 6418
Sqoop 1.4.6	Sqoop 1.4.6-1710 Release Notes on page 6462
Sqoop2 1.99.6	Sqoop2 1.99.6-1607 Release Notes on page 6472
Storm 0.10.0[4]	Storm 0.10.0-1611 Release Notes on page 6476

[2]Hive 1.2.1 includes backports of specific patches contained in Apache Hive 1.2.2. For details see the Hive 1.2.1-1703 Release Notes on page 5999.

[3]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 1.1.3 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 1.1.3 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 1.1.3.

Release Date	August 2017
Repository Location	https://package.mapr.com/releases/MEP/[1]

[1]The MEP-<version> directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). See Understanding Two-Digit and Three-Digit EEPs on page 5450.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 1.1.3 Components

The EEP 1.1.3 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.8	Drill 1.8.0-1703 Release Notes on page 5806

Component	Release Notes
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 1.2.1[2]	Hive 1.2.1-1707 Release Notes on page 5996
HttpFS 1.0	HttpFS 1.0-1703 Release Notes on page 6066
Hue 3.9	Hue 3.9.0-1707 Release Notes on page 6118
Impala 2.5.0	Impala 2.5.0-1703 Release Notes on page 6149
Mahout 0.12.0[3]	Mahout 0.12.0-1609 Release Notes on page 6161
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.2.0	Oozie 4.2.0-1707 (EEP 1.x) Release Notes on page 6301
Pig 0.15	Pig 0.15.0-1703 Release Notes on page 6322
Sentry 1.6.0	Sentry 1.6.0-1707 Release Notes on page 6340
Spark 1.6.1	Spark 1.6.1-1707 Release Notes on page 6418
Sqoop 1.4.6	Sqoop 1.4.6-1707 Release Notes on page 6464
Sqoop2 1.99.6	Sqoop2 1.99.6-1607 Release Notes on page 6472
Storm 0.10.0[4]	Storm 0.10.0-1611 Release Notes on page 6476

[2]Hive 1.2.1 includes backports of specific patches contained in Apache Hive 1.2.2. For details see the Hive 1.2.1-1703 Release Notes on page 5999.

[3]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 1.1.3 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.7.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 1.1.2 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 1.1.2.

Release Date	April 2017
Repository Location	https://package.mapr.com/releases/MEP/[1]

[1]The MEP-<version> directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-2.0 or MEP-2.0.0). The three-digit EEP directory contains a fixed EEP version with patches. Use this EEP version if you prefer to do manual installs and do not require patch updates.

last-updated: Apr 11, 2022

The two-digit EEP directory contains the latest EEP and patches and is continuously updated. The MapR installer uses the two-digit EEP directory to make new patches available automatically without the need for system reconfiguration.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 1.1.2 Components

The EEP 1.1.2 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.8	Drill 1.8.0-1703 Release Notes on page 5806
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1.8	HBase 1.1.8-1703 Release Notes on page 5877
Hive 1.2.1[2]	Hive 1.2.1-1703 Release Notes on page 5999
HttpFS 1.0	HttpFS 1.0-1703 Release Notes on page 6066
Hue 3.9	Hue 3.9.0-1703 Release Notes on page 6119
Impala 2.5.0	Impala 2.5.0-1703 Release Notes on page 6149
Mahout 0.12.0[3]	Mahout 0.12.0-1609 Release Notes on page 6161
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.2.0	Oozie 4.2.0-1703 (EEP 1.x) Release Notes on page 6303
Pig 0.15	Pig 0.15.0-1703 Release Notes on page 6322
Sentry 1.6.0	Sentry 1.6.0-1606 Release Notes on page 6341
Spark 1.6.1	Spark 1.6.1-1703 Release Notes on page 6427
Sqoop 1.4.6	Sqoop 1.4.6-1703 Release Notes on page 6465
Sqoop2 1.99.6	Sqoop2 1.99.6-1607 Release Notes on page 6472
Storm 0.10.0[4]	Storm 0.10.0-1611 Release Notes on page 6476

[2]Hive 1.2.1 includes backports of specific patches contained in Apache Hive 1.2.2. For details see the Hive 1.2.1-1703 Release Notes on page 5999.

[3]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[4]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 1.1.2 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.5.1
- Elasticsearch 2.3.3

- Fluentd 0.14.00
- Grafana 4.1.2
- Kibana 4.5.4
- OpenTSDB 2.3.0

MapR Ecosystem Pack 1.1.1 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 1.1.1.

Release Date	December 9, 2016
Repository Location	https://package.mapr.com/releases/MEP/[1]

[1]The MEP-<version> directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-1.1 or MEP-1.1.0). The three-digit EEP directory contains a fixed EEP version with patches. Use this EEP version if you prefer to do manual installs and do not require patch updates.

The two-digit EEP directory contains the latest EEP and patches and is continuously updated. The MapR installer uses the two-digit EEP directory to make new patches available automatically without the need for system reconfiguration.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 1.1.1 Components

The EEP 1.1.1 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740
Drill 1.8	Drill 1.8.0-1609 Release Notes
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1	HBase 1.1-1602 Release Notes on page 5878
Hive 1.2	Hive 1.2.1-1611 Release Notes on page 6003
HttpFS 1.0	HttpFS 1.0-1609 Release Notes
Hue 3.9.0	Hue 3.9.0-1609 Release Notes
Impala 2.5.0	Impala 2.5.0 - 1606 Release Notes on page 6149
Mahout 0.12.0[2]	Mahout 0.12.0-1611 Release Notes on page 6161
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.2.0	Oozie 4.2.0-1608 Release Notes on page 6305 and Oozie 4.2.0-1609 Release Notes and Oozie 4.2.0-1611 Release Notes
Pig 0.15	Pig 0.15.0-1611 Release Notes on page 6322
Sentry 1.6.0	Sentry 1.6.0-1606 Release Notes on page 6341

last-updated: Apr 11, 2022

Component	Release Notes
Spark 1.6.1	Spark 1.6.1-1608 Release Notes on page 6434 and Spark 1.6.1-1609 Release Notes and Spark 1.6.1-1611 Release Notes
Sqoop 1.4.6	Sqoop 1.4.6-1611 Release Notes on page 6465
Sqoop2 1.99.6	Sqoop2 1.99.6-1607 Release Notes on page 6472
Storm 0.10.0[3]	Storm 0.10.0-1611 Release Notes on page 6476

[2]Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

[3]Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

The EEP 1.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.5.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 3.1.1
- Kibana 4.5.1
- OpenTSDB 2.2.1

MapR Ecosystem Pack 1.1.0 Release Notes
This topic contains information about the components included with the MapR Ecosystem Pack 1.1.0.

Release Date	September 30, 2016
Repository Location	https://package.mapr.com/releases/MEP/[1]

[1]The MEP-<version> directory can be represented by a 2-digit number or a 3-digit number (for example, MEP-1.1 or MEP-1.1.0). The three-digit EEP directory contains a fixed EEP version with patches. Use this EEP version if you prefer to do manual installs and do not require patch updates.

The two-digit EEP directory contains the latest EEP and patches and is continuously updated. The MapR installer uses the two-digit EEP directory to make new patches available automatically without the need for system reconfiguration.

To understand which MapR Core versions can use this MEP, see EEP Support and Lifecycle Status on page 5531.

Release Note Naming Convention

The release note naming convention is based on version number and release date. For Hive 2.1.1-1803, 2.1.1 refers to the Hive version number and 1803 typically indicates a March 2018 release but last-minute changes in the release date can result in a slight mismatch between the naming convention and the actual release.

EEP 1.1.0 Components

The EEP 1.1.0 repository contains the following ecosystem components that are fully supported:

Component	Release Notes
AsyncHBase 1.7	AsyncHBase 1.7.0-1607 Release Notes on page 5740

Component	Release Notes
Drill 1.8	Drill 1.8.0-1609 Release Notes
Flume 1.6	Flume 1.6.0-1602 Release Notes on page 5829
HBase 1.1	HBase 1.1-1602 Release Notes on page 5878
Hive 1.2	Hive 1.2.1-1608 Release Notes on page 6005 and Hive 1.2.1-1609 Release Notes on page 6004
HttpFS 1.0	HttpFS 1.0-1609 Release Notes
Hue 3.9.0	Hue 3.9.0-1609 Release Notes
Impala 2.5.0	Impala 2.5.0 - 1606 Release Notes on page 6149
Mahout 0.12.0	Mahout 0.12.0-1609 Release Notes on page 6161
Myriad 0.1	Myriad Release Notes on page 6265
Oozie 4.2.0	Oozie 4.2.0-1608 Release Notes on page 6305 and Oozie 4.2.0-1609 Release Notes and Oozie 4.2.0-1611 Release Notes
Pig 0.15	Pig 0.15.0-1608 Release Notes on page 6323
Sentry 1.6.0	Sentry 1.6.0-1606 Release Notes on page 6341
Spark 1.6.1	Spark 1.6.1-1608 Release Notes on page 6434 and Spark 1.6.1-1609 Release Notes
Sqoop 1.4.6	Sqoop1.4.6-1609 Release Notes on page 6466
Sqoop2 1.99.6	Sqoop2 1.99.6-1607 Release Notes on page 6472
Storm 0.10.0	Storm 0.10.0-1609 Release Notes on page 6476

The EEP 1.1 repository contains the following ecosystem components that are supported for internal MapR Monitoring use cases only:

- Collectd 5.5.1
- Elasticsearch 2.3.3
- Fluentd 0.14.00
- Grafana 3.1.1
- Kibana 4.5.1
- OpenTSDB 2.2.0

Package Names for MapR Ecosystem Packs (EEPs)
This page describes how to view the the package names for each MapR Ecosystem Pack (EEP) release.

To view the package names for an EEP:

1. Use a browser to navigate to https://package.mapr.hpe.com/releases/MEP/. A list of EEP links is displayed.
2. Click the link for your EEP. A list of operating system links is displayed.
3. Click the link for your operating system. The list of package names is displayed.

For more information about the supported EEPs, see EEP Components and OS Support on page 5536.

last-updated: Apr 11, 2022

For information about packages and dependencies, see Packages and Dependencies for MapR Software on page 68.

Airflow Release Notes

The release notes for the Airflow component included in the MapR Data Platform contain notes specific to data-fabric only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536 or EEP Support and Lifecycle Status on page 5531. To view release notes for prior data-fabric releases, see Previous Versions on page 6578.

Airflow 2.2.1.0 - 2201 (EEP 6.2.0-8.1.0) Release Notes

The following notes relate specifically to the MapR Data Platform Distribution for Apache Airflow. You may also be interested in the Apache Airflow home page.

Airflow Version	2.2.1.0
Release Date	January 2022
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/airflow
GitHub Release Tag	2.2.1.0-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to http://package.mapr.hpe.com/releases/MEP/, and select your EEP(MEP) and OS to view the list of package names.
Documentation	• Apache Airflow • Installing Airflow • Airflow Providers

New in This Release

This is the first release of the Airflow component. Starting from EEP 8.1.0, the MapR Data Platform supports Apache Airflow in core releases 7.0.0 and 6.2.0. You can use Airflow to:

- Define, schedule, and monitor workflows.
- Orchestrate third-party systems to execute tasks.
- Analyze and manage workflows using the Airflow web interface.

A variety of operators and sensors are provided to integrate Airflow with the MapR Data Platform Database. In addition, release 7.0.0 includes operators, sensors, and transfers that enable Airflow to create and interact with S3 buckets. For more information, see Airflow Providers.

Fixes

None.

Known Issues and Limitations

- Airflow is not supported with FIPS-enabled nodes.

last-updated: Apr 11, 2022

- The Installer can install Airflow, but cannot set up MySQL as the backend database for Airflow. The default Airflow database is SQLite.
- S3 operators can be used with Airflow in release 7.0.0 but not in release 6.2.0 because native S3 support is not implemented in release 6.2.0.
- Airflow Amazon S3 providers might work with Minio S3 API, but HPE does not guarantee this functionality.
- Airflow requires a patch to operate in a release 6.2.0 cluster with security enabled.

Resolved Issues

- None.

AsyncHBase Release Notes

The release notes for AsyncHBase component contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

AsyncHBase 1.8.2-2009 Release Notes

The notes below relate to the MapR Data Platform. You may also be interested in the AsyncHBase Github page.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.8.2
Release Date	September 2020
MapR Version Interoperability	Component Versions for Released EEPs
Source on GitHub	https://github.com/mapr/asynchbase
GitHub Release Tag	v1.8.2-mapr-2009
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Fixes

None.

Known Issues and Limitations

None.

Resolved Issues

None.

AsyncHBase 1.7.0-1808 Release Notes

last-updated: Apr 11, 2022

The notes below relate to the MapR Converged Data Platform. You may also be interested in the AsyncHBase Github page.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.7.0
Release Date	September 2018
MapR Version Interoperability	Pre-MapR 5.2: Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 MapR 5.2 and later: Component Versions for Released EEPs
Source on GitHub	https://github.com/mapr/asynchbase/tree/1.7.0-mapr-1808
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Fixes

This release by MapR includes the following fixes on the base release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
e2a97c2	2018-07-11	MAPRDB-1243: Fixed AsyncHBase not sorting column qualifiers in lexicographical order.

AsyncHBase 1.7.0-1607 Release Notes

The notes below relate to the MapR Converged Data Platform. You may also be interested in the AsyncHBase github page.

Version	1.7.0
Release Date	July 29, 2016
MapR Version Interoperability	Pre-MapR 5.2: Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 MapR 5.2 and later: EEP Components and OS Support
Source on GitHub	https://github.com/mapr/asynchbase/tree/v1.7.0-mapr-1607
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Fixes

This release by MapR includes the following fixes on the base release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
0917694	2016-07-109	MapR-23932: Free memoryArena after performing GET from AsyncHBase. This fixes an issue where FreeArena() wasn't called for GET operations.
a0e33ad	2016-07-07	MapR-23881: Fixed an issue where OpenTSDB daemon gets stuck while running queries with large number of rows.
9faa290	2016-06-09	MapR-22952: Fixed Maven Protocol Buffers plugin in AsyncHBase pom file. Previously, the asynchbase build was broken because maven-protoc-plugin was not available in Maven Central anymore.
11006f0	2016-05-26	MapR-20677: Added support to delete exact cell version through AsyncHBase.

AsyncHBase 1.7.0-1603 Release Notes

The notes below relate to the MapR Converged Data Platform. You may also be interested in the AsyncHBase github page.

Version	1.7.0
Release Date	April 4, 2016
MapR Version Interoperability	See the Ecosystem Support Matrix.
Source on GitHub	https://github.com/mapr/asynchbase/tree/v1.7.0-mapr-1603
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-asynchbase-1.7.0.201603301412-1.noarch.rpm • mapr-asynchbase_1.7.0.201603301412_all.deb

New Features

This release of AsyncHBase includes the following behavior change that is specific to MapR:

Ability to define the default database that AsyncHBase connects to.	A new parameter `mapr.hbase.default.db` can be added to the asynchbase.conf file. You can configure this parameter to specify if AsyncHBase accesses HBase tables or MapR Database tables by default. If this value is not configured, AsyncHBase will determine which type of table is being accessed based on the table name.

Fixes

This release by MapR includes the following fixes on the base release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
f1d9c46	2016-03-18	MapR-22861: `mapr.hbase.default.db` parameter can now be set to indicate whether AsyncHBase connects to MapR Database tables or HBase tables by default.
7f563c4	2016-03-15	MapR-22797: Implemented the locateRegions functionality for MapR Database tables
f2b0a70	2016-03-09	MapR 22778: The AppendRequest behavior against HBase tables was modified so that it returns ArrayList<KeyValue> whenever it is used to return the new values after the append operation.

Known Issue

- 22911: In MapR 5.1, when the DeleteRequest API calls setDeleteAtTimestampOnly for a MapR Database table, the delete occurs for timestamps less than or equal to the given timestamp.

AsyncHBase 1.6.0-1504 Release Notes

Version	1.6.0-mapr-1504
Release Date	May 6, 2015
MapR Version Interoperability	See the Ecosystem Support Matrix.
Source on GitHub	https://github.com/mapr/asynchbase
GitHub Release Tag	v1.6.0-mapr-1504
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release by MapR includes the following fixes on the base release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
b1535ac	2015-04-21	MapR 17453: JNI memory is no longer released when data from a scan is still being cached.

AsyncHBase 1.6.0-1503 Release Notes

You may also be interested in the AsyncHBase github page.

Version	1.6.0-mapr-1503
Release Date	March 27, 2015
MapR Version Interoperability	See the Ecosystem Support Matrix.
Source on GitHub	https://github.com/mapr/asynchbase
GitHub Release Tag	v1.6.0-mapr-1503
Maven Artifacts	https://repository.mapr.com/maven/

New in this Release

- Comparison filters for HBase and MapR Database are now supported.

Data Access Gateway Release Notes

This section includes the release notes for the MapR Data Access Gateway.

Data Access Gateway 4.0 Release Notes

These notes describe the 4.0 release of the Data Access Gateway.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.0
Release Date	January 2022
MapR Version Interoperability	Compatible with release 6.2 with EEP 7.0.0 and later*
Package Name	`mapr-data-access-gateway` To view the full list of package names, navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS.
Documentation	Administering the MapR Data Access Gateway on page 1492

*The latest core 6.2.0 EBF patch must be applied before you can use Data Access Gateway 4.0 on release 6.2.0.

New in This Release

Only Data Access Gateway 4.0 can be used with release 7.0.0 in FIPS mode. This is the only significant difference between Data Access Gateway 3.0 and 4.0. Both versions 3.0 and 4.0 can be used in non-FIPS mode.

The MapR Data Platform Data Access Gateway is included in EEP repositories beginning with EEP 5.0.0. The Data Access Gateway is a service that acts as a proxy and gateway for translating requests between lightweight client applications and the data-fabric cluster.

Client	Supported EEPs
MapR Database JSON REST API	EEP 5.0.0 and later
Python OJAI client	EEP 6.0.0 and later
Node.js OJAI client	EEP 6.0.0 and later
C# OJAI client	EEP 6.0.0 and later
Go OJAI client	EEP 6.0.0 and later
Java OJAI Thin Client	EEP 6.3.0 and later

Configuring the Maximum Message Size for the gRPC Service

EEP 7.1.0 and later support a new configuration option (`grpc.service.max-message-size`) that allows you to change the maximum message size that the gRPC service accepts. For details, see Administering the MapR Data Access Gateway on page 1492.

last-updated: Apr 11, 2022

In EEP 7.1.0 and later, the Java OJAI Thin Client supports an OJAI Connection String option (`maxmsgsize`) to change the maximum message size that the gRPC client accepts. For details, see Using the Java OJAI Thin Client on page 2670.

Fixes

None.

Known Issues and Limitations

None.

Resolved Issues

None.

Data Access Gateway 3.0 Release Notes

These notes describe the 3.0 release of the Data Access Gateway.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	3.0
Release Date	Setember 2020
MapR Version Interoperability	Compatible with release 6.2 with EEP 7.0.0 and later
Package Name	`mapr-data-access-gateway` To view the full list of package names, navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS.
Documentation	Administering the MapR Data Access Gateway on page 1492

New in This Release

The MapR Data Platform Data Access Gateway is included in EEP repositories beginning with EEP 5.0.0. The Data Access Gateway is a service that acts as a proxy and gateway for translating requests between lightweight client applications and the data-fabric cluster.

Client	Supported EEPs
MapR Database JSON REST API	EEP 5.0.0 and later
Python OJAI client	EEP 6.0.0 and later
Node.js OJAI client	EEP 6.0.0 and later
C# OJAI client	EEP 6.0.0 and later
Go OJAI client	EEP 6.0.0 and later
Java OJAI Thin Client	EEP 6.3.0 and later

Configuring the Maximum Message Size for the gRPC Service

EEP 7.1.0 and later support a new configuration option (`grpc.service.max-message-size`) that allows you to change the maximum message size that the gRPC service accepts. For details, see Administering the MapR Data Access Gateway on page 1492.

In EEP 7.1.0 and later, the Java OJAI Thin Client supports an OJAI Connection String option (`maxmsgsize`) to change the maximum message size that the gRPC client accepts. For details, see Using the Java OJAI Thin Client on page 2670.

Fixes

None.

Known Issues and Limitations

None.

Resolved Issues

None.

MapR Data Access Gateway 2.0 Release Notes

These notes describe the 2.0 release of the MapR Data Access Gateway.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	2.0
Release Date	December 2019
MapR Version Interoperability	Compatible with MapR 6.1 with EEP 6.0.0 and later
Package Name	`mapr-data-access-gateway` To view the full list of package names, navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS.
Documentation	Administering the MapR Data Access Gateway on page 1492

New in This Release

The MapR Data Access Gateway is included in EEP repositories beginning with EEP 5.0.0. The MapR Data Access Gateway is a service that acts as a proxy and gateway for translating requests between lightweight client applications and the MapR cluster. The version of the MapR Data Access Gateway remains unchanged for EEP 6.3.0, but the Java OJAI Thin Client is now supported:

Client	Supported EEPs
MapR Database JSON REST API	EEP 5.0.0 and later
Python OJAI client	EEP 6.0.0 and later
Node.js OJAI client	EEP 6.0.0 and later
C# OJAI client	EEP 6.0.0 and later
Go OJAI client	EEP 6.0.0 and later
Java OJAI Thin Client	EEP 6.3.0 and later

Configuring the Maximum Message Size for the gRPC Service

last-updated: Apr 11, 2022

EEP 6.3.4 and later support a new configuration option (`grpc.service.max-message-size`) that allows you to change the maximum message size that the gRPC service accepts. For details, see Administering the MapR Data Access Gateway on page 1492.

In EEP 6.3.4 and later, the Java OJAI Thin Client supports an OJAI Connection String option (`maxmsgsize`) to change the maximum message size that the gRPC client accepts. For details, see Using the Java OJAI Thin Client on page 2670.

Fixes

None.

Known Issues and Limitations

None.

Resolved Issues

None.

MapR Data Access Gateway 1.0 Release Notes

These notes describe the first release of the MapR Data Access Gateway.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.0
Release Date	April 2018
MapR Version Interoperability	Compatible with MapR 6.0.1 and later
Package Name	`mapr-data-access-gateway` To view the full list of package names, navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS.
Documentation	Administering the MapR Data Access Gateway on page 1492

New in This Release

This is the first release of the MapR Data Access Gateway. The MapR Data Access Gateway is included in EEP repositories beginning with EEP 5.0.0. The MapR Data Access Gateway is a service that acts as a proxy and gateway for translating requests between lightweight client applications and the MapR cluster. For the EEP 5.0.0 release, the MapR Database JSON REST API uses this service.

Fixes

None.

Known Issues and Limitations

None.

Resolved Issues

None

Drill Release Notes

The release notes for Apache Drill contains notes specific to MapR only. Release notes for prior releases are posted on the Apache Drill web site.

Drill 1.16.1.400-2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Drill. You may also be interested in the Apache Drill homepage and the Apache Drill release notes:

Version	1.16.1.400
Release Date	January 2022
HPE Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Drill 1.16.1.400-2201 introduces the following enhancements or HPE platform-specific behavior changes:

- None

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
33a7d24ea2	2022-01-10	MD-6251: Secondary index error when reading from mapr-db json (#575)
8365703194	2021-12-30	MD-5516: Add https support for Drill-on-YARN (#566)
d492882d29	2021-12-30	MD-6191: Allow partition pruning with dynamic CURRENT_DATE operator.
a6ab48aede	2021-12-20	MD-6196: Medial CVE fixes (jquery, bootstrap, data tables)
5ee9b79204	2021-12-20	MD-6196: Medial CVE fixes (junit, bcpkix-jdk15on)
4f92206395	2021-12-08	MD-6202: Excluding transitive netty dependency from zookeeper
aeb91d399c	2021-12-07	MD-6161: fix skipping of types written not in uppercase (#565)
cbbceb728b	2021-11-26	DRILL-8009: DrillConnectionImpl#isValid() doesn't correspond JDBC API
a5b79c9e67	2021-11-21	MD-6196: Fix the CVEs with the high severity
bddeab869d	2021-11-16	DRILL-7586: Fix loading incorrect version of commons-lang3
ec1051c0ec	2021-11-09	MD-6182: Fixed problem with starting drill on the fips cluster (#564)

Known Issues

- You cannot connect to Drill from SQLLine with the `auth` argument set to `maprsasl`, as shown:

```
/opt/mapr/drill/drill-1.16.0/bin/sqlline -u
jdbc:drill:zk=localhost:5181;auth=maprsasl
```

- Due to Drill version changes (3-digit to 4-digit), you cannot upgrade from Drill in EEP 7.0.0 (Drill 1.16.1) to Drill in EEP 7.0.1 (Drill 1.16.1.5) or later. You must perform a new installation of Drill. Alternatively, if you are running Drill on CentOS or RHEL, you can issue the following command as a workaround to upgrade Drill:

```
rpm -Uv --<old-package> <path/to/packages>/*.rpm
```

See Upgrading Drill on page 351.

Limitations

- Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support queries on HBase tables.

Drill 1.16.1.300-2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Drill. You may also be interested in the Apache Drill homepage and the Apache Drill release notes:

Version	1.16.1.300
Release Date	October 2021
HPE Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Drill 1.16.1.300-2110 introduces the following enhancements or HPE platform-specific behavior changes:

- None

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
e1578d9aed	2021-09-06	MD-6167: Update the maven artifact version strings to eep
7dd73ee1a9	2021-08-27	MD-6163: Fixed bug with returning null values when selecting by key without tests
4c322e45ce	2021-08-18	MD-6165: Downgrading jackson libs to be consistent with core (from 2.12.1 to 2.11.1)
67619111f2	2021-08-12	MD-6162: Security vulnerability found in jars used in Drill
1c657eff14	2021-08-12	MD-6153: CVE-2019-10172, CVE-2019-10202 vulnerabilities in jackson-mapper-asl-1.9.13.jar

ffe1f0b175	2021-08-06	DRILL-7934: Fix NullPointerException error when reading parquet files

4e673662e6	2021-05-27	MD-6126: CVE-2020-13936 velocity-engine-core vulnerability
f80f67df1e	2021-05-19	DRILL-7372: MethodAnalyzer consumes too much memory
c023fa7705	2021-05-19	MD-6022: Column names are not flipped when running a query

Known Issues

- You cannot connect to Drill from SQLLine with the `auth` argument set to `maprsasl`, as shown:

```
/opt/mapr/drill/drill-1.16.0/bin/sqlline -u
jdbc:drill:zk=localhost:5181;auth=maprsasl
```

- Due to Drill version changes (3-digit to 4-digit), you cannot upgrade from Drill in EEP 7.0.0 (Drill 1.16.1) to Drill in EEP 7.0.1 (Drill 1.16.1.5) or later. You must perform a new installation of Drill. Alternatively, if you are running Drill on CentOS or RHEL, you can issue the following command as a workaround to upgrade Drill:

```
rpm -Uv --<old-package> <path/to/packages>/*.rpm
```

See Upgrading Drill on page 351.

Limitations

- Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support queries on HBase tables.

Drill 1.16.1.200-2104 (EEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Drill. You may also be interested in the Apache Drill homepage and the Apache Drill release notes:

Version	1.16.1.200
Release Date	April 2021
HPE Version Interoperability	See Component Versions for Released MEPs.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

New in This Release

Drill 1.16.1.200-2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Service verifier

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
85f32639d	2021-05-09	MD-6133: Fixed issue with Decimal type
8af5a9b51	2021-04-30	MD-6128: Fixed differences between jetty versions and updated to 9.4.40
4324b0753	2021-04-16	MD-6120: Fixed issues with parquet while using hive-storage
2f111fcfa	2021-04-14	MD-6120: Fixed issues with hive (#548)
746179715	2021-04-12	MD-6120: Fixed issue with builds
bf8f0febd	2021-04-12	MD-6102: Removed hasSecurityMechanism function because if there is no mechanism drill will use plain
6963a5b61	2021-04-12	MD-6102: Cannot connect by MAPRSASL without username field (#547)
8b3a076e5	2021-03-31	MD-6120: Update Drill dependencies to the latest artifacts for MEP7.1.0 release (#545)
a467f6327	2021-03-22	MD-6114: Add service verifier to drill package (#543)
9ccf98f66	2021-03-22	MD-5787: Improved kafka-storage plugin to handle topics from non default stream and added support for headers
a9bc026f3	2021-03-18	MD-6101: CVE-2019-16869, CVE-2014-3488 etc. Netty vulnerabilities (#542)
5c878b763	2021-03-10	MD-6117: The Drill cannot run after updates Jetty vulnerability in secure cluster
9e3c48030	2021-02-26	MD-6077: Excluded Log4jplugins.dat file from hive-exec-shaded.jar
0ab22dc82	2021-02-22	MD-6105: Fixed issue so Drill does not return a parsing error for queries on Parquet files.
64d3e225b	2021-02-22	DRILL-7361: Support MAP (DICT) type in schema file
e7f3b6133	2021-02-22	DRILL-7509: Incorrect TupleSchema is created for DICT column when querying Parquet files
27099bcda	2021-02-22	Similar changes to DRILL-7359
0bec91f7c	2021-02-15	MD-6110: CVE-2020-27216: Jetty vulnerability (#538)
5828c1c13	2021-02-10	MD-6111: CVE-2020-25649 Jackson vulnerability (#537)

Known Issues and Limitations

- You cannot connect to Drill from SQLLine with the `auth` argument set to `maprsasl`, as shown:

```
/opt/mapr/drill/drill-1.16.0/bin/sqlline -u
jdbc:drill:zk=localhost:5181;auth=maprsasl
```

- Due to Drill version changes (3-digit to 4-digit), you cannot upgrade from Drill in MEP 7.0.0 (Drill 1.16.1) to Drill in MEP 7.0.1 (Drill 1.16.1.5) or later. You must perform a new installation of Drill. Alternatively, if you are running Drill on CentOS or RHEL, you can issue the following command as a workaround to upgrade Drill:

```
rpm -Uv --<old-package> <path/to/packages>/*.rpm
```

  See Upgrading Drill on page 351.

- Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support queries on HBase tables.

Drill 1.16.1.100-2101 (EEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Drill. You may also be interested in the Apache Drill homepage and the Apache Drill release notes:

Version	1.16.1.100
Release Date	January 2021
HPE Version Interoperability	See Component Versions for Released MEPs.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

New in This Release

Drill 1.16.1.100-2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
90e5ecb	2021-01-04	MD-6096: Partition pruning not happening after Upgrade and causing OversizedAllocationException failure
94675b6 b898b86	2020-12-15 2020-12-11	MD-6086:CVE-2019-14262: metadata extractor vulnerability fixed
dd051ab	2020-12-11	MD-6084: CVE-2017-12610,CVE-2018-17196: kafka-clients vulnerability (kafka-clients updated to 2.3.1)
f4bf0cb	2020-12-10	MD-6094: WS-2019-0490: jcommander vulnerability

last-updated: Apr 11, 2022

0386778	2020-12-10	MD-6095:CVE-2019-17359: bcprov-jdk15on-1.60.jar library vulnerability
9f0ac5a	2020-12-09	MD-6091: CVE-2017-5929: logback vulnerability
55b4ad0	2020-12-07	MD-6089:CVE-2018-1272 etc. vulnerabilities in Spring
8457e19	2020-11-26	MD-6072: SchemaChangeException due to a REPEATED MAP field
7c6f90e	2020-11-25	MD-6069: updated not equal ComparisonPredicate because of wrong logic inside
228775b	2020-11-17	MD-6070: Fixed problem with NPE in index picking by adding extra checking
c420ba6	2020-11-17	MD-6057: Positional alias is not working in Group by clause for Nested CASE expressions
58047ca	2020-11-13	MD-6066: Changes due to fix performance issue.
fe00ddf	2020-10-29	MD-6073:CVE-2019-10172 and CVE-2019-10202 - jackson-mapper-asl vulnrability

Known Issues

MapR Tracking Number	Description
MD-6052	Prttn_Prnng_TC1.sql.explain test failed.
MD-6028	Property 'MAPR_JMXSSL' in 'env_override.sh' by default set as "false"
MD-6020	Error while using Drill
MD-5792	TPCH query 5 runs 10-20% slower at sf100/sf1000, possibly due to hash join ordering
MD-5786	TPCDS query 98 is 2x slower with Statistics enabled due to hash join order for sf100 and sf1000
MD-5770	TPCH query 9 runs 18% slower at sf 100/sf1000, possibly due to hash join
MD-5758	TPCDS query 78 runs 30x slower with Statistics enabled at sf100
MD-5694	select query takes too long after metadata refresh
MD-5684	Drill timeout when querying a large number of files
MD-5646	Modification needed in Drill dependencies/scripts to support hadoop decoupling
MD-5518	Semi-Join performance is slower with default settings for TPCH 16

MD-5309	Query on complex data fails with SYSTEM ERROR: SchemaChangeException: Failure while materializing expression. Error in expression at index -1. Error: Missing function implementation: [min(MAP-REPEATED)]. Full expression: --UNKNOWN EXPRESSION--.
MD-4906	SI Selectivity Queries hit ForemanException: One more more nodes lost connectivity during query
MD-4738	Incorrect parallelism determination for index plans (SI and Complex SI)
MD-4504	DRILL-6465: Transitive closure is not working in Drill for Join with multiple local conditions
MD-2294	DRILL-1162: 25 way join ended up with OOM

Known Issues and Limitations

- Due to Drill version changes (3-digit to 4-digit), you cannot upgrade from Drill in MEP 7.0.0 (Drill 1.16.1) to Drill in MEP 7.0.1 (Drill 1.16.1.5) or later. You must perform a new installation of Drill. Alternatively, if you are running Drill on CentOS or RHEL, you can issue the following command as a workaround to upgrade Drill:

  ```
  rpm -Uv --<old-package> <path/to/packages>/*.rpm
  ```

  See Upgrading Drill on page 351.

- Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support queries on HBase tables.

Drill 1.16.1.0-2009 (EEP 7.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Drill 1.16.1.0-2009 in EEP 7.0.0.

Below are release notes for the Drill component included in the MapR Converged Data Platform. You may also be interested in the Apache Drill homepage and the Apache Drill release notes:

Version	1.16.1.0-2009
Release Date	September 2020
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

Feature Support

- None.

New Features

- None.

Resolved Issues

Drill 1.16.1.0-2009 provides the following resolved issues and improvements:

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
dade023	2020-03-24	DRILL-7405: Avoiding download of TPC-H data
5f44f00	2020-06-22	DRILL-7750: Drill fails to read KeyStore password from Credential provider
065ac75	2020-06-18	DRILL-7749: Drill-on-Yarn Application Master UI is broken due to bootstrap update
28d3f4c	2020-04-30	DRILL-7705: Updated jQuery and Bootstrap libraries
11fa657	2020-04-21	DRILL-7713: Upgrade misc libraries which outdated versions have reported vulnerabilities
a28c844	2020-04-17	DRILL-7704: Update Maven to 3.6.3
dff80b1	2020-04-16	DRILL-7702: Update shaded guava
ab18420	2020-04-16	DRILL-7702: Update ZooKeeper and Curator, exclude org.codehaus.jackson
8479c37	2020-04-16	DRILL-7702: Update httpclient, libthrift, httpdlog-parser, jetty, derby, exclude and ban log4j, jasper-runtime, commons-httpclient
302fc35	2020-04-16	Revert "DRILL-7189: Revert DRILL-7105 Error while building the Drill native client"
59856bc	2020-04-16	DRILL-7693: Updated protobuf version to 3.11.1
abfc879	2020-04-14	DRILL-7294: Prevent generating java beans using protostuff to avoid overriding classes with the same simple name declared as nested in the proto files
bb4069e	2020-04-14	Revert "DRILL-7188: Revert DRILL-6642: Update protocol-buffers version"
892d164	2020-03-24	DRILL-7650: Add option to enable Jetty's dump for troubleshooting
493e65e	2020-03-19	DRILL-7351: Added tokens to Web forms to prevent CSRF attacks
97c1d22	2020-03-18	DRILL-7644: Log SSL protocol version at Drill start up
3b0c61f	2020-03-18	DRILL-7626: Add ability to set HTTP response headers
f46e0c9	2020-03-13	DRILL-7637: Add an option to retrieve MapR SSL truststore/keystore credentials using MapR Web Security Manager
d0daa60	2020-03-13	DRILL-7367: Remove Server details from response headers

Drill 1.16.1.0-2009 also includes the following resolved issues and improvements:

MapR Tracking Number	Description
MD-6051	Drill Build is failing on CentOS 8 while Building "libdrillClient.so"
MD-6048	DRILL-7774: NPE during planning phase of query in 1.16.0.21
MD-6043	Create get-jars-list.sh script to be used by mapr-config.sh (CORE-221)
MD-6037	Cleanup `GuavaPatcher`'s warning messages in log
MD-6036	Drill logging system is broken after the latest build
MD-6035	Drill logging system is broken after the latest build
MD-6034	Janino compiler 3.0.8 causing drill query throwing exception org.codehaus.commons.compiler.CompileException
MD-6033	Fix unit tests failures caused by latest changes in Hive

MapR Tracking Number	Description
MD-6018	Querying empty Parquet files throws error after upgrade to 1.16
MD-6003	DRILL-7694: CollectD warnings on collecting queries.running and queries.completed metrics
MD-6004	UNION query returns "VALIDATION ERROR" if try union varchar output and decimals/ integer/date
MD-5998	DRILL-7649: Replace maprfs.version property usage by mapr.release.version
MD-5996	Scrypt j_security_check works without security headers
MD-5990	Drill Java JMX Server Insecure Configuration Remote Code Execution Vulnerability
MD-5950	Drill-on-Yarn: NPE while querying a column in Hive table
MD-5920	drill.exec.ssl.protocol option is not honored by Webserver
MD-5908	Drillbit not starting with error: "Caused by: java.io.IOException: No FileSystem for scheme: maprfs"
MD-5839	DRILL-7615: UNION ALL query returns the wrong result for the decimal value

Known Issues

The following table lists the known issues for Drill 1.16.1.0:

MapR Tracking Number	Description
MD-6052	Prttn_Prnng_TC1.sql.explain test failed.
MD-6028	Property 'MAPR_JMXSSL' in 'env_override.sh' by default set as "false"
MD-6027	Cannot change value of "MAPR_JMXSSL=" in "env_override.sh"
MD-6020	Error while using Drill
MD-5792	TPCH query 5 runs 10-20% slower at sf100/sf1000, possibly due to hash join ordering
MD-5786	TPCDS query 98 is 2x slower with Statistics enabled due to hash join order for sf100 and sf1000
MD-5770	TPCH query 9 runs 18% slower at sf 100/sf1000, possibly due to hash join
MD-5758	TPCDS query 78 runs 30x slower with Statistics enabled at sf100
MD-5694	select query takes too long after metadata refresh
MD-5684	Drill timeout when querying a large number of files
MD-5646	Modification needed in Drill dependencies/scripts to support hadoop decoupling
MD-5518	Semi-Join performance is slower with default settings for TPCH 16
MD-5309	Query on complex data fails with SYSTEM ERROR: SchemaChangeException: Failure while materializing expression. Error in expression at index -1. Error: Missing function implementation: [min(MAP-REPEATED)]. Full expression: --UNKNOWN EXPRESSION--.
MD-4906	SI Selectivity Queries hit ForemanException: One more more nodes lost connectivity during query
MD-4738	Incorrect parallelism determination for index plans (SI and Complex SI)
MD-4504	DRILL-6465: Transitive closure is not working in Drill for Join with multiple local conditions
MD-2294	DRILL-1162: 25 way join ended up with OOM

last-updated: Apr 11, 2022

Limitations

Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables.

Drill 1.16.0.400-2201 (EEP 6.3.6) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Drill. You may also be interested in the Apache Drill homepage and the Apache Drill release notes.

Version	1.16.0.400
Release Date	January 2022
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Drill 1.16.0.400-2201 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
bf345798f7	2022-02-10	MD-6277: Remove mapr-log4j-slf4j-impl module introduced in Hive
da06a2908d	2022-01-10	MD-6251: Secondary index error at reading from mapr-db json (#575)
4faf5f4870	2021-12-30	MD-6191: Change to allow partition prunning with dynamic CURRENT_DATE operator.
14840a0f91	2021-12-20	MD-6196: Medial CVE fixes (jquery, bootstrap, data tables)
6573c1a091	2021-12-20	DRILL-7705: Updated jQuery and Bootstrap libraries
616fd1943e	2021-12-20	MD-6196: Medial CVE fixes (junit, derby, bcpkix-jdk15on)
a16e1268e9	2021-12-07	MD-6161: fix skipping of types written not in uppercase (#565)
40019935b2	2021-11-26	DRILL-8009: DrillConnectionImpl#isValid() doesn't correspond JDBC API
f60bc99104	2021-11-21	MD-6196: Fix the CVEs with the high severity
182dcaf124	2021-11-16	DRILL-7586: Fix loading incorrect version of commons-lang3

Known Issues

- You cannot connect to Drill from SQLLine with the `auth` argument set to `maprsasl`, as shown:

```
/opt/mapr/drill/drill-1.16.0/bin/sqlline -u
jdbc:drill:zk=localhost:5181;auth=maprsasl
```

Limitations

- Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support queries on HBase tables.

Drill 1.16.0.300-2110 (EEP 6.3.5) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Drill. You may also be interested in the Apache Drill homepage and the Apache Drill release notes.

Version	1.16.0.300
Release Date	October 2021
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Drill 1.16.0.300-2110 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
ebcc3f82ed	2021-09-01	DRILL-7294: Prevent generating java beans using protostuff to avoid overriding classes with the same simple name declared as nested in the proto files
aee600f190	2021-08-27	MD-6163: Fixed bug with returning null values when selecting by key without tests
e8efefe649, 082c21f6a6, 4942eaaf62	2021-08-18	MD-6165: Downgrading jackson libs to v2.11.1 to be consistent with core version
6b0e8685e8	2021-08-12	MD-6162: Security vulnerability found in jars used in Drill
84d23a2698	2021-08-12	MD-6153: CVE-2019-10172, CVE-2019-10202 vulnerabilities in jackson-mapper-asl-1.9.13.jar
86ba2964bd, 6a1a3eabec	2021-08-12	MD-6146: CVE-2012-5783 vulnerability in commons-httpclient
17d0259f5e	2021-08-06	DRILL-7934: Fix NullPointerException error when reading parquet files
1c68da948a	2021-07-28	MD-6144: Jetty security vulnerability
8ee8583eb0	2021-07-27	MD-6145: CVE-2020-13956, WS-2017-3734 vulnerabilities in http-client
36cf7751de	2021-07-15	MD-6140: mapr-drill failing with java.lang.NoClassDefFoundError: org/apache/zookeeper/Environment
df4362ab48	2021-07-07	MD-6143: Commons-codec vulnerability, WS-2019-0379
74b5cccf95	2021-06-03	MD-6130: Different jackson jar versions in 3rdparty libs
073696be4d	2021-05-27	MD-6126: CVE-2020-13936 velocity-engine-core vulnerability

694139b41d	2021-05-19	DRILL-7372: MethodAnalyzer consumes too much memory
b1c05a7849	2021-05-19	MD-6022: Column names are not flipped when running a query

Known Issues

- You cannot connect to Drill from SQLLine with the `auth` argument set to `maprsasl`, as shown:

```
/opt/mapr/drill/drill-1.16.0/bin/sqlline -u
jdbc:drill:zk=localhost:5181;auth=maprsasl
```

Limitations

- Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support queries on HBase tables.

Drill 1.16.0.200-2104 (EEP 6.3.4) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Drill. You may also be interested in the Apache Drill homepage and the Apache Drill release notes.

Version	1.16.0.200
Release Date	April 2021
MapR Version Interoperability	See Component Versions for Released MEPs.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

New in This Release

Drill 1.16.0.200-2104 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
85f32639d	2021-05-09	MD-6133: Fixed issue with Decimal type
8af5a9b51	2021-04-30	MD-6128: Fixed differences between jetty versions and updated to 9.4.40
5772a10ad	2021-04-12	MD-6102 Removed hasSecurityMechanism function because if there is no mechanism drill will use plain
ec9554e91	2021-04-12	MD-6102: Cannot connect by MAPRSASL without username field (#547)
a40a3f242	2021-03-22	MD-5787 Improved kafka-storage plugin to handle topics from non default stream and added support for headers
7b16dd6e3	2021-03-18	MD-6101: CVE-2019-16869, CVE-2014-3488 etc. Netty vulnerabilities (#542)
8d67a1902	2021-03-10	MD-6117 The Drill cannot run after updates Jetty vulnerability in secure cluster

23e61b94c	2021-02-26	MD-6077 Excluded Log4jplugins.dat file from hive-exec-shaded.jar
0f2d562be	2021-02-22	MD-6105 Checkstyle fixes and resolved problems with tests
5257dedf1	2021-02-22	DRILL-7361: Support MAP (DICT) type in schema file
335e11089	2021-02-22	DRILL-7509: Incorrect TupleSchema is created for DICT column when querying Parquet files
b30e485e1	2021-02-22	Similar changes to DRILL-7359
b1ce9720b	2021-02-15	MD-6110: CVE-2020-27216: Jetty vulnerability (#538)
720b7437e	2021-02-10	MD-6111: CVE-2020-25649 Jackson vulnerability (#537)

Known Issues

- You cannot connect to Drill from SQLLine with the `auth` argument set to `maprsasl`, as shown:

```
/opt/mapr/drill/drill-1.16.0/bin/sqlline -u
jdbc:drill:zk=localhost:5181;auth=maprsasl
```

Limitation

Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support queries on HBase tables.

Drill 1.16.0.100-2101 (EEP 6.3.2) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Drill 1.16.0.100 in MEP 6.3.2.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Drill. You may also be interested in the Apache Drill homepage and the Apache Drill release notes.

Version	1.16.0.100
Release Date	January 2021
MapR Version Interoperability	See Component Versions for Released MEPs.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

New in This Release

Drill 1.16.0.100-2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
9e9dbd3	2020-12-02	EMEP-85:CVE-2017-7656,CVE-2017-7657,CVE-2017-7658, etc : jetty vulnerabilities
0256dda	2020-12-02	EMEP-77: CVE-2019-0205: potential DoS when processing untrusted Thrift payloads

31a7739	2020-12-07	MD-6089:CVE-2018-1272 etc. vulnerabilities in Spring
09b2f4a	2020-12-07	MD-6090: CVE-2014-0107: xalan vulnerability
c55d81b	2020-12-08	MD-6087:CVE-2018-1000844,CVE-2018-1000850: retrofit vulnerabilities
d2e977d	2020-12-08	MD-6091: CVE-2017-5929: logback vulnerability
bc498b8	2020-12-10	MD-6095:CVE-2019-17359: bcprov-jdk15on-1.60.jar library vulnerability
808b7c2	2020-12-10	MD-6094: WS-2019-0490: jcommander vulnerability
8746484	2020-12-11	MD-6084: CVE-2017-12610,CVE-2018-17196: kafka-clients vulnerability (kafka-clients updated to 2.3.1)
866078d	2020-12-11	CVE-2019-14262: metadata extractor vulnerability fixed
75dece5	2020-12-15	MD-6086:CVE-2019-14262: metadata extractor vulnerability fixed
43a0034	2020-12-29	MD-6096: Partition pruning not happening after Upgrade and causing OversizedAllocationException failure
3221da2 4914e4e	2020-10-22 2021-01-05	MD-6071: Update commons-beanutils, xercesImpl
fd96c36	2020-10-15	MD-6061:CVE-2019-14262 - mapr ojai driver and mapr drill
65ff5ec	2020-10-23	MD-6073: Update snakeyaml
A33c78e 235d54b	2020-10-29 2020-11-02	MD-6074:CVE-2019-10172 and CVE-2019-10202 - jackson-mapper-asl vulnerability
1edf007	2020-11-11	MD-6066: Changes due to performance issue, to allow the setting of variable output_batch_size on both system and session level
87ca6c8	2020-11-17	MD-6070: Fixed problem with NPE in index picking by adding extra checking
69f6ca3	2020-11-25	MD-6069: updated not equal ComparisonPredicate because of wrong logicinside
7daaab9 1d7e83d	2020-11-25 2020-11-26	MD-6072: SchemaChangeException due to a REPEATED MAP field
3530e89	2020-12-01	MD-6083: Updated derby version to 10.12.1.1 (CVE-2015-1832)

last-updated: Apr 11, 2022

Known Issues

None.

Limitation

Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support queries on HBase tables.

Drill 1.16.0.22-2009 (EEP 6.3.1) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Drill 1.16.0.22-2009 in EEP 6.3.1.

Below are release notes for the Drill component included in the MapR Converged Data Platform. You may also be interested in the Apache Drill homepage and the Apache Drill release notes:

Version	1.16.0.22-2009
Release Date	September 2020
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names.

New Features

- None.

Resolved Issues

Drill 1.16.0.22-2009 provides the following resolved issues and improvements:

Commit	Date (YYYY-MM-DD)	Comment
dade023	2020-03-24	DRILL-7405: Avoiding download of TPC-H data
892d164	2020-03-24	DRILL-7650: Add option to enable Jetty's dump for troubleshooting
493e65e	2020-03-19	DRILL-7351: Added tokens to Web forms to prevent CSRF attacks
97c1d22	2020-03-18	DRILL-7644: Log SSL protocol version at Drill start up
3b0c61f	2020-03-18	DRILL-7626: Add ability to set HTTP response headers
f46e0c9	2020-03-13	DRILL-7637: Add an option to retrieve MapR SSL truststore/keystore credentials using MapR Web Security Manager
d0daa60	2020-03-13	DRILL-7367: Remove Server details from response headers

Drill 1.16.0.22-2009 also includes the following resolved issues and improvements:

MapR Tracking Number	Description
MD-6048	DRILL-7774: NPE during planning phase of query in 1.16.0.21
MD-6035	DRILL-7761: Drill 1.16.0 fails with OOM in PLANNING and drillbit hung
MD-6034	Janino compiler 3.0.8 causing drill query throwing exception org.codehaus.commons.compiler.CompileException
MD-6018	Querying empty Parquet files throws error after upgrade to 1.16

last-updated: Apr 11, 2022

MapR Tracking Number	Description
MD-6004	UNION query returns "VALIDATION ERROR" if try union varchar output and decimals/ integer/date
MD-5998	DRILL-7649: Replace maprfs.version property usage by mapr.release.version
MD-5996	Scrypt j_security_check works without security headers
MD-5990	Drill Java JMX Server Insecure Configuration Remote Code Execution Vulnerability
MD-5950	Drill-on-Yarn: NPE while querying a column in Hive table
MD-5920	drill.exec.ssl.protocol option is not honored by Webserver
MD-5839	DRILL-7615: UNION ALL query returns the wrong result for the decimal value

Known Issues

- None.

Limitations

Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables.

Drill 1.16.0.10-1912 (EEP 6.3.0) Release Notes

This section provides reference information for fixes in Drill 1.16.0.10-1912.

The following release note applies to the 1.16.0.10-1912 version of the Drill component:

Important: This release note describes only the issues resolved since the 1.16.0.0 release note. For a listing of 1.16.0.0 resolved issues, see Drill 1.16.0.0-1904 (EEP 6.2.0) Release Notes on page 5763.

Version	1.16.0.10-1912
Release Date	December 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names, for example: • mapr-drill-1.16.0.10.201912111313-1.noarch.rpm • mapr-drill-internal-1.16.0.10.201912111313-1.noarch.rpm • mapr-drill-yarn-1.16.0.10.201912111313-1.noarch.rpm

Resolved Issues

Drill 1.16.0.10-1912 provides the following resolved issues and improvements:

Apache Drill Issue	MapR Tracking Number	Description
DRILL-7453	MD-5936	Updated the JODA-Time API to ensure correct time zone info
DRILL-7417	MD-5914	Add user logged in/out events in info-level logs

last-updated: Apr 11, 2022

DRILL-7391	MD-5895	Wrong result when doing left outer join on CSV table
DRILL-6711	N/A	Use jetpack repository for Drill Calcite project artifact
DRILL-7373	MD-5534	Fix problems reading from DICT type
DRILL-7096	MD-5534	Develop vector for canonical Map<K,V>
DRILL-7376	N/A	Drill ignores Hive schema for MaprDB tables when group scan has star column
DRILL-7341	N/A	Vector reAlloc can fail after exchange
DRILL-7369	MD-5801	Schema for MaprDB tables is not used when several fields are queried
DRILL-7338	MD-5262	REST API calls to Drill fail dure to insufficient heap memory
DRILL-7313	MD-5801	Query on a Hive external table in MaprDB fails while reading vector
DRILL-7250	MD-5707	Query with CTE fails when its name matches the table name without access
DRILL-7237	MD-5732	Fix single_value aggregate function for variable length types
DRILL-7050	MD-5732	RexNode convert exception in sub-query

Limitations

Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables.

Drill 1.16.0.0-1904 (EEP 6.2.0) Release Notes

This section provides reference information, including new features, improvements, resolved issues, known issues, and limitations for Drill 1.16.0.0-1904.

These release notes contain MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

The following release notes apply to the 1.16.0.0 version of the Drill component:

Version	1.16.0.0
Release Date	May 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names, for example: • mapr-drill-1.16.0.0.201905231125-1.noarch.rpm • mapr-drill-internal-1.16.0.0.201905231125-1.noarch.rpm • mapr-drill-yarn-1.16.0.0.201905231125-1.noarch.rpm

New in this Release

Drill 1.16.0.0 includes the following new features and improvements in the following areas:

SQL

- ANALYZE TABLE COMPUTE STATISTICS generates table statistics for more efficient query plans. (DRILL-1328)

last-updated: Apr 11, 2022

	• ANALYZE TABLE REFRESH METADATA generates metadata cache files for specific columns instead of an entire table or directory. (DRILL-7058) • CREATE OR REPLACE SCHEMA command defines schema for text files. (MD-5202, DRILL-6964) • NEARESTDATE function for time series analysis. • NEAREST DATE function to facilitate time series analysis (DRILL-7077) • By default, Drill no longer writes the profiles for SET queries to the persistent store. Setting the `exec.query_profile.alter_session.skip` option to false reverts this behavior.
Storage	• SYSLOG (RFC-5424) Format Plugin (DRILL-6582) • Format plugin for LTSV files (DRILL-7014) • A new maprdb format plugin option, `readTimestampWithZoneOffset`, converts timestamp values from UTC to local time zone when values are read from MapR Database. This option is disabled by default. (MD-5272) • Drill can query views defined in Hive similarly to querying Hive tables in a hive schema, for example: `SELECT * FROM hive.`hive_view`;` (DRILL-540)
Configuration Options	• A new Drill configuration option, `store.hive.maprdb_json.read_timestamp_with_timezone_offset`, enables Drill to read timestamp values with a timezone offset when using the hive plugin with the Drill native MaprDB JSON reader enabled. This option is disabled by default. (MD-5272)
Web UI	Several Web UI improvements, including: • Storage plugin management improvements (DRILL-6562) • Query progress indicators and warnings (DRILL-6879) • Ability to limit the result size for better UI response (DRILL-6050) • Ability to sort the list of profiles in the Drill Web UI (DRILL-6942) • Display query state in query result page (DRILL-6939) • Button to reset the options filter (DRILL-6921)

SQLLine (Drill shell)	• Upgrade to SQLLine 1.7. (DRILL-6989)
Calcite	• Upgrade to Calcite 1.18.0. (MD-5050)

For a list of additional features and improvements, see the Apache Drill 1.16 release notes.

Resolved Issues

Drill 1.16.0.0 includes the following resolved issues and improvements:

MapR Tracking Number	Resolved Issue
MD-5673	DRILL-7150: Drill timestamp timezone conversion uses current daylight savings time instead of the one active during timestamp date
MD-5647	DRILL-7118: Filter not getting pushed down on MapR-DB tables.
MD-5638	DRILL-7130: IllegalStateException: Read batch count [0] should be greater than zero
MD-5630	DRILL-7113: Drill on MapRDB can not understand null value
MD-5624	DRILL-7125: REFRESH TABLE METADATA fails after upgrade from Drill 1.13.0 to Drill 1.15.0
MD-5623	Unable to connect to Drill 1.15 through ZK
MD-5609	DRILL-7079: Drill can't query views from the S3 storage when plain authentication is enabled
MD-5606	DRILL-7100: parquet RecordBatchSizerManager : IllegalArgumentException: the requested size must be non-negative
MD-5561	DRILL-7060: Query on audit logs fails by DATA_READ ERROR Error Parsing JSON - Unrecognized character escape 'S' (code 83)
MD-5552	DRILL-7119: Modify selectivity calculations to use histograms
MD-5550	DRILL-7048: Implement JDBC Statement.setMaxRows() with System Option
MD-5523	Physical plan generation failure after upgrade from 1.10 to 1.14
MD-5490	DRILL-7117: Support creation of column Histograms for numeric data types
MD-5428	Include links to pre and post procedures in Drill upgrade documentation
MD-5379	DRILL-7018: Drill Query (when store.parquet.reader.int96_as_timestamp=true) on Parquet File fails with Error: SYSTEM ERROR: IndexOutOfBoundsException: readerIndex: 0, writerIndex: 372 (expected: 0 <= readerIndex <= writerIndex <= capacity(256))
MD-5374	DRILL-6971: Display query state in query result page of Web UI
MD-5369	DRILL-7115: Improve Hive schema show tables performance
MD-5368	DRILL-4858: repeated_count on JSON array of objects (maps) implementation is **missing** in Drill 1.14
MD-5363	DRILL-4858: Missing function implementation: [repeated_count(LIST-REPEATED)]

last-updated: Apr 11, 2022

MD-5356	DRILL-4858: Implement - Missing function implementation: [repeated_count(MAP-REPEATED)].
MD-5348	DRILL-6997: TPCDS queries 56, 60, 83 are slower with plan change
MD-5330	DRILL-6967: TIMESTAMPDIFF returns incorrect value for SQL_TSI_QUARTER
MD-5319	DRILL-6997: TPCDS query 95 slower with plan change
MD-5278	DRILL-6931: Drill "SHOW FILES" command duplicates empty S3 folders as subfolders
MD-5277	DRILL-6928: exec.query.return_result_set_for_ddl does not affect Web UI query results
MD-5272	DRILL-6969: Drill on maprdb native reader reads a wrong timezone comparing to hive
MD-5253	to_timestamp function is losing precision for milliseconds
MD-5251	DRILL-6894: CTAS and CTTAS are not working on S3 storage when cache is disabled
MD-5236	DRILL-7023: Tableau query fails with IndexOutOfBoundsException after upgrade from drill 1.13.0 to drill 1.14.0
MD-5226	DRILL-6918: Querying empty topics fails with "NumberFormatException"
MD-5198	DRILL-6880: TPCDS query 35 slower due to nulls
MD-5179	DRILL-6874: CTAS from json to parquet is not working on S3 storage
MD-5095	DRILL-7051: Update Drill's Jetty Server to 9.3
MD-4863	Simba JDBC driver does not return some values
MD-4862	Simba JDBC driver returns incorrect time value
MD-4826	The COALESCE function returns results when the columns referenced in the function do not exist in the files being queried. You do not have to CAST the columns to a specific data type for the COALESCE function to return results.
MD-4617	"direct.used" metrics(jvm_direct_current) doesn't catch the direct memory usage.
MD-4362	Query on data containing reserved word 'date' as column name fails to generate non-covering index plan
MD-3723	Querying Hbase row_key column with non- existing column returns different results in different Drill Versions
MD-1585	Need More Accurate Filter Estimation Before Running a Query
MD-1008	DRILL-7038: Performance - Queries on partitioned columns currently scan the entire datasets
MD-880	HashJoin's not fully parallelized in query plan
MD-680	DRILL-7069: Planning time unaccounted for query with longer planning time

Known Issues

Drill 1.16.0.0 has the following known issues:

last-updated: Apr 11, 2022

MapR Tracking Number	Known Issue
MD-5792	TPCH query 5 runs 10-20% slower at sf100/sf1000, possibly due to hash join ordering
MD-5786	TPCDS query 98 is 2x slower with Statistics enabled due to hash join order for sf100 and sf1000
MD-5782	Need better error message when analyze command fails due to schema change
MD-5770	TPCH query 9 runs 18% slower at sf 100/sf1000, possibly due to hash join
MD-5758	TPCDS query 78 runs 30x slower with Statistics enabled at sf100
MD-5755	DirectScan lists all partitions in explain plan, even for full table scan
MD-5744	[DRILL-7216] Auto limit is happening on the Drill Web-UI while the limit check box is unchecked
MD-5740	REFRESH TABLE METADATA does not count null values for decimal, varchar, and interval data types.
MD-5694	The first query to use a new metadata cache file may take a while to run because the first query triggers a refresh of the metadata cache file.
MD-5684	Drill timeout when querying a large number of files
MD-5676	Drill parquet file may not have statistics for decimal and varchar data types.
MD-5608	Running analyze command on a view fails correctly but the error is confusing
MD-5528	Compute stats on non existent columns fails with exception
MD-5388	Running analyze cmd on duplicate column names is resulting in IndexOutOfBoundsException
MD-5371	Error msg not clear when analyze cmd is run on table with complex types
MD-5342	DRILL-6839 : regarding aggs in cross join queries

Fixes

None.

Limitations

None.

Drill 1.15.0.7-1904 (EEP 6.1.1) Release Notes

This section provides reference information for fixes in Drill 1.15.0.7-1904.

The following release notes apply to the 1.15.0.7-1904 version of the Drill component:

Version	1.15.0.7-1904
Release Date	May 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.

last-updated: Apr 11, 2022

Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names, for example: • mapr-drill-1.15.0.7.201905031823-1.noarch.rpm • mapr-drill-internal-1.15.0.7.201905031823-1.noarch.rpm • mapr-drill-yarn-1.15.0.7.201905031823-1.noarch.rpm

Fixes

Drill 1.15.0.7-1904 provides the following fixes:

Fix Tracking Number	Description
MD-5523	Physical plan generation failure after upgrade from 1.10 to 1.14.
DRILL-7100	Fixed IllegalArgumentException when reading Parquet data.
MD-4166	Fix creation of filter conditions for IS NULL and IS NOT NULL.
DRILL-7118	Filter not getting pushed down on MapR-DB tables.
DRILL-7125	REFRESH TABLE METADATA fails after upgrade from Drill 1.13 to 1.15.0.0.
DRILL-7130	Fixed IllegalStateException while reading Parquet data.
DRILL-7150	Fix timezone conversion for timestamp from MaprDB after the transition from PDT to PST.
DRILL-7050	RexNode convert exception in sub-query.
MD-5623	Unable to connect to Drill 1.15 through ZK.
MD-5771	Username / password authentication for JDBC is not working anymore in Drill 1.15.
DRILL-7237	Fix single_value aggregate function for variable length types.

Known Issues and Limitations

None.

Drill 1.15.0.0-1901 (EEP 6.1.0) Release Notes

This section provides reference information, including new features, improvements, resolved issues, known issues, and limitations for Drill 1.15.0.0-1901.

These release notes contain MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

The following release notes apply to the 1.15.0.0 version of the Drill component:

Version	1.15.0.0
Release Date	February 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

ODBC/JDBC Drivers	Drill 1.15.0.0 works with the following MapR Drill drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit (Unsupported)
	  • 64-bit
	  • Windows
	  • 32-bit (Unsupported)
	  • 64-bit
	• JDBC Driver
	For additional driver information, see Drill Drivers.

New in this Release

Drill 1.15.0.0 includes the following new features and improvements in the following areas:

Storage

- Ability to query data in S3 via the new cloud storage plugin for S3. (MD-4541)
- Credential Provider API support in the S3 storage plugin. (MD-4543, DRILL-6662)
- The INFORMATION_SCHEMA FILES table provides information about directories and files stored in workspaces configured within S3 and filesystem storage plugin configurations. (MD-4544, DRILL-6680)

SQL

- TIMESTAMPADD and TIMESTAMPDIFF datetime functions. (MD-342, DRILL-3610)
- CROSS JOIN in the FROM clause. (MD-4359, DRILL-786)
- Support for column aliases and positional aliases in the GROUP BY, HAVING, and ORDER BY clauses. (MD-4825, DRILL-1248)
- Lateral join functionality is enabled by default. (DRILL-6729)
- Storage plugin names are case-insensitive. (MD-4589, MD-4663, DRILL-6492, DRILL-6768)
- All cast and data type conversion functions return null for an empty string ('') when the `drill.exec.functions.cast_empty_string_to_null` option is enabled. (DRILL-6817)
- A new option, `exec.query.return_result_set_for_ddl`, prevents Drill from returning a result set for DDL statements when set to "false." Useful for clients tools that connect to Drill (via JDBC) if they do not expect a result set. (MD-4757, DRILL-6834)

last-updated: Apr 11, 2022

Query optimization	• MapR Database secondary index support in Apache Drill. (DRILL-6381) • Improved query performance with semi-join functionality inside the Hash-Join operator. (MD-4877, DRILL-6735)
Parquet	• Parquet filter pushdown supports VARCHAR and DECIMAL data types (MD-1266, DRILL-6744)
Security	• Secure znodes with custom Access Control Lists. (MD-4476, DRILL-5671)
Web UI	Multiple Web UI improvements that simplify use and administrative tasks, including: • The ability to cancel multiple queries at once via a check box next to executing queries. • The auto prompt in the Web UI SQL box now works on UDFs. • An enhanced Options page that includes detailed descriptions of each option. • Categorized options via Quick Filters on the Options page. (DRILL-5735) • Default button (DRILL-6668) • Web display options and updated option names (MD-4835, DRILL-6544, DRILL-6715) • Meta+Enter key combination to submit queries (DRILL-6611)
SQLLine (Drill shell)	• Upgrade to SQLLine 1.6, includes the ability to add a custom configuration. (MD-2682, MD-5151, DRILL-3853) • Additional SQLLine connection parameters. (DRILL-3933)
System tables	• System options table includes option descriptions. (DRILL-6684) • System functions table exposes the available SQL functions in Drill and also detects UDFs that have been dynamically loaded into Drill. (MD-4941, DRILL-3988)

For a list of additional features and improvements, see the Apache Drill 1.15 Release Notes.

For additional information, read the MapR Drill 1.15 blog post.

Default Configuration Changes

Starting in MEP 6.1.0, certain ecosystem components, including Drill, have four digit version numbers. For example, when you install Drill, the Drill version appears as 1.15.0.0.

last-updated: Apr 11, 2022

Resolved Issues

Drill 1.15.0.0 includes the following resolved issues:

MapR Tracking Number	Resolved Issue
MD-5253	The TO_TIMESTAMP function no longer loses precision for milliseconds.
MD-5226	DRILL-6918: Querying empty topics no longer fails with a "NumberFormatException."
MD-5208	Semi-join queries on sf1 data no longer return an UNSUPPORTED_OPERATION error.
MD-5149	DRILL-6869: Drill no longer allows views created outside of workspaces.
MD-5147	DRILL-6865: Queries no longer return the wrong results when filter pruning occurs.
MD-5142	DRILL-6857: Limit is pushed into the scan when selecting from a Parquet file with multiple row groups.
MD-5138	DRILL-6863: Drop table works when the path is within a workspace that starts with '/'.
MD-5105	DRILL-6818: Secondary index options have descriptions.
MD-5076	DRILL-6811: Type inference returns the correct data mode for boolean functions.
MD-5062	DRILL-6664: Drill returns the same results for queries on the same column of a Parquet table with the same predicate.
MD-5057	Queries against new files created on a volume that has reached the name container data threshold no longer fail with I/O exceptions.
MD-5023	DRILL-6810: Drill does not support nullable complex types (maps, arrays); therefore, UDFs cannot return null if @Output is of a complex type. Null handling of complex types is disabled by default. NullHandling.INTERNAL should be used instead of NullHandling.NULL_IF_NULL in UDFs. When using NullHandling.INTERNAL, the UDF must handle null input(s) on its own.
MD-5019	DRILL-6797: Drill aggregation queries that use custom UDF to split column data in a Parquet file no longer fail with a compilation error if the filter criteria results in no rows.
MD-5014	DRILL-6776: The Drill Web UI page source no longer has links to external sites.
MD-5008	Drill can leverage indexes for queries with ORDER BY DESC on indexed columns; for example, if a secondary index is defined on column a, Drill leverages the index for the query: SELECT a FROM t ORDER BY a DESC;
MD-5002	DRILL-6764: Queries no longer fail with IOB exception when UNNEST references a deep nested field, like t.c_orders.o_lineitems.
MD-5001	DRILL-6766 : Queries with LATERAL UNNEST no longer return the following system error when one batch of streaming aggregates is split across multiple output batches : IllegalStateException: Unexpected case where rowId [] in right batch of lateral is smaller than rowId [] in left batch being processed.
MD-4968	DRILL-6762: Dynamic UDFs registered on one Drillbit are now visible on other Drillbits.
MD-4956	DRILL-6755: Hash-Join does not build hash tables when the probe side is empty.

MD-4938	The option planner.index.covering_selectivity_threshold takes effect in execution plan when set to values < 1.0 for complex data.
MD-4936	DRILL-6773: Queries, with column aliases, that returned inconsistent results after a Drill patch was applied no longer return inconsistent results.
MD-4867	DRILL-6726: Drill can query views created before DRILL-6492 when impersonation is enabled.
MD-4852	DRILL-6819: The invisible "back" link on the query results page in the Drill WebUI has been removed.
MD-4851	Drill queries on MapRDB JSON tables no longer fail on schema change when the only distinct values are null and text.
MD-4801	DRILL-6724: Operator context is dumped to logs when errors occur during query execution.
MD-4780	DRILL-6746: Queries no longer hang when one of the nodes encounters a connection error.
MD-4755	DRILL-6709: The batch statistics logging utility has been extended to mid-stream operators.
MD-4643	DRILL-6732: Disabled plugins no longer work as enabled.
MD-4617	"direct.used" metrics(jvm_direct_current) catches the direct memory usage.
MD-4585	The drillbit.log file includes query user information.
MD-4567	DRILL-6517 : Hash-Join no longer accesses batches after query cancellation.
MD-4499	DRILL-5365: File not found exception no longer results from reading a Parquet file.
MD-4362	Drill no longer fails to generate a non-covering index plan for queries on data with the reserved word 'date' as a column name.
MD-3879	DRILL-6039: Graceful shutdown waits for fragments to complete before stopping the Drillbit.
MD-2979	DRILL-6410: The Parquet reader no longer leaks memory during query cancellation.

Known Issues

Drill 1.15.0.0 has the following known issues:

MapR Tracking Number	Known Issue
MD-5390	Drill does not return an error message when impersonation prevents access to a directory.
MD-5376	DRILL-6991: The Kerberos ticket is being dumped in the log if the log level is "debug" for stdout.
MD-5348	TPCDS queries 56, 60, 83 are slower with plan change.
MD-5319	TPCDS query 95 slower with plan change.
MD-5250	TPCDS queries 56 and 60 have regressed.
MD-5232	TPCH query 4 has regressed for scale factor 1000.
MD-5231	DRILL-6896: TPCH 13 has "regressed".
MD-5204	DRILL-6845: TPCDS query 95 slower with semi-join enabled. You can disable semi-join through the planner.enable_semijoin option.

MD-5063	TPCH queries hit an IndexOutOfBoundsException when planner.enable_demux_exchange = true.

Fixes

None.

Limitations

None.

Drill 1.14.0-1904 (EEP 6.0.2) Release Notes

This section provides reference information for fixes in Drill 1.14.0-1904.

The following release notes apply to the 1.14.0-1904 version of the Drill component:

Version	1.14.0-1904
Release Date	May 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names, for example: • mapr-drill-1.14.0.201905031749-1.noarch.rpm • mapr-drill-internal-1.14.0.201905031749-1.noarch.rpm • mapr-drill-yarn-1.14.0.201905031749-1.noarch.rpm

Fixes

Drill 1.14.0-1904 provides the following fixes:

Fix Tracking Number	Description
MD-5523	Physical plan generation failure after upgrade from 1.10 to 1.14.
MD-4166	Fix creation of filter conditions for IS NULL and IS NOT NULL.
DRILL-6721	Fix SchemalessScan plan serialization / deserialization.
DRILL-7050	RexNode convert exception in sub-query.
DRILL-7125	REFRESH TABLE METADATA fails after upgrade from Drill 1.13 to 1.15.0.0.
MD-5771	Username / password authentication for JDBC is not working anymore in Drill 1.15.
DRILL-7237	Fix single_value aggregate function for variable length types.

Known Issues and Limitations

None.

Drill 1.14.0-1901 (EEP 6.0.1) Release Notes

This section provides reference information for fixes in Drill 1.14.0-1901.

The following release notes apply to the 1.14.0-1901 version of the Drill component:

last-updated: Apr 11, 2022

Version	1.14.0-1901
Release Date	February 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names, for example: • mapr-drill-1.14.0.201901161034-1.noarch.rpm • mapr-drill-internal-1.14.0.201901161034-1.noarch.rpm • mapr-drill-yarn-1.14.0.201901161034-1.noarch.rpm

Fixes

Drill 1.14.0-1901 provides the following fixes:

Fix Tracking Number	Description
MD-5379	DRILL-7018: Fixed Parquet buffer overflow when reading timestamp column.
MD-5272	DRILL-6969: Drill no longer returns inconsistent results when reading MapR Database JSON tables using hive plugin when the native reader is enabled.
MD-5257	DRILL-6942: Sort query profiles by duration in the Drill Web UI under Profiles tab.
MD-5062	DRILL-6664: Drill returns the same results for queries on the same column of a Parquet table with the same predicate.
MD-5019	DRILL-6797: Drill aggregation queries that use custom UDF to split column data in a Parquet file no longer fail with a compilation error if the filter criteria results in no rows.
MD-5014	DRILL-6776: The Drill Web UI page source no longer has links to external sites.
MD-5008	Drill can leverage indexes for queries with ORDER BY DESC on indexed columns; for example, if a secondary index is defined on column a, Drill leverages the index for the query: SELECT a FROM t ORDER BY a DESC;
MD-5002	DRILL-6764: Queries no longer fail with IndexOutOfBoundsException when UNNEST references a deep nested field, like t.c_orders.o_lineitems.
MD-5001	DRILL-6766: Queries with LATERAL UNNEST no longer return the following system error when one batch of streaming aggregates is split across multiple output batches: IllegalStateException: Unexpected case where rowId [] in right batch of lateral is smaller than rowId [] in left batch being processed.

MD-4938	The option planner.index.covering_selectivity_threshold takes effect in execution plan when set to values < 1.0 for complex data.
MD-4936	DRILL-6773: Queries, with column aliases, that returned inconsistent results after a Drill patch was applied no longer return inconsistent results.
MD-4902	Complex secondary index plans are parallelized when queries have AND conditions.
MD-4851	Drill queries on MapRDB JSON tables no longer fail on schema change when the only distinct values are null and text.
MD-4780	DRILL-6746: Queries no longer hang when one of the nodes encounters a connection error.

Known Issues and Limitations

None.

Drill 1.14.0-1808 (EEP 6.0.0) Release Notes

This section provides reference information, including new features, improvements, resolved issues, known issues, and limitations for Drill 1.14.0-1808.

These release notes contain MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

The following release notes apply to the 1.14.0 version of the Drill component:

Version	1.14.0
Release Date	September 2018
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

New in this Release

Drill 1.14.0 includes the following new features and improvements:

Query Planning	The query planner in Drill can leverage indexes created on MapR Database JSON document fields with array fields. See Writing Drill Queries that Leverage Indexes on Array Fields. (MD-3742)
	When you query a view created on a MapR Database table, the query planner in Drill creates the same query plan it would create if you ran the underlying query directly against the MapR Database table. (MD-3360, MD-3313)
SQL	Drill supports lateral joins. You must enable the lateral join functionality in Drill. See Lateral Join.
	The DECIMAL data type is enabled by default and has enhanced support. (MD-3522, MD-1138, MD-640)
	Hive schema and table names are case-insensitive. See Case-Sensitivity. (MD-948)
	Support for the ANY_VALUE function; based on CALCITE-2366. (MD-4498)

last-updated: Apr 11, 2022

	Drill allows comparisons between date and timestamp values. (MD-4220)
Resource management	Drill can directly manage the CPU resources through the Drill start-up script, drill-env.sh. See Configuring cgroups to Control CPU Usage. (MD-3862)
Storage plugin management	Ability to export and save your storage plugin configurations to a JSON file for reuse. (MD-4621) Ability to manage storage plugin configurations in the Drill configuration file storage-plugins-override.conf. (MD-2732)
Integration with Hive and Hue	Hue integration with Drill is officially supported. See Integrate Hue with Drill. (MD-2382) Ability to specify Hive properties at the session level through the store.hive.conf.properties option. See Setting Hive Properties. (MD-4370) A new option, store.hive.maprdb_json.optimize_scan_with_native_reader, enables Drill to use the native Drill reader to read Hive MapR Database JSON tables. When you enable this option, Drill typically performs faster reads of data and applies filter pushdown optimizations. See SET maprdb Format Plugin Options. (MD-3662)
Parquet filter pushdown and partition pruning	Drill can infer filter conditions for join queries and push the filter conditions down to the data source. (MD-3542, MD-2181, MD-1399, MD-1272) Parquet filter pushdown pushes filters past the ITEM operator; useful for queries on complex fields. (MD-1271) Parquet performance improvements. (MD-2518, MD-1582) Drill uses a native reader to read Hive tables when the store.hive.optimize_scan_with_native_readers option is enabled; Drill reads data faster and applies filter pushdown optimizations. (MD-1267) Drill can pushdown filters into the Systems table. (MD-4055)
Query profiles	Profiles in Drill show the amount of memory used by the Unordered Receiver operator. (MD-4260)
Drivers	Drill 1.14 requires new versions of the ODBC and JDBC drivers. You can download the MapR ODBC and JDBC drivers for Drill 1.14. Earlier versions of the drivers do not work with Apache Drill 1.14.

For a list of additional features and improvements, see the Apache Drill 1.14 Release Notes.

Default Configuration Changes

Note the following changes to default configurations in Drill 1.14.0:

- Warden manages memory as a percentage of total system memory. See Configuring Drill Memory. (MD-2850)
- Spillable operators spill data to the /tmp/drill/spill directory on the MapR Filesystem. You can override this setting in drill-override.conf. Refer to the examples in drill-override-example.conf. (MD-4775)
- Query profile data is stored in maprfs:///apps/drill/profiles. The drill-override.conf file includes the sys.store.provider.zk.blobroot property that you can use to override the default location. See Configuring the ZooKeeper PStore Location. (MD-3527)

last-updated: Apr 11, 2022

Resolved Issues

Drill 1.14.0 includes the following resolved issues:

MapR Tracking Numbers	Resolved Issues
MD-4871	When querying a target MapR stream, the query stops running, and Drill prints a message stating "Failed to fetch messages within 200 milliseconds."
MD-4831	The Drill-on-Yarn package has inconsistent libMapRClient.so versions.
MD-4721	The following error should be logged as a warning instead of an error: "ERROR o.a.d.e.p.index.IndexDiscoverBase - No index returned from Admin.getTableIndexes"
MD-4666	DRILL-6612: Drill logs an assertion error when a query joins on a temporary table.
MD-4643	DRILL-6732: Disabled storage plugins work as if they are enabled.
MD-4607	DRILL-6557: Scanning input splits in Hive table causes an exceptionally long planning phase.
MD-4535	DRILL-6513: Drill should only allow valid values when users set planner.memory.max_query_memory_per_node. This option should be limited by direct memory; otherwise, there can be memory pressure and out-of-memory errors.
MD-4422	DRILL-6468: The Drillbit stays in QUIESCENT mode after an out-of-memory condition.
MD-4371	A specific query returns an exception when using the "equals" operator to filter on a boolean column.
MD-4251	DRILL-6474: Queries with ORDER BY and OFFSET (without LIMIT) do not return any rows.
MD-4156	When selecting a column from a Parquet file, a query may stop running and return an error stating "ArrayIndexOutOfBoundsException,"
MD-4133	The INFO log level provides excessive logging information.
MD-4107	Queries on Hive data sources may stop running amd return an error stating “UnsupportedOperationException: org.apache.hadoop.hive.ql.io.parquet.convert.ETypeConverter$8$1.”
MD-4102	UNION ALL queries return a UNION-ALLNumberFormatException
MD-4065	The Hash Aggregate operator uses ~2X memory.
MD-4048	DRILL-6282: Update Drill's metric dependencies.
MD-4033	Drill does not return results for some queries with an inner join.
MD-4017	DRILL-6254: Flatten queries may stop running due to an error that states “IllegalArgumentException: the requested size must be non-negative.”
MD-4005	The HashJoinSpill operator does not use memory efficiently.
MD-3997	DRILL-6250: The SQLLine start command and password appears in sqlline.log.
MD-3984	DRILL-6241: The Saffron properties configuration file has excessive permissions.
MD-3886	DRILL-6199: Filter push down does not work with more than one nested subquery.
MD-3716	DRILL-6223: Queries stop running if they select on all columns from a set of Parquet files.

last-updated: Apr 11, 2022

MD-3688	Impersonating a view owner does not work.
MD-3656	DRILL-6132 The HashPartitionSender leaks memory.
MD-3541	If Drill encounters JRE SIGSEGV, the Drillbit stops running.
MD-3525	Drill queries fails on function LOG10.
MD-2883	DRILL-4337: Querying Hive tables with INT96 fields causes Drill to fail.
MD-2082	DRILL 4807: An ORDER BY aggregate function in a window definition results in an assertion error.
MD-2048	The JSESSIONID cookie is not set with the HttpOnly flag.
MD-1549	DRILL-5188: TPC-DS query16 fails with the following exception: “IllegalArgumentException: Target must be less than target count”
MD-1487	DRILL-3855: Predicate pushdown does not occur for the UNION ALL operator.

Known Issues

Drill 1.14.0 has the following known issues:

MapR Tracking Numbers	Known Issues
MD-4938	The planner.index.covering_selectivity_threshold does not take effect in the execution plan when the option is set to values less than 1.0 for complex data.
MD-4906	For selectivity queries on secondary indexes, Drill may return an exception that states “ForemanException: One more more nodes lost connectivity during query.”
MD-4902	Queries with AND conditions on indexed complex type fields are not parallelized.
MD-4894	Queries with nested FLATTEN functions may stop running and return an error that states “Error: UNSUPPORTED_OPERATION ERROR: Hash aggregate does not support schema change.”
MD-4890	The query planner in Drill does not create an index-based query plan for queries with multi-level flattens or queries with intermediate filters that reference multi-level flattens.
MD-4865	Certain queries with AND conditions on alphanumeric data, such as keys, stop running, and Drill returns an error that states “UNSUPPORTED_OPERATION ERROR: In a list of type BIT, encountered a value of type FLOAT4.”
MD-4860	Simple select star queries return a NullPointerException when the data is highly complex.
MD-4846	When operators hit the maximum buffer size, Drill returns an OversizedAllocationException that states "Unable to expand the buffer. Max allowed buffer size is reached."
MD-4827	The ODBC driver returns INFINITY in capital letters instead of mixed case.
MD-4821	DRILL-6707: A query with a 10-way merge join fails with an IllegalArgumentException.
MD-4799	Data batches for the Project operator exceed the specified maximum.
MD-4773	A data verification failure in Functional/tpch/sf0dot01/smoke/parquet/join10-hash.q needs to be resolved.
MD-4759	An orderby on a field with [][] throws a NullPointerException.
MD-4739	Parallelism for complex secondary index plans are unrestricted.
MD-4738	The query planner incorrectly determines parallelism for secondary index plans.
MD-4736	Queries with multiple flatten functions may hang.

MD-4730	Drill may log the following exception during index planning: java.lang.ClassCastException: org.apache.drill.common.expression.FunctionCall cannot be cast to org.apache.drill.common.expression.SchemaPath
MD-4709	Queries pick non-covering index plans if the Streaming Aggregate operator is disabled.
MD-4704	Queries that have an exact equality filter with a map JSON literal stop running and return an error that states "SchemaChangeException - Error: Missing function implementation: [equal(MAP-REQUIRED, VARBINARY-REQUIRED)]."
MD-4577	The HashJoin operator allocates too much memory and slows down queries (TPCH 16) when spill to disk is enabled.
MD-4574	MapR Database cannot push filters on non-rowkey columns down to the data source when using a convert function with the byte_substr manipulation function; for example: … where convert_from(byte_substr(t.cf1.ADDR_WORK_OPT_OUT_DATE_DM,1,8),'UTF8')='20130402'
MD-4531	The total batches for the Project operator are not properly split and exceed the maximum specified.
MD-4518	The total batch size for the Project operator exceeds the maximum specified.
MD-4504	[DRILL-6465] Transitive closure is not working for joins with multiple local conditions.
MD-4479	The error message for group by queries on a complex type needs to be updated to state that they are unsupported.
MD-4404	The Datediff function returns the wrong result if Drill uses a timezone with DST.
MD-4377	Queries on complex data may stop running and return a NumberFormatException.
MD-4376	Queries on complex data may return a NullPointerException.
MD-4375	Queries with invalid filters on fields with complex types hang during the planning phase.
MD-4264	HashAgg Batch throws an IllegalStateException when asserts are enabled for a non-covering index plan.
MD-4229	DRILL-6329 : TPC-DS Query 66 failed due to out-of-memory errors.

Drill 1.13.0-2009 (EEP 5.0.5) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Drill Drill 1.13.0-2009 in EEP5.0.5.

Below are release notes for the Drill component included in the MapR Converged Data Platform. You may also be interested in the Apache Drill homepage and the Apache Drill release notes:

Version	Drill 1.13.0-2009
Release Date	September 2020

last-updated: Apr 11, 2022

MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names.

New Features

- None.

Resolved Issues

Drill 1.13.0-2009 provides the following resolved issues and improvements:

Commit	Date (YYYY-MM-DD)	Comment
9d1841f	2020-06-05	DEVOPS-4070: Fix repository.mapr.com/nexus repository
8857248	2020-06-03	DRILL-7405: Avoiding download of TPC-H data
628933e	2020-06-04	DRILL-6470: Remove defunct repository

Drill 1.13.0-2009 also includes the following resolved issues and improvements:

MapR Tracking Number	Description
MD-6000	Query hung after upgrade from 1.10 to 1.13

Known Issues

- None.

Limitations

Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables.

Drill 1.13.0-1912 (EEP 5.0.4) Release Notes

This section provides reference information for fixes in Drill 1.13.0-1912.

The following release notes apply to the 1.13.0-1912 version of the Drill component:

Version	1.13.0-1912
Release Date	December 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.

last-updated: Apr 11, 2022

Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names. For example: CentOS/Red Hat: • `mapr-drill-1.13.0.201910091439-1.noarch.rpm` • `mapr-drill-internal-1.13.0.201910091439-1.noarch.rpm` • `mapr-drill-yarn-1.13.0.201910091439-1.noarch.rpm` Ubuntu/Debian: • `mapr-drill_1.13.0.201910091438_all.deb` • `mapr-drill-internal_1.13.0.201910091438_all.deb` • `mapr-drill-yarn_1.13.0.201910091438_all.deb`

Fixes

Drill 1.13.0-1912 provides the following fixes:

Apache Drill Issue	MapR Tracking Number	Description
N/A	MD-5842	Drill confuses the data type when inserted both from OJAI API and dbshell
DRILL-7113	MD-5630	Drill on MapRDB cannot understand a null value
DRILL-7052	MD-5541	High risk phishing vulnerability in Web UI
DRILL-6664	MD-5077	Backport fix for DRILL-6664 into 1.13-R1 and 1.14-R1 branches
N/A	MD-5057	Drill Query on New File created on Volume that has reached namecontainerdatathreshold fails with gets I/O Exception (Failure while trying to get block map)
DRILL-6557	MD-4607	Drill should not get ALL input splits during planning phase for Hive partition table

Known Issues and Limitations

Older versions of Drill, such as Drill 1.10.0, supported the HBase plug-in, but Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables.

Drill 1.13.0-1904 (EEP 5.0.3) Release Notes

This section provides reference information for fixes in Drill 1.13.0-1904.

The following release notes apply to the 1.13.0-1904 version of the Drill component:

Version	1.13.0-1904
Release Date	May 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.

last-updated: Apr 11, 2022

Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names, for example: • mapr-drill-1.13.0.201905031711-1.noarch.rpm • mapr-drill-internal-1.13.0.201905031711-1.noarch.rpm • mapr-drill-yarn-1.13.0.201905031711-1.noarch.rpm

Fixes

Drill 1.13.0-1904 provides the following fixes:

Fix Tracking Number	Description
MD-4166	Fix creation of filter conditions for IS NULL and IS NOT NULL.
DRILL-6721	Fix SchemalessScan plan serialization / deserialization.
MD-5771	Username / password authentication for JDBC is not working anymore in Drill 1.15.

Known Issues and Limitations

None.

Drill 1.13.0-1901 (EEP 5.0.2) Release Notes
This section provides reference information for fixes in Drill 1.13.0-1901.

The following release notes apply to the 1.13.0-1901 version of the Drill component:

Version	1.13.0-1901
Release Date	February 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names, for example: • mapr-drill-1.13.0.201901241316-1.noarch.rpm • mapr-drill-internal-1.13.0.201901241316-1.noarch.rpm • mapr-drill-yarn-1.13.0.201901241316-1.noarch.rpm

Fixes

Drill 1.13.0-1901 provides the following fixes:

Fix Tracking Number	Description
MD-5379	DRILL-7018: Fixed Parquet buffer overflow when reading timestamp column.
MD-5062	DRILL-6664: Drill returns the same results for queries on the same column of a Parquet table with the same predicate.
MD-5019	DRILL-6797: Drill aggregation queries that use custom UDF to split column data in a Parquet file no longer fail with a compilation error if the filter criteria results in no rows.

MD-5014	DRILL-6776: The Drill Web UI page source no longer has links to external sites.
MD-5008	Drill can leverage indexes for queries with ORDER BY DESC on indexed columns; for example, if a secondary index is defined on column a, Drill leverages the index for the query: SELECT a FROM t ORDER BY a DESC;
MD-4936	DRILL-6773: Queries, with column aliases, that returned inconsistent results after a Drill patch was applied no longer return inconsistent results.
MD-4851	Drill queries on MapRDB JSON tables no longer fail on schema change when the only distinct values are null and text.
MD-4780	DRILL-6746: Queries no longer hang when one of the nodes encounters a connection error.

Known Issues

See the Drill 1.13-1803 release notes.

Drill 1.13.0-1808 Release Notes

This section provides reference information for fixes in Drill 1.13.0-1808.

The following release notes apply to the 1.13.0-1808 version of the Drill component:

Version	1.13.0-1808
Release Date	September 2018
MapR Version Interoperability	Component Versions for Released EEPs
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names, for example: • mapr-drill-1.13.0.201809261426-1.noarch.rpm • mapr-drill-internal-1.13.0.201809261426-1.noarch.rpm • mapr-drill-yarn-1.13.0.201809261426-1.noarch.rpm

Fixes

Drill 1.13.0-1808 provides the following fixes:

Fix Tracking Numbers	Description
MD-4156	Queries on a single Parquet column no longer fail with an ArrayIndexOutOfBoundsException.
MD-4248	(DRILL-6442) Hbase disk cost and row count estimates are adjusted when filter push down is applied; also, includes fixes for issues in the HBaseTestsSuite's init method.
MD-4259	LIMIT queries on MapR Database JSON tables with indexes now return the correct results.
MD-4403	The compiler no longer returns an 'inline' specifier error when compiling the Drill native client on CentOS 7, Ubuntu 14, and Windows.
MD-4444	Issuing the CTAS command against a MapR Database table no longer returns a NullPointerException.

last-updated: Apr 11, 2022

Fix Tracking Numbers	Description
MD-4509	Query plans with CAST indexes are generated for LIKE filters with CAST functions.
MD-4969	The client POM file now includes the org.apache.drill.contrib dependency.

Known Issues and Limitations

See the Drill 1.13-1803 release notes.

Drill 1.13-1803 Release Notes

This section provides reference information, including new features, improvements, resolved issues, known issues, and limitations for Drill 1.13.0-1803.

The following release notes apply to the 1.13.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.13.0
Release Date	April 2018
MapR Version Interoperability	See the EEP Components and OS Support, Interoperability Matrix, and Drill Support Matrix.
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in this Release

This release of Drill includes a fix for CVE-2017-12197 and the following new features:

- Parquet planning improvements, including:
  - (MD-3445, MD-1312) Performance improvements with support for project push down, filter push down, and partition pruning on star queries in common table expressions (CTEs), views, and subqueries.
- Parquet filter pushdown improvements, including:
  - (MD-1264) Filtering on the IS [NOT] NULL and IS [NOT] TRUE|FALSE operators.
  - (MD-3821) Filtering on boolean values.
  - (MD-1270) Casting between date, time, and timestamp values.
  - (MD-1269) Support for files with multiple row groups.
- Runtime filter pushdown support for queries with join conditions on rowkeys.
  - (MD-1293) Drill can push down rowkey join filters to MapR Database at runtime.
- (MD-1947) Upgrade to Calcite version 1.15.
- (MD-1086) Ability to configure cgroups to control Drill CPU usage when Drill runs under YARN.
- (MD-2234) Ability to gracefully shut down a Drillbit.
- (MD-2404) Support for SPNEGO to extend the Kerberos-based single sign-on authentication mechanism to HTTP.
- SQL syntax highlighting for queries and snippets (SQL templates).

last-updated: Apr 11, 2022

- Ability to define the maximum amount of cumulative memory allocated to the Drill process during startup.

For a list of additional features and improvements, see the Apache Drill 1.13 Release Notes.

Improvements

This release of Drill includes the following improvements:

MapR Tracking Numbers	Improvements
MD-3836	DRILL-6174 Parquet pushdown planning improvements
MD-3711	Batch Sizing for Operators in EEP 5.0
MD-3657	DRILL-6071 Limit batch size for flatten operator
MD-3611	DRILL-6145 Implement Hive MapR Database JSON handler
MD-3428	DRILL-6115 SingleMergeExchange is not scaling up when many minor fragments are allocated for a query
MD-3340	DRILL-6147: Limit batch size for Flat Parquet Reader
MD-3312	Proposal Auto Mem Allocation
MD-3265	Query with union on empty directory on any side fails
MD-2920	Drill contains updated Hive libraries with Hive version 2.1.1-mapr-1710. With the update, Drill supports queries on transactional (ACID) and non-transactional Hive bucketed ORC tables. The updated libraries are backward compatible with earlier versions of the Hive server and metastore.
MD-2074	Memory Fragmentation Fundamentals Completion
MD-1360	Projection push down using WITH clause needs to work on Parquet files in addition to views
MD-1297	Improve Drill Join Performance on MapR Database Tables On Primary Indexes

Resolved Issues

This release of Drill includes the following resolved issues:

MapR Tracking Numbers	Resolved Issues
MD-4026	Drillbit failed to start after v6.0.0 -> v6.0.1 core upgrade.
MD-3997	DRILL-6250: Sqlline start command with password appears in the sqlline.log.
MD-4110	OJAI query through Drill fails due to impersonation.
MD-4099	Fix protocol incompatibility between 1.12.0-mapr and 1.13.0-mapr client and bit.
MD-4049	Query with runtime filter pushdown returns incorrect results.
MD-4074	HashAggBatch.innerNext() OOM error.
MD-4108	Queries on wide column parquet dataset return incorrect results.
MD-4101	Queries going to Drill fail with java.lang.IllegalArgumentException: org.apache.zookeeper.KeeperException$NoAuthException: KeeperErrorCode = NoAuth for /drill/cluster114-drillbits/2ffc1e3c-0ff7-490c-bf23-98365cc7eaf2.
MD-4100	Update the default Heap for Drill to 4GB.
MD-4098	Drillbit crashes when canceling a hash agg query.
MD-4082	Query fails with IndexOutOfBoundsException: Index: 0, Size: 0.
MD-4077	OJAI is unable to query QueryService (Drill) as root.

last-updated: Apr 11, 2022

MD-4071	Update the Hadoop and MapR versions in the pom.xml file.
MD-4056	Drillbit startup fails with "No configuration setting found for key 'drill.exec.options.store.parquet.reader.enableFSRetry'".
MD-4054	Queries with runtime filter pushdown fail with NPE when subquery contains filter on nested fields.
MD-4039	Query encounters INTERNAL_ERROR ERROR: index: -25614, length: 0 (expected: range(0, 65536)).
MD-4017	DRILL-6254: IllegalArgumentException: the requested size must be non-negative.
MD-4013	DRILL-6275: Drillbit direct_current memory usage is not populated/updated.
MD-4002	Query is not honoring the batch size limit.
MD-3986	Queries are hanging.
MD-3984	DRILL-6241: Saffron properties config file still has the excessive permissions.
MD-3957	Error in parquet record reader.
MD-3956	Query hangs.
MD-3948	Allocated batch size is larger than requested.
MD-3947	Record counts are the same but batch sizes are different.
MD-3946	Batch Sizes are inconsistent when record sizes are the same.
MD-3945	MapR Drill does not compile because JDBC driver JAR is too large.
MD-3925	Query using index plan fails with "DrillRuntimeException: Join only supports implicit casts between <types>. Add explicit casts to avoid this error".
MD-3886	DRILL-6199: Filter push down doesn't work with more than one nested subqueries
MD-3880	RowKeyJoin caused IndexOutOfBoundsException.
MD-3875	DRILL-6151 Fragment executors may terminate without sending final batch to a downstream causing query to hang.
MD-3865	DRILL-6217: NaN/Inf: NestedLoopJoin processes NaN values incorrectly.
MD-3864	Error is displaying while accessing query profiles via the Web-UI.
MD-3863	DRILL-6187: Exception in RPC communication between data server and data client.
MD-3857	NullPointerException occurs on HiveDrillNativeParquetScan.
MD-3824	dir0 does not work when the directory structure contains Avro files(DRILL-4120).
MD-3822	DRILL-6216: Metadata mismatch for sys.options table.
MD-3802	DRILL-6023 Graceful shutdown hardening.
MD-3784	DRILL-6189: User credentials appear in the Drill logs if the log level is set to ALL.
MD-3783	DRILL-6189: Drill config files have the excessive permissions.
MD-3726	Simple Order by queries (without limit) when an index is used are showing regression.
MD-3670	Fix NPE during physical plan submission for various storage plugins.
MD-3634	Find on a table using Dill fails with ClassNotFoundException: org.ojai.store.QueryResult.
MD-3610	Drill query hanging.
MD-3598	Address bugs related to Nan / Inf w/ MD-2745.
MD-3455	Queries with GROUP BY w/o WHERE clause using index plans returns rows with possible incorrect precision.

last-updated: Apr 11, 2022

MD-3575	DRILL-6192: Drill is vulnerable to CVE-2017-12197.
MD-3208	Misleading message when multi-column subquery is projecting within an IN clause.
MD-3188	DRILL-5903: Query encounters "Waited for 15000ms, but tasks for 'Fetch parquet metadata' are not complete."
MD-3187	DRILL-5902: Regression: Queries encounter random failure due to RPC connection timed out.
MD-2922	Predicates joined by AND/OR do not return right results for time and timestamp with millisec or higher precision.
MD-2790	DRILL-5902 Queries encounter random failure due to RPC connection timed out.
MD-2684	DRILL-4708: connection closed unexpectedly.
MD-2544	Drillbit JVM dumps core when querying a table with SI.
MD-2041	Potential wrong result from spillable hash agg.
MD-1848	Drill not able to read MapR Database when FQDN is longer than 64 characters.
MD-1575	Not able to set exec.impersonation.inbound_policies from web interface.

Known Issues

This release of Drill includes the following known issues:

MapR Tracking Numbers	Known Issues
MD-4106	DRILL-6293: Unable to read Apache Hive(2.1.1) tables using Drill 1.13.0.
MD-3988	Query runs out of memory.
MD-4153	Add support for runtime filter pushdown when _id occurs on the right side of the join.
MD-4133	Excessive logging at INFO level.
MD-4109	Drillbit crashed when concurrency is high (48 clients) and -Dio.netty.buffer.bytebuf.checkAccessible=true not in the Drillbit start-up command line.
MD-4107	Queries on Hive datasource fail with UnsupportedOperationException: org.apache.hadoop.hive.ql.io.parquet.convert.ETypeConverter$8$1.
MD-4102	NumberFormatException from UNION-ALL query.
MD-4086	Clean up messages going into drillbit.out.
MD-4065	HashAgg uses ~2X memory.
MD-4048	DRILL-6283: Excluding io.dropwizard.metrics dependencies.
MD-4047	Queries frequently fail with scan errors when performing runtime filter pushdown.
MD-4046	Drill returns different query plans across runs for queries performing runtime filter pushdown.
MD-4031	Drill does not pushdown runtime filters for queries with IN subquery unless threshold is over 10%.
MD-4001	select count(*) the Count from sys.drillbits works fine from sqlline but fails from drillSession.executeStatement().
MD-3981	Runtime filter pushdown does not happen for equality join with scalar subquery.
MD-3929	DRILL-6219: Filter pushdown does not work with star operator if there is a subquery with its own filter.
MD-3924	Query with a nested sub-query having a filter on a non-existent field fails with NPE.
MD-3138	Invalid expected results for Functional/table_function/positive/drill-3149_10.q.

last-updated: Apr 11, 2022

Fixes

None

Limitations

None

Drill 1.12.0-1904 (EEP 4.1.4) Release Notes

This section provides reference information for fixes in Drill 1.12.0-1904.

The following release notes apply to the 1.12.0-1904 version of the Drill component:

Version	1.12.0-1904
Release Date	May 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names, for example: • mapr-drill-1.12.0.201904160030-1.noarch.rpm • mapr-drill-internal-1.12.0.201904160030-1.noarch.rpm • mapr-drill-yarn-1.12.0.201904160030-1.noarch.rpm

Fixes

Drill 1.12.0-1904 provides the following fixes:

Fix Tracking Number	Description
DRILL-6721	Fix SchemalessScan plan serialization / deserialization.

Known Issues and Limitations

None.

Drill 1.12.0-1901 (EEP 4.1.3) Release Notes

This section provides reference information for fixes in Drill 1.12.0-1901.

The following release notes apply to the 1.12.0-1901 version of the Drill component:

Version	1.12.0-1901
Release Date	February 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586.
Package Names	Navigate to https://package.mapr.com/releases/MEP/, and select your MEP and OS to view the list of package names, for example: • mapr-drill-1.12.0.201901030219-1.noarch.rpm • mapr-drill-internal-1.12.0.201901030219-1.noarch.rpm • mapr-drill-yarn-1.12.0.201901030219-1.noarch.rpm

Fixes

Drill 1.12.0-1901 provides the following fixes:

Fix Tracking Numbers	Description
MD-5264	DRILL-5902: Queries no longer encounter a random failure due to RPC connection timeouts.
MD-4936	DRILL-6773: Queries, with column aliases, that returned inconsistent results after a Drill patch was applied no longer return inconsistent results.

Known Issues and Limitations

See the Drill 1.12.0-1801 release notes.

Drill 1.12.0-1808 Release Notes

This section provides reference information for fixes in Drill 1.12.0-1808.

The following release notes apply to the 1.12.0-1808 version of the Drill component:

Version	1.12.0-1808
Release Date	September 2018
MapR Version Interoperability	Component Versions for Released EEPs.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names, for example: • mapr-drill-1.12.0.201807100435-1.noarch.rpm • mapr-drill-internal-1.12.0.201807100435-1.noarch.rpm • mapr-drill-yarn-1.12.0.201807100435-1.noarch.rpm

Fixes

Drill 1.12.0-1808 provides the following fixes:

Fix Tracking Numbers	Descriptions
MD-4509	Query plans with CAST indexes are generated for LIKE filters with CAST functions.
MD-4444	Issuing the CTAS command against a MapR Database table no longer returns a NullPointerException.
MD-4156	Queries on a single Parquet column no longer fail with an ArrayIndexOutOfBoundsException.
MD-4048	The io.dropwizard.metrics have been removed from Drill.
MD-3979	Queries that use CAST index plans no longer fail with a NullPointerException.
MD-3716	(DRILL-6223) Queries on complex nested data in Parquet files no longer fail when selecting on all columns.
MD-3544	Queries on complex nested data in Parquet files no longer fail.
DRILL-6557	Drill no longer fetches all the input splits when Hive statistics provide the number of bytes, which improves query planning time for queries on Hive data.

last-updated: Apr 11, 2022

Fix Tracking Numbers	Descriptions
DRILL-6204	When the store.hive.optimize_scan_with_native_readers option is enabled, Drill separates the partitioned columns from the non-partition columns when reading Hive data directly from the filesystem. This prevents Drill from returning an error if the reader cannot find partitioned columns in the table schema.
DRILL-6195	Drill can query Hive partitioned bucketed tables.
DRILL-6164	Drill no longer returns out-of-memory errors due to memory leaks caused by the buildup of Parquet reader references that the scanner does not remove.
DRILL-5978	Hive libraries are updated to version 2.1.2-mapr-1710.
DRILL-4185	Drill supports queries with JOIN and UNION [ALL] operators on empty directories.

Known Issues and Limitations

See the Drill 1.12.0-1801 release notes.

Drill 1.12.0-1801 Release Notes

This section provides reference information, including new features, default configuration changes, improvements, resolved issues, known issues, and limitations for Drill 1.12.0-1801.

The following release notes apply to the 1.12.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.12.0
Release Date	February 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536, Interoperability Matrix, and Drill Support Matrix.
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in this Release

- (MD-1649) Index-based query plans for queries without filters, including queries with GROUP BY, JOIN, and DISTINCT projections. See Index Planning in Drill.
- (MD-2301) Ability to submit queries from the REST API when impersonation is enabled and authentication is disabled. See Submitting Queries.
- (MD-2745) Support for NaN (Not-a-Number) and Infinity (both POSITIVE and NEGATIVE) as numeric values. See JSON Data Model.
- (MD-2490, DRILL-5723) System options improvements, including a new internal system options table.

Default Configuration Changes

The default size for the `store.parquet.block-size` parameter is now 268435456 (256 MB), the same size as MapR filesystem chunk sizes. Previously, the default size was 536870912 (512 MB). See Configuring the Parquet Block Size for more information.

Improvements

In addition to the features mentioned above, Drill 1.12 includes the following improvements:

MapR Tracking Numbers	Improvements
MD-3365	Bounds checking for direct memory is now disabled by default. You can enable bounds checking, as explained in Configuring Drill Memory.
MD-3314	Unable to re-run queries from Profiles tab with impersonation and without authentication
MD-3086	Improve the row count estimates for LIMIT queries to avoid over-parallelization
MD-3053	MapR Database Statistics Improvements
MD-2867	DRILL-5855 Provide a useful error message when the SystemOptionManager is queried for a non-existent option
MD-2842	Projecting a Few Columns with DISTINCT, LIMIT and ORDER BY without a Filter Specified should use a Secondary Index Tables for Fast Query Response Times
MD-2758	Drill performance improvement for text search vs Impala
MD-2745	Error parsing JSON containing token 'NaN'
MD-2647	Enable UTF-8 support in query string by default
MD-2518	Parquet Scan Performance Improvement
MD-2403	Drillbit fails to start when only keystore path is provided without keystore password.
MD-2323	Review & update the default values of index planning config options
MD-2319	Query Containing Wildcard in String Matching Filter Runs 4x Slower Than Impala
MD-2301	Support Impersonation without authentication for REST API
MD-2196	DRILL-4264: Allow field names to include dots
MD-2002	Operator Specific Handle for Empty Batches
MD-1752	Throttling-based per-query memory assignment
MD-1650	Drill Join query with Secondary indexes
MD-1649, MD-3267	Support Index Planning for Queries with GROUP BY w/o WHERE clause
MD-1431	Improve Performance of Drill's Parquet Scan Operator (Amadeus)
MD-1247, MD-1810	Drill only initializes enabled storage plugins and registers schemas for workspaces that relate directly to a query, which improves query time for small queries that run concurrently. The Foreman in Drill caches the root schema of the JSON document for use in subsequent queries. Previously, Drill initialized all enabled storage plugins and registered workspace schemas for each query without caching the root schema, which caused an increase in query time if a storage plugin was misconfigured or the underlying data source was down or slow.
MD-580	Improve performance of Parquet scan operator

For a list of additional features and improvements, see Apache Drill 1.12 Release Notes.

Resolved Issues

This release of Drill includes the following resolved issues:

last-updated: Apr 11, 2022

MapR Tracking Numbers	Resolved Issues
MD-3471	Intermittent permission denied errors with Drill queries on Views
MD-3423	DRILL-5880 : Advanced tests fail with error: "UNSUPPORTED_OPERATION ERROR: This query cannot be planned possibly due to either a cartesian join or an inequality join"
MD-3322	You no longer need to enable the planner.index.force_sort_noncovering option for Drill to correctly return the results of a non-covering query in sorted order.
MD-3249	Query with union on 520 columns failing with compilation exception
MD-3246	Investigate jackson-databind vulnerabilities CVE-2017-15095 & CVE-2017-7525
MD-3196	Query hangs when we concat many items
MD-3155	Simba JDBC driver dependency issues with third party applications
MD-3131	DRILL-5967 Memory leak by HashPartitionSender
MD-3071	Queries (intermittently) fail with SYSTEM ERROR: RpcException: Data not accepted downstream.
MD-3066	Queries with join on two or more tables fail to pick hash index plans for all eligible tables
MD-3062	DRILL-5822: The query with "SELECT *" with "ORDER BY" clause and `planner.slice_target`=1 doesn't preserve column order
MD-3055	Remove hbase and hbase_describe plugin templates from 1.11.0-mapr branch
MD-3031	Duplicate columns projected from MapR Database Scan for large IN condition
MD-2987	DRILL-5771: Fix serDe errors when format plugin is used with table function
MD-2983	Using option `planner.index.use_hashjoin_noncovering`=true is causing NPE
MD-2979	Memory leak by ParquetRowGroupScan
MD-2978	Drill isn't honoring option not to save query profiles
MD-2894	Order by doesn't sort columns when window function is involved in the query
MD-2843	MIN MAX DIR tests fail and return incorrect results
MD-2807	DRILL-5922 Intermittent Memory Leaks in the ROOT allocator
MD-2771	skip.header.line.count does not work for Hive table with data file size > chunk size
MD-2770	java.lang.NoClassDefFoundError exception not handled in org.apache.drill.exec.rpc.security.ClientAuthenticatorProvider
MD-2769	DRILL-5819: Default value of security.admin.user_groups and security.admin.users is "true"
MD-2730	Null Pointer Exception with query using table function
MD-2723	Client to Bit Encryption shown as disabled in the drill webserver when SSL encryption is enabled
MD-2712	Queries failed with AssertionError: rel has lower cost than the best cost of subset

MD-2702	Rename ssl property enableHostVerification as disableHostVerification
MD-2635	Enabling SSL using hadoop config doesn't honor "ssl.server.keystore.keypassword" property
MD-2632	DRILL-5775: Select * query on a maprdb binary table fails
MD-2621	Fix XSS vulnerabilities in Drill
MD-2619	Drill fails to start when https is enabled with a keystore having keyPassword different from keyStorePassword
MD-2617	NullPointerException: Querying maprdb json tables
MD-2528	Parquet int_64 causes UnsupportedOperationException in Drill
MD-2516	Hash function produces skewed results on String values with same leading prefix
MD-2509	Some queries in concurrent execution get stuck in STARTING phase
MD-2483	exec.hashagg.num_partitions cannot be set by "alter session" or "alter system"
MD-2464	DRILL-5715: Performance of refactored HashAgg operator regressed
MD-2459	DRILL-5714: Fix NPE when MapR Database plugin is used in table function
MD-2436	Issue with drill-config.sh checking java version
MD-2412	Query with 2-way JOIN fails with "Hash join does not support schema changes"
MD-2379	drill.connections.rpc.user.<encrypted/unencrypted> metric can result in a neg value
MD-2375	RowKeyJoin is generated instead of IndexScan for queries with derived table/ table functions
MD-2292	Query hangs with bit to bit authentication
MD-2216	DRILL-5660: Drill 1.10 queries fail due to Parquet Metadata "corruption" from DRILL-3867
MD-2201	DRILL-4469: SUM window query returns incorrect results over integer data
MD-2130	Drill wrong old date-time values displaying
MD-2125	Queries fail with "Failed to create schema tree." when Impersonation is enabled and logins are anonymous
MD-2041	Potential wrong result from spillable hash agg
MD-1945	DRILL-4139: Fix parquet partition pruning for BIT, INTERVAL and DECIMAL types
MD-1828	DRILL-5507 Millions of "Failure finding Drillbit running on host" info messages in foreman logs
MD-1586	Pam authentication with Centrify doesn't work by JPam restriction
MD-1455	Hash aggregate does not support schema changes
MD-1205	Simple query with only one join condition failed with "Hash join does not support schema changes"
MD-1171	Security: Stored XSS (Drillbit>>Query) vulnerability

last-updated: Apr 11, 2022

MD-1168	Drill Web UI Page Source Has Links To External Sites
MD-1122	Fix the Hive default storage plugin template.
MD-1115	DRILL-5464: HashAgg throws a SchemaChangeException when atleast 1 scan fragment reads 0 rows
MD-965	UnsupportedOperationException: Unable to get holder type for minor type [LATE] and mode [OPTIONAL].
MD-853	Query on TPC-H SF100 dataset fails with "Hash join does not support schema changes"

Known Issues

This release of Drill includes the following known issues:

MapR Tracking Numbers	Known Issues
MD-3564	Min/Max functions logic should be improved
MD-3563	Order by clause works inconsistently when sorting columns with NaN
MD-3534	Query runs out of memory when using SI indices
MD-3521	Nan/Inf data types: strange query result with INNER JOIN operator when selecting 1 column
MD-3497	NaN/Infinity: some functions don't work as expected
MD-3449	Queries using non-covering index plans with larger rowkey join batch size fail with "CONNECTION ERROR: Exceeded timeout while waiting send intermediate work fragments to remote nodes"
MD-3345	Query using index plans (intermittently) fails with IllegalStateException: #Scan ranges should be greater than 0 since estimated rowcount=[non-zero]
MD-3344	TPC-H Query 1 returns rows with incorrect precision on Parquet SF100 dataset
MD-3201	Multiple occurrences of "AnalyzerException: Error at instruction 98: Expected an object reference, but found ." seen in drillbit.out
MD-2455	Query with INTERVAL in predicate does not return any rows

Fixes

None

Limitation

(Ubuntu systems only) If you uninstall Drill 1.11 or upgrade from Drill 1.11 to Drill 1.12, you must manually backup log files, third-party JAR files, and configuration files and settings prior to performing the uninstall or upgrade procedure. Failure to do so results in the loss of the files and configurations.

Drill 1.11.0-1710 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Drill 1.11.0-1710.

The following release notes apply to the 1.11.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.11.0

Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536, Interoperability Matrix, and Drill Support Matrix.
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in this Release

- Secondary index support on MapR Database for JSON tables.
- MapR default security configuration that secures the cluster and ecosystem components using MapR security (mapr tickets) to provide authentication, authorization, and encryption.
- Client to Drillbit Encryption using SSL/TLS.
- Spill to disk for the Hash Aggregate operator (in addition to the Sort operator).
- Throttle-based resource assignment (queuing feature).
- Drill integration with Zeppelin.

In addition to the features mentioned above, Drill 1.11 also includes the following features and improvements:

MapR Tracking Numbers	Features
MD-2490	Addition of an internal options table.
MD-1813	Multiplexing session over a connection.
MD-1655	Provide an option to persist Query Profiles in a Drillbit server's memory
MD-1245	MapR-SASL Plugin for ODBC/Drill (Authentication & Encryption)
MD-536	SASL support between Drillclient and Drillbit

MapR Tracking Numbers	Improvements
MD-2962	Add a UDF to decode encoded fieldpath
MD-2871	Restricted scan (for non-covering) gets over-parallelized due to scan range size
MD-2799	DRILL-5811 Large number of "Failure finding Drillbit" messages when using MapR File System
MD-2789	Fix correct batch size for merge back during non-covering query.
MD-2693	Drill should use `com.mapr.db.index.IndexDesc.getNullOrdering()` to decide if an index can be used for order by
MD-2656	Drill needs to return more specific error for DB
MD-2647	Enable UTF-8 support in query string by default
MD-2506	Standardize on JDBC driver that gets shipped with Drill and sqlline
MD-2422	Drill performance - doing less than 40 queries/sec
MD-2416	RestrictedJsonTableGroupScan should support projection pushdown
MD-2403	Drillbit fails to start when only keystore path is provided without keystore password.
MD-2339	Additional log events for debugging index selection

MD-2319	Query Containing Wildcard in String Matching Filter Runs 4x Slower Than Impala
MD-2301	Support Impersonation without authentication for REST API
MD-2278	Include flags controlling secure Drill ZK ACLs in the secure installer
MD-2225	Review the names of index planning config options
MD-2196	DRILL-4264: Allow field names to include dots
MD-2192	Provide log tracing of a query submitted by an OJAI client for user debugging
MD-2074	Memory Fragmentation Fundamentals Completion
MD-2067	Handle the case of order-by with no filter conditions
MD-2002	Operator Specific Handle for Empty Batches
MD-1987	Drill should read MapR Database tablets in parallel
MD-1962	Create configuration file for distribution specific configuration
MD-1836	Leverage hash index when doing secondary index planning
MD-1823	Add logging information for listing candidate indexes for a given query
MD-1815	Leverage MapR Database batch gets for better performance.
MD-1789	Cast function support pull request and code review process
MD-1786	Push down limit on MapR Database table scan
MD-1752	Throttling-based per-query memory assignment
MD-1673	Add Statistics support for MapR Database
MD-1665	Provide query level option to pick specific indexes
MD-1643	Disable table caching by default
MD-1498	Plan queries against MapR Database JSON faster
MD-1318	Improve Low Latency Performance of Drill
MD-1209	Configuring ZooKeeper Access Controls for Drill on a Secure Cluster

Fixes

None

Known Issues and Limitations

This release of Drill includes the following known issues:

MapR Tracking Numbers	Known Issues
MD-3171	Drillbit down due to fs client assertion in Java_com_mapr_fs_jni_MapRTableTools_GetScanner
MD-3162	DRILL-5946: Document maprdb format plugin options
MD-3160	Hit ExpressionParsingException: Expression has syntax error! line 1:0:no viable alternative at input 'TIME'
MD-3155	Simba JDBC driver dependency issues with third party applications
MD-3131	Memory leak by HashPartitionSender
MD-3108	planner.memory.max_query_memory_per_node should be default to 4GB

MD-3089	Some queries with join on two or more tables only pick non-covering index plans
MD-3071	Queries using hash index plans (intermittently) fail with SYSTEM ERROR: RpcException: Data not accepted downstream.
MD-3047	Apache Drill JDBC driver from mapr-drill package not works
MD-3041	Identify closed jdbc connection
MD-3040	need a better error message - RpcException: Drillbit (demo-179.lab) does not require auth, but auth is enabled.
MD-3037	Performance issues with queries against MapR Database JSON tables (full table scans)
MD-3031	Duplicate columns projected from MapR Database Scan for large IN condition
MD-2979	Memory leak by ParquetRowGroupScan
MD-2950	Full outer join on two empty hive tables throws IllegalArgumentException: Full outer join not currently supported
MD-2948	SI: Non-covering queries hang after drillbit restart
MD-2848	IteratorValidatorBatchIterator is throwing exception when assertions are enabled.
MD-2838	After upgrading from MapR Drill 1.10.0 to 1.11.0, drillbit hangs on startup
MD-2837	Queries on MapR Database 5.x tables hang
MD-2809	Scalar replacement failures
MD-2791	Cancelled query using index plan logs several errors
MD-2790	Queries fail with various CONNECTION ERRORs
MD-2695	Test Framework - Test fails with DATA_READ_ERROR : Failed to load table into HBase
MD-2589	Drillbit startup has errors: "Can't load log handler java.util.logging.FileHandler"
MD-2544	drillbit jvm dumps core when querying a table with SI
MD-2528	Parquet int_64 causes UnsupportedOperationException in Drill
MD-2515	Evaluate Codegen Compilers for performance overhead
MD-2513	Querying last column in CSV causes IndexOutOfBoundsException
MD-2455	Query with INTERVAL in predicate does not return any rows
MD-2420	External sort with higher memory takes longer to finish vs. smaller memory
MD-2419	Query fails with OOM with queuing enabled and exchanges disabled
MD-2415	Resource leak during Hash Agg spill to disk longevity run
MD-2400	Random Jenkins unit test failure due to ".crc" files in spill directory
MD-2397	Zeppelin cannot connect to Drill through the JDBC driver on a secure MapR cluster when Zeppelin has Kerberos authentication enabled.
MD-2285	Filter with interval was not fully pushed down
MD-2218	Direct memory fragmentation cause OOM while running OJAI queries
MD-2141	Predicates on indexed field, joined by OR, do not return the correct results for time and timestamp data types
MD-2120	Order by queries on short and byte datatypes fail
MD-2112	Query with LIKE Predicate on Non-Varchar Fields Returns No Results
MD-2060	Hash Partitioner Sender taking unusual amount of time

last-updated: Apr 11, 2022

MD-2041	Potential wrong result from spillable hash agg
MD-1964	OOM when Hash Aggr outputs large aggregate data types
MD-1923	Simple query failed when planner.use_simple_optimizer=true
MD-1867	SYSTEM ERROR: CannotPlanException when query MDB Json table

Resolved Issues

This release of Drill includes the following resolved issues:

MapR Tracking Numbers	Resolved Issues
MD-2825	initcap function returning incorrect result
MD-2769	Default value of security.admin.user_groups and security.admin.users is "true"
MD-2738	Memory Limit Exception in External Sort
MD-2621	Fix XSS vulnerabilities in Drill
MD-2617	NullPointerException: Querying maprdb json tables
MD-2531	Error connecting to Drill from Data Stage through Simba ODBC driver
MD-2436	Issue with drill-config.sh checking java version
MD-2216	DRILL-5660: Drill 1.10 queries fail due to Parquet Metadata "corruption" from DRILL-3867
MD-2197	DRILL-4511: refresh over empty folder results in error, we need a better error message
MD-2195	DRILL-4755: StringIndexOutOfBoundsException seen with CONVERT_FROM function
MD-2146	DRILL-4970: Wrong results when casting double to bigint or int
MD-2144	DRILL-4720: MINDIR() and IMINDIR() functions return no results with metadata cache
MD-2130	Drill wrong old date-time values displaying
MD-2125	Queries fail with "Failed to create schema tree." when Impersonation is enabled and logins are anonymous
MD-1988	Spillable Hash Agg : OOM while constructing the hash table
MD-1980	DRILL-5130: UNION ALL difference in results
MD-1970	ArrayIndexOutOfBoundException occurs when querying MapR Database JSON with Drill
MD-1946	DRILL-5140: Fix CompileException in run-time generated code when record batch has large number of fields
MD-1945	DRILL-4139: Fix parquet partition pruning for BIT, INTERVAL and DECIMAL types
MD-1922	Use indexDesc instead of indexFid in getIndexTable API to support HashPartitioned Indexes
MD-1890	Drill Explorer on the mac does not connect when started as an app
MD-1848	Drill not able to read MapR Database when FQDN is longer than 64 characters
MD-1828	DRILL-5507 Millions of "Failure finding Drillbit running on host" info messages in foreman logs
MD-1776	Issue with column alias for nested table calculated column when using sum ()
MD-1671	Have to restart drillbits whenever hive metastore is restarted.
MD-1661	A query with limit 0 on MapR Database binary table not allowing filter to push past project

MD-1657	Random Error : Flatten does not support inputs of non-list values
MD-1640	Drill fails to compare multi-byte characters from hive table(DRILL-3250)
MD-1633	Query remains in CANCELLATION_REQUESTED state after "java.io.IOException: Broken pipe"
MD-1618	Moving a directory which contains a cache file causes subsequent queries to fail
MD-1607	Reverse a String: IndexOutOfBoundsException
MD-1597	simba and mapr jdbc driver differ in implementation
MD-1586	Pam authentication with Centrify doesn't work by JPam restriction
MD-1576	JBOSS Drill Connectivity - NullPointerException
MD-1524	linux ODBC is ALWAYS returning 64K as the length of a varchar or char
MD-1515	Drill planner/optimizer pushes down the Filter columns into Scan even after Filter is eliminated
MD-1473	Query failed with error Statement "break OrOP2" is not enclosed by a breakable statement with label "OrOP2"
MD-1455	Hash aggregate does not support schema changes
MD-1382	Use simple optimizer for low latency operational queries
MD-1361	Out of heap running CTAS against text delimited
MD-1359	Wrong results after set planner.enable_nljoin_for_scalar_only=false
MD-1339	Query text show as empty string in profile when queries are executed using PreparedStatements
MD-1256	unset MAPR_TICKETFILE_LOCATION for sqlline
MD-1238	Wrong result with Drill displaying date fields with parquet files generated by spark
MD-1237	Cancelled query stuck into CANCELLATION_REQUESTED forever
MD-1205	Simple query with only one join condition failed with "Hash join does not support schema changes"
MD-1168	Drill Web UI Page Source Has Links To External Sites
MD-1115	DRILL-5464: HashAgg throws a SchemaChangeException when atleast 1 scan fragment reads 0 rows
MD-965	UnsupportedOperationException: Unable to get holder type for minor type [LATE] and mode [OPTIONAL].
MD-853	Query on TPC-H SF100 dataset fails with "Hash join does not support schema changes" [MapR Database JSON Tables]
MD-752	Remove mapr jars from Drill packages and source them from $MAPR_HOME/lib

Drill 1.10.0-1808 Release Notes

This section provides reference information for fixes in Drill 1.10.0-1808.

The following release notes apply to the 1.10.0-1808 version of the Drill component:

Version	1.10.0-1808
Release Date	September 2018
MapR Version Interoperability	Component Versions for Released EEPs

last-updated: Apr 11, 2022

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names, for example: • mapr-drill-1.10.0.201805300932-1.noarch.rpm • mapr-drill-yarn-1.10.0.201805300932-1.noarch.rpm

Fixes

Drill 1.10.0-1808 provides the following fixes:

Fix Tracking Numbers	Description
MD-3943	The io.dropwizard.metrics have been removed from Drill.
MD-3716	Queries on complex nested data in Parquet files no longer fail when selecting on all columns.
MD-3715	A Drillbit no longer hangs or loses connectivity.
MD-3544	Queries on complex nested data in Parquet files no longer fail.
MD-3471	Queries on views no longer intermittently return permission denied errors.
MD-3409	Drill returns the correct row count for queries on MapR Database JSON tables.
MD-3214	Drill reruns queries on Parquet data sources if they fail due to Parquet input stream read errors.
MD-3196	Queries with multiple concatenated items no longer hang.
MD-2758	Performance improvements for queries with the LIKE operator.
MD-2528	Drill can read Parquet columns with INT64 types.
DRILL-6140	Drill correctly lists operators in query profiles.
DRILL-6028	Drill splits the generated code in ChainedHashTable into blocks to avoid "code too large" error.
DRILL-5978	Hive libraries are updated to version 2.1.2-mapr-1710.
DRILL-5972	Improved performance for queries with filters on INFORMATION_SCHEMA.
DRILL-5971	Drill can read Parquet logical types INT64 and INT32.
DRILL-5906	The Hive version in Drill is upgraded to 1.2.0-mapr-1707 hive.version to avoid NullPointerException when querying Hive ORC tables.
DRILL-5857	Hive unit tests include a fix for NumberFormatException.
DRILL-5757	Queries with the CONVERT_TO_JSON function no longer fail when using fields that do not exist as a parameter.
DRILL-5697	Improved performance for queries with the LIKE operator to filter on pattern matching.
DRILL-5420	The ParquetAsyncPgReader no longer goes into an infinite loop during cleanup.
DRILL-5083	To avoid an infinite loop in the Merge Join, the status.getOutcome() method returns a failure if one of the batches has a “stop” status.
DRILL-4120	The Avro storage format allows implicit columns.
DRILL-4039	Queries no longer fail when non-ascii characters are used in string literals.

last-updated: Apr 11, 2022

Fix Tracking Numbers	Description
DRILL-3250	Drill no longer fails when comparing multi-byte characters from a Hive table.

Drill 1.10.0-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Drill 1.10.0-1707.

The following release notes apply to the 1.10.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.10.0
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536, Interoperability Matrix, and Drill Support Matrix.
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in this Release

No new features in this release.

Fixes

This release of Drill on MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

MapR Fix	Description
MD-1970	Querying MapR Database JSON with Drill no longer produces an ArrayIndexOutOfBoundException.
MD-2273	Drill no longer returns IndexOutofBound errors when reading CSV files.
DRILL-5590	Drill no longer returns an IndexOutOfBoundsException when a text file contains more than 4,096 rows.
DRILL-5498	The CSV reader can handle duplicate column header names.
DRILL-5599	Queries no longer stay in the CANCELLATION_REQUESTED state after a connection with the client is interrupted.
MD-2050	Drill correctly calculates the number of rows and creates an optimal query plan.
DRILL-5496	You do not have to restart drillbits when a secure Hive metastore is restarted.
DRILL-5399	Running multiple queries concurrently no longer produces an UNSUPPORTED_OPERATION ERROR.
DRILL-5516	Drill optimizes memory usage for the HBase reader.
DRILL-5419	Drill now calculates the return string length for literals and certain string functions.
MD-1671, MD-1631	Drill no longer hangs or reports errors when retrieving schemas as the Hive server restarts.

last-updated: Apr 11, 2022

MapR Fix	Description
DRILL-5424	Queries that apply reverse functions on tables with long varchars no longer fail with IndexOutOfBoundsException errors.
DRILL-5413, DRILL-4678, DRILL-4347	Drill is updated with version of 1.4.0-drill-r21 Calcite.

Known Issues and Limitations

No known issues or limitations in this release.

Resolved Issues

No resolved issues in this release.

Drill 1.10.0-1703 Release Notes

The following release notes apply to the 1.10.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.10.0
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536, Interoperability Matrix, and Drill Support Matrix.
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in this Release

This Apache Drill release includes the following behavior changes that are specific to MapR:

- Support for authentication through MapR-SASL tickets.
- Support for installation on SUSE operating systems with Open JDK 1.8 and Oracle JDK 1.7 or 1.8.

This release also includes the following bug fixes and improvements:

- Tableau native connectivity.
- Support for the CREATE TEMPORARY TABLE AS (CTTAS) command.
- Support for Kerberos authentication between the client and drillbit.
- Support for authentication through MapR-SASL tickets.
- New JDBC connection option that improves fault tolerance when connecting directly to a Drill node from a client.
- Improved diagnostics in Drill Web Console with version and other query profile statistics.
- Improved Parquet compatibility with Hive/Spark generated Parquet files with support for INT96 timestamp datatype
- Configurable list of profiles in Drill web UI

Additional bug fixes and enhancements are listed in the Apache Drill 1.10.0 Release Notes

Fixes

MapR Fix	Description
Drill-5395	Region to fragment assignment logic no longer causes queries against MapR Database tables to fail with a null pointer exception.
MD-1457	The ODBC driver's DNS Configuration dialog box now supports Cluster IDs that include dots(.).
MD-1433	The planning stage now has better performance for queries against MapR Database binary tables.
MD-1259	The Apache Drill documentation now includes implicit column name parameters and details.
MD-1244	Using store.parquet.reader.int96_as_timestamp no longer throws IndexOutOfBoundsException.
MD-832	Drill verifies that all the running drillbits are in the same version. A warning displays in the Web UI whenever there is a mismatch.
MD-924	Drill compatibility issues with Parquet Date and Timestamp data types have been resolved.

Known Issues and Limitations

- MD-1588: When Drill is run under Warden on RedHat/CentOS operating systems, drillbits fail to start automatically after an upgrade to Drill 1.10.0.

  Workaround: Run the following command to manually start the drillbits:

  ```
  maprcli node services -name drill-bits -action start -nodes <node host
  names separated by a space>
  ```

- MD-1340: Select * query returns incorrect format for nested Date fields.

Drill 1.9.0-1703 Release Notes

The following release notes apply to the 1.9.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.9.0
Release Date	April 2017
MapR Version Interoperability	MapR Drill 1.9.0 is certified on the MapR v5.1.0 and v 5.2.0 converged data platform. See EEP Components and OS Support on page 5536, Interoperability Matrix, and Drill Support Matrix.
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

None

Fixes

This MapR release includes the following fixes on the base release:

last-updated: Apr 11, 2022

MapR Fix Number	Description
MD-1433	The planning stage now has better performance for queries against MapR Database binary tables.
MD-1375	FileNotFoundException no longer displays when reading a parquet file.
MD-1314	The same query no longer produces different results when using the flatten operator.
Drill-5395	Region to fragment assignment logic no longer causes queries against MapR Database tables to fail with a null pointer exception.
Drill-5159	Drill MergeProjectRule now operates on Calcite logical convention.
Drill-5117	Queries on json files with 1000+ columns no longer fail with a compile error.
Drill-5056	UserException now writes more information to the log.

Known Issues

The following table lists the known issues in Drill 1.9.0:

Issue	Description
MD-1256	The MAPR_TICKETFILE_LOCATION variable in drill-env.sh needs to be unset so that a user other than the mapr user can connect to Drill through SQLLine and MapR-SASL.
MD-1229	Hive table partition pruning does not prune out all unnecessary partitions in some scenarios.
MD-1226	MapR-SASL plain authentication goes through Kerberos, by default, requiring regular users to have a valid Kerberos ticket when connecting to Drill using SQLLine through ZooKeeper.
MD-1208	Parquet filter pushdown does not prune enough partitions in queries where the predicate contains the TIME data type.

Drill 1.9.0 Release Notes

The following release notes apply to the 1.9.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.9.0
Release Date	December 9, 2016
MapR Version Interoperability	MapR Drill 1.9.0 is certified on the MapR v5.1.0 and v5.2.0 Converged Data Platform. See Interoperability Matrices on page 5519 and Drill Support Matrix on page 5629.
Packages	See Package Names for MapR Ecosystem Packs (EEPs)

Noteworthy New Features in the MapR Distribution of Drill

This release provides enhanced query improvements with the following bug fixes and improvements:

- The Asynchronous Parquet Reader improves the performance of the Parquet Scan operator by increasing the speed at which the Parquet reader scans, decompresses, and decodes data. This feature is disabled by default.
- Parquet Filter Pushdown optimizes the performance by pruning extraneous data from a Parquet file to reduce the amount of data that Drill scans and reads when a query on a Parquet file contains a filter expression.
- Dynamic UDFs enable users to register and unregister UDFs in a muti-tenant environment using the new CREATE FUNCTION USING JAR and DROP FUNCTION USING JAR commands.
- Support for a variety of JOIN syntax generated by Tableau and other BI tools, including joins between tables with NULL column values.
- HTTPD Format Plugin adds the capability to query HTTP web server logs natively and also includes parse_url() and parse_query() UDFs that return maps of the URL and the query string.

Additional bug fixes and enhancements listed in the Apache Drill 1.9.0 Release Notes.

Default Configuration Changes

The default value for the `store.parquet.block-size` parameter is now 268435456 (256MB), the same size as MapR filesystem chunk sizes. Prior to this release, the default value was 536870912 (512 MB).

The `planner.enable_limit0_optimization` parameter is now enabled by default to optimize limit0 queries. Prior to this release, the option was disabled by default.

You can modify parameter values using the ALTER SYSTEM|SESSION command.

Resolved Issues

The following table lists resolved issues in Drill 1.9.0:

Issue	Description
MD-1217	When you use the JDBC URL format for a direct Drillbit connection, the driver can now shuffle between the Drillbits listed in the connection string instead of always selecting the first Drillbit listed.
MD-1163	The avgwidth stat for the timestamp data type (int64) is now 8 instead of 4 bytes.
MD-540	Query profiles now include the session options used for a query.

Known Issues

The following table lists the known issues in Drill 1.9.0:

Issue	Description
MD-1256	The MAPR_TICKETFILE_LOCATION variable in drill-env.sh needs to be unset so that a user other than the mapr user can connect to Drill through SQLLine and MapR-SASL.
MD-1229	Hive table partition pruning does not prune out all unnecessary partitions in some scenarios.
MD-1226	MapR-SASL plain authentication goes through Kerberos, by default, requiring regular users to have a valid Kerberos ticket when connecting to Drill using SQLLine through ZooKeeper.

last-updated: Apr 11, 2022

Issue	Description
MD-1208	Parquet filter pushdown does not prune enough partitions in queries where the predicate contains the TIME data type.

Limitations

See Drill-on-YARN Limitations.

Drill 1.8.0-1703 Release Notes

The following release notes apply to the 1.8.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.8.0
Release Date	April 2017
MapR Version Interoperability	MapR Drill 1.8.0 is certified on the MapR v5.1.0 converged data platform. See the Interoperability Matrix and Drill Support Matrix.
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

No new features.

Fixes

This MapR release includes the following fixes on the base release:

MapR Fix Number	Description
MD-1314	The same query no longer produces different results when using the flatten operator.
MD-1217	The JDBC client randomly chooses a Drillbit in the cluster instead of selecting the first one in the list.
MD-1142	A simple query with a where condition on a particular column is no longer getting an illegalstateexception.
MD-1127	Drill 1.8.0 sandbox is now able to start even when loopback address is detected.
MD-1117	Queries for a single row group and single parquet file no longer take 6 seconds.
MD-1109	Queries that include the flatten function are no longer cancelled.
Drill-5159	Drill MergeProjectRule now operates on Calcite logical convention.
Drill-5094	Comparator guarantees transitive attribute.
Drill-5032	Drill query on hive parquet table no longer fails with OutOfMemoryError: Java heap space
Drill-4927	Drill now supports null equality joins.
Drill-4911	SimpleParallelizer now avoids plan serialization for logging purpose when debug logging is not enabled.

Known Issues and Limitations

For known issues, see the Drill 1.8.0 release notes.

For limitations, see Drill-on-YARN Limitations on page 3237

Resolved Issues

None.

Drill 1.8.0 - 1609 Release Notes

The following release notes apply to the 1.8.0-1609 version of the Apache Drill component included in the MapR Converged Data Platform.

Drill Version	1.8.0-1609	
Release Date	September 30, 2016	
MapR Version Interoperability	MapR Drill 1.8.0-1609 is certified on the MapR v5.1.0 and v5.2.0 converged data platform. See the Interoperability Matrix and Drill Support Matrix.	
Packages	**Drill (Warden)**	RedHat/CentOS: mapr-drill-1.8.0.20160912151 7-1.noarch.rpm Ubuntu: mapr-drill_1.8.0.20160912 1537_all.deb
	Drill (YARN)	RedHat/CentOS: mapr-drill-yarn-1.8.0.20160 9121517-1.noarch.rpm Ubuntu: mapr-drill-yarn_1.8.0.2016 09121537_all.deb

Known Issues

See the Drill 1.8.0 release notes.

Resolved Issues

Drill 1.8.0-1609 provides the following fixes:

- Drill 1.8.0 is available as part of the MapR Ecosystem Pack (EEP) version 1.1.0.
- You can use the MapR Installer to install or upgrade to Drill 1.8.0.
- You can now install Drill 1.8.0 on MapR v5.2.0, as well as MapR v5.1.0. When you install, you have the option of installing Drill under the MapR Warden service or under YARN.

Limitations

See Drill-on-YARN Limitations.

Drill 1.8.0 Release Notes

The following release notes apply to the 1.8.0 version of the Apache Drill component included in the MapR Converged Data Platform.

Version	1.8.0

last-updated: Apr 11, 2022

Release Date	September 12, 2016
MapR Version Interoperability	MapR Drill 1.8.0 is certified on the MapR v5.1.0 converged data platform. See Interoperability Matrix and Drill Support Matrix.
Packages	**Drill (Warden)** RedHat/CentOS: mapr-drill-1.8.0.201609121517-1.noarch.rpm Ubuntu: mapr-drill_1.8.0.201609121537_all.deb **Drill (YARN)** RedHat/CentOS: mapr-drill-yarn-1.8.0.201609121517-1.noarch.rpm Ubuntu: mapr-drill-yarn_1.8.0.201609121537_all.deb

Noteworthy New Features in the MapR Distribution of Drill

This release provides enhanced query improvements with the following bug fixes and improvements:

- Drill-on-YARN (mapr-drill-yarn package)
- Metadata cache pruning - See Partition Pruning Introduction and Optimizing Parquet Metadata Reading.
- IF EXISTS parameter with the DROP TABLE and DROP VIEW commands - See DROP TABLE and DROP VIEW.
- DESCRIBE SCHEMA command - See DESCRIBE.
- Multi-byte delimiter support - See List of Attributes and Definitions.
- New parameters for filter selectivity estimates - See System Options.

Additional bug fixes and enhancements listed in the Apache Drill 1.7.0 Release Notes and the Apache Drill 1.8.0 Release Notes.

Note: Currently, you cannot use the MapR Installer to install or upgrade to Drill 1.8. Support for this feature will be available soon.

Resolved Issues

The following table lists resolved issues in Drill 1.8.0:

Issue	Description
MD-1047	Query time is improved for simple queries on INFORMATION_SCHEMA.TABLES when there are many views.
MD-1044	Queries no longer get stuck in the CANCELLATION_REQUESTED state.
MD-1042	CTAS queries that contain an INNER JOIN and UNION no longer produce an inefficient query plan and resource errors.

MD-1030	Partition pruning now works correctly when optimization is applied to queries that contain an IN list with more multiple lines.
MD-949	Flatten on CONVERT_FROM no longer fails with a ClassCastException.
MD-904	Drill no longer throws an array index out of bound exception when reading a parquet file written by a mapreduce program.
MD-901	Drill no longer produces a Java compilation error for large queries with many CASE and CAST expressions.
MD-895	Drill queries no longer produce memory leaks.
MD-888	Queries no longer fail with a "Connection timed out" error.
MD-878	The RANK() window function no longer returns the wrong results for large datasets.
MD-746	Queries no longer hang when fragment 0 is running.
MD-727	Drill returns null values for non-existent columns in MapR Database JSON tables.
MD-603	Drill now returns the directory structure associated with a workspace.
MD-509	Drill no longer returns a NumberFormatException error when casting an empty string to int in HBase/MapR Database.

Known Issues

Issue	Description
MD-1076	Drill drops NULL fields when writing to a JSON file.
MD-1073	Queries on ORC tables no longer take an unusually long time when Drill runs for multiple days without restart.
MD-1061	Queries on Hive ORC tables fail with a "does not have access to maprfs:///" error.
MD-892	The drill-env.sh script does not set the file client read ahead throttle environment variable.
MD-833	Queries submitted from Tableau produce IndexOutOfBoundsException errors.

Limitations

See Drill-on-YARN Limitations.

Drill 1.7.0 Release Notes (Developer Preview)

The following release notes are for the 1.7.0 developer preview of the MapR distribution of Apache Drill. Release notes for prior releases are posted on the Apache Drill web site.

Version	1.7.0 (developer preview)
Release Date	July 5, 2016
MapR Version Interoperability	See Interoperability Matrices on page 5519 and Drill Support Matrix on page 5629.

last-updated: Apr 11, 2022

Noteworthy New Features

This release introduces the following enhancements:

- Improvements to MaxDir/MinDir functions. See Query Directory Functions.
- Access to Drill logs in the Web UI. See Log and Debug Introduction.
- Addition of JDBC/ODBC client IP in Drill audit logs. See Query Audit Logging.
- Monitoring via JMX. See Monitoring Metrics.
- Hive CHAR data type support. See Hive-to-Drill Data Type Mapping.
- Partition pruning enhancements.
- Improved metadata query performance on Hive tables.
- Ability to return file names as part of queries.

See Apache Drill 1.7.0 Release Notes for a complete list of JIRAs resolved in the 1.7.0 release.

Drill 1.6.0 - 1606 Release Notes

The following release notes apply to the 1.6.0 - 1606 version of the Apache Drill component included in the MapR Converged Data Platform.

Drill Version	1.6.0
Release Date	June 30, 2016
MapR Version Interoperability	See Interoperability Matrices on page 5519 and Drill Support Matrix on page 5629.
Packages	**Redhat** mapr-drill-1.6.0.201606241408-1.noarch.rpm **SuSe** mapr-drill-1.6.0.201606241408-1.noarch.rpm **Ubuntu** mapr-drill_1.6.0.201606241350_all.deb

Resolved Issues

The following table lists resolved issues in Drill 1.6.0 - 1606:

Issue	Description
DRILL-4715	Queries with multiple, non-trivial expressions no longer cause compilation errors at runtime due to memory limits imposed by the JVM.
DRILL-4694	Drill no longer adds extraneous NULL fields to JSON output files when you issue the CTAS statement to create JSON output from an existing JSON file. A new option, `store.json.writer.skip_null_fields`, controls this behavior. By default, `store.json.writer.skip_null_fields = true` and skips NULL fields. Setting `store.json.writer.skip_null_fields = false` reverts the behavior.

DRILL-4693	Columns now appear in the correct order when you issue a SELECT list expression with the COVERT_FROM function and the format type is JSON.
DRILL-4679	Queries that contain the CONVERT_FROM function with the JSON format type no longer fail with the following error when the input data has 0 rows due to a filter condition: `Error: SYSTEM ERROR: IllegalStateException: next() returned NONE without first returning OK_NEW_SCHEMA [#16, ProjectRecordBatch]Fragment 0:0`
DRILL-4676	Canceling a query during planning no longer blocks the drillbit from accepting new queries.
DRILL-4657	Running a query with the RANK function no longer produces incorrect results when a frame does not fit into two batches of data.
DRILL-4654	Drill now uses JMX (Java Management Extensions) to monitor queries at runtime and provide the following new metrics through the Drill Web Console and JConsole: • pending/running/completed queries • current memory usage (root allocator)
DRILL-4647	In instances when a drillbit is not running or query submission fails, the C++ client correctly propagates failed connection errors back to the application.
DRILL-4476	The UNION ALL operator now supports scenarios where the query expression on either side of the UNION ALL operator references an empty source.
DRILL-3714	Queries no longer remain in a CANCELLATION_REQUESTED state until the drillbits are restarted.
MD-850	Queries that contain two numbers CAST as decimals and added together no longer result in a data type mismatch.
MD-849	Queries on JSON files that contain two index levels no longer fail with an IndexOutOfBoundsException error.

MD-815	Queries on INFORMATION_SCHEMA (hive metadata) are significantly faster due to the use of a bulk load algorithm when the exec.enable_bulk_load_table_list system option is set to true:
	`ALTER SYSTEM SET`
	`` `exec.enable_bulk_load_table_list` = ``
	`true`

Drill 1.6.0 Release Notes

The following release notes are for the 1.6.0 version of the Apache Drill component included in the MapR distribution for Apache Hadoop. Release notes for prior releases are posted on the Apache Drill web site.

Version	1.6.0
Release Date	April 4, 2016

last-updated: Apr 11, 2022

MapR Version Interoperability	MapR Drill 1.6.0 is certified on the MapR v5.1.0 converged data platform. See Interoperability Matrices on page 5519 and Drill Support Matrix on page 5629.
Download Location	See Installing Drill.

Noteworthy New Features in the MapR Distribution of Drill

This release provides enhanced query improvements with the following bug fixes and improvements:

- JDK 1.8 support.
- JSON and binary table support through the MapR Database format plugin.
- Inbound impersonation which is useful in a multi-tier architecture where queries must run as the end user instead of the application user.
- More custom frames in the window function frame clause.
- Row count based pruning for Limit N queries
- Lazy reading of parquet metadata caching
- Early application of partition pruning in query planning

Additional bug fixes and enhancements listed in the Apache Drill 1.6.0 Release Notes.

Resolved Issues

The following table lists resolved issues in Drill 1.6.0:

Issue	Description
MD-803	LIMIT 0 optimization applies to the ranking and value window functions.
MD-784	LIMIT 0 optimization applies to the Hive UDF xpath_double.
MD-781	LIMIT 0 optimization applies to the TRIM function.
MD-608	Complex data functions FLATTEN and KVGEN no longer return null data when you issue queries through the ODBC driver.
MD-604	EXTRACT function with seconds no longer returns incorrect data when you issue queries through the ODBC driver.
MD-361	Drill honors the Hive skip.header.line.count and skip.footer.line.count table properties and skips header and footer lines when querying Hive tables created with these properties.

Known Issues

The following table lists known issues in Drill 1.6.0:

Issue	Description
MD-851	Pushdown is disabled for columns with TIMESTAMP values which makes these columns case-insensitive. See Limitations.
MD-845	LIMIT 0 optimization does not apply when used in a query with a FULL OUTER JOIN and the `planner.enable_mergejoin` option is set to true.

MD-817	LIMIT 0 optimization does not apply when a query contains math operations between an interval type and a constant.
MD-802	LIMIT 0 optimization applies to the AVG window function.
MD-794	LIMIT 0 optimization does not apply when the return type is VARBINARY.
MD-787	LIMIT 0 optimization does not apply to the Hive BIN function.
MD-786	LIMIT 0 does not apply to the Hive HEX function.
MD-747	SUM function queries with a decimal argument and LIMIT 0 optimization returns the wrong data types and nullability.
MD-727	If you query a column that does not exist in the records of the queried table, Drill does not return any rows when it should return rows with null values. See Limitations.

Limitations

(MD-851) Pushdown filtering is disabled on columns with TIMESTAMP values, which results in these columns being case-insensitive. For example, if a JSON table is created with the following JSON records where the “access” columns are not of a particular case:

```
{"_id":"ID1","name":"Alice","age":"25","access":"2013-10-23 11:11:11","DOB":
{"$dateDay":"1988-01-01"},"salary":"50.00"}
{"_id":"ID2","name":"Bob","age":"21","access":"2013-10-23 11:11:11","DOB":
{"$dateDay":"1988-01-01"},"salary":"150.00"}
{"_id":"ID3","name":"Frank","age":"32","ACCESS":"2013-10-23 11:11:11","dob":
{"$dateDay":"1988-01-01"},"salary":"250.00"}
```

Running a query on the “access” column returns all values because Drill does not push the filtering process down to MapR Database to get the subset of columns from records where the name is "access" in lowercase. Instead, MapR Database returns every value from each record that has a column named "access", regardless of the case. If some records include a column named "ACCESS" or "Access," these values are also returned in the result set.

```
SELECT * FROM dfs.`/tmp/data/student_db` where access = timestamp
'2013-10-23 11:11:11';
+------+----------------------+------+-------------+-----------+---------+
| _id  |        access        | age  |     dob     |   name    | salary  |
+------+----------------------+------+-------------+-----------+---------+
| ID1  | 2013-10-23 11:11:11  | 25   | 1988-01-01  | Alice  | 50.00   |
| ID2  | 2013-10-23 11:11:11  | 21   | 1980-12-12  | Bob     | 150.00  |
| ID3  | 2013-10-23 11:11:11  | 32   | 1970-10-12  | Frank      | 250.00  |
+------+----------------------+------+-------------+-----------+---------+
3 rows selected (0.223 seconds)
```

In comparison, you can see that a query on the “dob” column in the same table produces only one result because the column does not contain TIMESTAMP values and is therefore case-sensitive:

```
SELECT * FROM dfs.`/tmp/data/student_db` where dob = date '1988-01-01';
+------+----------------------+------+-------------+-------+---------+
| _id  |        ACCESS        | age  |     dob     | name  | salary  |
+------+----------------------+------+-------------+-------+---------+
| ID3  | 2013-10-23 11:11:11  | 32   | 1988-01-01  | Frank  | 250.00  |
+------+----------------------+------+-------------+-------+---------+
1 row selected (0.359 seconds)
```

Although there are three records with “dob” columns, there is only one record with the column name in lowercase.

last-updated: Apr 11, 2022

(MD-727) If you query one column that is partially or completely non-existent in the records of the queried table, Drill does not return any rows for the records when it should return the rows with null values. For example, if a JSON table is created from the following JSON records where only one record has a “time” column with a value and the other two records do not have time columns:

```
{"_id":"student1", "name":"Alice", "street":"123 Ballmer Av",
"zipcode":12345, "state":"CA"},
{"_id":"student2", "name":"Bob", "time":"2016-03-08", "street":"1 Infinite
Loop", "zipcode":12345, "state":"CA"},
{"_id":"student3", "name":"Frank", "street":"435 Walker Ct",
"zipcode":12345, "state":"CA"}
```

The query returns only one row for the record in which the time column exists with a value instead of returning three rows with two rows having null values in the column.

```
SELECT `time` FROM dfs.`/user/root/students`;
+------------+
| time       |
+------------+
| 2016-03-08|
+------------+
```

In comparison, if you query all of the columns in the table, you can see that the query returns all records and includes null values for records missing a time column.

```
SELECT * FROM dfs.`/user/root/students`;
+-----------+--------+--------+------------------+----------+-------------+
|    _id    |  name  | state  |      street      | zipcode  |    time     |
+-----------+--------+--------+------------------+----------+-------------+
| student1  | Alice  | CA     | 123 Ballmer Av   | 12345.0  | null        |
| student2  | Bob    | CA     | 1 Infinite Loop  | 12345.0  | 2016-03-08  |
| student3  | Frank  | CA     | 435 Walker Ct    | 12345.0  | null        |
+-----------+--------+--------+------------------+----------+-------------+
3 rows selected (0.314 seconds)
```

Drill 1.5.0 Release Notes (Developer Preview)

The following release notes are for the 1.5.0 developer preview of the MapR distribution of Apache Drill. Release notes for prior releases are posted on the Apache Drill web site.

Version	1.5.0 (Developer preview)
Release Date	February 23, 2016
MapR Version Interoperability	See Interoperability Matrices on page 5519 and Drill Support Matrix on page 5629

Noteworthy New Features

This release introduces the following enhancements:

- Improved Memory Allocator - Drill uses a new allocator that improves an operator’s use of direct memory and tracks the memory use more accurately. See Configuring Drill Memory.
- Configurable Caching of Hive Metadata - You can now configure the TTL for the Hive metadata client cache depending on how frequently the Hive metadata is updated. See Hive Metadata Caching.

See Apache Drill 1.5.0 Release Notes for a complete list of JIRAs resolved in the 1.5.0 release.

Drill 1.4.0 Release Notes

The following release notes are for the 1.4.0 version of the Apache Drill component included in the MapR distribution for Apache Hadoop.

Version	1.4.0
Release Date	January 12, 2016
MapR Version Interoperability	See Interoperability Matrix

Noteworthy New Features in the MapR Distribution of Drill

This release introduces a number of enhancements, including the following ones:

- Improved Tableau experience with faster Limit 0 queries (MD-602)
- Metadata (INFORMATION_SCHEMA) query performance improvements on Hive schemas/tables (MD-530, MD-504, MD-507, DRILL-4126, DRILL-4127, DRILL-4161)
- Optimized Parquet metadata caching, faster queries on a large number of files

  Metadata caching is new feature introduced in Drill 1.2 to speed up Drill queries involving large number of files. In 1.4, the cache size is considerably reduced using a variety of techniques including efficient storage of information as well reducing the redundant metadata. This significantly boosts performance of the queries. Note however that the depending on the size of data, the cache construction might take longer.
- Partition pruning improvements

  Partition pruning is significantly enhanced in 1.4. The enhancements including support for more datatypes, working better in conjunction with metadata caching as well as a moving the partition pruning evaluation from Hep to Volcano planner. (DRILL-4126, DRILL-3765)
- Improved Window functions resource usage and performance
- Updated 1.2.1 Windows ODBC driver (updates to Mac and Linux versions to follow)
- New and improved Drill JDBC driver.

  This driver is recommended by MapR for production deployments deployments and partner certifications. The new driver offers much more compatibility to the JDBC standard. This driver compliments the currently available open source version of JDBC driver.
- Stability improvements
- 90 bug fixes and additional enhancements listed in Apache Drill 1.4 Release Notes and Apache Drill 1.3 Release Notes

Known Issues

- Drill was upgraded to use a new Parquet reader in the Drill 1.3 dev preview release. Customers moving from Drill 1.2 and prior versions to 1.4 must migrate their data or regenerate their parquet in order to continue working with Drill in optimized way. For more information on how to upgrade the parquet, refer to the migration tool documentation.
- Merge join in 1.4 has known issues related to performance and data correctness in 1.4 (DRILL-3578). Hence, upgrading to 1.4 is not recommended for performant queries that use merge joins. If you do upgrade to 1.4, you must set the planner.enable_mergejoin option to false (that is, use hash join instead); otherwise, merge join queries will not run and/or produce incorrect results.
- Extract function with seconds returns incorrect data when you issue queries from the ODBC driver. (MD-604)

last-updated: Apr 11, 2022

- Complex data functions FLATTEN and KVGEN return null data when you issue queries from the ODBC driver. (MD-608)
- After upgrading to Release 1.4 or later, any custom function you wrote in Release 1.3 or earlier that is in a package that Drill scans by default will run. However, if you created *your own package* for the custom function, it will *not* run in Release 1.4 and later. You can use one of the following workarounds. The first workaround is quick and easy. The second is recommended for new UDFs you create in Release 1.4 and later.

  Quick Workaround

  1. Create a drill-module.conf file in $DRILL_HOME/conf/ if one does not already exist.
  2. Add the following code to the drill-module.conf, replacing com.yourgroupidentifier.udf with the package name(s) of your UDFs.

     ```
     drill.classpath.scanning.packages += "com.yourgroupidentifier.udf"
     ```

  3. Copy the drill-module.conf file to all Drillbits.
  4. Ensure that DRILL_HOME/conf/drill-override.conf does not contain any information regarding UDF packages.
  5. Restart Drill on all the Drillbits.

  Alternative Workaround

  1. Add the following code to the drill-module.conf in your UDF project (src/main/resources/drill-module.conf). Replace com.yourgroupidentifier.udf with the package name(s) of your UDFs.

     ```
     drill.classpath.scanning.packages += "com.yourgroupidentifier.udf"
     ```

  2. Recompile the UDFs and place the 2 jar files (source + binary) in Drill's classpath on all the Drillbits.
  3. Recompile the UDFs and place the 2 jar files (source + binary) in Drill's classpath on all the Drillbits.
  4. Restart drill on all the Drillbits.
- If you upgrade from Drill 1.2 or earlier, update Parquet data.

  Drill 1.4 is the first production ready release after the Drill upgrade to use the latest version of the Apache Parquet library, which was released in 1.3 dev preview. If you generated Parquet using Drill 1.2 and earlier, take one of the following actions:

  - Update data using the Drill migration utility.
  - Regenerate data using the new version of Drill.

  One of these actions is mandatory to continue to get accurate functionality and to optimize performance.

Resolved Issues

- Regardless of whether impersonation is enabled or not, this release caches data in the HiveMetaStore to improve performance. (DRILL-4126)

Drill 1.3.0 Release Notes (Developer Preview)

The following release notes are for the 1.3.0 developer preview of the MapR distribution of Apache Drill. Release notes for prior releases are posted on the Apache Drill web site.

Version	1.3.0 Developer Preview
Release Date	November 23, 2015
MapR Version Interoperability	See Interoperability Matrices on page 5519 and Drill Support Matrix on page 5629

Noteworthy New Features

This release introduces the following enhancements:

- Upgrade to the latest version of the Apache Parquet library (See DRILL-4070 and http://drill.apache.org/docs/partition-by-clause/)
- Performance improvements for Limit 0 and Limit 1 queries
- Hive table query planning improvements
- Partition pruning enhancements
- Support for CSV header parsing
- Improved query/operators profiles
- Capability to reset the SYSTEM and SESSION settings to their defaults
- Merge Join improvements
- Additional bug fixes and enhancements

Known Issue

The MapR 1.3 developer preview of Drill has the following known issue:

- DRILL-4070 - You must change the metadata of Parquet files generated by Drill 1.1 and 1.2 for the files to work optimally with Drill 1.3.0. See http://drill.apache.org/docs/partition-by-clause/.

Drill 1.2.0 Release Notes

Version	1.2.0
Release Date	November 7, 2015
Works with MapR version	See Drill Support Matrix on page 5629

Noteworthy New Features in MapR Distribution of Drill

This release introduces a number of enhancements, including the following ones:

- Partition pruning improvements
- Optimizes reads of Parquet-backed, Hive tables.
- Improved Hive support

  Supports Hive 1.2.1 and using multiple Hive versions (same as corresponding MapR platform version).
- Analytical/Window functions support

  Adds Lead, Lag, First_Value, Last_Value, and Ntile support and allows multiple window functions in the same query.
- DROP TABLE Command

- Parquet metadata caching

  Improves query performance on a large number of files.

- Security support for the Web Console
- Row key filter pushdown

  Improves performance when querying MapR Database and HBase.

- Improvements in the Drill JDBC driver.
- Read support for the Parquet INT96 data type support

  A new TIMESTAMP_IMPALA type used with the CONVERT_FROM function decodes a timestamp from Hive or Impala.

- Improved correlated subqueries
- Support for UNION DISTINCT syntax
- Improved LIMIT processing

Known Issues

The MapR 1.2 release of Drill does not include fixes for the following issues that were fixed in the Apache Drill 1.2 release:

Drill JIRA	Description
DRILL-1065	You cannot issue the ALTER SESSION RESET command to reset an option to its default system value.
DRILL-2361	Drill returns the following error message when column aliases for aggregate or group by fields include a dot (.): Field references must be singular names.
DRILL-2879	Drill cannot parse JSON files with the BSON OID data type, a MongoDB extension to the JSON format. Drill may also have issues parsing JSON files with the BSON Binary data type.
DRILL-3791	Testing of the JDBC storage plugin with MySQL is incomplete.
DRILL-3869	Queries submitted through the Drill Web Console with a trailing semicolon (;) fail, and Drill returns the following error message: org.apache.drill.common.exceptions.UserRemoteException: PARSE ERROR: Encountered ";" at line 1, column 42. Was expecting one of: "OFFSET" ... "FETCH" ...
DRILL-3888	The test JAR file configurations exist in each module's POM file instead of the root POM file.
DRILL-3916	Drill-bits cannot load the JDBC storage plugin when starting because the plugin does not exist.

Drill 1.1.0 Release Notes

This version of Drill is no longer supported.

Flume Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for Flume contain notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Flume 1.9.0.0 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Flume 1.9.0.0.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following release notes for the Flume 1.9.0.0 component are included in the MapR distribution for Apache Hadoop:

Flume 1.9.0.200-2110 (EEP 8.0.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Flume. You may also be interested in the Apache Flume 1.9.0 changelog or the Apache Flume homepage.

For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.9.0.200
Release Date	October 2021
HPE Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/flume
GitHub Release Tag	1.9.0.200-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names

New in This Release

No new features were introduced in this release.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	Fix Number and Description
cb11414	2021-09-07	MAPR-FLUME-82 Update maven artifact version strings to replace 'mep/mapr' with 'eep'
420b96f	2021-09-03	MAPR-FLUME-81 mapr-security-web jar is taken from the cluster

last-updated: Apr 11, 2022

eb25c7b	2021-09-03	MAPR- FLUME-79 kafka-eventstreams*.jar was added to classpath
d9a47e3	2021-07-23	MAPR- FLUME-71 Kafka version was updated to 2.6.1.0-mapr

For complete details, refer to the commit log for this project in GitHub.

Flume 1.9.0.100-2101 (EEP 7.0.1) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Flume. You may also be interested in the Apache Flume 1.9.0 changelog or the Apache Flume homepage.

Version	1.9.0.100
Release Date	January 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/flume
GitHub Release Tag	1.9.0.100-mapr-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Flume 1.9.0.100-2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
43bfe16	2020-11-12	MAPR-FLUME-70 Thrift version was updated to v0.13.0

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Flume 1.9.0.0-2009 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Flume 1.9.0.0 for EEP 7.0.0.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

You may also be interested in the Apache Flume 1.9.0 changelog or the Apache Flume homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.0
Release Date	September 2020
MapR Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/flume
GitHub Release Tag	1.9.0.0-mapr-700
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
c9df319	2019-03-15	MAPR-FLUME-27: Flume uses 2.1.1.0-mapr version of Kafka
5343bb7	2019-03-20	MAPR-FLUME-26: KafkaChannel does not avoid duplicates while consumer rebalancing processing. KafkaChannel was extended to consume from multiple topics(listed explicitly or via specifying regex pattern). Sink and Source runner stop were fixed.
5fb966b	2019-06-05	MAPR-FLUME-43: Flume 1.9 uses hadoop 2.7.4.0-mapr-1908
6e39679	2020-01-21	MAPR-FLUME-44: Protobuf version was updated to 3.11.1 for Flume 1.9.
dc9d3dd	2020-03-31	MAPR-FLUME-1: Flume uses mapr version of mapr specific components.
27e0ce2	2020-04-07	MAPR-FLUME-50: Mapr-flume is built using java 11.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
f71421a	2020-04-16	MAPR-FLUME-55: XercesImpl version was upgraded to 2.12.0.
3af3507	2020-04-30	MAPR-FLUME-1 hive version was changed to 2.3.7-mapr
623e77a	2020-04-30	MAPR-FLUME-61: Zookeeper version was changed to 3.5.6-mapr.
7056d16	2020-05-05	MAPR-FLUME-58: libthrift version was upgraded to 0.12.0. Derby version was upgraded to 10.14.2.0.
f06f6b9	2020-05-14	MAPR-FLUME-53: jackson-databind version was upgraded to 2.10.0. Avro version was updated to 1.9.2. jackson-mapr-asl was excluded.
46a7704	2020-07-15	MAPR-FLUME-66: guava version was upgraded to 28.2-jre
2da21f7	2020-08-11	MAPR-FLUME-68: HBase version was changed to 1.4.12.0-mapr

- None.

Flume 1.8.0 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following release notes for the Flume 1.8.0 component are included in the MapR distribution for Apache Hadoop.

Flume 1.8.0-2201 (EEP 6.3.6) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Flume. You may also be interested in the Apache Flume 1.8.0 changelog or the Apache Flume homepage.

Version	1.8.0
Release Date	January 2022
MapR Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/flume
GitHub Release Tag	1.8.0-mapr-2201
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Flume 1.8.0-2201 is a defect-repair release.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
5d7b40a	2022-01-25	MAPR-FLUME-85 log4j v1 was updated to the 1.3.1-mapr
e9b7914	2021-12-16	MAPR-FLUME-84 Log4j version was updated to 1.3.0-mapr
0229b54	2021-01-23	MAPR-FLUME-77 Upgrade version of rat-plugin

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

Flume 1.6.0 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following release notes for the Flume 1.6.0 component are included in the MapR distribution for Apache Hadoop.

Flume 1.6.0-1602 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Flume Version	1.6.0
Release Date	February 29, 2016
Source on GitHub	https://github.com/mapr/flume/tree/1.6.0-mapr-1602
MapR Version Interoperability	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release if you are running 5.0 or 5.1 and install Flume from the repository, or if you are running 5.2 and install EEP 1.0 or 1.1.0: • mapr-flume-1.6.0.201602111316-1.noarch.rpm • mapr-flume_1.6.0.201602111316_all.deb If you are running 5.2 and install EEP 1.1.1 or 2.0, see Package Names for MapR Ecosystem Packs (EEPs).

last-updated: Apr 11, 2022

New in this Release

This release of Apache Flume includes the following behavior change that is specific to MapR:

Support for MapR Event Store For Apache Kafka through the Kafka 0.9 API.	To read MapR Event Store For Apache Kafka topics, you can use a Kafka source or a Kafka channel. To write to a MapR Event Store For Apache Kafka topic, you can use a Kafka channel or a Kafka sink.

For details on the features provided in open source version of Flume 1.6, see the Apache Flume release notes.

Fixes

GitHub Commit	Date (YYYY-MM-DD)	Comment
3e11b9a	2015-12-25	MAPR-21957: Flume now includes support for MapR Event Store For Apache Kafka through the Kafka 0.9 API.
61f6ac3	2016-01-14	MAPR-22162: `flume-kafka-channel` now has a junit dependency.
0536731	2016-01-14	MAPR-22168: Flume channel now catches `UnknownTopicOrPartitionException` for the committed() method.
e71cfff	2016-01-19	MAPR-22205: Flume no longer throws `NoSuchMethodError` when an agent includes an Hbase 1.1 sink and source.

Flume 1.6.0-1509 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Flume Version	1.6.0
Release Date	Oct 5, 2015
Source on GitHub	https://github.com/mapr/asynchbase
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-flume-1.6.0.201509301714-1.noarch.rpm • mapr-flume_1.6.0.201509301714_all.deb

New in this release

For details on the features provided in Flume 1.6, see the Apache Flume release notes.

Flume 1.5.0 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following release notes for the Flume 1.5.0 component are included in the MapR Converged Data Platform:

Flume 1.5.0-1503 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

You may also be interested in the Apache Flume 1.5.0 changelog or the Apache Flume homepage.

Flume Version	1.5.0
Release Date	March 27, 2015
MapR Version Compatibility	See the Ecosystem Support Matrix.
Source on GitHub	https://github.com/mapr/flume
GitHub Release Tag	1.5.0-mapr-1503
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release from MapR includes the following fixes on the base Apache release. These fixes were back-ported from Flume Version 1.5.2. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
1d7ee18	2014-11-12	FLUME-2549: Enable SSLv2Hello for HttpSource.
2ed1a43	2014-11-12	FLUME-2548: Enable SSLv2Hello for Avro Source and NettyAvroRpcClient.
3d78e0b	2014-11-12	FLUME-2551: Add dev-support directory to source tarball.
c82f7b5	2014-11-05	FLUME-2533: HTTPS tests fail on Java 6.
ccadd4d	2014-08-05	FLUME-2441: HTTP Source Unit tests failed with IBM JDK 7.
429cf96	2014-10-22	FLUME-2511: Allow configuration of enabled protocols in Avro source and RpcClient.
b33bd46	2014-10-27	FLUME-2520: HTTP Source should be able to block a prefixed set of protocols.

Updating Flume for Compatibility with HBase 0.98

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Flume 1.5 is compatible with HBase 0.94 and 0.98. If you are using MapR Version 4.0.x and have upgraded to HBase 0.98, you need to update the Flume 1.5 jar files as follows:

1. Go to the directory where the Flume scripts are stored:

```
cd /opt/mapr/flume/flume-<version>/bin/
```

last-updated: Apr 11, 2022

2. Execute the update script:

```
bash flume-jars.sh
```

During the script execution, you should see the following log messages:

```
POST_YARN=1, HBASE_VERSION=0.98.4 : installing flume*-hbase.98-h2 jars
```

You can now use Flume 1.5 with HBase 0.98.

Flume 1.5.0-1501 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

You may also be interested in the Apache Flume 1.5.0 changelog or the Apache Flume homepage.

Flume Version	1.5.0
Release Date	January 21, 2015
MapR Version Compatibility	See the Ecosystem Support Matrix.

Fixes

Commit	Date (YYYY-MM-DD)	Comment
7096e0f	2014-12-11	Added tmp extensions to prevent the JVM from using jar files from other versions of HBase.
e544e94	2014-12-04	Added a script to configure Flume jars after an upgrade to HBase 0.98.
334a2bc	2014-12-04	mapr-flume-1.5.0 was built with support for HBase 0.94 and 0.98.

Updating Flume for Compatibility with HBase 0.98

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Flume 1.5 is compatible with HBase 0.94 and 0.98. If you are using MapR Version 4.0.x and have upgraded to HBase 0.98, you need to update the Flume 1.5 jar files as follows:

1. Go to the directory where the Flume scripts are stored:

```
cd /opt/mapr/flume/flume-<version>/bin/
```

2. Execute the update script:

```
bash flume-jars.sh
```

During the script execution, you should see the following log messages:

```
POST_YARN=1, HBASE_VERSION=0.98.4 : installing flume*-hbase.98-h2 jars
```

You can now use Flume 1.5 with HBase 0.98.

Flume 1.5.0-1408 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

You may also be interested in the Apache Flume 1.5.0 changelog or the Apache Flume homepage.

last-updated: Apr 11, 2022

New in This Release

This is the initial release of Flume 1.5.0 on the MapR Distribution for Hadoop. This release supports MapReduce version 1 and MapReduce verion 2 and includes all patches made to Flume version 1.4.0.

Hadoop Release Notes

The release notes for the Hadoop and YARN components included in the MapR Data Platform contain notes specific to data-fabric only.

Hadoop 2.7.6.200 - 2201 (EEP 8.1.0) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache Hadoop.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	2.7.6.200
Release Date	January 2022
Version Interoperability	See EEP Components and OS Support on page 5536.
GitHub Source	https://github.com/mapr/hadoop-common/
GitHub Release Tag	2.7.6.200-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

Hadoop 2.7.6.100 - 2110 introduces the following enhancements:

- Added FIPS support.
- Added sharding for RM volume across multiple volumes to support stability.

Fixes

This HPE release includes the following fixes on the base Apache release:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
974986fae21	2022-01-25	MAPRHADOOP-213: updated log4j to 1.3.1-mapr version
65cf470fefa	2022-01-21	MAPRYARN-349: verify ownership/permissions for cluster directory when RM/HS starts
e587b904ab1	2022-01-13	MAPRHADOOP-211: handle case when volume mapr.resourcemanager.volume is already mounted with incorrect mount point
7ac1f8da988	2021-12-14	MAPRYARN-348: Updated Netty4 to 4.1.71.Final version
41bd3d1a720	2021-12-09	MAPRHADOOP-209: Fixed backward compatibility for client
ce8692d77c4	2021-12-06	MAPRYARN-337 - Create Spark spill local volumes by default
0cc00d6dd33	2021-12-01	MAPRYARN-345: Added FIPS support to AWS client

513f2c49362	2021-11-24	MAPRYARN-312: fix MapRTicketLocalizer to be able to operate with nm-local-dirs as with list of directories
a48cf251a22	2021-11-18	MAPRYARN-342: Removed Netty3 dependency
d25811160d6	2021-11-18	Backport HADOOP-11245. Update NFS gateway to use Netty4
ed9b5fa1f04 2b0e116df0b	2021-11-18	Backport HDFS-5570. Deprecate hftp / hsftp and replace them with webhdfs / swebhdfs. Contributed by Haohui Mai
c6245b1186e	2021-11-18	MAPRYARN-343: updated gson to 2.8.9 version
7c9a5632a37	2021-11-18	MAPRHADOOP-207: Jetty updated to 9.4.44.v20210927 version
330748ae5f0	2021-11-02	Backport YARN-4925. ContainerRequest in AMRMClient, application should be able to specify nodes/racks together with nodeLabelExpression. Contributed by Bibin A Chundatt
ddad84644f1	2021-10-25	MAPRYARN-333: Fixed logging ContainerLocalizer to local file system while yarn.use-central-logging-for-mapreduce-only is enabled
336907aa52c a6d6f29f6c1 0e5d6028056	2021-10-22	MAPRYARN-326: Added SCRAM-SASL to Hadoop
782d4b83149	2021-10-13	MAPRYARN-317: add ability to enable case in-sensitive groups/usernames in fair-scheduler file
59737fbb1dd	2021-10-04	Backport YARN-7157. Add admin configuration to filter per-user's apps in secure cluster. Contributed by Sunil G.
d1c8ea0dd4a	2021-09-03	MAPRYARN-296: YARN RM UI or commands do not show allocated containers for finished applications
1579432cb0d	2021-09-03	Backport YARN-4417. Make RM and Timeline-server REST APIs more consistent. Contributed by Wangda Tan
db2081bd96d	2021-09-03	Backport YARN-5440. Use AHSClient in YarnClient when TimelineServer is running (Xuan Gong via gtcarrera9)
078ab8abb3f	2021-09-03	Backport YARN-5767. Fix the order that resources are cleaned up from the local Public/Private caches. Contributed by Chris Trezzo
085526639b5	2021-08-20	MAPRHADOOP-195: Create symlinks to verify script for Hadoop services
56a48da51ec	2021-08-17	MAPRYARN-274: Shard RM volume across multiple volumes to support scalability
f45e2898856 42a6a35138c	2021-08-12	MAPRHADOOP-187: Add property to preserve link for "hadoop cp" and distCp operations
07887e3f7c5 8c752b00fcc	2021-07-21	MAPRHADOOP-185: Use alternate java.security for yarn scripts

Known Issues and Limitations

- None.

Hadoop 2.7.6.100 - 2110 (EEP 8.0.0) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache Hadoop.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	2.7.6.100
Release Date	October 2021
Version Interoperability	See EEP Components and OS Support on page 5536.
GitHub Source	Not applicable
GitHub Release Tag	2.7.6.100-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

Hadoop 2.7.6.100 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- All fixes from Apache Hadoop 2.7.6 have been backported.
- Support for file exclusion list in DistCp.
- Added a `yarn top` tool.
- Support for BCFKS keystores for Hadoop Credential Provider.

Fixes

This HPE release includes the following fixes on the base Apache release:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
4d102084877	2021-09-13	MAPRHADOOP-200: Load ssl configuration after core-site.
48960d6b6e5	2021-09-01	MAPRYARN-323-325: Added BC provider to Hadoop services
b808c225390	2021-09-01	Backport HADOOP-17699. Remove hardcoded SunX509 usage from SSLFactory. (#3016)
ca635e0db98	2021-09-01	MAPRHADOOP-192: Exclude bc-fips jars from Hadoop build
0dc49e773b8	2021-09-01	Backport HADOOP-13011 - Clearly Document the Password Details for Keystore-based Credential Providers
5400bc53028	2021-09-01	Backport HADOOP-17284. Support BCFKS keystores for Hadoop Credential Provider. (#2334)
c4ef4f0f162	2021-09-01	Backport HADOOP-12942. hadoop credential commands non-obviously use password of "none" (Mike Yoder via lmccay)
b93bcdf2592	2021-08-18	MAPRHADOOP-194: Update commons-compress to 1.21

4f1c4ec9828	2021-08-12	MAPRHADOOP-190: update htrace to 4.2.0-mapr-incubating
dc9fce5dd8f	2021-08-04	MAPRMR-21: ControlledJob#toString failed with NPE when job status is not successfully updated
f267f098be2	2021-08-04	Backport MAPREDUCE-6762. ControlledJob#toString failed with NPE when job status is not successfully updated (Weiwei Yang via Varun Saxena)
e0732a00771	2021-07-28	MAPRHADOOP-186: Update Jetty to 9.4.43.v20210629
a30951764be	2021-07-27	MAPRMR-20: add retry support for all Job actions
a42503a9153	2021-07-26	Update gradle-wrapper.properties
1d04de14c09	2021-07-26	Backport MAPRYARN-321: Upgraded Avro version to 1.10.1
2b2518f33a8	2021-07-23	Backport HADOOP-17341. Upgrade commons-codec to 1.15 (#2428)
b6988af1234	2021-07-20	Backport HADOOP-10075. addendum to fix compilation on Windows
7d0183ee3bd	2021-06-21	MAPRYARN-320: Kill child process from container-executor
ad8e8d08c0b	2021-06-18	Backport YARN-10490. yarn top command not quitting completely with ctrl+c. Contributed by Agshin Kazimli
1c737ee2f90	2021-06-18	MAPRYARN-316: Added disks to "yarn top" command
a35adb43f87	2021-06-18	Backport YARN-3348. Add a 'yarn top' tool to help understand cluster usage. Contributed by Varun Vasudev
9f5418a1de5	2021-06-07	Backport HADOOP-17602. Upgrade JUnit to 4.13.1. Contributed by Ahmed Hussein.
f3b647eea98	2021-06-04	Fixed LocatedFileStatusFetcher for work with symlinks
9b16bf0084b	2021-06-03	MAPRHADOOP-177: Fixed mkdir command for non existing parent dir
e96a8d7e003	2021-06-02	MAPRHADOOP-174: Fixed issue with copying multiple files to directory
740035b02f1	2021-05-31	Backport HADOOP-16245. Restrict the effect of LdapGroupsMapping SSL configurations to avoid interfering with other SSL connections. Contributed by Erik Krogen.
27e38cbbb28	2021-05-31	Backport HADOOP-12862. LDAP Group Mapping over SSL can not specify trust store. Contributed by Wei-Chiu Chuang and Konstantin Shvachko.
290a908be21	2021-05-31	Backport HADOOP-15345. Backport HADOOP-12185 to branch-2.7: NetworkTopology is not efficient adding/getting/removing nodes. Contributed by He Xiaoqiao.
532934140ad	2021-05-31	Backport HDFS-13195. DataNode conf page cannot display the current value after reconfig. Contributed by maobaolong.
f9918ab5550	2021-05-31	Backport HDFS-12884. BlockUnderConstructionFeature.truncateBlock should be of type BlockInfo. Contributed by chencan.
1c3f997eb9b	2021-05-31	Backport HADOOP-13105. Support timeouts in LDAP queries in LdapGroupsMapping. Contributed by Mingliang Liu.
209c93fbe66	2021-05-31	Backport HADOOP-12001. Fixed LdapGroupsMapping to include configurable Posix UID and GID attributes during the search. Contributed by Patrick White.

last-updated: Apr 11, 2022

fdb6bf9b675	2021-05-31	Backport HADOOP-15279. increase maven heap size recommendations
444cef90d29	2021-05-31	Backport HADOOP-15283. Upgrade from findbugs 3.0.1 to spotbugs 3.1.2 in branch-2 to fix docker image build.
a156fd13c95	2021-05-31	Backport HDFS-4210. Throw helpful exception when DNS entry for JournalNode cannot be resolved. Contributed by Charles Lamb and John Zhuge.
79158f841e8	2021-05-31	Backport HADOOP-15206. BZip2 drops and duplicates records when input split size is small. Contributed by Aki Tanaka
93547c2cb3b	2021-05-31	Backport HADOOP-12568. Update core-default.xml to describe posixGroups support. Contributed by Wei-Chiu Chuang.
28283d0740c	2021-05-31	Backport HADOOP-12793. Write a new group mapping service guide (Wei-Chiu Chuang via iwasakims)
a6aef9fa3fa	2021-05-31	Backport HADOOP-9477. Add posixGroups support for LDAP groups mapping service. (Dapeng Sun via Yongjun Zhang)
2b0f6773337	2021-05-31	Backport MAPREDUCE-7048. Uber AM can crash due to unknown task in statusUpdate. Contr ibuted by Peter Bacsko
ac06e483c05	2021-05-31	Backport HDFS-10453. ReplicationMonitor thread could stuck for long time due to the race between replication and delete of same file in a large cluster.. Contributed by He Xiaoqiao.
384340b76ed	2021-05-31	Backport HDFS-7959. WebHdfs logging is missing on Datanode (Kihwal Lee via sjlee)
953f75abed0	2021-05-31	Backport HDFS-13120. Snapshot diff could be corrupted after concat. Contributed by Xiaoyu Yao.
8bc1c2ecbaa	2021-05-31	Backport HADOOP-15212. Add independent secret manager method for logging expired tokens. Contributed by Daryn Sharp.
f73da507697	2021-05-31	Backport MAPREDUCE-7020. Task timeout in uber mode can crash AM. Contributed by Peter Bacsko
ef3f06d320b	2021-05-31	Backport HDFS-12371. BlockVerificationFailures and BlocksVerified show up as 0 in Datanode JMX. Contributed by Hanisha Koneru.
7570e0e491d	2021-05-31	Backport HADOOP-13508. FsPermission string constructor does not recognize sticky bit. Contributed by Atul Sikaria.
27e4c5fe92e	2021-05-31	Backport HDFS-11003. Expose XmitsInProgress through DataNodeMXBean. Contributed By Brahma Reddy Battula
a537ad3ea2d	2021-05-31	Backport HADOOP-13263. Reload cached groups in background after expiry. (Contributed bt Stephen O'Donnell)
358d2fd6795	2021-05-31	Backport HADOOP-14246. Authentication Tokens should use SecureRandom instead of Random and 256 bit secrets (Conttributed by Robert Kanter via Daniel Templeton)
fb29d47034b	2021-05-31	Backport HDFS-11384. Balancer disperses getBlocks calls to avoid NameNode's rpc queue saturation. Contributed by Konstantin V Shvachko.
442c573b4e6	2021-05-31	Backport MAPREDUCE-7028. Concurrent task progress updates causing NPE in Application Master. Contributed by Gergo Repas
ead4809bbc1	2021-05-31	Backport HDFS-12881. Output streams closed with IOUtils suppressing write errors. Contributed by Ajay Kumar

f7842437eff	2021-05-31	Backport MAPREDUCE-5124. AM lacks flow control for task events. Contributed by Peter Bacsko
9316e6866df	2021-05-31	Backport YARN-4167. NPE on RMActiveServices#serviceStop when store is null. (Bibin A Chundatt via rohithsharmaks) Backport YARN-6633 by Inigo Goiri.
573618f058e	2021-05-31	Backport YARN-3425. NPE from RMNodeLabelsManager.serviceStop when NodeLabelsManager.serviceInit failed. (Bibin A Chundatt via wangda) Backport YARN-6632 by Inigo Goiri.
38565378f4f	2021-05-31	Backport YARN-7661. NodeManager metrics return wrong value after update node resource. Contributed by Yang Wang
cb027e006c4	2021-05-28	Backport MAPRHADOOP-174: Added wildcard usage for path with symlinks
ffc31a97594	2021-05-26	Backport YARN-4348. ZKRMStateStore.syncInternal shouldn't wait for sync completion for avoiding blocking ZK's event thread. (ozawa)
226dfdeca76	2021-05-26	Backport YARN-3798. ZKRMStateStore shouldn't create new session without occurrance of SESSIONEXPIED. (ozawa and Varun Saxena)
4f4bf8a1446	2021-05-20	MAPRHADOOP-173: Moving cluster from secure to unsecure breaks yarn-site.xml
6a83c9d9918	2021-05-19	COMSECURE-384: Add Bouncy Castle JARs to Hadoop class path - unitTested
fa833c7d5bb	2021-05-17	MAPRHADOOP-171: Distcp to S3A does not work
ff9e411bb5f	2021-05-13	MAPRHADOOP-172: configure ssl-client/server.xml as part of hadoop-util configuration
da5ef438a37	2021-05-11	Backport HADOOP-15970. Upgrade plexus-utils from 2.0.5 to 3.1.0.
4e64e475366	2021-05-06	MAPRYARN-299: change service name identification approach
6d453dc22df	2021-04-28	MAPRHADOOP-169: Updated JQuery to 3.5.1 for SLS
2ac48dc37c5	2021-04-28	Backport HADOOP-17302. Upgrade to jQuery 3.5.1 in hadoop-sls. (#2379)
32e551d6ae2	2021-04-28	Backport HADOOP-14040. Use shaded aws-sdk uber-JAR 1.11.86. Contributed by Steve Loughran and Sean Mackrory
8394c1d02c1	2021-04-28	Backport HADOOP-12537 S3A to support Amazon STS temporary credentials. Contributed by Sean Mackrory.
1c36296b9e8	2021-04-28	Backport HADOOP-12723 S3A: Add ability to plug in any AWSCredentialsProvider. Contributed by Steven Wong.
eed76986ecd	2021-04-26	Backport HADOOP-1540. Support file exclusion list in distcp. Contributed by Rich Haase
912a88cdc84	2021-04-20	MAPRHADOOP-167: jackson-mapper-asl updated to 1.9.13-atlassian-5

Hadoop 2.7.5.0 - 2104 (EEP 7.1.0) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache Hadoop.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	2.7.5.0
Release Date	April 2021
Version Interoperability	See EEP Components and OS Support on page 5536.
GitHub Source	https://github.com/mapr/hadoop-common/
GitHub Release Tag	2.7.5.0-mapr-mep-710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

Hadoop 2.7.5.0 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- All the fixes from Apache Hadoop 2.7.5 have been backported.
- Symbolic links are supported for all Hadoop operations.
- Hadoop Key Management Server (hadoop-kms) has been removed.
- Log4j APIs have moved to slf4j.
- Jetty version updated to 9.4.39.v2021032.
- Service verifier.

Fixes

This data-fabric release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
48b8b44e	2021-04-13	MAPRHADOOP-165: Jetty updated to 9.4.39.v20210325 due CVE-2021-28165
62625863	2021-04-06	MAPRHADOOP-163:fix mapred-site.xml HS_IP new value change
7df21655	2021-03-25	MAPRHADOOP-161: ssl-client/server.xml should be updated after Hadoop upgrade
2c4da9f4	2021-03-22	MAPRYARN-307: Job history server does not delete logs on new nodes with central logging
4406c09b	2021-03-17	MAPRYARN-299: Add service verifier to hadoop packages that contains a startable servicee
961269d8	2021-03-15	MAPRHADOOP-159: Fixed mfs and conf commands for Windows client
6b28f579	2021-03-09	MAPRHADOOP-155: CVE-2016-2402 vulnerability in okhttp

ceb85f35	2021-03-05	MAPRYARN-306: fix ConcurrentModificationException
705769a6	2021-03-03	MAPRHADOOP-152: Updated Jetty to 9.4.38.v20210224 due CVEs
d72447ab	2021-03-01	Backport HADOOP-17223. Update org.apache.httpcomponents:httpclient to 4.5.13 and httpcore to 4.4.13
258214e1	2021-02-26	Backport YARN-7590. Improve container-executor validation check. Contributed by Eric Yang.
e189bdff	2021-02-26	MAPRYARN-294: Added missed API for ContainerLocalizer logs
e0e5e7ff	2021-02-26	Backport YARN-8039. Clean up log dir configuration in TestLinuxContainerExecutorWithMocks.testStartLocalizer. Contributed by Miklos Szegedi.
1cac41e8	2021-02-26	Backport YARN-5277. When localizers fail due to resource timestamps being out, provide more diagnostics. Contributed by Siddharth Ahuja
9df6eea0	2021-02-26	Backport YARN-7705. Create the container log directory with correct sticky bit in C code. Contributed by Yufei Gu.
989909e7	2021-02-26	YARN-7363. ContainerLocalizer don't have a valid log4j config in case of Linux container executor. (Contributed by Yufei Gu)
1ace3db4	2021-02-26	Backport YARN-7261. Add debug message for better download latency monitoring. (Yufei Gu)
7125273e	2021-02-24	MAPRHADOOP-147: Fixed __HS_IP__ address at mapred-site.xml after Hadoop update
7430b2fc	2021-02-23	MAPRHADOOP-146: Added information about ACE to cp copy usages
1f3ff1a9	2021-02-22	MAPRYARN-125: fix typo in deprecated key replacement
c2be584e	2021-02-16	MAPRYARN-283: Implement maxContainer queue element at the queue level
8c75d4dd	2021-02-12	Backported YARN-6752. Display reserved resources in web UI per application
eaf1f314	2021-02-10	MAPRYARN-292: Nodemanager does not delete the appcache application directories
c5ede6c4	2021-02-10	MAPRHADOOP-120: Fixed symlink path for LocatedFileStatus
897dca05	2021-02-08	MAPRHADOOP-143: CVE-2020-17527 Tomcat 9.0.39 vulnerability. Updated to 9.0.43
98fe6480	2021-02-03	MAPRYARN-295: NodeManager shutsdown with NPE in AsyncDispatcher Thread
5cf60bb9	2021-02-02	MAPRHADOOP-142: MapTask checks if output dir exist in MFS ignoring the path schema
21585148	2021-01-06	MAPRHADOOP-88: Remove hadoop-kms
e5a0ca54	2020-12-29	MAPRYARN-288: Scheduler queue UI doesn't work
a1deb43c	2020-12-24	MAPRHADOOP-135: Moved ShuffleHandler to Netty 4
fa85c3c7	2020-12-07	MAPRHADOOP-121: Added symlink support for LS and Delete operations
77b364a2	2020-12-07	MAPRYARN-280: Support for symlinks as input/output for YARN application

last-updated: Apr 11, 2022

7dfc54f2	2020-12-07	MAPRHADOOP-121: Support symlinks for CLI
23ed8d45	2020-11-27	MAPRHADOOP-116 Move log4j APIs over to slf4j
df184cf8	2020-11-02	MAPRHADOOP-79: Update jackson to 2.11.1
a3119a41	2020-10-08	Backport some changes from hadoop-13597
641791bf	2020-10-06	Backport MFS-11328: Link activation jar under lib to find the class DataSource
3960fa46	2020-10-05	MAPRHADOOP-114: Update jetty dependency to version 9

For complete details, refer to the commit log for this project in GitHub.

Resolved Issues

- None.

Hadoop 2.7.4.100 - 2101 (EEP 7.0.1) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache Hadoop.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	2.7.4.100
Release Date	January 2021
Version Interoperability	See EEP Components and OS Support on page 5536.
GitHub Source	https://github.com/mapr/hadoop-common/
GitHub Release Tag	2.7.4.100-mapr-mep-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

This release includes bug fixes and updates but no significant new features.

Fixes

This data-fabric release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
4c7ba30	2020-10-09	Backported YARN-4411.RMAppAttemptImpl#createApplicationAttemptReport throws IllegalArgumentException. Contributed by Bibin A Chundatt and yarntime
e98c109	2020-10-21	Backported HADOOP-15054. upgrade hadoop dependency on commons-codec to 1.11

029cd64	2020-10-21	Backported HADOOP-12552. Fix undeclared/unused dependency to httpclient
7d3e416	2020-10-21	Backported HADOOP-13382. Remove unneeded commons-httpclient dependencies from POM files in Hadoop and sub-projects, while adding it in to the only place it is still needed, hadoop-openstack
469c37d	2020-10-21	Backported HADOOP-11614. Remove httpclient dependency from hadoop-openstack
ac3d2a2	2020-10-21	MAPRHADOOP-123: Updated netty versions
bc275b9	2020-10-21	Backported HADOOP-10296. Incorrect null check in SwiftRestClient#buildException
97807cb	2020-10-21	Backported HADOOP-11613. Remove commons-httpclient dependency from hadoop-azure
2a19cc5	2020-10-21	Backported HDFS-12221. Replace xcerces in XmlEditsVisitor
2809c52	2020-10-21	MAPRHADOOP-123: Updated commons-io to 2.7 version
0e080d9	2020-12-07	Backported HADOOP-9613. [JDK8] Update jersey version to latest 1.x release
511cb80	2020-12-22	MAPRMR-19: Add retry support to waitForCompletion() method
fbff7cd	2020-12-29	MAPRYARN-284: YARN kills container but hanging task process is not getting killed
f9a19df	2021-01-05	Backported YARN-5053. More informative diagnostics when applications killed by a user
107da45	2021-01-11	MAPRHADOOP-139: Fixed CVE-2020-13934, CVE-2020-9484 vulnerabilities
2f13f87	2021-01-11	MAPRHADOOP-136: Updated commons-compress
84e3d19	2021-01-13	MAPRYARN-286: RM hangs after calling System.exit() from SchedulerEventDispatcher
55ee369	2021-01-13	Backported YARN-6948. Invalid event: ATTEMPT_ADDED at FINAL_SAVING
08e7c27	2021-01-14	Backported YARN-3344. Fix warning - procfs stat file is not in the expected format
404473d	2021-01-14	Backported HADOOP-17283. Hadoop - Upgrade to jQuery 3.5.1
c91054b	2021-01-14	MAPRYARN-282: Inconsistent resource management between Warden and NodeManager

Known Issues and Limitations

- None.

Resolved Issues

- None.

Hadoop 2.7.4.0-2009 (EEP 7.0.0) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache Hadoop.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	2.7.4.0
Release Date	September 2020
Version Interoperability	See EEP Components and OS Support on page 5536.
GitHub Source	https://github.com/mapr/hadoop-common/
GitHub Release Tag	2.7.4.0-mapr-700
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

This release:

- Decouples Hadoop from core and splits Hadoop into the following packages:
  - `mapr-hadoop-util`
  - `mapr-hadoop-client`
  - `mapr-hadoop-core`

  The `mapr-mapreduce2` package has been removed.
- Decouples the following YARN resources from core and moves them to the MEP repository:
  - `mapr-nodemanager`
  - `mapr-resourcemanager`
  - `mapr-historyserver`
  - `mapr-timelineserver`
- Provides support for YARN CGroups.
- Adds a CLI feature to manage the `node.labels` file that updates and autogenerates the labels file.
- Provides support for JDK 11.
- Adds saving ACE for Hadoop FS commands.

Fixes

This data-fabric release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
e70d0068212	2020-09-04	MAPRHADOOP-110: Added java8_support option to run distributed shell on jdk8
27e5feefb53	2020-08-28	MAPRYARN-232: fix bug with label expression.

82608b1e9d7	2020-08-27	MAPRHADOOP-99: Added support for jmxagent at JMX_REMOTEHOST
22cd170dc77	2020-08-25	MAPRHADOOP-109: create output directory for MapReduce tasks
8d49274d29e	2020-08-25	CORE-235: 'yarn.nodemanager.linux-container-executor.group' settings are not configured properly for non mapr admin user
9af92b94658	2020-08-25	MAPRHADOOP-110: Distributedshell application fix issues MAPRHADOOP-84 and MAPRHADOOP-107
7ff579baeb1	2020-08-14	MAPRHADOOP-108: Hadoop configure.sh doesn't work on Mac OS
0097c56aeda	2020-08-13	MAPRHADOOP-84: Fixed illegal reflective access warning on Windows node
2d51e2ff1c2	2020-08-13	MAPRHADOOP-107: Change GC to ParallelGC for YARN services and containers
670e6816a71	2020-08-13	MAPRHADOOP-110: Fix OOM issue in DistributedShell.
b95185e9953	2020-08-12	MAPRHADOOP-87: added retry property to get token authentication exception
63cabe9cf05	2020-08-12	MAPRYARN-267: Doesn't work link from RM to AM and HS at the non-secure cluster
9acc2c994af	2020-08-10	Backported YARN-8844. TestNMProxy unit test is failing. (Eric Yang via wangda)
40d5ea49fd6	2020-08-10	Backported YARN-4916. TestNMProxy.tesNMProxyRPCRetry fails. Contributed by Tibor Kiss. (cherry picked from commit 00058167431475c6e63c80207424f1d365569e3a)
7f396a21a1c	2020-08-10	Backported HADOOP-11875. [JDK9] Adding a second copy of Hamlet without _ as a one-character identifier.
cc73db526b4	2020-08-10	Backported HADOOP-11875. [JDK9] Adding a second copy of Hamlet without _ as a one-character identifier.
cb153bc81ed	2020-08-10	Backported Fixed import at LdapGroupsMapping
5063d1f7170	2020-08-10	Backported HADOOP-15936. [JDK 11] MiniDFSClusterManager & MiniHadoopClusterManager compilation fails due to the usage of '_' as identifier. Contributed by Zsolt Venczel.
55cc8d04ed0	2020-08-10	Backported HADOOP-16299. [JDK 11] Build fails without specifying -Djavac.version=11
f93adaec25a	2020-08-10	Set java 11 as default for compile
68e65b80365	2020-08-10	Backported HADOOP-15764. Addendum patch: Fix NPE in SecurityUtil.
cf292164bc4	2020-08-10	Backported HADOOP-15764. [JDK10] Migrate from sun.net.dns.ResolverConfiguration to the replacement. Contributed by Akira Ajisaka.
cee2b9a3dbd	2020-08-10	Backported HADOOP-15756. [JDK10] Migrate from sun.net.util.IPAddressUtil to the replacement. Contributed by Akira Ajisaka.
3d1f99ab0b2	2020-08-10	MAPRYARN-265: Blkio CGroups - blkio.weight replaced by new blkio.bfq.weight start from centos8
ec7a13d362a	2020-08-06	MAPRDB-2274: Fixed hadoop_symlinks.sh script for Mac
83186016c2d	2020-08-05	MAPRYARN-241: handle JMX options

d51c8f5d9cd	2020-08-03	MAPRHADOOP-106: Added configure-hadoop.bat to Hadoop project
f36240f896c	2020-07-31	MAPRHADOOP-103: Renamed ext-conf/get-jars-list.sh into ext-conf/mapr-eco-config.sh
cbe7c9d10d6	2020-07-31	MAPRYARN-266: Jobs fails when yarn.use-central-logging-for-mapreduce-only = true
b66ca7bff1c	2020-07-30	MAPRHADOOP-105: Hadoop build fail to generate headers on Windows
a96c5e9fd78	2020-07-29	Backported HADOOP-14586. StringIndexOutOfBoundsException breaks org.apache.hadoop.util.Shell on 2.7.x with Java 9. Contributed by Uwe Schindler.
fb9c3aaef18	2020-07-24	MAPRHADOOP-103: Added get-jars-list.sh for use by Core mapr-config.sh (CORE-221)
143c1ec6a9f	2020-07-24	MFS-2465: added aces prototypes to hdfs.h unitTested skipBuild review @ Rajesh
9cc3222e9c8	2020-07-23	MAPRHADOOP-102: error -1 while copying aces from MapR-FS to local FS
a6f621fa884	2020-07-23	MAPRHADOOP-101: Add ext-conf to the hadoop tar file
f8b702588e6	2020-07-21	Backported HDFS-14729. Upgrade Bootstrap and jQuery versions used in HDFS UIs. Contributed by Vivek Ratnavel Subramanian. This closes #1297
5ba299d1b8a	2020-07-21	Backported YARN-8426:Upgrade jquery-ui to 1.12.1 in YARN. Contributed by Sunil Govindan
0e206b9fd7d	2020-07-21	Backported HADOOP-15483. Upgrade jquery to version 3.3.1. Contributed by Lokesh Jain, Mukul Kumar Singh and Sunil Govindan.
c952b19130d	2020-07-16	MAPRHADOOP-97: Hadoop applications throw warnings
fc6d22f86eb	2020-07-16	MAPRHADOOP-96: Add support for cp/mv commands if symlink was created for directory
0d41507075b	2020-07-13	MAPRYARN-257: Sls tests finish work when run from command line
ad69d2a86cd	2020-07-09	MFS-6696: hadoop fs -mv should preserve source file ACEs to destination file ACEs within cross volumes
8c6fb1dae6e	2020-07-08	MAPRYARN-261: yarn admin users not able to see logs for running jobs
591c85a5ea2	2020-07-08	MAPRHADOOP-84: Illegal reflective access of ShimLoader when using jdk11 for containers
5fda517dbd7	2020-07-08	MAPRYARN-261: yarn admin users not able to see logs for running jobs
ed860bbd99c	2020-07-07	CORE-443: Fixed UMask to 022 for YARN services
14ae8ff7ea7	2020-07-07	MAPRYARN-223: Set max idle time for http and https connection
cb1f7ad20cb	2020-07-06	MAPRYARN-261: Yarn admin users not able to see logs for running jobs
b84ceb51267	2020-07-01	MAPRHADOOP-83: Updated tomcat version to 9.0.36

33e2f935f28	2020-06-19	Backported YARN-8147. TestClientRMService#testGetApplications sporadically fails. Contributed by Jason Lowe
847b75e0b08	2020-06-19	Backported HADOOP-13220. Follow on fixups after upgraded mini-kdc using Kerby. Contributed by Jiajia Li
13312bb98af	2020-06-19	Backported HADOOP-16935. Backport HADOOP-10848. Cleanup calling of sun.security.krb5.Config. (#1912)
82c9d989086	2020-06-19	Backported HADOOP-12911. Upgrade Hadoop MiniKDC with Kerby. Contributed by Jiajia Li
9cef4b0168e	2020-06-17	CORE-434: Linking more Hadoop jar files under Core, for Zookeeper to use
fa1eefe0ef6	2020-06-11	MAPRYARN-258: Publish system metrics to ATS in batches
f70d35cc38d	2020-06-10	MAPRYARN-254: Webproxy failed to validate certificate
067edee9c63	2020-06-05	MAPRHADOOP-90: Removed hadoop-pipes from Hadoop project
1e675edcebb	2020-06-03	MAPRHADOOP-87: added retry property for renew token authentication exception
50898cdb44e	2020-05-28	MAPRHADOOP-83: Upgrade Tomcat to 9.0.34 at the hadoop-kms.
139f9229675	2020-05-28	Backported HADOOP-16439. Upgrade bundled Tomcat in branch-2.
f25fa6db3bb	2020-05-26	MAPRYARN-232: fixed docs and refactored cli feature to manage the node.lables file
2ef67211a1f	2020-05-22	MAPRMR-16: Remove symlink creation to mapr libraries from the hadoop-util post install
a4e4914a409	2020-05-22	MAPRHADOOP-84: Illegal reflective access of ShimLoader when using Java11
740ecbf7c45	2020-05-21	MAPRMR-16: Added script for symlinks creating
9a87ce6c498	2020-05-14	MAPRHADOOP-81: Update htrace-core to 4.2.0-incubating
e4c36d6e350	2020-05-14	Backported HDFS-9187. Fix null pointer error in Globber when FS was not constructed via FileSystem#createFileSystem (cmccabe)
f4367bb816d	2020-05-14	Backported HDFS-9080. Update htrace version to 4.0.1 (cmccabe)
53341245fe5	2020-05-14	Backported HDFS-8008. Support client-side back off when the datanodes are congested. Contributed by Haohui Mai.
1f54dc59c12	2020-05-14	Backported HDFS-8026. Trace FSOutputSummer#writeChecksumChunks rather than DFSOutputStream#writeChunk (cmccabe)
65fbf4e65ae	2020-05-14	Backported HDFS-8100. Refactor DFSClient.Conf to a standalone class and separates short-circuit related conf to ShortCircuitConf.
33b4376755f	2020-05-14	Backported HDFS-7854. Separate class DataStreamer out of DFSOutputStream. Contributed by Li Bo.
20076f7d9ad	2020-05-08	MAPRYARN-250: Added timeout to rescan intermediate_done dirs
094f99dc84f	2020-05-07	SPARK-616: Removed MapRTicketGenerator

last-updated: Apr 11, 2022

3f8150da966	2020-05-07	MAPRHADOOP-82: Fixed exception after guava upgrade
eea73281d19	2020-05-07	SPARK-616: Move to use MapRTicketGenerator from core by default
0622a9745dd	2020-05-07	MAPRHADOOP-82: Update Guava version to 28.2-jre
9cce8949947	2020-05-07	Backported HADOOP-16210. Update guava to 27.0-jre in hadoop-project trunk. Contributed by Gabor Bota.
f48d8562069	2020-05-07	Backported HADOOP-14386. Rewind trunk from Guava 21.0 back to Guava 11.0.2.
ae7dd42e74e	2020-05-07	Backported HADOOP-14386. Rewind trunk from Guava 21.0 back to Guava 11.0.2.
ad083f5de6e	2020-05-07	Backported HADOOP-14382 Remove usages of MoreObjects.toStringHelper. Contributed by Andrew Wang
47e9d711513	2020-05-04	MAPRYARN-249: Clear disks after preemption
92c3887fb7f	2020-04-30	Backported YARN-6175. Negative vcore for resource needed to preempt
a527fe7fe56	2020-04-24	MAPRHADOOP-76: Review and clean up unnecessary files from Hadoop 2.7.4
9b138200dec	2020-04-24	Backported YARN-9783. Remove low-level zookeeper test to be able to build Hadoop against zookeeper 3.5.5. Contributed by Mate Szalay-Beko.
2b38194bc49	2020-04-24	Backported HADOOP-16579. Upgrade to Curator 4.2.0 and ZooKeeper 3.5.5 (#1656). Contributed by Norbert Kalmár, Mate Szalay-Beko
015f61e3b7e	2020-04-15	MAPRHADOOP-72: Fixed hadoop for work with java 1.8
33ac369d359	2020-04-15	Backported HADOOP-15767. [JDK10] Building native package on JDK10 fails due to missing javah. Contributed by Takanobu Asanuma.
8a870750f7d	2020-04-15	Backported HADOOP-14056. Update maven-javadoc-plugin to 2.10.4.
a901c178b9f	2020-04-15	Backported HDFS-11610. sun.net.spi.nameservice.NameService has moved to a new location. Contributed by Akira Ajisaka.
6e97361b594	2020-04-15	Backported HADOOP-12760. sun.misc.Cleaner has moved to a new location in OpenJDK 9. Contributed by Akira Ajisaka.
c75f864bcf3	2020-04-15	HADOOP-15304. [JDK10] Migrate from com.sun.tools.doclets to the replacement. Contributed by Akira Ajisaka.
8ab08d9a70b	2020-04-10	MAPRHADOOP-73: Add ability to manage node labels through RM Rest API
16fe1cfc914	2020-03-30	MAPRHADOOP-27: Configure hadoop on the edge node
e66229651ca	2020-03-24	MAPRYARN-246: RM Hangs with a FATAL error when space is provided in the queue name
622decf8b00	2020-03-24	Backported YARN-3400. [JDK 8] Build Failure due to unreported exceptions in RPCUtil (rkanter)
a1947649fe9	2020-03-24	MAPRYARN-232: Add CLI / maprcli feature to manage the node.lables file updates or autogenerate the labels file
e4d6f999430	2020-03-23	Backported HADOOP-13773. Wrong HADOOP_CLIENT_OPTS in hadoop-env on branch-2. Contributed by Fei Hui

7066457622e	2020-03-19	MAPRYARM-241: Added JMX configuration to YARN RM/NM
c50bc6d60ce	2020-03-18	MAPRYARN-154: Cleanup extra init mapreduce directory
cbbb05dc11b	2020-03-11	MAPRYARN-244: RM hangs after calling System.exit()
85ab8d513de	2020-03-10	MFS-4656: added hdfs api to set ticket
bbd3cd4deee	2020-03-04	Backported YARN-8382. cgroup file leak in NM. Contributed by Hu Ziqian.
ebb6b4b11bb	2020-02-27	MAPRHADOOP-28: Hadoop - Distribute Notice.txt across components starting with MEP 7.0
8657ed9fae9	2020-02-27	Backported YARN-4643. Container recovery is broken with delegating container runtime. Contributed by Sidharta Seethana
58746fe320e	2020-02-21	MAPRHADOOP-70: hadoop fs -cp -p and distCp should copy source file aces to destination file aces
fff79ee878b	2020-02-19	MAPRMR-14: DistCp error - duplicate files in input path
39e3b919f1e	2020-02-13	MAPRMR-13: Distcp link file copy doesn't work
825a1af3f29	2020-02-05	MAPRYARN-183: Nodemanager log level change for message: Can not find metadata for a job. Returning service metadata
e08862759b1	2020-01-30	MAPRYARN-224: Added logic to clean up Spill files directory
12b429601c3	2020-01-23	MAPRHADOOP-69: Disable TLSv1.1 by default and uses TLSv1.2 by default
2edb37aede0	2020-01-23	MAPRMR-12: Added support blocksperchunk for large files in distcp
18d193a7509	2020-01-17	MAPRYARN-211: Fix problem that NodeManager don't start when CPU lower than 4 and MFSCPU=4
9d1b3450a79	2020-01-17	MAPRYARN-185: Added CGroup support. Backported YARN-3365, YARN-3443, YARN-3366, YARN-2619, YARN-1912, YARN-3684, YARN-160, YARN-2194, YARN-2194, YARN-3982, YARN-3853, YARN-4253, YARN-1856, YARN-3542, YARN-4578, YARN-5849, YARN-6500, YARN-5301, YARN-6757, YARN-4744, YARN-6433, YARN-7818
0b68b6052f9	2020-01-17	MAPRYARN-224: NM should always remove spill directories or completed applications
28bd7d86327	2020-01-15	MAPRHADOOP-43: Evaluate impact of Protobuf upgrade for 6.2 to Protobuf 3.11.1 on Hadoop
ce5ba4702bd	2020-01-13	MAPRYARN-227: Infinite authentication loop when try to access AM UI from RM UI
6a34523c0cf	2019-12-23	MAPRYARN-223: Make jetty connection max idle time configurable
499840501ef	2019-12-18	MAPRHADOOP-64: upgraded tomcat to 6.0.53 version
2bbef34188b	2019-12-16	MAPRHADOOP-63: Removed jackson-databind dependency because it has security vulnerability
adb89d7b1c2	2019-12-10	MAPRHADOOP-61: Setting custom ticket location makes Kerberos fail for services
c8641f01c44	2019-11-25	MAPRYARN-221: ContainerLocalizer process hangs
c9f7560dd8e	2019-11-25	MAPRYARN-168: NM/RM process do not start with XX:ErrorFile option (fix for Ubuntu and SLES)

last-updated: Apr 11, 2022

631e2c09e64	2019-11-14	MAPRYARN-218: Log aggregation has not completed or is not enabled MAPRYARN-219: AggregatedLogDeletionService: Logs of all application containers are not removed when logs of single container are not accessible
51b197c0ef3	2019-11-11	MFS-3295: Fix build breakage due to an earlier commit. Including some header files needed for uid_t.
9778fb86988	2019-11-09	MAPRYARN-217: No metadata found for application by other users
36ef2eb3677	2019-11-08	MFS-3295: Added a new API hdfsConnectAsUid() for connecting to mapr cluster using a uid.
18288f2b6ed	2019-11-08	MAPRYARN-216: Node local log aggregation does not support hostname:port name format in command "yarn logs ... -nodeAddress"
0bc3a053882	2019-11-06	MAPRYARN-215: NodeLocalMetadataWriter init failed when restart NodeManager and mfs simultaneously
719246c1b94	2019-11-06	MAPRYARN-214: HistoryServer UI doesn't show local aggregated Logs
67608235160	2019-10-31	MAPRYARN-210: Node-local log aggregation
b9e18c50841	2019-10-09	CORE-297: Added security headers for RM, NM, JHS, TLS
2f41fd0ec1f	2019-09-23	MAPRYARN-208: Update Dockerfile, hadoop_env_checks and start-build-env files
f41206b97f8	2019-09-23	Backported HADOOP-11843. Make setting up the build environment easier. Contributed by Niels Basjes.
6aed14c8703	2019-09-18	MAPRHADOOP-59: Added debug logs to aggregated log deletion logic.
4200186ea25	2019-09-18	MAPRHADOOP-58: Changed version of commons-configuration because of CVE-2014-0114.
614d51ece3d	2019-09-04	MAPRHADOOP-54: Fixed getLabelsOnNode REST API method
3137436bea3	2019-08-14	MAPRHADOOP-57: Updated commons-net and commons-io versions
28a970b6c25	2019-08-02	Backported HADOOP-15865. ConcurrentModificationException in Configuration.overlay() method. Contributed by Oleksandr Shevchenko.
935de182482	2019-07-30	MAPRHADOOP-36: adding path to libjvm.so native lib to LD_LIBRARY_PATH env variable
b9514d38e04	2019-07-19	MAPRYARN-202: FairScheduler improvements. Contains partly or fully. YARN-1287. Consolidate MockClocks. YARN-4090. Make Collections.sort() more efficient by caching resource usage YARN-7382. NoSuchElementException in FairScheduler after failover causes RM crash
f2bdb27a4cd	2019-07-19	MAPRYARN-162: added preemptedDisks and allocatedDisks fields
1a29a9bca14	2019-07-12	MAPRHADOOP-37: add outDir null check
e94706b9266	2019-07-09	MAPRHADOOP-54: Add ability to fetch node labels through RM Rest API
bb7d41d794c	2019-07-04	MAPRYARN-200: Backport YARN-6797: TimelineWriter does not fully consume the POST response

1b02dfa19d0	2019-06-27	MAPRHADOOP-52: update dependency (upgrade version commons-compress and netty)
d0315775926	2019-06-27	Backported HADOOP-14597. Native compilation broken with OpenSSL-1.1.0. Contributed by Ravi Prakash.
bbfad1bdc9f	2019-06-26	MAPRYARN-191: Fixed some ClientRMService node/labels related methods.
28e0de41fc3	2019-06-21	MAPRHADOOP-49: Hadoop configuration after installation incomplete
f8560fdd218	2019-06-20	MAPRYARN-195: Fixed compare method at DominantResourceFairnessPolicy, change weight calculation for CPU, MEMORY, DISK.
ecc0d96cba4	2019-06-20	Backported YARN-8436. FSParentQueue: Comparison method violates its general contract. (Wilfred Spiegelenburg via Haibo Chen)
30ab0e70ef3	2019-06-18	MAPRMR-8: Added property for the configuration max number of blocks in the split for CombineFileInputFormat
dd01c093203	2019-06-14	MAPRHADOOP-37: Add copyAce logic on running Map Tasks
428acd4d377	2019-06-07	MAPRYARN-192: Refactored label wrapper to handle edge conditions
632659bfa7f	2019-06-07	MAPRYARN-191: Edited node labels page to work with MapR specific.
6bdf170a840	2019-06-07	MAPRYARN-191: Fixed yarn cluster -lnl to properly show label information.
8d95c10257a	2019-06-06	MAPRYARN-192: Added AND support to label expression
51919781c70	2019-06-04	MAPRYARN-154: Added creation of nm-staging volume to LocalVolumeAuxService.
97028f090e8	2019-06-03	MAPRYARN-168: Added -XX:ErrorFile default location to YARN_OPTS.
a44b8b3c195	2019-05-31	MAPRYARN-182: Added AM/PM flag to last heartbeat report time.
b43cb6a34a8	2019-05-30	MAPRHADOOP-37: added copyAce method to AbstractMapRFileSystem.
1cd2861e7d2	2019-05-29	MAPRYARN-187: Repair SLS to work with hadoop-2.7.4-mapr.
ab38d390906	2019-05-28	Backported YARN-4579. Allow DefaultContainerExecutor container log directory permissions to be configurable (rchiang via rkanter)
a283450c281	2019-05-24	MAPRHADOOP-42: Excluded mapr specific properties from map-reduce unit tests
7d3f70347e3	2019-05-23	Backported YARN-6078. Containers stuck in Localizing state. Adapted to 2.7 hadoop. (cherry picked from commit bd1a53c)
2e3f1b93ab3	2019-05-23	Backported YARN-6004. Refactor TestResourceLocalizationService#testDownloadingResources OnContainer so that it is less than 150 lines. (Chris Trezzo via mingma) (cherry picked from commit 61424da)
9c9a8a89d49	2019-05-22	MAPRHADOOP-42: Excluded mapr specific properties from unit tests
a043d169aeb	2019-05-13	MAPRYARN-183: changed the log levels to WARN from ERROR at LocalVolumeAusService.java

last-updated: Apr 11, 2022

e18c6c7bf33	2019-05-13	MAPRHADOOP-40: Set default mapr_home in ssl-client/server conf
a7489d421c6	2019-05-13	MAPRHADOOP-34: Property mapreduce.shuffle.ssl.enabled was add to the mapred-site.xml for secure clusters
12909327cc6	2019-05-07	MAPRHADOOP-39: Option -R doesn't clean up yarn-site.xml
81af4616c5a	2019-05-03	MAPRYARN-173: Fixed wrong constant usage in TestCapacityScheduler. Fixed using maxVcores instead of maxDisks in refreshMinimumAllocation in AbstractYarnScheduler. Created testRefreshMaximumResourceAllocationShouldReturnSameResourcesAsInArgument.
7ffee8be41e	2019-04-26	MAPRYARN-179: Fixed FairSharePolicy comparator.
0de1dad6d74	2019-04-24	MAPRHADOOP-36: Add condition for getting MaprFS instead of LocalFS for writing logs in case of enabled DFS logging.
bebab711a51	2019-04-24	MAPRMR-7: added new variable to FileSystem.Cache.Key
9c32b7a4296	2019-04-23	Backported HDFS-9612. DistCp worker threads are not terminated after jobs are done. (Wei-Chiu Chuang via Yongjun Zhang)
86199b5232f	2019-04-23	Backported HDFS-9347. Invariant assumption in TestQuorumJournalManager.shutdown() is wrong. Contributed by Wei-Chiu Chuang.
26dbab3311b	2019-04-23	MAPRYARN-175: yarn job fails to initialize when output directory is set to target cluster
32ae1a69d69	2019-04-18	Backported YARN-5969. FairShareComparator: Cache value of getResourceUsage for better performance. Fix using existing Resource.java API in 2.7.0 hadoop.
0627a2c1ec6	2019-04-18	Backported YARN-6769. Make schedulables without demand less needy in FairSharePolicy#compare. (Yunfan Zhou via Yufei Gu)
e9cb861304a	2019-04-18	Backported YARN-4690. Skip object allocation in FSAppAttempt#getResourceUsage when possible (Ming Ma via sjlee)
61cd9d9efdf	2019-04-10	MAPRYARN-171: jobs comparison(with disk usage) was fixed.
934258896f5	2019-03-22	MAPRYARN-161: History server Deletion thread stops once it finds an invalid application directory
1b4b61f19b5	2019-03-22	MAPRYARN-167: Timeline had incorrect configuration
00384e786b6	2019-03-21	MAPRYARN-169: Moved hadoop-maprfs package to hadoop-common
fae981d7127	2019-03-20	MAPRYARN-165: Options for setting oom_score_adj for NM child containers
239f2753da5	2019-03-15	MAPRHADOOP-32: Configure yarn-site before change permission
ef6d389c39f	2019-03-13	MFS-2179: Add few more C++ apis to hdfs header
11414518543	2019-03-13	Backported YARN-4000. RM crashes with NPE if leaf queue becomes parent queue during restart. Contributed by Varun Saxena
efb21906cd0	2019-03-13	Backported YARN-4087. Followup fixes after YARN-2019 regarding RM behavior when state-store error occurs. Contributed by Jian He

9e7298ee372	2019-03-13	Backported YARN-2019. Retrospect on decision of making RM crashed if any exception throw in ZKRMStateStore. Contributed by Jian He.
bfa630eba18	2019-03-13	Backported YARN-4459. container-executor should only kill process groups. Contributed by Jun Gong (cherry picked from commit 1ba31fe9e906dbd093afd4b254216601967a4a7b)
6087ca36843	2019-03-07	MAPRYARN-155. changed "dot" in dfs logging property to "underscore".
d0daa13f506	2019-02-04	COMSECURE-117: Cleanup external token only for finished application
feb85e70e82	2018-11-07	Backported MAPREDUCE-6741. Add MR support to redact job conf properties. Contributed by Haibo Chen (cherry picked from commit f1b74a3d9ff71bc014dbfd29a6996071b81d14c5)
b5120c88b17	2018-11-07	Backported MAPREDUCE-6259. IllegalArgumentException due to missing job submit time. Contributed by zhihai xu (cherry picked from commit bf70c5ae2824a9139c1aa9d7c14020018881cec2)
6014bac6e00	2018-10-23	Backported YARN-4153. TestAsyncDispatcher failed at branch-2.7. Contributed by Zhihai Xu
fc37a3014ce	2018-10-23	Backported YARN-3999. RM hangs on draing events. Contributed by Jian He
b26e91baae3	2018-10-23	Backported YARN-3978. Configurably turn off the saving of container info in Generic AHS (Eric Payne via jeagles)
c944bad4679	2018-10-16	Backported MAPREDUCE-6817. The format of job start time in JHS is different from those of submit and finish time. (Haibo Chen via kasha)
ad4fbefa295	2018-10-16	Backported MAPREDUCE-6620. Jobs that did not start are shown as starting in 1969 in the JHS web UI (haibochen via rkanter)
767c4bc75c2	2018-10-11	MAPR-32181: Added max delete size for ATS deletion thread wake up
88f57119dfc	2018-09-29	Backported YARN-4398. Remove unnecessary synchronization in RMStateStore. Contributed by Ning Ding
7fe347bd5a5	2018-09-25	MAPR-32319: Containers fail during creating a symlink which started with hyphen for a resource file
9c8adf15343	2018-09-17	Backported MAPREDUCE-7101. Add config parameter to allow JHS to alway scan user dir irrespective of modTime. (Thomas Marquardt via wangda)
5ebae0609bd	2018-09-17	Backported MAPREDUCE-6680. JHS UserLogDir scan algorithm sometime could skip directory with update in CloudFS (Azure FileSystem, S3, etc. Contributed by Junping Du
18fb150b10a	2018-09-17	MAPREDUCE-6662. Clear ASF Warnings on test data files. Contributed by Vinayakumar B
6ffc9e2dd6f	2018-09-17	MAPREDUCE-6577. MR AM unable to load native library without MR_AM_ADMIN_USER_ENV set (sjlee)
ce37c0d2d17	2018-09-17	MAPR-YARN-124. NullPointerException in IFile$Reader for Apache's shuffle implementation
c561fd8b999	2018-09-17	Backported MAPREDUCE-5807. Print usage for TeraSort job. Contributed by Rohith.

2c25b288632	2018-09-17	MAPRYARN-123: Job with label runs on node without proper label.
5d4137018e6	2018-09-17	MAPRYARN-125: Possibility to enable/disable multi split locations
858f75b226f	2018-09-17	Backported MAPREDUCE-7137. MRAppBenchmark.benchmark1() fails with NullPointerException
dfd4d41340f	2018-09-17	Backported MAPREDUCE-7139. TestShuffleProvider#testShuffleProviders and TestTaskAttemptContainerRequest#testAttemptContainerRequest fail since a static common container launch context does't recreate
530f3db816a	2018-09-17	Backported MAPREDUCE-7138. ThrottledContainerAllocator in MRAppBenchmark should implement RMHeartbeatHandler
9ac645828f1	2018-09-17	MAPRYARN-15: Set default value for 'java.security.auth.login.config' if unset before. Needed for unit tests. On a cluster this property set by JVMProperties.java.
603c3195d44	2018-09-17	Backported MAPREDUCE-5982. Task attempts that fail from the ASSIGNED state can disappear. Contributed by Chang Li Additional commit from 2.8.0. (cherry picked from commit ee4ee6af6a5a6299d27462adb6944206039bbbae)
a03346d409f	2018-09-17	Backported MAPREDUCE-6513. MR job got hanged forever when one NM unstable for some time. (Varun Saxena via wangda)
03d1f08536b	2018-09-17	Backported MAPREDUCE-5465. Tasks are often killed before they exit on their own. Contributed by Ming Ma
07b71529e9f	2018-09-17	Backported MAPREDUCE-7133. History Server task attempts REST API returns invalid data. Contributed by Oleksandr Shevchenko
81a931b6c00	2018-09-12	Backported YARN-8197. Fixed AM IP Filter and Webapp proxy to redirect app tracking-URLs correctly when UI is secure. Contributed by Sunil Govindan.
467c77e8096	2018-09-12	Backported YARN-4204. ConcurrentModificationException in FairSchedulerQueueInfo. (adhoot)
c70287ef4dd	2018-09-12	MAPRYARN-114: DistCp job fails during symlink copying The cause of the problem is comparing a size of a target file with a size of a symlink to ensure that copy was successful. They are not equal. We should compare the size of the source of symlink and target file which will be copied from a source of a symlink.
7cdb92251d7	2018-09-12	Backported HADOOP-12963 Allow using path style addressing for accessing the s3 endpoint. (Stephen Montgomery via stevel)
c2ec6367fec	2018-09-12	Backported HADOOP-12851. S3AFileSystem Uptake of ProviderUtils.excludeIncompatibleCredentialProviders. Contributed by Larry McCay.
a583bb41624	2018-09-12	Backported HADOOP-12548. Read s3a creds from a Credential Provider. Contributed by Larry McCay.
74a66284ec8	2018-09-12	Backported HADOOP-12292. Make use of DeleteObjects optional. (Thomas Demoor via stevel)
a6b4c204373	2018-09-12	Backported HADOOP-12269. Update aws-sdk dependency to 1.10.6 (Thomas Demoor via Lei (Eddy) Xu)

Known Issues and Limitations

- None.

Resolved Issues

- None.

HBase Release Notes

The release notes for HBase component included in the MapR Converged Data Platform contains notes specific to MapR only.

More details are available on the Apache website under the Release Notes for Apache HBase page and the Apache HBase Project page.

HBase 1.4.13.200 - 2201 (EEP 8.1.0) Release Notes

The notes below relate to the MapR Data Platform distribution of HBase.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. You may also be interested in the Ecosystem Component Release Notes on page 5658 and the Apache HBase homepage.

Version	1.4.13.200
Release Date	January 2022
Version Interoperability	See Interoperability Matrix, Ecosystem Support Matrix, and HBase Support Matrix.
Source on GitHub	https://github.com/mapr/hbase
GitHub Release Tag	1.4.13.200-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names.

New in this Release

HBase 1.4.13.200 - 2201 introduces the following enhancemtns or HPE platform-specific behavior changes:

- Federal Information Processing Standards (FIPS) support
- CVE fixes
- Bug fixes

Fixes

This HPE release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
12c2a75dff9	2022-02-09	EEP-HBASE-280: FIPS mode check needs to be done over ssl-client instead of Zookeeper
af61cf17008	2022-01-25	EEP-HBASE-275: Upgrade Log4J version to '1.3.1-mapr'

last-updated: Apr 11, 2022

ddba4184c7	2022-01-13	EEP-HBASE-274: HBase REST authentication doesn't work for /jmx and /conf
45e13fbfe7	2022-01-05	EEP-HBASE-271: Update log4j v2 to the latest available (to 2.17+)
f33379b62c	2021-12-20	EEP-HBASE-263: Log4j Vulnerabilities: CVE-2019-17571 -- Upgrading to 1.3.0-mapr
04229b0d9b	2021-12-14	EEP-HBASE-263: Log4j Vulnerabilities: CVE-2019-17571
8ce02cfa42	2021-12-14	EEP-HBASE-269: CVE-2021-44228 - Log4j vulnerability in HBase
65769ae7c3	2021-11-25	EEP-HBASE-268: Upgrade Jetty to 9.4.44.v20210927 to sync with Hadoop
c98b48fd3c	2021-11-25	EEP-HBASE-264: Nimbus-jose-jwt Vulnerabilities: CVE-2019-17195, CVE-2017-12974 and CVE-2017-12972
f4c5bc5e5b	2021-11-24	EEP-HBASE-267: Update Spark version to 3.2.0.0-eep-SNAPSHOT
44c6284197	2021-11-23	EEP-HBASE-266: Exclude bcprov-jdk15on from HBase dependencies
cbee9488cf	2021-11-18	EEP-HBASE-260: Netty Vulnerabilities: WS-2020-0408, CVE-2021-37137 and CVE-2021-37136
c030c1b1af	2021-11-15	EEP-HBASE-257: HBase mapreduce jobs failed on cluster with enabled FIPS
51bc6be0cb	2021-11-09	EEP-HBASE-258: Update hadoop version to 2.7.6.200-eep-810-SNAPSHOT
74a9e15252	2021-10-25	MAPR-HBASE-252: [Hbase] CVE-2021-42340 Apache Tomcat DoS
748a79f5ab	2021-10-21	MAPR-HBASE-254: Upgrade slf4j dependencies from 1.7.5 to 1.7.25 to sync with Hadoop
21108dde8d	2021-10-18	MAPR-HBASE-251: HBase services can't start on cluster with enabled FIPS

Known Issues and Limitations

This release contains the following known issues and limitations:

- For a FIPS-enabled configuration, mixed mode support is not available in this release. For example, a non-FIPS client node cannot communicate with a FIPS server node.

HBase 1.4.13.100 - 2110 (EEP 8.0.0) Release Notes

The notes below relate to the MapR Data Platform distribution of HBase.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. You may also be interested in the Ecosystem Component Release Notes on page 5658 and the Apache HBase homepage.

Version	1.4.13.100
Release Date	October 2021
Version Interoperability	See Interoperability Matrix, Ecosystem Support Matrix, and HBase Support Matrix.
Source on GitHub	https://github.com/mapr/hbase
GitHub Release Tag	1.4.13.100-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names.

New in this Release

HBase 1.4.13.100 - 2110 introduces mainly bug fixes and fixes to common vulnerabilities and exposures (CVEs).

Fixes

This HPE release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
dd0fda2904	2021-09-16	MAPR-HBASE-249: ThriftServer and RESTServer cannot start on core 7.0.0.
36bba5050e	2021-09-06	MAPR-HBASE-247: mapr-security-web jar should be taken from the cluster.
e9c5d738d8 912685bd11	2021-09-03 2021-09-03	MAPR-HBASE-246: Update the maven artifact version strings to eep.
c9e1ff499b	2021-08-11	MAPR-HBASE-245: Update Spark version to 3.1.2.0-mapr-SNAPSHOT.
0195fe8ea1	2021-08-09	MAPR-HBASE-244: Upgrade Avro version to 1.10.1.
447f5b6f36	2021-08-09	MAPR-HBASE-243: Update Hadoop version to 2.7.6.0-mapr-720-SNAPSHOT.
eda8dcfeea ae90385dbe	2021-07-27 2021-08-12	MAPR-HBASE-240: CVE-2012-5783 vulnerability in commons-httpclient. (HBASE-16267 Remove commons-httpclient dependency from hbase-rest module).
9f4c884c4d	2021-07-22	MAPR-HBASE-242: Too large error message/uninformative when running HBase shell from user without ticket.
0e453c03b9	2021-06-19	MAPR-HBASE-239: WS-2019-0379: commons-codec vulnerability.

last-updated: Apr 11, 2022

bb7013e7ab	2021-06-18	MAPR-HBASE-237: Sync Jackson version with hadoop-2.7.5.0.
4924431fad	2021-06-18	MapR [SPARK-889] HBase examples running fails with "org.apache.spark.unsafe.types.UTF8String is not a valid external type for schema of string".
ca6787138f	2021-06-04	MAPR-HBASE-236: CVE-2020-15250 vulnerability in JUnit.
861cf40791	2021-06-04	MAPR-HBASE-208: HBase build should use only internal repositories / mirrors.

Known Issues and Limitations

This release contains the following known issues and limitations:

- None

HBase 1.4.13.0 - 2104 (EEP 7.1.0) Release Notes

The notes below relate to the MapR Data Platform distribution of HBase.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. You may also be interested in the Ecosystem Component Release Notes on page 5658 and the Apache HBase homepage.

Version	1.4.13.0
Release Date	April 2021
MapR Version Interoperability	See Interoperability Matrix, Ecosystem Support Matrix, and HBase Support Matrix.
Source on GitHub	https://github.com/mapr/hbase
GitHub Release Tag	1.4.13.0-mapr-710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

HBase 1.4.13.0 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- CVEs fixes.
- Extra loggings.
- Service verifier.
- Bug fixes.

Fixes

This HPE release includes the following fixes on the base Apache release:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description

451ca18c25	2021-04-27	MAPR-HBASE-233: Couldn't get into HBase shell on client node.
05892ab377	2021-04-13	MAPR-HBASE-232: Impersonation doesn't work for hbase-rest. (cherry picking HBASE-21960 Ensure RESTServletContainer used by RESTServer)
c517c848b5	2021-03-30	MAPR-HBASE-218: Add service verifier to HBase package (Additional checks on services).
229e1d69ca	2021-03-29	MAPR-HBASE-217: HBase data loss due to RS crash, extra-logging added for investigation.
3cfa6a2055	2021-03-22	MAPR-HBASE-218: Add service verifier to HBase package.
9b736d6a70	2021-03-22	MAPR-HBASE-167: Upgrade Jackson-Databind (transitive from HTrace) packaged with MapR-HBase.
3aed5b975a	2021-03-19	MAPR-HBASE-230: Update HBase dependencies to the latest artifacts for MEP7.1.0 release.
e2c24bb816	2021-03-17	MAPR-HBASE-225: Opentsdb daemon process does not start after setting noexec to /tmp dir in MapR 6.1/MEP-6.2.
cd81f567e3	2021-03-12	MAPR-HBASE-223: CVE: Security vulnerabilities in bootstrap.js (cherry picking HBASE-24971: updating JQuery).
4a3138f81f	2021-03-04	MAPR-HBASE-216: HBase process should start with ErrorFile option.
0fe43d8588	2021-03-02	MAPR-HBASE-223: CVE: security vulnerabilities in bootstrap.js (cherry picking HBASE-25079 + HBASE-25261).
a0d4312e03	2021-02-23	MAPR-HBASE-220: Dependency error for 3.0.1-b06-SNAPSHOT: PKIX path validation failed.
0b0be18f3b	2021-02-11	MAPR-HBASE-215: CVE-2014-3488,CVE-2019-16869 etc. Netty vulnerabilities.
911a5d63db	2021-02-09	MAPR-HBASE-214: Vulnerabilities in Tomcat.
8d43b042c4	2021-02-05	MAPR-HBASE-207: HBase Web UIs display incorrectly when encryption is disabled on secure cluster.

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

This release contains the following known issues and limitations:

- None

HBase 1.4.12.100 - 2101 (EEP 7.0.1) Release Notes

The notes below relate to the MapR Data Platform distribution of HBase.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.4.12.100
Release Date	January 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hbase
GitHub Release Tag	1.4.12.0-mapr-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

This release contains CVE fixes.

Fixes

This HPE release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
fd7abcd11e	2021-01-08	MAPR-HBASE-206 Excessive logging from DynamicClassLoader
4b306ec007	2021-01-06	MAPR-HBASE-205 create command fails if {BULKLOAD => 'true'} specified
de33733588	2017-07-19	MAPR-HBASE-204 Fix shell noninteractive launch
8df472ddb6	2020-12-30	MAPR-HBASE-201 CVE-2016-6796: Tomcat / Jasper library vulnerability
41ec48aa4c	2020-12-23	MAPR-HBASE-199: Command 'processlist' fails with ERROR: Unexpected end of file from server on secure cluster
81d8aa72f7	2020-12-11	MAPR-HBASE-200: Netty vulnerabilities
9446669d5c	2020-11-24	MAPR-HBASE-195: upgrading thrift from 12 to 13. jetty version is updated based on mapr-security-web dependencies
67c8bce37b	2020-10-12	MAPR-HBASE-194 Error 500 when using HBase Rest to create namespace
3ccd2f9894	2020-09-15	MAPR-HBASE-191 Retrieve max version records using spark hbase binary connector

75e88be952	2020-09-07	MAPR-HBASE-184: Illegal reflective access of sun.net.www.protocol.http.HttpURLConnection.userAgent

Known Issues and Limitations

This release contains the following known issues and limitations:

- None

HBase 1.4.12.0-2009 (EEP 7.0.0) Release Notes

The notes below relate to the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.4.12.0
Release Date	September 2020

New in this Release

- Java 11 Support
- CVEs fixes

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
63a98f35	2020-03-05	MAPR-HBASE-145: Update protobuf version to 3.11.1
2074692b	2020-03-30	MAPR-HBASE-141: Disable TLSv1 and TLSv1.1 protocol for Hbase thrift server
ceeefb42	2020-04-02	MAPR-HBASE-152: Duplicates of some jars in the hbase lib directory
b49b19fa	2020-04-08	MAPR-HBASE-151: Bad exception message
10e834fc	2020-04-20	MAPR-HBASE-164: Unable to modify a column family in a maprdb table using hbase shell

177800e6	2020-04-23	MAPR-HBASE-157: Fix io.netty vulnerability
4a364d2b	2020-04-03	MAPR-HBASE-163: Unable to create buffered mutator for maprdb table
985f6ae1	2020-04-24	MAPR-HBASE-154: Unable to start hbase shell with MapR ticket in case Kerberos is enables in the cluster
65e21d86	2020-04-27	MAPR-HBASE-165: ZK version updates to v3.5.6 for MEP 7.0.0
ddde8d1b	2020-04-30	MAPR-HBASE-166: hbase hbck command incorrectly uses HBASE_REGIONSERVER_OPTS environment variable
041ca362	2020-05-07	MAPR-HBASE-156: Fix org.codehaus.jackson vulnerability
520ebadd	2020-05-12	MAPR-HBASE-172: Throw UnsupportedOperationException for unsupported maprdb methods
11ccd452	2020-05-19	MAPR-HBASE-170: Update Google Guava library version to `28.2-jre` in HBase 1.4.12
2c67a1eb	2020-05-22	MAPR-HBASE-171: 'list_perm' and 'set_perm' commands are not available
9600575c	2020-05-26	MAPR-HBASE-168: HBase web pages don't look right
2216faab	2020-06-05	MAPR-HBASE-173: HBase doesn't start on core 6.2.0 with Java11
58287ba0	2020-06-17	MAPR-HBASE-158: Build and verify HBase and Java 11
37be28c7	2020-07-03	MAPR-HBASE-180: 404 ERROR for all requests to the hbase-rest
f67c7c47	2020-07-10	MAPR-HBASE-179: Warnings in the hbase shell
a466d4af	2020-07-20	MAPR-HBASE-181: HBase Rest Throws NoClassDefFoundError: org/apache/logging/log4j/core/Layout
c9da5fd0	2020-07-20	CORE-262 and CORE-263 Warden hbase memory/svc management add hbmaster and hbregionserver warden conf with the previously used memory settings
c726132a	2020-07-22	MAPR-HBASE-182: Could not finish disable_all/enable_all commands - 'enter' key does not work correctly in the hbase shell
4abed490	2020-07-29	MAPR-HBASE-183: Could not create region server group in the hbase shell
706c9461	2020-08-10	MAPR-HBASE-185: Unnecessary string in the output of command 'show_filters'

77a95708	2020-08-19	MAPR-HBASE-175: Hbase thrift Java JMX Server Insecure Configuration Remote Code Execution Vulnerability
796757af	2020-08-19	MAPR-HBASE-190: Update disruptor dependency to 3.4.2
e94abc9b	2020-08-21	MAPRDB-2275: [hbase-1.4.12] NPE in BufferedMutatorImpl.setRpcTimeout
70068f7a	2020-08-28	MAPR-HBASE-189: hbase.rest.client.RemoteAdmin.getRestVersion return 500 error
b092745b	2020-08-28	CORE-468: fix issue causing hbase classpath to break
049614b2	2020-09-01	MAPR-HBASE-174: Hbase services fails with NPE when Credential Provider is configured.

HBase 1.1.13.500-2201 (EEP 6.3.6) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache HBase.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. You may also be interested in Ecosystem Component Release Notes on page 5658 and the Apache HBase homepage.

Version	1.1.13.500
Release Date	January 2022
Version Interoperability	See Interoperability Matrix, Ecosystem Support Matrix, and HBase Support Matrix
Source on GitHub	https://github.com/mapr/hbase
GitHub Release Tag	1.1.13.500-mapr-636
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names.

New in this Release

HBase 1.1.13.500 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- CVE fixes
- Bug fixes

Fixes

This HPE release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
3f220a0c74	2022-01-25	EEP-HBASE-275: Upgrade Log4J version to '1.3.1-mapr'
7fdeb174ed	2022-01-13	EEP-HBASE-274: HBase REST authentication doesn't work for /jmx and /conf
a5f4e12215	2021-12-20	EEP-HBASE-270: Update disruptor dependency in EEP-6.3.5
ec24def3de	2021-12-20	EEP-HBASE-263: Log4j Vulnerabilities: CVE-2019-17571 -- Upgrading to 1.3.0-mapr
69fc348174	2021-12-14	EEP-HBASE-263: Log4j Vulnerabilities: CVE-2019-17571
90584ea4d5	2021-11-18	EEP-HBASE-260: Netty Vulnerabilities: WS-2020-0408, CVE-2021-37137 and CVE-2021-37136
42b703d124	2021-10-25	MAPR-HBASE-252: [Hbase] CVE-2021-42340 Apache Tomcat DoS

Known Issues and Limitations

This release contains the following known issues and limitations:

- ASYNC-5: Data-fabric-SASL security is not implemented in AsyncHBase. As a result, an AsyncHBase client connection fails on a secure data-fabric cluster. **Workaround:** Implement AsyncHBase security or disable HBase security.
- Data-fabric client nodes cannot be configured for HBase by using the `configure.sh` script. **Workaround:** To configure an HBase client node, you can use the `configure_client.sh` script. For more information, see Configuring HBase on a Client Node.
- MD-5925: Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables. **Workaround:** None.
- ASYNC-9: An error is generated when AsyncHBase is used to put data to a cluster with HBase and Kerberos configured. The error occurs when `hbase.rpc.protection` is set to privacy or integrity in the AsyncHbase client configuration. **Workaround:** To avoid the error, set `hbase.rpc.protection` to `authentication`.

HBase 1.1.13.400-2110 (EEP 6.3.5) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache HBase.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. You may also be interested in Ecosystem Component Release Notes on page 5658 and the Apache HBase homepage.

Version	1.1.13.400
Release Date	October 2021
Version Interoperability	See Interoperability Matrix, Ecosystem Support Matrix, and HBase Support Matrix
Source on GitHub	https://github.com/mapr/hbase

GitHub Release Tag	1.1.13.400-mapr-635
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names.

New in this Release

HBase 1.1.13.400 - 2110 introduces mainly bug fixes and fixes to common vulnerabilities and exposures (CVEs).

Fixes

This HPE release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
6676521667 a85d668dba	2021-08-12 2021-07-27	MAPR-HBASE-240: CVE-2012-5783 vulnerability in commons-httpclient. (HBASE-16267 Remove commons-httpclient dependency from hbase-rest module).
3082076dae	2021-07-19	MAPR-HBASE-239: WS-2019-0379: commons-codec vulnerability.
66514954a1	2021-06-04	MAPR-HBASE-236: CVE-2020-15250 vulnerability in JUnit.
04854c357b	2021-06-04	MAPR-HBASE-208: HBase build should use only internal repositories / mirrors.

Known Issues and Limitations

This release contains the following known issues and limitations:

- ASYNC-5: Data-fabric-SASL security is not implemented in AsyncHBase. As a result, an AsyncHBase client connection fails on a secure data-fabric cluster. **Workaround:** Implement AsyncHBase security or disable HBase security.
- Data-fabric client nodes cannot be configured for HBase by using the `configure.sh` script. **Workaround:** To configure an HBase client node, you can use the `configure_client.sh` script. For more information, see Configuring HBase on a Client Node.
- MD-5925: Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables. **Workaround:** None.
- ASYNC-9: An error is generated when AsyncHBase is used to put data to a cluster with HBase and Kerberos configured. The error occurs when `hbase.rpc.protection` is set to privacy or integrity in the AsyncHbase client configuration. **Workaround:** To avoid the error, set `hbase.rpc.protection` to `authentication`.

HBase 1.1.13.300-2104 (EEP 6.3.4) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache HBase.

last-updated: Apr 11, 2022

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. You may also be interested in Ecosystem Component Release Notes on page 5658 and the Apache HBase homepage.

Version	1.1.13.300
Release Date	April 2021
MapR Version Interoperability	See Interoperability Matrix, Ecosystem Support Matrix, and HBase Support Matrix
Source on GitHub	https://github.com/mapr/hbase
GitHub Release Tag	1.1.13.300-mapr-634
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

HBase 1.1.13.300 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- CVEs fixes.
- Extra loggings.
- Bug fixes.

Fixes

This HPE release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
442bf075d7	2021-04-27	MAPR-HBASE-233: Couldn't get into HBase shell on client node.
c4b124d200	2021-03-29	MAPR-HBASE-217: HBase data loss due to RS crash, extra-logging added for investigation.
af92293fe5	2021-03-22	MAPR-HBASE-167: Upgrade Jackson-Databind (transitive from HTrace) packaged with MapR-HBase.
2b694bbdd2	2021-03-17	MAPR-HBASE-225: Opentsdb daemon process does not start after setting noexec to /tmp dir in MapR 6.1/MEP-6.2.
6539a26268	2021-03-16	MAPR-HBASE-228: HBase mapreduce jobs failed with exitCode=1 due to shaded Guava (partially reverting MAPR-HBASE-192).
00b6a7cdfc	2021-03-12	MAPR-HBASE-223: CVE: Security vulnerabilities in bootstrap.js (cherry picking HBASE-24971: updating JQuery).

0290b06632	2021-03-10	MAPR-HBASE-224: HBase Rest threads go in loop while processing TLSv1.3 requests.
a832859220	2021-03-04	MAPR-HBASE-216: HBase process should start with ErrorFile option.
b356b53bc2	2021-03-02	MAPR-HBASE-223: CVE: security vulnerabilities in bootstrap.js (cherry picking HBASE-25079 + HBASE-25261).
c03d5db9b5	2021-02-11	MAPR-HBASE-215: CVE-2014-3488,CVE-2019-16869 etc. Netty vulnerabilities.
e0ad1f0ea1	2021-02-09	MAPR-HBASE-214: Vulnerabilities in Tomcat.
2960be4671	2021-02-05	MAPR-HBASE-207: HBase Web UIs display incorrectly when encryption is disabled on secure cluster.

Known Issues and Limitations

This release contains the following known issues and limitations:

- ASYNC-5: Data-fabric-SASL security is not implemented in AsyncHBase. As a result, an AsyncHBase client connection fails on a secure data-fabric cluster. Workaround: Implement AsyncHBase security or disable HBase security.
- Data-fabric client nodes cannot be configured for HBase by using the `configure.sh` script. Workaround: To configure an HBase client node, you can use the `configure_client.sh` script. For more information, see Configuring HBase on a Client Node.
- MD-5925: Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables. Workaround: None.
- ASYNC-9: An error is generated when AsyncHBase is used to put data to a cluster with HBase and Kerberos configured. The error occurs when `hbase.rpc.protection` is set to privacy or integrity in the AsyncHbase client configuration. Workaround: To avoid the error, set `hbase.rpc.protection` to authentication.

HBase 1.1.13.200-2101 (EEP 6.3.2) Release Notes

The notes below relate to the MapR Data Platform distribution of Apache HBase.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.1.13.200
Release Date	January 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536.

Known Issues and Limitations

This release contains the following known issues and limitations:

- ASYNC-5: MapR-SASL security is not implemented in AsyncHBase. As a result, an AsyncHBase client connection fails on a secure MapR cluster. Workaround: Implement AsyncHBase security or disable HBase security.
- MapR client nodes cannot be configured for HBase by using the configure.sh script. Workaround: To configure an HBase client node, you can use the configure_client.sh script. For more information, see Configuring HBase on a Client Node.
- MD-5925: Drill versions 1.11.0 through 1.16.0.x do not support querying HBase tables. Workaround: None.
- ASYNC-9: An error is generated when AsyncHBase is used to put data to a cluster with HBase and Kerberos configured. The error occurs when hbase.rpc.protection is set to privacy or integrity in the AsyncHbase client configuration. Workaround: To avoid the error, set hbase.rpc.protection to authentication.

HBase 1.1.8-2101 (EEP 5.0.6) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache HBase.

Version	1.1.8
Release Date	January 2021
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hbase
GitHub Release Tag	1.1.8-mapr-2101
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

HBase 1.1.8-2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
e276401226	2021-01-12	MAPR-HBASE-197: port locking of hbase rest and thrift services UI

last-updated: Apr 11, 2022

312b45d089	2020-09-15	MAPR-HBASE-191 Retrieve max version records using spark hbase binary connector

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

HBase 1.1.8-2009 (EEP 5.0.5) Release Notes

The notes below relate to the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.1.8
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536.

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

- Added HBase Master and RegionServer services.
- Added MaprSasl support for HBase Master, RegionServer, REST, and Thrift.
- Added configurable HTTP Security Headers.
- Added the use of HTTP principal for Kerberos authentication for HBase Thrift.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
ac9f771e	2019-01-11	HBASE-24: The key store and trust store password for hbase-rest and hbase-thrift should be taken from ssl-client.xml
39be41fc	2019-01-23	HBASE-36: Implement configure.sh script for HBase. Warden files were added, existing were changed. Configure.sh logic was changed.
f2ad71cd	2018-12-13	HBASE-47: Enable authentication for HBase
8b541603	2018-11-18	[SPARK-343] Mapr-db binary connector for Spark does not match predicate with binary keys

HBase 1.1.8-1808 Release Notes

The notes below relate to the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.1.8
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hbase/tree/rel/1.1.8
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

- HBase Master and HBase Regionserver are removed for MapR 6.0.0 and EEP 4.0.0. The Thrift and REST server packages are still available to support MapR Database binary tables.
- MapR-SASL authentication, encryption, and impersonation for HBase Thrift Gateway are enabled by default on secure clusters.
- On a secure cluster, by default, HBase REST and HBase Thrift read the `ssl-client.xml` file and configure SSL using this file.
- PAM authentication, encryption, and impersonation for HBase REST are enabled by default on secure clusters.

Note: HBase Master and HBase Regionserver are still available for previous EEP releases.

Resolved Issues

This MapR release includes the following bug fixes:

Bug	Description
Bug 28640	Updated Jersey version to 1.19.4 in the MapR Spark connector. In addition, fixed the build failure for licenses and added a Jersey servlet dependency in the hbase-server/pom.xml file
MAPR-HBASE-20	Changed permissions to hbase-site.xml
MapR [Spark-245]	Fixed Spark integration with MapR Database binary on MapR-SASL
MAPR-HBASE-22	Adding Impersonation configuration for HBase REST (enabled by default on secure clusters)
MAPR-HBASE-24	The key store and trust store password for hbase-rest and hbase-thrift are taken from ssl-client.xml
MAPR-HBASE-25	Updated zookeeper version in HBase from 3.4.6 to 3.4.11

Bug	Description
MAPR-HBASE-31	Restart of HBase Rest and HBase Thrift services during configure.sh
MAPR-HBASE-2	Enabled secure by default for HBase Rest/Thrift Gateway

HBase 1.1.8-1710 Release Notes

The notes below relate to the MapR Converged Data Platform.

Version	1.1.8
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hbase
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

HBase Master and HBase Regionserver are removed for MapR 6.0/MEP 4.0.0. The Thrift and REST server packages are still available to support MapR Database binary tables.

Note: HBase Master and HBase Regionserver are still available for previous MapR/MEP releases.

Resolved Issues

This MapR release includes the following bug fixes:

Bug	Description
Bug 28640	Updated Jersey version to 1.19.4 in the MapR Spark connector. In addition, fixed the build failure for licenses and added a Jersey servlet dependency in the hbase-server/pom.xml file.

HBase 1.1.8-1703 Release Notes

The notes below relate to the MapR Converged Data Platform.

Version	1.1.8
Release Date	April 2017
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/hbase
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Resolved Issues

This MapR release includes the following bug fix.

Bug	Description
25241	In MapR Database, when using the HBase Java FuzzyRowFilter filter, the wrong result is returned due to incorrect mask preprocessing.

HBase 1.1-1602 Release Notes

The notes below relate to the MapR Converged Data Platform. You may also be interested in the Apache HBase release notes for HBase 1.1.0.

Version	1.1
Release Date	February 29, 2016
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/hbase
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

This is the initial MapR release of HBase 1.1. In addition to HBase 1.1 features, this release includes the following feature that is specific to MapR:

- **Default Database Setting.**

  When you run configure.sh, a default database for HBase clients is automatically set based on the packages available on the cluster. When mapr-hbase-regionserver or mapr-hbase-master packages are installed on the cluster, HBase is the default database for all HBase client connections. You can use the configure.sh -defaultdb option to change the default database setting for the cluster or you specify a value to override the default in the HBase job configuration or the hbase-site.xml. For more information, see MapR's HBase and confgure.sh documentation.

- **Default Ports**

  The following ports for HBase 1.1 are changed:

Table

Service	Port
HBase Master	16000
HBase Master (for GUI)	16010
HBase RegionServer	16020
HBase RegionServer (for GUI)	16030
HBase Status MultiCast	16100

Note: If you need to use the previous default ports from HBase 0.98.x, change the `hbase-site.xml` by adding the following properties:

```
<property>
        <name>hbase.master.port</name>
        <value>60000</value>
</property>
<property>
        <name>hbase.master.info.port</name>
        <value>60010</value>
</property>
<property>
        <name>hbase.regionserver.port</name>
        <value>60020</value>
</property>
<property>
        <name>hbase.regionserver.info.port</name>
        <value>60030</value>
</property>
```

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
8cc858f	2016-01-28	Backported HBASE-14799 to fix potential security vulnerability in the commons-collections library when you accept and process Java object serialization data.
ed43aca	2015-11-11	**MAPR 13750:** fs.mapr.readbuffering and fs.mapr.aggregate.writes are now disabled for HBase RegionServers.

last-updated: Apr 11, 2022

New in This Release

This is the initial release of HBase 0.98.12.1.

When HBase 0.98.12.1 runs on MapR version 5.0, it includes the following updates for MapR Database:

- HTable.checkAndMutate() API is supported by MapR Database
- Truncate API will retain ACEs for MapR Database binary tables

For more information about MapR Database API compatibility, refer to MapR Database documentation for *Creating MapR Database Applications with Java*.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
f977386	2015-06-19	**MAPR-19053:** Bulk importing HFiles from within the hbase volume now moves the file instead of making a copy during the incremental load phase.

HBase 0.98.9-1503 Release Notes

You may also be interested in the Apache HBase release notes for v0.98.9.

Version	0.98.9-mapr-1503
Release Date	March 27, 2015
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/hbase
GitHub Release Tag	0.98.9-mapr-1503
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

- C APIs for HBase are supported by MapR Database in MapR version 4.1.
- HBase Rest Gateway Server can be deployed as a pluggable service on MapR version 4.0.1 or higher.
- HBase 0.98.9 introduces the HBaseAdmin.truncateTable() API. In this MapR release of HBase, the HBaseAdmin.truncateTable() API is also supported for MapR Database tables with MapR version 4.0.1 or higher.
- The performance test utility for libhbase includes support for Zipfian and uniform random key generation. It also runs a performance test for scans.

Note: The HTable.checkAndMutate() API is not supported by MapR Database.

Apply the latest 4.x EBF patch if you want to use HBase replication. Contact Customer Support for details.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
7f86d82	2015-01-28	MAPR-16493: ImportFiles command no longer fails with the following error: `java.lang.RuntimeException: java.lang.ClassNotFoundException: Class org.apache.hadoop.hbase.mapreduce.HFileOutputFormat`
3ecea99	2015-01-29	MAPR-16948: To avoid data loss, speculative execution is now disabled for CopyTable jobs.
a1d4d58	2015-02-03	MAPR-17043: To increase performance, PutCombiner is disabled for ImportTsv jobs.
cff5b9a	2015-02-04	MAPR-17057: list_perm command no longer fails with the following error: `ERROR: Security features for MapR tables are not available in this version.`
51a3973	2015-02-10	MAPR-17122: CopyTable does not fail for MapR Database tables.
dd61dc4	2015-02-10	MAPR-16750: CopyTable supports bulkload mode for MapR Database tables. However, the user must reset the the bulkload attribute on the MapR Database table after running the CopyTable utility.
e00abd0	2015-02-10	HBASE-13009: The HBase REST UI is accessible.

Hive Release Notes

The release notes for the Hive component included in the MapR Data Platform contain notes specific to data-fabric only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536 or EEP Support and Lifecycle Status on page 5531. To view release notes for prior data-fabric releases, see Previous Versions on page 6578.

Hive 2.3.9 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.9.

The following release notes for the Hive 2.3.9 component are included in the MapR Data Platform distribution for Apache Hadoop:

Hive 2.3.9.0 - 2201 (EEP 8.1.0) Release Notes

The following notes relate specifically to the MapR Data Platform Distribution for Apache Hive. You may also be interested in the Apache Hive-2.3.9 Release Notes and the Apache Hive homepage.

Hive Version	2.3.9.0

last-updated: Apr 11, 2022

Release Date	January 2022
HPE Version Interoperability	See Hive and HCatalog Support Matrix and Ecosystem Support Matrix and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.9.0-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to http://package.mapr.hpe.com/releases/MEP/, and select your EEP(MEP) and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.9 works with the following MapR Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2.

Feature support

The following list describes support of various components and functionality with Hive 2.3.9 - 2201:

- Supports Hive-2.3.9 on Tez-0.9.2 For more information, see Tez 0.9.2 - 2201 (EEP 8.1.0) Release Notes on page 6481.
- Does not support Hive on Spark. You cannot use Spark as a query engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- Does not support HDFS encryption in Hive tables.
- Does not support LLAP with Hive-2.3.9 because Apache Slider is not an MapR supported ecosystem component.
- Starting from Hive 2.1, Hive must run the `schematool` command as an initialization step.

Changes in default security configuration

The following list describes changes in default security for Hive 2.3.9 - 2201:

- Starting from EEP-8.1.0, Hive supports SCRAM token and SCRAM-SHA-256 authentication in MapR Data Platform.

Table

#	Property	Data Type	Default value	Description

Table (Continued)

1	hive.delegation.token.authentication	String	DIGEST	Delegation token authentication method. Possible values are DIGEST, SCRAM

To configure SCRAM token and SCRAM-SHA-256 authentication, set the following property on `HIVE_HOME/conf/hive-site.xml` file:

```
<property>
    <name>hive.delegation.token.authentication</name>
    <value>SCRAM</value>
</property>
```

Execute `MAPR_HOME/server/configure.sh -R` script on a newly installed and Data-Fabric SASL or KERBEROS secured cluster to automatically configure the following authentications:

1. For a FIPS enabled cluster, Hive configures `hive.delegation.token.authentication=SCRAM` authentication.
2. For a non-FIPS cluster if you configure Hadoop with `hadoop.security.token.authentication.method=SCRAM` authentication, Hive configures the SCRAM authentication.
3. For other clusters, Hive configures `hive.delegation.token.authentication=DIGEST` authentication.

For non-secure clusters, Hive configures `hive.delegation.token.authentication=DIGEST` authentication.

When you upgrade Hive, the upgrade does not update the value of the set `hive.delegation.token.authentication` property.

Manually set the value of `hive.delegation.token.authentication` property when you change the cluster settings from FIPS to non-FIPS or from non-FIPS to FIPS.

New in This Release

Hive 2.3.9.0 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- Starting from EEP-8.1.0, Hive supports FIPS and SCRAM SASL.
- Beginning with EEP 8.1.0, JAR artifacts for Hive use four digits instead of three digits. For example:

```
hive-service-rpc-2.3.9.0-mapr-SNAPSHOT.jar
hive-llap-ext-client-2.3.9.0-mapr-SNAPSHOT.jar
hive-exec-2.3.9.0-mapr-SNAPSHOT.jar
hive-beeline-2.3.9.0-mapr-SNAPSHOT.jar
```

If your application includes a Hive dependency in the `pom.xml` file, you must update the JAR artifact before using Hive 2.3.9 - 2201.

The Hive package name on package.mapr.hpe.com continues to use two digits, and the Hive root folder continues to use three digits.

last-updated: Apr 11, 2022

- Improved `Describe table` operator in terms of fetching statistics of partitions. Starting from EEP 8.0.0, you can fetch the partition information using the `describe` command with `formatted` or `extended` statements.

  Configure the `hive.describe.partitionedtable.ignore.stats` property to change the behaviour of fetching statistics of partitions. It is set to the default value of `false`.

```
<property>
    <name>hive.describe.partitionedtable.ignore.stats</name>
    <value>false</value>
    <description>Enables partitioned table stats collection for 'DESCRIBE
FORMATTED' or 'DESCRIBE EXTENDED' commands</description>
</property>
```

```
<property>
    <name>hive.describe.partitionedtable.ignore.stats</name>
    <value>true</value>
    <description>Disables partitioned table stats collection for
'DESCRIBE FORMATTED' or 'DESCRIBE EXTENDED' commands</description>
 </property
```

- Hive supports symbolic links on MapR File System.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
a6d17888e2	2022-01-31	EEP-HIVE-1153 : FAILURE! - in org.apache.hive.conftool.SslDefaultTest
5d4dcca0d9	2022-01-31	EEP-HIVE-1151 : Build Hive ECO EEP 8.1.0 components with DF v 6.2.0

16c0ba4efd	2021-10-11	MAPR-HIVE-1014 : Could not transfer artifact org.pentaho:pentaho-aggdesigner-algorithm:jar:5.1.5-jhyde

This release from HPE also includes the following back-ported issues. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
95ae2bebc9	2021-12-21	HIVE-17774: compaction may start with 0 splits and fail
ed4b16c0fa	2021-10-08	HIVE-16820 : TezTask may not shut down correctly before submit (Sergey Shelukhin, reviewed by Siddharth Seth)
794c971152	2021-10-28	HIVE-20072 : Write access being requested when performing select on a table

Known Issues and Limitations

- HIVE-1089: Hive on MapReduce engine does not support data insertion into Versioned buckets.You must use Unversioned buckets on MaprReduce engine in S3 file system.

  MapR Technologies recommends using Hive on Tez engine for full S3 file system support.

- HIVE-19502: Unable to insert values into table stored by JdbcStorageHandler
- HIVE-19286: NPE in MERGE operator on MR mode

- HIVE-760: [Hive-2.3] Could not start hive-metastore on Centos 8 MetaException(message:Version information not found in metastore)

  Starting in EEP 7.0.0, use the MySQL driver with MariaDB.

```
<property>
    <name>javax.jdo.option.ConnectionURL</name>
    <value>jdbc:mysql://localhost:3306/hive?
createDatabaseIfNotExist=true</value>
 </property>
 <property>
    <name>javax.jdo.option.ConnectionDriverName</name>
    <value>com.mysql.jdbc.Driver</value>
    <description>Driver class name for a JDBC metastore</description>
 </property>
```

  Some SELECT queries can be converted to a single FETCH task minimizing latency. Currently, the query should be single sourced and should not have a subquery or any aggregations or distincts (which incurs RS), lateral views and joins:

```
none : disable hive.fetch.task.conversion
minimal : SELECT star, filter on partition columns, LIMIT only
more :  SELECT, filter, LIMIT only (support TABLESAMPLE and virtual
columns)
```

Resolved Issues

- MAPR-TEZ-172 fixes a HIVE-789 known issue from Hive 2.3.8 - 2104 (EEP 7.1.0) Release Notes on page 5897 in this release.

Hive 2.3.9 - 2110 (EEP 8.0.0) Release Notes

The following notes relate specifically to the MapR Data Platform Distribution for Apache Hive. You may also be interested in the Apache Hive-2.3.9 Release Notes and the Apache Hive homepage.

Hive Version	2.3.9
Release Date	October 2021
HPE Version Interoperability	See Hive and HCatalog Support Matrix and Ecosystem Support Matrix and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.9-eep-2110
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to http://package.mapr.hpe.com/releases/MEP/, and select your EEP(MEP) and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.9 works with the following MapR Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2.

Feature support

The following list describes support of various components and functionality with Hive 2.3.9 - 2110:

- Supports Hive-2.3.9 on Tez-0.9.2 For more information, see Tez 0.9.2 - 2110 (EEP 8.0.0) Release Notes on page 6482.
- Does not support Hive on Spark. You cannot use Spark as a query engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- Does not support HDFS encryption in Hive tables.
- Does not support LLAP with Hive-2.3.9 because Apache Slider is not an MapR supported ecosystem component.
- Starting from Hive 2.1, Hive must run the `schematool` command as an initialization step.

Changes in default security configuration

The following list describes changes in default security for Hive 2.3.9 - 2110:

- None.

New in This Release

Hive 2.3.9 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

last-updated: Apr 11, 2022

- Improved `Describe table` operator in terms of fetching statistics of partitions. Starting from EEP 8.0.0, you can fetch the partition information using the `describe` command with `formatted` or `extended` statements.

  Configure the `hive.describe.partitionedtable.ignore.stats` property to change the behaviour of fetching statistics of partitions. It is set to the default value of `false`.

  ```
  <property>
      <name>hive.describe.partitionedtable.ignore.stats</name>
      <value>false</value>
      <description>Enables partitioned table stats collection for 'DESCRIBE
  FORMATTED' or 'DESCRIBE EXTENDED' commands</description>
  </property>
  ```

  ```
  <property>
      <name>hive.describe.partitionedtable.ignore.stats</name>
      <value>true</value>
      <description>Disables partitioned table stats collection for
  'DESCRIBE FORMATTED' or 'DESCRIBE EXTENDED' commands</description>
   </property
  ```

- Hive supports symbolic links on MapR File System.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
2549e5350a	2021-09-17	MAPR-HIVE-994: Non mapr user unable to read SSL configuration from XML files on Core 7.0

bfda9cc9a8	2021-05-23	MAPR-HIVE-942 : FAILURE! - in org.apache.hadoop.hive.accumulo.predicate.TestAccumuloPredicateHandler

This release from HPE also includes the following back-ported issues. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
3a7b6db040	2021-09-15	HIVE-24965: Describe table partition stats fetch should be configurable
1d1bb4c2fd	2021-09-15	HIVE-22453: Describe table unnecessarily fetches partitions
96b37ab69c	2021-09-14	HIVE-23756 : Added more constraints to the package.jdo file
40cdec9dd2	2021-09-12	HIVE-24177 : hive mapjoin throws udf class not found
606c3c240b	2021-09-08	HIVE-17659 : get_token thrift call fails for DBTokenStore in remote HMS mode (Vihang Karajgaonkar, reviewed by Aihua Xu)
a2416a115c	2021-09-06	HIVE-25054: Upgrade `jodd-core` dependency to get rid of CVE-2018-21234 (Abhay Chennagiri, reviewed by Jesus Camacho Rodriguez)

e593c8cb4e	2021-08-18	HIVE-17824 : msck repair table should drop the missing partitions from metastore (Janaki Lahorani, reviewed by Peter Vary, Alexander Kolbasov and Vihang Karajgaonkar)
3591ea65fa	2021-08-18	HIVE-16143: Improve msck repair batching (Vihang Karajgaonkar, reviewed by Sahil Takiar & Aihua Xu)
fab9a7603a	2021-07-29	HIVE-19228: Remove commons-httpclient 3.x usage (Janaki Lahorani reviewed by Aihua Xu)
0ffeae33b1	2021-06-13	HIVE-21200: Vectorization: date column throwing java.lang.UnsupportedOperationException for parquet (#2276)
c6300400bd	2021-06-13	HIVE-24608: Switch back to get_table in HMS client for Hive 2.3.x (#2080)
0518323174	2021-06-13	HIVE-18147 : Tests can fail with java.net.BindException: Address already in use (Janaki Lahorani, reviewed by Andrew Sherman and Vihang Karajgaonkar)
d6766f34fb	2021-06-13	HIVE-21563 : Improve Table#getEmptyTable performance by disable registerAllFunctionsOnce
a3477edb7f	2021-06-13	HIVE-24797: Disable validate default values when parsing Avro schemas (#1994)
1fc7585a2e	2021-06-08	ORC-437: Make acid schema checks case insensitive
9120da5c4f	2021-05-31	HIVE-21075 : Metastore: Drop partition performance downgrade with Postgres DB
39d42ddf12	2021-05-31	HIVE-9447: Metastore: inefficient Oracle query for removing unused column descriptors when add/drop table/partition (Selina Zhang reviewed by Ashutosh Chauhan, Adam Szita)
1ccb218119	2021-05-22	HIVE-21085: Materialized views registry starts non-external tez session (Jesus Camacho Rodriguez, reviewed by Ashutosh Chauhan)
dea7190511	2021-05-22	HIVE-19691: Start SessionState in materialized views registry (Jesus Camacho Rodriguez, reviewed by Ashutosh Chauhan)
09b4ca437f	2021-05-22	HIVE-17853: RetryingMetaStoreClient loses UGI impersonation-context when reconnecting after timeout (Chris Drome, reviewed by Mithun Radhakrishnan)

b8902a7bb8	2021-05-22	HIVE-23534: NPE in RetryingMetaStoreClient#invoke when catching MetaException with no message (Stamatis Zampetakis, reviewed by Jesus Camacho Rodriguez)
11db00d681	2021-05-22	HIVE-18494: Regression: from HIVE-18069, the metastore directsql is getting disabled (Jesus Camacho Rodriguez, reviewed by Gopal V)
1920988b66	2021-05-22	HIVE-18069: MetaStoreDirectSql to get tables has misplaced comma (Jesus Camacho Rodriguez, reviewed by Aihua Xu) (addendum)
e5ed2cb9ed	2021-05-22	HIVE-18069: MetaStoreDirectSql to get tables has misplaced comma (Jesus Camacho Rodriguez, reviewed by Aihua Xu)
9b506546a4	2021-05-22	HIVE-15436: Enhancing metastore APIs to retrieve only materialized views (Jesus Camacho Rodriguez, reviewed by Ashutosh Chauhan)
051002d23a	2021-05-22	HIVE-6990 : Direct SQL fails when the explicit schema setting is different from the default on (Bing Li, Sergey Shelukhin via Ashutosh Chauhan)

Known Issues and Limitations

- HIVE-19502 Unable to insert values into table stored by JdbcStorageHandler
- HIVE-19286 NPE in MERGE operator on MR mode
- HIVE-760 [Hive-2.3] Could not start hive-metastore on Centos 8 MetaException(message:Version information not found in metastore)

  Starting in MEP 7.0.0, use the MySQL driver with MariaDB.

```
<property>
    <name>javax.jdo.option.ConnectionURL</name>
    <value>jdbc:mysql://localhost:3306/hive?
createDatabaseIfNotExist=true</value>
  </property>
 <property>
    <name>javax.jdo.option.ConnectionDriverName</name>
    <value>com.mysql.jdbc.Driver</value>
    <description>Driver class name for a JDBC metastore</description>
 </property>
```

  Some SELECT queries can be converted to a single FETCH task minimizing latency. Currently, the query should be single sourced and should not have a subquery or any aggregations or distincts (which incurs RS), lateral views and joins:

```
none : disable hive.fetch.task.conversion
minimal : SELECT star, filter on partition columns, LIMIT only
more :  SELECT, filter, LIMIT only (support TABLESAMPLE and virtual
columns)
```

Resolved Issues

- MAPR-TEZ-172 fixes a HIVE-789 known issue from Hive 2.3.8 - 2104 (EEP 7.1.0) Release Notes on page 5897 in this release.

Hive 2.3.8 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.8.

The following release notes for the Hive 2.3.8 component are included in the MapR Data Platform distribution for Apache Hadoop:

Hive 2.3.8 - 2104 (EEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hive. You may also be interested in the Apache Hive-2.3.8 Release Notes and the Apache Hive homepage.

Hive Version	2.3.8
Release Date	April 2021
HPE Version Interoperability	See Hive and HCatalog Support Matrix andEcosystem Support Matrix and MEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.8-mapr-2104
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate tohttp://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.8 works with the following MapR Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2.

Feature support

The following list describes support of various components and functionality with Hive 2.3.8 - 2104:

- Supports Hive-2.3.8 on Tez-0.9.2 For more information, see Tez 0.9.2-2104 (MEP 7.1.0) Release Notes.
- Does not support Hive on Spark. You cannot use Spark as an query engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- Does not support HDFS encryption in Hive tables.
- Does not support LLAP with Hive-2.3.8 because Apache Slider is not an MapR supported ecosystem component.

last-updated: Apr 11, 2022

- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

Changes in default security configuration

The following list describes changes in default security for Hive 2.3.8 - 2104:

- None.

New in This Release

Hive 2.3.8 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Added configuration to view audit logs for connected, disconnected, and total connected users in HiveServer2.
- Added Service verifier.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
9704751	2021-05-14	MAPR-HIVE-930: Cannot run join with Order by and Limit clause specified at the same time
7c2414	2021-05-14	Revert "ZOO-36: Upgrade Hive log jars to match the Zookeeper client"
097fa53	2021-05-14	Revert "MAPR-HIVE-725 : Avatica's unshaded Jackson (2.6) conflicts with Jackson 2.7+ through hive-exec dependency
ceaa1302	2021-05-14	Revert "HIVE-15708 : Upgrade calcite version to 1.12 (Remus Rusanu via Ashutosh Chauhan)"
8489e7db9	2021-04-19	MAPR-HIVE-924 : FAILURE! - in org.apache.hive.hcatalog.api.TestHCatClient
5a058e051	2021-04-19	MAPR-HIVE-925 : FAILURE! - in TestHiveRemote>TestHive.testAutoPurgeTablesAndPartitions
9659809	2021-04-19	MAPR-HIVE-877 : Add service verifier to hive package that contains a startable service (Part II)
fd887ffb	2021-04-12	MAPR-HIVE-919: FAILURE! - in org.apache.hadoop.hive.ql.metadata.TestHive
b984382e	2021-04-08	MAPR-HIVE-907 : java.lang.NoClassDefFoundError: org/xerial/snappy/Snappy while reading parquet data
50bf5f	2021-04-08	MAPR-HIVE-917 : FAILURE! - in org.apache.hadoop.hive.ql.io.parquet.TestHiveSchemaConverter
8e3d4bd	2021-03-26	MAPR-HIVE-857 : Class path contains multiple SLF4J bindings

b08237d	2021-03-25	MAPR-HIVE-912 : Update to hbase version to 1.4.13.0-mapr-SNAPSHOT
a84e3f6	2021-03-22	MAPR-HIVE-911 : Update to Hadoop to 2.7.5.0-mapr-710-SNAPSHOT
bebe9227	2021-03-16	MAPR-HIVE-908 : FAILURE! - in org.apache.hadoop.hive.metastore.TestHiveMetaStoreTimeout
e9ac75	2021-03-14	MAPR-HIVE-897 : CVE-2021-25329 Tomcat vulnerability
33f3104	2021-03-14	MAPR-HIVE-898 : Unable to connect hs2 through jdbc HiveConnection
78222e2	2021-03-09	MAPR-HIVE-877 : Add service verifier to hive package that contains a startable service
a1f0262	2021-03-03	MAPR-HIVE-893 : Can't insert values into Hive table and simple selecting data from table: java.lang.NoClassDefFoundError: org/apache/hive/com/google/common/util/concurrent/internal/InternalFutureFailureAccess
f2e586d	2021-03-22	MAPR-HIVE-882 : /opt/mapr/hive/hive-2.3/conf.backup.*_* : No such file or directory
ccaa8b2	2021-02-22	MAPR-HIVE-883 : Make parquet versions consistent in hive/drill/sqoop
cb576a8	2021-02-18	MAPR-HIVE-873 : Add audit logs for connected, disconnected and total users
1134475	2021-02-16	MAPR-HIVE-872 : Update Hadoop version to 2.7.4.0-mapr-710-SNAPSHOT
88cdd7	2021-02-16	MAPR-HIVE-879 : Update tomcat version to latest 10.0.2
881acb6	2021-02-16	MAPR-HIVE-878 : Refactor tomcat dependency management
fa6f8d4	2021-02-08	MAPR-HIVE-874 : CVE-2020-25649 Jackson databind vulnerability
f276ad01	2021-02-03	MAPR-HIVE-871 : Unable to create table in database created with specified location when storage based authorization is enabled
91db8cf	2021-02-02	MAPR-HIVE-869: missing Hive Queries page configuration while installing hive on tez via UI Installer
66f1f3	2021-01-28	MAPR-HIVE-856: hive-site.xml contains many empty lines between properties
012e21b	2021-01-25	MAPR-HIVE-812 : The query does not work when hive.vectorized.execution.enabled is set to true

last-updated: Apr 11, 2022

618dbc4e	2021-01-22	MAPR-HIVE-864 : FAILURE! - in org.apache.hadoop.hive.serde2.avro.TestAvroSerializer
3a5d3d4f	2021-01-21	MAPR-HIVE-860: Multiple Vulnerabilities in Hive jars found

This release from HPE also includes the following back-ported issues. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
c067c097	2021-04-08	HIVE-22648: Upgrade Parquet to 1.11.0 (Marta Kuczora, reviewed by Adam Szita)
6782db81	2021-04-08	HIVE-19464: Upgrade Parquet to 1.10.0 (Jesus Camacho Rodriguez, reviewed by Prasanth Jayachandran)
7bd9eff	2021-03-23	HIVE-20204: Type conversion during IN () comparisons is using different rules from other comparison operations (Jason Dere, reviewed by Ashutosh Chauhan)
18727a	2021-03-22	HIVE-21455: Too verbose logging in AvroGenericRecordReader (Miklos Szurap, reviewed by David Mollitor and Peter Vary)
a174ab74	2021-03-22	HIVE-22891: Skip PartitionDesc Extraction In CombineHiveRecord For Non-LLAP Execution Mode (Syed Shameerur Rahman, reviewed by Ádám Szita)
cf798d	2021-03-22	HIVE-24436: Fix Avro NULL_DEFAULT_VALUE compatibility issue (#1722)
6f91c4	2021-03-22	HIVE-23980: Shade Guava from hive-exec in Hive 2.3 (#1356)
0004ff7	2021-03-22	HIVE-24324: Remove deprecated API usage from Avro (#1621) (#1672)
43875c1	2021-03-22	HIVE-23323: Add qsplits profile (Zoltan Haindrich reviewed by Miklos Gergely)
89e5f1e0	2021-02-18	HIVE-21943 : Add audit log in HiveServer2
732b650	2021-02-05	HIVE-15160: Can't order by an unselected column (Pengcheng Xiong, reviewed by Ashutosh Chauhan)
05524d04	2021-02-05	HIVE-16117: SortProjectTransposeRule should check for monotonicity preserving CAST (Jesus Camacho Rodriguez, reviewed by Ashutosh Chauhan)
225d30c	2021-02-22	HIVE-24559: Fix some spelling issues (Ricky Ma reviewed by Vihang Karajgaonkar and Miklos Gergely)

last-updated: Apr 11, 2022

ec0c8ac	2021-02-22	HIVE-24553. Exclude calcite from test-jar dependency of hive-exec (#1794)
3c0fe12	2021-02-22	HIVE-24551: Hive should include transitive dependencies from calcite after shading it (#1792)
765be22	2021-02-22	HIVE-22708: Fix for HttpTransport to replace String.equals (Naveen Gangam, reviewed by Peter Vary)
7288caf4	2021-02-22	HIVE-24512: Exclude calcite in packaging. (#1760)

Known Issues and Limitations

- HIVE-947: If you add `tez.history.logging.service.class` and `tez.tez-ui.history-url.base` properties to `tez-site.xml` file, Hive applications will fail in EEP 7.1.0. To fix this issue, remove these properties from the `tez-site.xml` configuration file.
- HIVE-19502 Unable to insert values into table stored by JdbcStorageHandler
- HIVE-19286 NPE in MERGE operator on MR mode
- HIVE-789 [Hive-Hbase integration] Unable to run queries against hive-hbase tables. ClassNotFoundException: HiveHBaseTableInputFormat [MEP-7.0.0]

If you run an HBase + Hive + Tez integration in MEP 7.1.0, you may encounter the following exception:

```
Caused by: java.lang.ClassNotFoundException:
org.apache.hadoop.hbase.client.mapr.BaseTableMappingRules
    at java.base/
jdk.internal.loader.BuiltinClassLoader.loadClass(BuiltinClassLoader.java:581
)
    at java.base/
jdk.internal.loader.ClassLoaders$AppClassLoader.loadClass(ClassLoaders.java:
178)
    at java.base/java.lang.ClassLoader.loadClass(ClassLoader.java:522)
    ... 39 more
```

This exception can occur due to the new Tez classloader implemented in the Tez project. To resolve this issue, put the following additional JAR files in the `/apps/tez/tez-0.9` folder.

Issue the following commands before you run HBase + Hive + Tez integration in MEP 7.1.0:

```
hadoop fs -mkdir /apps/tez/tez-0.9/hbase
hadoop fs -put /opt/mapr/hbase/hbase-1.4.12/lib/* /apps/tez/tez-0.9/hbase/
```

Add the following property to `/opt/mapr/tez/tez-0.9/conf/tez-site.xml`:

```
<property>
<name>tez.lib.uris</name>
<value>${fs.defaultFS}/apps/tez/tez-0.9,${fs.defaultFS}/apps/tez/tez-0.9/
lib,${fs.defaultFS}/apps/tez/tez-0.9/hbase/</value>
 </property>
```

It is assumed that the Hive version is 2.3, Hbase version is 1.4.12, Tez version is 0.9, Hadoop version is 2.7.4, Zookeeper version is 3.5.6.0, and ecosystem release is 2009.

HIVE-760 [Hive-2.3] Could not start hive-metastore on Centos 8 MetaException(message:Version information not found in metastore)

last-updated: Apr 11, 2022

Starting in MEP 7.0.0, use the MySQL driver with MariaDB.

```
<property>
    <name>javax.jdo.option.ConnectionURL</name>
    <value>jdbc:mysql://localhost:3306/hive?createDatabaseIfNotExist=true</
value>
  </property>
 <property>
    <name>javax.jdo.option.ConnectionDriverName</name>
    <value>com.mysql.jdbc.Driver</value>
    <description>Driver class name for a JDBC metastore</description>
 </property>
```

Some SELECT queries can be converted to a single FETCH task minimizing latency. Currently, the query should be single sourced and should not have a subquery or any aggregations or distincts (which incurs RS), lateral views and joins:

```
none : disable hive.fetch.task.conversion
minimal : SELECT star, filter on partition columns, LIMIT only
more :  SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
```

Resolved Issues

- None.

Hive 2.3.7 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.7.

The following release notes for the Hive 2.3.7 component are included in the MapR Data Platform distribution for Apache Hadoop:

Hive 2.3.7 - 2101 (EEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hive. You may also be interested in the Apache Hive-2.3.7 Release Notes and the Apache Hive homepage.

Hive Version	2.3.7
Release Date	January 2021
HPE Version Interoperability	See Hive and HCatalog Support Matrix andEcosystem Support Matrix andMEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.7-mapr-2101
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate tohttp://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.7 works with the following HPE Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2.

Feature support

The following list describes support of various components and functionality with Hive 2.3.7 - 2101:

- Supports Hive-2.3.7 on Tez-0.9.2 For more information, see Tez 0.9.2-2101 (MEP 7.0.1) Release Notes.
- Does not support Hive on Spark. You cannot use Spark as an query engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- Does not support HDFS encryption in Hive tables.
- Does not support LLAP with Hive-2.3.7 because Apache Slider is not an HPE supported ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

Changes in default security configuration

The following list describes changes in default security for Hive 2.3.7 - 2101:

- None.

New in This Release

Hive 2.3.7 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
7365788	2021-01-06	MAPR-HIVE-859 : ERROR Unable to invoke factory method in class class org.apache.logging.log4j.core.appender.RandomAccessFileAppender for element RandomAccessFile. java.lang.reflect.InvocationTargetException

- HIVE-19286 NPE in MERGE operator on MR mode
- HIVE-789 [Hive-Hbase integration] Unable to run queries against hive-hbase tables. ClassNotFoundException: HiveHBaseTableInputFormat [MEP-7.0.0]

If you run an HBase + Hive + Tez integration in MEP 7.0.1, you may encounter the following exception:

```
Caused by: java.lang.ClassNotFoundException:
org.apache.hadoop.hbase.client.mapr.BaseTableMappingRules
    at java.base/
jdk.internal.loader.BuiltinClassLoader.loadClass(BuiltinClassLoader.java:581
)
    at java.base/
jdk.internal.loader.ClassLoaders$AppClassLoader.loadClass(ClassLoaders.java:
178)
    at java.base/java.lang.ClassLoader.loadClass(ClassLoader.java:522)
    ... 39 more
```

This exception can occur due to the new Tez classloader implemented in the Tez project. To resolve this issue, put the following additional JAR files in the `/apps/tez/tez-0.9` folder.

Issue the following commands before you run HBase + Hive + Tez integration in MEP 7.0.1:

```
hadoop fs -mkdir /apps/tez/tez-0.9/hbase
hadoop fs -put /opt/mapr/hbase/hbase-1.4.12/lib/* /apps/tez/tez-0.9/hbase/
```

Add the following property to `/opt/mapr/tez/tez-0.9/conf/tez-site.xml`:

```
<property>
<name>tez.lib.uris</name>
<value>${fs.defaultFS}/apps/tez/tez-0.9,${fs.defaultFS}/apps/tez/tez-0.9/
lib,${fs.defaultFS}/apps/tez/tez-0.9/hbase/</value>
 </property>
```

It is assumed that the Hive version is 2.3, Hbase version is 1.4.12, Tez version is 0.9, Hadoop version is 2.7.4, Zookeeper version is 3.5.6.0, and ecosystem release is 2009.

HIVE-760 [Hive-2.3] Could not start hive-metastore on Centos 8 MetaException(message:Version information not found in metastore)

last-updated: Apr 11, 2022

Starting in MEP 7.0.1, use the MySQL driver with MariaDB.

```
<property>
    <name>javax.jdo.option.ConnectionURL</name>
    <value>jdbc:mysql://localhost:3306/hive?createDatabaseIfNotExist=true</
value>
  </property>
 <property>
    <name>javax.jdo.option.ConnectionDriverName</name>
    <value>com.mysql.jdbc.Driver</value>
    <description>Driver class name for a JDBC metastore</description>
 </property>
```

Some SELECT queries can be converted to a single FETCH task minimizing latency. Currently, the query should be single sourced and should not have a subquery or any aggregations or distincts (which incurs RS), lateral views and joins:

```
none : disable hive.fetch.task.conversion
minimal : SELECT star, filter on partition columns, LIMIT only
more :  SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
```

Resolved Issues

- None.

Hive 2.3.7-2009 (EEP 7.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.7-2009 in EEP 7.0.0.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive homepage and the following Apache Hive release notes:

- Apache Hive-2.3.7 Release Notes
- Apache Hive-2.3.6 Release Notes
- Apache Hive-2.3.5 Release Notes
- Apache Hive-2.3.4 Release Notes
- Apache Hive-2.3.3 Release Notes
- Apache Hive-2.3.2 Release Notes
- Apache Hive-2.3.1 Release Notes
- Apache Hive-2.3.0 Release Notes

These release notes contain MapR-specific information only and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.3.7
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.7-mapr-2009

Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

ODBC / JDBC Drivers	Hive 2.3.7 works with the following MapR Hive ODBC drivers:
	• Mac OS X
	• Linux
	  • 32-bit
	  • 64-bit
	• Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2 on page 3515.

Feature Support

- Hive-2.3.7 works with Tez-0.9.2. For more information, see Tez 0.9.2-2009 (MEP 7.0.0) Release Notes.
- Hive on Spark is not supported; you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- HDFS encryption is not supported in Hive tables.
- LLAP is not supported with Hive-2.3.7, as Apache Slider is not a supported ecosystem component.
- In Hive 2.1 and later, Hive must run the `schematool` command as an initialization step.
- In EEPs 6.3.1 and 7.0.0, the default protocol version for TLS (SSL) is `TLSv1.2`, but you can modify the protocol version. For more information, see Configure the TLS (SSL) Protocol Version in Hive on page 3449.

Default Security Configuration Change

By default, the `hive-site.xml` file now contains the following property on secured clusters:

Property	Default Value
hive.metastore.pre.event.listeners	org.apache.hadoop.hive.ql.security.authorization.AuthorizationPreEventListener

This property is added to `hive-site.xml` during Hive updates (no version change) and upgrades (with version change).

New Features

- None.

Known Issues

- Some SELECT queries can be converted to a single FETCH task to minimize latency. Currently, a query should be single sourced, without a subquery, and should not have any aggregations or distincts (which incurs RS), lateral views, or joins:
  - none: disable `hive.fetch.task.conversion`
  - minimal: SELECT *, filter on partition columns, LIMIT only
  - more: SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
- Use MySQL driver with MariaDB. In `hive-site.xml`, set the following properties:

```
<property>
    <name>javax.jdo.option.ConnectionURL</name>
    <value>jdbc:mysql://localhost:3306/hive?
createDatabaseIfNotExist=true</value>
</property>
<property>
    <name>javax.jdo.option.ConnectionDriverName</name>
    <value>com.mysql.jdbc.Driver</value>
    <description>Driver class name for a JDBC metastore</description>
</property>
```

- HIVE-19502 - Unable to insert values into table stored by JdbcStorageHandler.
- HIVE-19286 - NPE in MERGE operator in MR mode.
- HIVE-760 - [Hive-2.3] Could not start hive-metastore on Centos 8 MetaException(message:Version information not found in metastore)
- HIVE-789 - [Hive-Hbase integration] Unable to run queries against hive-hbase tables.

  When using HBase with Hive-on-Tez, some queries, such as SELECT COUNT(*), fail because the new Tez classloader cannot load the MapR-specific classes. When this occurs, the system returns the following exception:

```
org.apache.hadoop.hbase.client.mapr.BaseTableMappingRules
    at java.base/
jdk.internal.loader.BuiltinClassLoader.loadClass(BuiltinClassLoader.java:5
81)
    at java.base/
jdk.internal.loader.ClassLoaders$AppClassLoader.loadClass(ClassLoaders.jav
a:178)
    at java.base/java.lang.ClassLoader.loadClass(ClassLoader.java:522)
    ... 39 more
```

  Workaround

  This workaround resolves the issue when running HBase 1.4.12 with Hive 2.3 on Tez 0.9 in an environment with Hadoop 2.7.4 and ZooKeeper 3.5.6.0 in ecosystem release 2009.

  To resolve the issue, complete the following steps before you run HBase with Hive-on-Tez:

  1. Create the `/apps/tez/tez-0.9/hbase` directory:

```
hadoop fs -mkdir /apps/tez/tez-0.9/hbase
```

last-updated: Apr 11, 2022

2. Add the HBase JAR files to the `/apps/tez/tez-0.9/hbase` directory:

```
hadoop fs -put /opt/mapr/hbase/hbase-1.4.12/lib/* /apps/tez/tez-0.9/
hbase/
```

3. Update `/opt/mapr/tez/tez-0.9/conf/tez-site.xml` with the following property:

```
<property>
    <name>tez.lib.uris</name>
    <value>${fs.defaultFS}/apps/tez/tez-0.9,${fs.defaultFS}/apps/tez/
tez-0.9/lib,${fs.defaultFS}/apps/tez/tez-0.9/hbase/</value>
</property>
```

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
f50bb9f	2020-09-04	MAPR-HIVE-791 : Unnecessary WARNINGs during hive CLI start
8755a63	2020-09-03	MAPR-HIVE-816 : Update ZK version to 3.5.6.0-mapr-SNAPSHOT
8060cf9	2020-08-28	MAPR-HIVE-790 Added jmxagent jar into classpath

Hive 2.3.6 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.6.

The following release notes for the Hive 2.3.6 component are included in the MapR distribution for Apache Hadoop:

Hive 2.3.6 - 2201 (EEP 6.3.6) Release Notes

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hive. You may also be interested in the Apache Hive-2.3.6 Release Notes and the Apache Hive homepage.

Hive Version	2.3.6
Release Date	January 2022
HPE Version Interoperability	See Hive and HCatalog Support Matrix and Ecosystem Support Matrix and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.6-mapr-2201
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to http://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.6 works with the following MapR Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit HIVE-20204
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2.

Feature support

The following list describes support of various components and functionality with Hive 2.3.6 - 2201:

- Supports Hive-2.3.6 on Tez-0.9.1 For more information, see Tez 0.9.1 - 2201 (EEP 6.3.6) Release Notes on page 6489.
- Does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- Does not support HDFS encryption in Hive tables.
- Does not support LLAP with Hive-2.3.6 because Apache Slider is not a supported HPE ecosystem component.
- Starting from Hive 2.1, Hive must run the `schematool` command as an initialization step.

Changes in default security configuration

The following list describes changes in default security for Hive 2.3.6 - 2201:

- None.

New in This Release

Hive 2.3.6 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

last-updated: Apr 11, 2022

- Improved `Describe table` operator in terms of fetching statistics of partitions. Starting from EEP 6.3.5, you can fetch the partition information using the `describe` command with `formatted` or `extended` statements.

  Configure the `hive.describe.partitionedtable.ignore.stats` property to change the behaviour of fetching statistics of partitions. It is set to the default value of `false`.

```
<property>
    <name>hive.describe.partitionedtable.ignore.stats</name>
    <value>false</value>
    <description>Enables partitioned table stats collection for 'DESCRIBE
FORMATTED' or 'DESCRIBE EXTENDED' commands</description>
</property>
```

```
<property>
    <name>hive.describe.partitionedtable.ignore.stats</name>
    <value>true</value>
    <description>Disables partitioned table stats collection for
'DESCRIBE FORMATTED' or 'DESCRIBE EXTENDED' commands</description>
 </property
```

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
21f6a46d26	2022-01-25	EEP-HIVE-1149: Upgrade Log4J version to '1.3.1-mapr'
db3c3fe39d	2022-01-19	EEP-HIVE-1145 : Add only necessary jars to Hive class path from Slider lib folder
c358c77ba0	2022-01-19	MAPR-HIVE-857 : Class path contains multiple SLF4J bindings
5310a60e7c	2022-01-19	EEP-HIVE-1138 : Add some org.apache.curator classes to container classpath
485c2dddb3	2022-01-19	EEP-HIVE-1137 : Add tez jars to containers folder app/install//lib/tez/
5c6a759068	2022-01-19	EEP-HIVE-1136 : Apply existing LLAP daemon security for kerberos only
8eb9d621b8	2022-01-10	EEP-HIVE-1129 : java.lang.ClassNotFoundException: org.apache.commons.logging.LogFactory
2bdd87c769	2022-01-06	EEP-HIVE-1065: CVE-2021-37136, CVE-2021-37137, WS-2020-0408, CVE-2021-21290: netty-*-4.1.55.Final.jar
8c97c3dad4	2022-01-05	EEP-HIVE-1062: CVE-2016-5007, CVE-2016-9878 ,CVE-2018-1271, CVE-2018-1272, CVE-2020-5421: spring-*-3.2.16.RELEASE.jar

e8824ff58b	2022-01-05	EEP-HIVE-1068: CVE-2020-9480: spark-network-common_2.11-2.3.0.jar, CVE-2018-17190: spark-core_2.11-2.3.0.jar
4b59b03b22	2022-01-05	EEP-HIVE-1123 : UnsupportedClassVersionError: com/beust/jcommander/ParameterException
0f3c07c5db	2022-01-04	EEP-HIVE-1117: Update log4j v2 to the latest available (to 2.17+)
62cde6b526	2022-01-04	EEP-HIVE-1116: Hive returns an incorrect number of columns
f3eb784483	2022-01-04	Revert "MAPR-HIVE-930: Cannot run join with Order by and Limit clause specified at the same time"
b7e98bc780	2021-12-30	EEP-HIVE-1119: com.fasterxml.jackson.annotation.JsonFormat.empty()Lcom/fasterxml/jackson/annotation/JsonFormat
b6c3e29c75	2021-12-24	EEP-HIVE-1064: CVE-2021-30639 ; CVE-2021-33037: tomcat-coyote-10.0.4.jar
bd35d3d8b0	2021-12-24	EEP-HIVE-1059: CVE-2019-10172, CVE-2019-10202: jackson-mapper-asl-1.9.13.jar, jackson-mapper-asl-1.9.2.jar
a7414780f7	2021-12-24	EEP-HIVE-1056: CVE-2021-35515, CVE-2021-35516, CVE-2021-35517, CVE-2021-36090: commons-compress-1.20.jar
b9b59431d8	2021-12-24	EEP-HIVE-1055: CVE fixes of bcprov-jdk15on-1.52.jar
c72f9e03b2	2021-12-24	EEP-HIVE-1054: WS-2021-0419: gson-2.2.4.jar
3b9477aa97	2021-12-22	MAPR-HIVE-1053 : Relative path in absolute URI: slider reads hdfs-site.xml from hadoop-hdfs.jar
1bcc87122e	2021-12-22	MAPR-HIVE-1036 : java.lang.NoClassDefFoundError: org/apache/commons/digester/Digester
f385e38ed5	2021-12-22	MAPR-HIVE-1025 : LLAP server expects tez.tar.gz archive in MapR FS
ce47408acc	2021-12-22	MAPR-HIVE-1033 : Add MapR slider dependency to Hive
307f5634f4	2021-12-15	MAPR-HIVE-919: FAILURE! - in org.apache.hadoop.hive.ql.metadata.TestHive
6a6adc1605	2021-12-14	EEP-HIVE-1097: CVE-2021-44228 - Log4j vulnerability

38f79750e5	2021-12-03	EEP-HIVE-1087: CAST gives NULL values during insert when vectorization enabled.
0c49ac7aa6	2021-11-11	MAPR-HIVE-1031 : logError: command not found if any error happens during configuring Hive
86fce467db	2021-11-11	MAPR-HIVE-1024 : Replace deprecated AuthMethod.DIGEST with AuthMethod.TOKEN in HadoopThriftAuthBridge25Sasl
5aa83575a3	2021-11-02	MAPR-HIVE-975: Customer request to investigate temporary hive session files cleanup improvements
5d17652c59	2021-10-13	MAPR-HIVE-1002 : Hive-2.3 does not remove old compressed logs
949a43e679	2021-10-11	MAPR-HIVE-1015 : Configure repositories for Jenkins job

This release also includes the following back-ported issues. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
d1c4ee1ed3	2021-12-08	HIVE-17774: compaction may start with 0 splits and fail
e2f6d07cbf	2021-10-28	HIVE-20072 : Write access being requested when performing select on a table
be8520b3dc	2021-10-08	HIVE-16820 : TezTask may not shut down correctly before submit (Sergey Shelukhin, reviewed by Siddharth Seth)

Known Issues and Limitations

- HIVE-19502 Unable to insert values into table stored by JdbcStorageHandler
- HIVE-19286 NPE in MERGE operator on MR mode

Some SELECT queries can be converted to a single FETCH task minimizing latency. Currently, the query should be single sourced, not having any subquery, and should not have any aggregations or distincts (which incurs RS), lateral views or joins:

```
none : disable hive.fetch.task.conversion
minimal : SELECT star, filter on partition columns, LIMIT only
more :  SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
```

Resolved Issues

- None.

Hive 2.3.6 - 2110 (EEP 6.3.5) Release Notes

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hive.

Hive Version	2.3.6
Release Date	October 2021

HPE Version Interoperability	See Hive and HCatalog Support Matrix and Ecosystem Support Matrix and MEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.6-mapr-2110
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to http://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.6 works with the following MapR Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit HIVE-20204
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2.

Feature support

The following list describes support of various components and functionality with Hive 2.3.6 - 2110:

- Supports Hive-2.3.6 on Tez-0.9.1 For more information, see Tez 0.9.1-2104(MEP 6.3.4) Release Notes.
- Does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- Does not support HDFS encryption in Hive tables.
- Does not support LLAP with Hive-2.3.6 because Apache Slider is not a supported HPE ecosystem component.
- Starting from Hive 2.1, Hive must run the `schematool` command as an initialization step.

Changes in default security configuration

The following list describes changes in default security for Hive 2.3.6 - 2110:

- None.

New in This Release

Hive 2.3.6 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

last-updated: Apr 11, 2022

- Improved `Describe table` operator in terms of fetching statistics of partitions. Starting from EEP 6.3.5, you can fetch the partition information using the `describe` command with `formatted` or `extended` statements.

  Configure the `hive.describe.partitionedtable.ignore.stats` property to change the behaviour of fetching statistics of partitions. It is set to the default value of `false`.

```
<property>
    <name>hive.describe.partitionedtable.ignore.stats</name>
    <value>false</value>
    <description>Enables partitioned table stats collection for 'DESCRIBE
FORMATTED' or 'DESCRIBE EXTENDED' commands</description>
</property>
```

```
<property>
    <name>hive.describe.partitionedtable.ignore.stats</name>
    <value>true</value>
    <description>Disables partitioned table stats collection for
'DESCRIBE FORMATTED' or 'DESCRIBE EXTENDED' commands</description>
 </property
```

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
5cf874c69e	2021-09-14	MAPR-HIVE-1007: Permission denied to hbase temp files while running hcat jobs from other user
d40b435ebc	2021-08-17	MAPR-HIVE-977 : Downgrade jackson to v2.11.1 or to 2.11.3 to be consistent with core version
55471aefc0	2021-07-29	MAPR-HIVE-960 : CVE-2012-5783 vulnerability in commons-httpclient
96739404d6	2021-07-23	MAPR-HIVE-965 : Throws exception at INSERT statement with Avro table on MapReduce engine
864aa58888	2021-07-21	MAPR-HIVE-959 : Update derbyclient and derbynet to most feasible version
dbc1444cce	2021-07-21	MAPR-HIVE-963 : CVE-2020-13956,WS-2017-3734 vulnerabilities in httpclient
f1b65a14f4	2021-07-21	MAPR-HIVE-962 : WS-2019-0379: commons-codec vulnerability
de8eff00d4	2021-06-28	MAPR-HIVE-896 : CVE-2020-17521 vulnerability in Groovy
d6cc638433	2021-06-22	MAPR-HIVE-927 : NPE thrown from XmlUtil by Hive Client
cf0ce2e550	2021-06-13	MAPR-HIVE-950 : HiveVersionInfo.getShortVersion returns wrong version
4ba9150835	2021-06-08	MAPR-HIVE-949 : Make SchemaEvolution class behavior the same as in Orc-1.5.12

d6a0cd99ae	2021-06-05	MAPR-HIVE-894 : CVE-2020-13955 vulnerability in Calcite

This release also includes the following back-ported issues. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
2e00b3ab7e	2021-09-15	HIVE-24965: Describe table partition stats fetch should be configurable
33c59e5bc1	2021-09-15	HIVE-22453: Describe table unnecessarily fetches partitions
59d9e532b1	2021-09-14	HIVE-23756 : Added more constraints to the package.jdo file
8f93305198	2021-09-12	HIVE-24177 : hive mapjoin throws udf class not found
d086e9f44e	2021-09-06	HIVE-25054: Upgrade `jodd-core` dependency to get rid of CVE-2018-21234 (Abhay Chennagiri, reviewed by Jesus Camacho Rodriguez)
f5c8373511	2021-08-18	HIVE-17659 : get_token thrift call fails for DBTokenStore in remote HMS mode (Vihang Karajgaonkar, reviewed by Aihua Xu)
2f963af3df	2021-08-18	HIVE-17824 : msck repair table should drop the missing partitions from metastore (Janaki Lahorani, reviewed by Peter Vary, Alexander Kolbasov and Vihang Karajgaonkar)
f219115a01	2021-08-18	HIVE-16143: Improve msck repair batching (Vihang Karajgaonkar, reviewed by Sahil Takiar & Aihua Xu)
b3197062e6	2021-07-28	HIVE-19228: Remove commons-httpclient 3.x usage (Janaki Lahorani reviewed by Aihua Xu)
9078072775	2021-07-23	HIVE-24324: Remove deprecated API usage from Avro (#1621)
b8d972a30a	2021-06-08	ORC-437: Make acid schema checks case insensitive
4a139e039f	2021-05-31	HIVE-21075 : Metastore: Drop partition performance downgrade with Postgres DB
6d952ad320	2021-05-31	HIVE-9447: Metastore: inefficient Oracle query for removing unused column descriptors when add/drop table/partition (Selina Zhang reviewed by Ashutosh Chauhan, Adam Szita)
79986d8ae1	2021-05-21	HIVE-21085: Materialized views registry starts non-external tez session (Jesus Camacho Rodriguez, reviewed by Ashutosh Chauhan)

22a4f78a98	2021-05-21	HIVE-19691: Start SessionState in materialized views registry (Jesus Camacho Rodriguez, reviewed by Ashutosh Chauhan)
46a18aa72b	2021-05-21	HIVE-17853: RetryingMetaStoreClient loses UGI impersonation-context when reconnecting after timeout (Chris Drome, reviewed by Mithun Radhakrishnan)
3b72d6b9c3	2021-05-21	HIVE-23534: NPE in RetryingMetaStoreClient#invoke when catching MetaException with no message (Stamatis Zampetakis, reviewed by Jesus Camacho Rodriguez)
85b0e4b2dd	2021-05-21	HIVE-18494: Regression: from HIVE-18069, the metastore directsql is getting disabled (Jesus Camacho Rodriguez, reviewed by Gopal V)
d91f984cf6	2021-05-21	HIVE-18069: MetaStoreDirectSql to get tables has misplaced comma (Jesus Camacho Rodriguez, reviewed by Aihua Xu) (addendum)
5e06c5859e	2021-05-21	HIVE-18069: MetaStoreDirectSql to get tables has misplaced comma (Jesus Camacho Rodriguez, reviewed by Aihua Xu)
efa1df1148	2021-05-21	HIVE-15436: Enhancing metastore APIs to retrieve only materialized views (Jesus Camacho Rodriguez, reviewed by Ashutosh Chauhan)
e642981bf1	2021-05-21	HIVE-6990 : Direct SQL fails when the explicit schema setting is different from the default on (Bing Li, Sergey Shelukhin via Ashutosh Chauhan)

Known Issues and Limitations

- HIVE-19502 Unable to insert values into table stored by JdbcStorageHandler
- HIVE-19286 NPE in MERGE operator on MR mode

Some SELECT queries can be converted to a single FETCH task minimizing latency. Currently, the query should be single sourced, not having any subquery, and should not have any aggregations or distincts (which incurs RS), lateral views or joins:

```
none : disable hive.fetch.task.conversion
minimal : SELECT star, filter on partition columns, LIMIT only
more :  SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
```

Resolved Issues

- None.

Hive 2.3.6 - 2104 (EEP 6.3.4) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hive.

Hive Version	2.3.6
Release Date	April 2021
HPE Version Interoperability	SeeHive and HCatalog Support Matrix andEcosystem Support Matrix and MEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.6-mapr-2104
Maven Artifacts	See Maven Artifacts for MapR.
Package Names	Navigate tohttp://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.6 works with the following MapR Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit HIVE-20204
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, seeConnecting to HiveServer2.

Feature support

The following list describes support of various components and functionality with Hive 2.3.6 - 2104:

- Supports Hive-2.3.6 on Tez-0.9.1 For more information, see Tez 0.9.1-2104(MEP 6.3.4) Release Notes.
- Does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- Does not support HDFS encryption in Hive tables.
- Does not support LLAP with Hive-2.3.6 because Apache Slider is not a supported HPE ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

Changes in default security configuration

The following list describes changes in default security for Hive 2.3.6 - 2104:

- None.

New in This Release

Hive 2.3.6 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

last-updated: Apr 11, 2022

- Added configuration to view audit logs for connected, disconnected, and total connected users in HiveServer2.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
a4e067b	2021-05-14	MAPR-HIVE-930: Cannot run join with Order by and Limit clause specified at the same time.
c108592	2021-05-14	Revert "MAPR-HIVE-725 : Avatica's unshaded Jackson (2.6) conflicts with Jackson 2.7+ through hive-exec dependency
d5141b22	2021-05-14	Revert "HIVE-15708 : Upgrade calcite version to 1.12 (Remus Rusanu via Ashutosh Chauhan)"
5fe63174	2021-04-19	MAPR-HIVE-920 : FAILURE! - in org.apache.hadoop.hive.maprdb.json.MapRDbJsonFetchByIdOptimizerPositiveTest

89140ba6	2021-03-25	HIVE-22708: Fix for HttpTransport to replace String.equals (Naveen Gangam, reviewed by Peter Vary)
57e56458	2021-03-23	HIVE-20204: Type conversion during IN () comparisons is using different rules from other comparison operations (Jason Dere, reviewed by Ashutosh Chauhan)
653c1185	2021-03-17	HIVE-21455: Too verbose logging in AvroGenericRecordReader (Miklos Szurap, reviewed by David Mollitor and Peter Vary)
0a219a9d0	2021-03-11	HIVE-22891: Skip PartitionDesc Extraction In CombineHiveRecord For Non-LLAP Execution Mode (Syed Shameerur Rahman, reviewed by Ádám Szita)
6618d2190	2021-02-18	HIVE-21943 : Add audit log in HiveServer2
2f56ebff	2021-02-05	HIVE-15160: Can't order by an unselected column (Pengcheng Xiong, reviewed by Ashutosh Chauhan)
5956d7c47	2021-02-05	HIVE-16117: SortProjectTransposeRule should check for monotonicity preserving CAST (Jesus Camacho Rodriguez, reviewed by Ashutosh Chauhan)

last-updated: Apr 11, 2022

Known Issues and Limitations

- HIVE-19502 Unable to insert values into table stored by JdbcStorageHandler
- HIVE-19286 NPE in MERGE operator on MR mode

Some SELECT queries can be converted to a single FETCH task minimizing latency. Currently, the query should be single sourced, not having any subquery, and should not have any aggregations or distincts (which incurs RS), lateral views or joins:

```
none : disable hive.fetch.task.conversion
minimal : SELECT star, filter on partition columns, LIMIT only
more :  SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
```

Resolved Issues

- None.

Hive 2.3.6 - 2101 (EEP 6.3.2) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hive.

Hive Version	2.3.6
Release Date	January 2021
HPE Version Interoperability	SeeHive and HCatalog Support Matrix andEcosystem Support Matrix andMEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.6-mapr-2101
Maven Artifacts	See Maven Artifacts for MapR.
Package Names	Navigate tohttp://package.mapr.hpe.com/releases/MEP/, and select your MEP and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.6 works with the following HPE Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, seeConnecting to HiveServer2.

Feature support

The following list describes support of various components and functionality with Hive 2.3.6 - 2101:

- Supports Hive-2.3.6 on Tez-0.9.1 For more information, see Tez 0.9.1-2101 (MEP 6.3.2) Release Notes.

- Does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- Does not support HDFS encryption in Hive tables.
- Does not support LLAP with Hive-2.1.1 because Apache Slider is not a supported HPE ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

Changes in default security configuration

The following list describes changes in default security for Hive 2.3.6 - 2101:

- None.

New in This Release

Hive 2.3.6 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
1fb62f0	2021-01-06	MAPR-HIVE-859 : ERROR Unable to invoke factory method in class class org.apache.logging.log4j.core.appender.RandomAccessFileAppender for element RandomAccessFile. java.lang.reflect.InvocationTargetException

c1ec2a3	2020-11-16	HIVE-23583 : Upgrade to ant 1.10.9 due to CVEs

Known Issues and Limitations

- HIVE-19502 Unable to insert values into table stored by JdbcStorageHandler
- HIVE-19286 NPE in MERGE operator on MR mode

Some SELECT queries can be converted to a single FETCH task minimizing latency. Currently, the query should be single sourced, not having any subquery, and should not have any aggregations or distincts (which incurs RS), lateral views or joins:

```
none : disable hive.fetch.task.conversion
minimal : SELECT star, filter on partition columns, LIMIT only
more :  SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
```

Resolved Issues

- None.

Hive 2.3.6-2009 (EEP 6.3.1) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.6-2009 in EEP 6.3.1.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive homepage and the following Apache Hive release notes:

- Apache Hive-2.3.7 Release Notes
- Apache Hive-2.3.6 Release Notes
- Apache Hive-2.3.5 Release Notes
- Apache Hive-2.3.4 Release Notes
- Apache Hive-2.3.3 Release Notes
- Apache Hive-2.3.2 Release Notes
- Apache Hive-2.3.1 Release Notes
- Apache Hive-2.3.0 Release Notes

These release notes contain MapR-specific information only and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.3.6
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.6-mapr-2009
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

last-updated: Apr 11, 2022

ODBC / JDBC Drivers	Hive 2.3.6 works with the following MapR Hive ODBC drivers:
	• Mac OS X
	• Linux
	  • 32-bit
	  • 64-bit
	• Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2 on page 3515.

Feature Support

- MapR supports Hive-2.3.6 on Tez-0.9.1 For more information, see Tez 0.9.1-2009 (MEP 6.3.1) Release Notes.
- Hive on Spark is not supported; you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- HDFS encryption is not supported in Hive tables.
- LLAP is not supported with Hive-2.3.6, as Apache Slider is not a supported ecosystem component.
- In Hive 2.1 and later, Hive must run the `schematool` command as an initialization step.
- In EEPs 6.3.1 and 7.0.0, the default protocol version for TLS (SSL) is `TLSv1.2`, but you can modify the protocol version. For more information, see Configure the TLS (SSL) Protocol Version in Hive on page 3449.

Default Security Configuration Change

By default, the `hive-site.xml` file now contains the following property on secured clusters:

Property	Default Value
hive.metastore.pre.event.listeners	org.apache.hadoop.hive.ql.security.authorization.AuthorizationPreEventListener

This property is added to `hive-site.xml` during Hive updates (no version change) and upgrades (with version change).

New Features

- None.

Known Issues

Some SELECT queries can be converted to a single FETCH task to minimize latency. Currently, a query should be single sourced, without a subquery, and should not have any aggregations or distincts (which incurs RS), lateral views, or joins:

- none: disable `hive.fetch.task.conversion`

- minimal: SELECT *, filter on partition columns, LIMIT only
- more: SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
- HIVE-19502 - Unable to insert values into table stored by JdbcStorageHandler
- HIVE-19286 - NPE in MERGE operator on MR mode

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
3ba69c4	2020-08-28	MAPR-HIVE-741: Exclude org.mortbay.jetty from maven dependencies (Part 2)

Hive 2.3.6-1912 (EEP 6.3.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.6-1912 for EEP 6.3.0.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the following:

- Apache Hive-2.3.6 Release Notes
- Apache Hive-2.3.5 Release Notes
- Apache Hive-2.3.4 Release Notes
- Apache Hive-2.3.3 Release Notes

- Apache Hive-2.3.2 Release Notes
- Apache Hive-2.3.1 Release Notes
- Apache Hive-2.3.0 Release Notes
- Apache Hive homepage

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.3.6
Release Date	December 2019
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.6-mapr-1912
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

ODBC / JDBC Drivers	Hive 2.3.6 works with the following MapR Hive ODBC drivers:
	• Mac OS X
	• Linux
	  • 32-bit
	  • 64-bit
	• Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2 on page 3515.

Feature Support

- MapR supports Hive-2.3.6 on Tez-0.9.1. For more information, see Tez 0.9.1-1912 (EEP 6.3.0) Release Notes on page 6494.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR supports HBase using Hive 2.3.6 starting with MEP 6.3.0 and MapR Core 6.1.0.
- MapR does not support LLAP with Hive 2.3.6, as Apache Slider is not a MapR ecosystem component.

last-updated: Apr 11, 2022

- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- None.

Known Issues

- HIVE-655 - Failed to launch Hive WebHCat job after update. See the workaround in Troubleshooting Hive and Tez on page 3598.
- HIVE-19502 Unable to insert values into table stored by `JdbcStorageHandler`
- HIVE-19286 NPE in `MERGE` operator on MR mode
- PIG-25 – Pig 0.16 failed to use ORC Storage. Pig - Hive dependency issue – MapR Pig does not support MapR Hive ORC integration.
- HIVE-522 – "INSERT INTO" overwrites old data when the destination table is encapsulated by a backquote.

  After HQL harmonization with requirements of the SQL standard, queries with table names or database names that contain a dot (`.`) can fail. For detailed information, see Troubleshooting Hive and Tez on page 3598.

Some select queries can be converted to single FETCH task minimizing latency. Currently, the query should be single sourced not having any subquery and should not have any aggregations or distincts (which incur RS), lateral views, and joins:

- `none:` disable hive.fetch.task.conversion
- `minimal: select` star, filter on partition columns, `LIMIT` only
- `more: SELECT`, filter, `LIMIT` only (support TABLESAMPLE and virtual columns)

Important:

Hive-2.3.6 MEP-6.3.0 requires Pig-0.16 MEP-6.3.0 and will not support Pig-0.16 from old MEPs. For details, see the Pig 0.16.0-1912 Release Notes on page 6318.

Changes in Security with Default Configuration

- Added properties to default `hive-site.xml` configuration on secured cluster. See the following table:

Table

No.	Property	Value
1	`hive.server2.webui.jetty.response.headers.file`	`/opt/mapr/hive/hive-2.3/conf/headers.xml`

- Added properties to default `webhcat-site.xml` configuration on secured cluster. See the following table.

Table

No.	Property	Value
1	`templeton.jetty.response.headers.file`	`/opt/mapr/hive/hive-2.3/conf/headers.xml`

Note that the property above is added both in a Hive update (no version change) and a Hive upgrade (with version change).

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
17fe3ee	2019-11-20	MAPR-HIVE-642: Joda Time Library update for Brazil to v2.10.3.jar
af42452	2019-11-19	MAPR-HIVE-641: CLONE - old jetty version at hive lib

Resolved Issues

- None.

Hive 2.3.3 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.3.

The following release notes for the Hive 2.3.3 component are included in the MapR distribution for Apache Hadoop:

Hive 2.3.3-1904 (EEP 6.2.0, EEP 6.1.1, and EEP 6.0.2) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.3-1904.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.3.3
Release Date	April 2019
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.3-mapr-1904
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.3 works with the following MapR Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2.

Feature Support

- EEP 6.1.0 supports Hive-2.3.3 on Tez-0.9.

  For more information, see Tez 0.9.1-1904 (EEP 6.2.0, EEP 6.1.1, and EEP 6.0.2) Release Notes on page 6495.

- EEP 6.1.0 does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive.

  However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

- EEP 6.x does not support HDFS encryption in Hive tables.
- EEP 6.x does not support LLAP with Hive-2.3.3, because Apache Slider is not a MapR ecosystem component.
- Hive 2.1 and later needs to run the `schematool` command as an initialization step.

New Features

- MapR Database JSON projection pushdown.
- Metrics report file `/tmp/hive_report.json` is split: `/tmp/hiveserver2_report.json` and `/tmp/hivemetastore_report.json` for HiveServer2 and Hive Metastore, respectively.

Changes in Security with Default Configuration

- Added the following properties to the `hive-site.xml` configuration by default on a secured cluster:

Table

Property	Value
`hive.server2.metrics.file.location`	`/tmp/hiveserver2_report.json`
`hive.metastore.metrics.file.location`	`/tmp/hivemetastore_report.json`

- Removed the following property from the `hive-site.xml` configuration by default on a secured cluster:

Table

Property	Value
`hive.service.metrics.file.location`	`/tmp/hive_report.json`

API Changes

The following classes are moved from `hive-maprdb-json-handler-2.3.3-mapr-XXXX.jar` to `hive-exec-2.3.3-mapr-XXXX.jar`:

- `org.apache.hadoop.hive.maprdb.json.shims.DocumentWritable`.
- `org.apache.hadoop.hive.maprdb.json.shims.MapRDBJsonSplit`.
- `org.apache.hadoop.hive.maprdb.json.shims.MapRDBProxy`.
- `org.apache.hadoop.hive.maprdb.json.shims.RecordReaderWrapper`.
- `org.apache.hadoop.hive.maprdb.json.shims.RecordWriterWrapper`.

last-updated: Apr 11, 2022

Known Issues

- In HIVE-19502, you cannot insert values into a table stored by `JdbcStorageHandler`.
- In HIVE-19286, NPE in `MERGE` operator on MR mode.
- In Bug 32349, [6.1RC1] Simple fetch from MapR Database JSON tables does not work. Workaround: Set `hive.fetch.task.conversion=none` in the `hive-site.xml` file or in the Hive CLI.
- Some select queries can be converted to single FETCH task minimizing latency. Currently the query should be single sourced not having any sub query and should not have any aggregations or distincts (which incurs RS), lateral views and joins:
  - `none`: Disable `hive.fetch.task.conversion`
  - `minimal`: SELECT star, filter on partition columns, LIMIT only
  - `more`: SELECT, filter, LIMIT only (support TABLESAMPLE and virtual columns)
- The Hive vectorized execution feature has many bugs in Hive 2.x. It is recommended to turn off this feature at a system level and only use it for certain queries which work fine using it. You must evaluate the benefit of this feature against the potential stability issues on a case by case basis.
- Spark does not support SSL encryption for metastore when `hive.metastore.use.SSL = true` is used.
  - SPARK-533 Spark Thriftserver fails with LDAP+KERBEROS+SSL configuration.

Fixes

This release includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
4d38efc 787b53a	2019-05-17	MAPR-HIVE-499 : Most information is lost when hive log4j2 routing appender rotated logs
4a9bbca	2019-04-16	MAPR-HIVE-507 : hive.metastore.use.SSL should be set to false by default
e379881	2019-03-27	MAPR-HIVE-462: INSERT OVERWRITE LOCAL DIRECTORY fails with permission error in hive-2.3
715c0e7	2019-04-15	MAPR-HIVE-500 : CLONE - Hive timers metrics availability is not constant

Hive 2.3.3-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes
This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.3-1901.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.3.3
Release Date	February 2019
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.3.3-mapr-1901
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

ODBC/JDBC Drivers	Hive 2.3.3 works with the following MapR Hive drivers:
	• ODBC Drivers
	  • Mac OS X
	  • Linux
	  • 32-bit
	  • 64-bit
	  • Windows
	  • 32-bit
	  • 64-bit
	For additional driver information, see Connecting to HiveServer2.

Feature Support

- EEP 6.1.0 supports Hive-2.3.3 on Tez-0.9.

  For more information, see Tez 0.9.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6495.

- EEP 6.1.0 does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive.

  However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

- EEP 6.1.0 does not support HDFS encryption in Hive tables.
- EEP 6.1.0 does not support HBase with Hive-2.3.3 starting from the 6.0.0 release.
- EEP 6.0.0 does not support LLAP with Hive-2.3.3, because Apache Slider is not a MapR ecosystem component.
- Hive 2.1 and later needs to run the `schematool` command as an initialization step.

New Features

- Implemented preserving warden configuration files during package update.
- Backported FallbackHiveAuthorizerFactory in scope of CVE-2018-11777. For more information, see Fallback Hive Authorizer on page 3458.

Changes in Security with Default Configuration

- The following properties are added to the `hive-site.xml` configuration by default on a secured cluster:

```
<property>
  <name>hive.users.in.admin.role</name>
  <value>mapr</value>
</property>

<property>
  <name>hive.conf.restricted.list</name>
  <value>hive.security.authenticator.manager,
    hive.security.authorization.manager,
    hive.security.metastore.authorization.manager,
    hive.security.metastore.authenticator.manager,
    hive.users.in.admin.role,
    hive.server2.xsrf.filter.enabled,
    hive.security.authorization.enabled,
    hive.server2.authentication.ldap.baseDN,
    hive.server2.authentication.ldap.url,
    hive.server2.authentication.ldap.Domain,
    hive.server2.authentication.ldap.groupDNPattern,
    hive.server2.authentication.ldap.groupFilter,
    hive.server2.authentication.ldap.userDNPattern,
    hive.server2.authentication.ldap.userFilter,
    hive.server2.authentication.ldap.groupMembershipKey,
    hive.server2.authentication.ldap.userMembershipKey,
    hive.server2.authentication.ldap.groupClassKey,
    hive.server2.authentication.ldap.customLDAPQuery,
    hive.exec.pre.hooks,
    hive.exec.post.hooks,
    hive.exec.failure.hooks,
    hive.exec.query.redactor.hooks,
    hive.semantic.analyzer.hook,
    hive.query.lifetime.hooks,
    hive.exec.driver.run.hooks,
    hive.server2.session.hook</value>
</property>

<property>

Hive 2.3.3-1808 (EEP 6.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.3.3-1808 EEP 6.0.0.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.3.3
Release Date	September 2018
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive/tree/2.3.3-mapr-1808
GitHub Release Tag	2.3.3-mapr-1808
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- EEP 6.0.0 supports Hive-2.3.3 on Tez-0.9.

  For more information, see Tez 0.9.1-1808 (EEP 6.0.0) Release Notes on page 6496.

- EEP 6.0.0 does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive.

  However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

- EEP 6.0.0 does not support HDFS encryption in Hive tables.
- EEP 6.0.0 does not support HBase with Hive-2.3.3 starting from the 6.0.0 release.

last-updated: Apr 11, 2022

- EEP 6.0.0 does not support LLAP with Hive-2.3.3, because Apache Slider is not a MapR ecosystem component.
- Hive 2.1 and later needs to run the `schematool` command as an initialization step.

New Features

- `MERGE` operator for MapR Database JSON Tables in Tez mode

  For more information, see Understanding the MERGE Statement on page 3481.
- `hive.metastore.allow.new.db.in.existing.directory` property with default value as false

  You must set `hive.metastore.allow.new.db.in.existing.directory=true` in the `hive-site.xml` file to create a database if the directory already exists and then restart Hive Metastore and HiveServer2.

  CAUTION: You cannot set the `hive.metastore.allow.new.db.in.existing.directory` using the Hive CLI or Beeline.
- Ability to read default SSL passwords and keystore location from `/opt/mapr/conf/ssl-client.xml`

Changes in Security with Default Configuration

- The following properties are removed from the default `hive-site.xml` configuration on a secured cluster:

Property	Value
`hive.server2.webui.keystore.path`	`/opt/mapr/conf/ssl_keystore`
`hive.server2.webui.keystore.password`	`Default keystore password`

- The following property is added to the `hive-site.xml` configuration by default on a secured cluster:

Property	Value
`hive.server2.use.SSL`	`true`

- Because HiveServer2 is configured to use SSL encryption by default starting from Hive-2.3 MEP-6.0.0, you must add `ssl=true;` to a JDBC connection string when using PAM or MapR-SASL authentication.
- You can configure the JDBC connection string with SSL enabled or disabled.

  For more information, refer to Configuring JDBC Connection String with SSL Encryption Enabled or Disabled on page 3521.
- World-readable permissions enabled for Hive configuration files.

Known Issues

- In HIVE-19502, you cannot insert values into a table stored by `JdbcStorageHandler`.
- You cannot connect to a Spark Thrift Server on a Kerberos-secured cluster, because Kerberos and SSL are not compatible.

  However, you can modify the `hive.server2.use.SSL` to `false` in the `hive-site.xml` file.
- In MAPR-HIVE-302, you cannot interact with Hive tables on PostgreSQL after upgrade.

- In Bug 32349, Simple Fetch from MapR Database JSON tables does not work in the Hive 2.3 release. **Workaround**: Set `hive.fetch.task.conversion=none` in the `hive-site.xml` file or using the Hive CLI. The `hive.fetch.task.conversion` property is used for query conversion. Some select queries can be converted to a single FETCH task that minimizes the latency. Currently, the query should be single sourced and not have any subquery and also must not have any aggregations or distincts (which incurs RS - ReduceSinkOperator, requiring a MapReduce task), lateral views and joins:
  - `none`: disable hive.fetch.task.conversion
  - `minimal`: SELECT star, filter on partition columns, LIMIT only
  - `more`: SELECT, filter, LIMIT only (supports TABLESAMPLE and virtual columns)
- A non-administrative user can install hooks, which could represent a security vulnerability. See Preventing a Non-Administrative User from Installing Hooks on page 3429 for more information.
- Vectorized execution is a new Hive feature that can show performance improvements in some cases and cause stability issues with others. The Hive vectorized execution feature has many bugs in Hive 2.x. It is recommended to turn off this feature at a system level and only use it for certain queries which work fine using it. You must evaluate the benefit of this feature against the potential stability issues on a case by case basis.

Fixes

The Hive 2.3.3-1808 (EEP 6.0.0) release includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
5ea2352	2018-08-08	MAPR-HIVE-300: Hive HCat does not create a proper "client" on MapR-SASL cluster without Hive metastore

Hive 2.1.1-2009 (EEP 5.0.5) Release Notes
This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1.1-2009 in EEP 5.0.5.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.1.1
Release Date	September 2020
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.1.1-mapr-2009
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4. For more information, see Tez 0.8.4-2009 (MEP 5.0.5) Release Notes.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support HBase with Hive-2.1.1 starting from mapr-core-6.0.0.
- MapR does not support LLAP with Hive-2.1.1, as Apache Slider is not a MapR ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- None.

Changes in Security with Default Configuration

- None.

Important:

Because `hive.users.in.admin.role` and `hive.security.authorization.manager` were added to the default Hive configuration, some actions in Hive are restricted according to security best practices and CVE-2018-11777

The new class `FallbackHiveAuthorizerFactory` does the following to mitigate the above-mentioned CVE-2018-11777:

- Disallows local file location in SQL statements for all except the administrator.
- Allows `set` only selected white list parameters.
- Disallows `dfs` commands for all except the administrator.
- Disallows `ADD JAR` statements for all except the administrator.
- Disallows `COMPILE` statements for all except the administrator.
- Disallows `TRANSFORM` statements.

For more information, refer to the documentation that describes `FallbackHiveAuthorizerFactory`.

Known Issues

- None.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
f0bb560a	2020-07-30	MAPR-HIVE-782 : Failed to start Hive services due to Password file not found: jmxremote.password [non-secure cluster]
27f9c9a8	2020-05-22	MAPR-HIVE-687 : Hiveserver2 Java JMX Server Insecure Configuration Remote Code Execution Vulnerability
a640d53	2020-05-12	MAPR-HIVE-730 : Update MapR Maven repository URL to use https
3cb01c9f	2019-12-06	MAPR-HIVE-652: SQL Standard Based Authorization does not allow to create a function over HiveServer2 even to Admin user

This release by MapR also includes the following backported issues. For complete details, refer to the commit log for this project in GitHub.

Hive 2.1.1-1912 (EEP 5.0.4) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1.1-1912 for EEP 5.0.4.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.1.1
Release Date	December 2019
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.1.1-mapr-1912
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4. For more information, see Tez 0.8.4-1912 (EEP 5.0.4) Release Notes on page 6498.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support HBase with Hive-2.1.1 starting from mapr-core-6.0.0.
- MapR does not support LLAP with Hive-2.1.1, as Apache Slider is not a MapR ecosystem component.

- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- None.

Changes in Security with Default Configuration

- None.

Important:

Because `hive.users.in.admin.role` and `hive.security.authorization.manager` were added to the default Hive configuration, some actions in Hive are restricted according to security best practices and CVE-2018-11777

The new class `FallbackHiveAuthorizerFactory` does the following to mitigate the above-mentioned CVE-2018-11777:

- Disallows local file location in SQL statements for all except the administrator.
- Allows `set` only selected white list parameters.
- Disallows `dfs` commands for all except the administrator.
- Disallows `ADD JAR` statements for all except the administrator.
- Disallows `COMPILE` statements for all except the administrator.
- Disallows `TRANSFORM` statements.

For more information, see Action Restrictions with Fallback Hive Authorizer on page 3459.

Known Issues

PIG-25 – Pig 0.16 failed to use ORC Storage. Pig - Hive dependency issue – MapR Pig does not support MapR Hive ORC integration.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4. For more information, see Tez 0.8.4-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 6499.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support HBase with Hive-2.1.1 starting from mapr-core-6.0.0.
- MapR does not support LLAP with Hive-2.1.1 as Apache Slider is not a MapR ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- None.

Changes in Security with Default Configuration

- None.

Because `hive.users.in.admin.role` and `hive.security.authorization.manager` were added to default Hive configuration, some actions in Hive are restricted according to security best practices and CVE-2018-11777

The new class `FallbackHiveAuthorizerFactory` will do the following to mitigate the above-mentioned CVE-2018-11777:

- Disallow local file location in SQL statements for all except the administrator.
- Allow `set` only selected white list parameters.
- Disallow `dfs` commands for all except the administrator.
- Disallow `ADD JAR` statements for all except the administrator.
- Disallow `COMPILE` statements for all except the administrator.
- Disallow `TRANSFORM` statements.

For more information, see Action Restrictions with Fallback Hive Authorizer on page 3459.

Known Issues

- Vectorized execution is a new Hive feature that can show performance improvements in some cases and cause stability issues with others. The Hive vectorized execution feature has many bugs in Hive 2.x. It is recommended to turn off this feature at a system level and only use it for certain queries which work fine using it. You must evaluate the benefit of this feature against the potential stability issues on a case by case basis.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
274aaff 060fff6	2019-05-17	MAPR-HIVE-499 : Most information is lost when hive log4j2 routing appender rotated logs
15c7b31	2019-03-18	MAPR-HIVE-478 : Use mapr tez dependency in Hive-2.1
4da18a	2019-03-12	MAPR-HIVE-457 : Hive MR job fails with NullPointerException if we execute cleardanglingscratchdir

Resolved Issues

- None.

Hive 2.1.1-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1-1901.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.1.1
Release Date	February 2019

MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.1.1-mapr-1901
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4. For more information, see Tez 0.8.4-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 6499.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support HBase with Hive-2.1.1 starting from mapr-core-6.0.0.
- MapR does not support LLAP with Hive-2.1.1 as Apache Slider is not a MapR ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- Implemented preserving warden configuration files during package update.
- Backported `FallbackHiveAuthorizerFactory` in the scope of CVE-2018-11777.

Changes in Security with Default Configuration

- Added the following properties to the `hive-site.xml` configuration by default on a secured cluster:

Table

Property	Value
`hive.users.in.admin.role`	`mapr`
`hive.conf.restricted.list`	`hive.security.authenticator.manager`, `hive.security.authorization.manager`, `hive.users.in.admin.role`,`hive.server2.xsrf.filter.enabled`, `hive.exec.pre.hooks`,`hive.exec.post.hooks`, `hive.exec.failure.hooks`,`hive.exec.query.redactor.hooks`, `hive.semantic.analyzer.hook`,`hive.exec.driver.run.hooks`, `hive.server2.session.hook`
`hive.security.authorization.enabled`	`true`
`hive.security.authorization.manager`	`org.apache.hadoop.hive.ql.security.authorization.plugin.fallback.FallbackHiveAuthorizerFactory`

last-updated: Apr 11, 2022

Because `hive.users.in.admin.role` and `hive.security.authorization.manager` were added to default Hive configuration, some actions in Hive are restricted according to security best practices and CVE-2018-11777

The new class `FallbackHiveAuthorizerFactory` will do the following to mitigate the above-mentioned CVE-2018-11777:

- Disallow local file location in SQL statements for all except the administrator.
- Allow `set` only selected white list parameters.
- Disallow `dfs` commands for all except the administrator.
- Disallow `ADD JAR` statements for all except the administrator.
- Disallow `COMPILE` statements for all except the administrator.
- Disallow `TRANSFORM` statements.

For more information, see Action Restrictions with Fallback Hive Authorizer on page 3459.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
3209ad7	2018-08-20	MAPR-HIVE-304 : Hive configure.sh ignores .customSecure file presence
41a6f32	2018-08-21	MAPR-32194 : Hardcoded reference to hdfs in Hive
8e228c8	2018-08-20	MAPR-31529: GenericUDFNamedStruct should constant fold at compile time
e4f3809	2018-09-06	MAPR-31413: add "explain ast"
7817ec2	2018-10-01	MAPR-HIVE-294: Authorization issue while trying to obtain logs in HS2 Web UI
bb5b17d	2018-10-03	MAPR-HIVE-329 : Incorrect verification of customSecure parameter during hive configure.sh
27aec85	2018-10-04	MAPR-HIVE-311 : Set up hive.conf.restricted.list configuration for clusters with MapR SASL security in scope of secure by default
e8748f62	2018-10-08	MAPR-HIVE-331 : Refactor conftool. Use enum instead of boolean for security variable
bc5dd15	2018-10-11	MAPR-HIVE-340 : configure.sh should keep custom configs in warden.hs2/hivemeta.conf
603b40f	2018-11-12	MAPR-HIVE-379 : Warden services do not copy while running configure.sh -R after update. Cannot run Hive after update

Commit	Date (YYYY-MM-DD)	Comment
934573e	2018-11-23	MAPR-HIVE-346 : Use rename of files where it is possible instead of full copy during moving data from staging dirs
50f7d8b	2018-11-31	MAPR-HIVE-367 : Extend hive.conf.restricted.list configuration for clusters with MapR SASL security in scope of secure by default
7f14674	2018-10-16	MAPR-HIVE-385 : CVE-2018-11777: Blocking local resource access in HiveServer2
d68fc4c	2018-08-23	MAPR-HIVE-286: Error in TestVectorStringExpressions.TestVectorStringExpressions while running on Jenkins
aaa387e	2018-12-14	MAPR-HIVE-411 : ConfToolTest.restrictedListSecurityOffTest is failed in Hive-2.1
2a9b793	2018-12-14	MAPR-HIVE-378 : Hive displays NULLS instead of Decimal values in external table (MapRDb Binary)
b87873d	2018-12-18	MAPR-HIVE-413 : Remove duplicates from ConfTool Junit tests
b680056	2018-12-20	MAPR-HIVE-389 : Develop the logic for preserving custom configuration in Hive warden.conf files
f2b21ca	2018-12-24	MAPR-HIVE-414 : Hive Metastore schema upgrade fails on MS SQL Database
3001d6d	2018-12-28	MAPR-HIVE-323 : Hive Metastore failed to start on Derby DB after running fresh configure.sh -R
1f22ff5	2019-01-08	MAPR-HIVE-416: unable to apply custom security. .customSecure is ignored by Hive configure.sh
d86903a	2019-01-09	MAPR-HIVE-395 : hive.warehouse.subdir.inherit.perms and hive.optimize.insert.dest.volume don't work on CTAS query

This release by MapR also includes the following backported issues. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
78665cef	2018-08-16	HIVE-15422: HiveInputFormat::pushProjectionsAndFilters paths comparison generates huge number of objects for partitioned dataset
652ad1c	2018-08-31	HIVE-16788: ODBC call SQLForeignKeys leads to NPE if you use PK arguments rather than FK arguments

Commit	Date (YYYY-MM-DD)	Comment
3931127	2018-11-23	HIVE-20420: Provide a fallback authorizer when no other authorizer is in use
7686e68	2018-11-30	HIVE-14007. Replace hive-orc module with ORC 1.3.1
b0f8fb6	2018-12-17	HIVE-15841: Upgrade Hive to ORC 1.3.3
cda4352	2018-12-17	HIVE-17631 : upgrade orc to 1.4.1
6c7dc72	2018-12-17	HIVE-18558: Upgrade orc version to 1.4.2
5e70406	2018-12-17	HIVE-18674 : update Hive to use ORC 1.4.3
82dffa1	2018-12-17	HIVE-19465: Upgrade ORC to 1.5.0
f8b0139	2018-12-17	HIVE-19226: Extend storage-api to print timestamp values in UTC
04d746b	2018-12-17	HIVE-19669: Upgrade ORC to 1.5.1
6f31bba	2018-10-08	HIVE-18007 : Address maven warnings
f920681	2018-10-25	HIVE-18778: Needs to capture input/output entities in explain
4c176fe	2018-12-20	HIVE-17272: when hive.vectorized.execution.enabled is true, query on empty partitioned table fails with NPE

Known Issues

- Vectorized execution is a new Hive feature that can show performance improvements in some cases and cause stability issues with others. The Hive vectorized execution feature has many bugs in Hive 2.x. It is recommended to turn off this feature at a system level and only use it for certain queries which work fine using it. You must evaluate the benefit of this feature against the potential stability issues on a case by case basis.

Resolved Issues

- None.

Hive 2.1.1-1901 (EEP 3.0.5) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1-1901.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.1.1
Release Date	February 2019

MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.1.1-mapr-1901
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4. For more information, see Tez 0.8.4-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes on page 6499.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

You must evaluate the benefit of this feature against the potential stability issues on a case by case basis.

Resolved Issues

- None.

Hive 2.1.1-1808 (EEP 4.1.2 and EEP 5.0.1) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1-1808.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.1.1
Release Date	September 2018
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive/tree/2.1.1-mapr-1808
GitHub Release Tag	2.1.1-mapr-1808
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4. For more information, see Tez 0.8.4-1808 (EEP 4.1.2 and EEP 5.0.1) Release Notes on page 6500.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support HBase with Hive-2.1.1 starting from mapr-core-6.0.0.

last-updated: Apr 11, 2022

- MapR does not support LLAP with Hive-2.1.1 as Apache Slider is not a MapR ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- Added the UPDATE operator for MapR Database JSON Tables in the Tez mode. For more information, see Understanding the UPDATE Statement on page 3469 .
- Added the `hive.metastore.allow.new.db.in.existing.directory` property with the default value as `false`. Set `hive.metastore.allow.new.db.in.existing.directory=true` in the `hive-site.xml` file to create a database if the directory already exists.

  CAUTION: Do not set the `hive.metastore.allow.new.db.in.existing.directory` using the Hive CLI or Beeline because it will not take effect. To change the value, set it only in the `hive-site.xml` file and then restart HMS and HS2.

- You can configure JDBC connection string with SSL enabled or disabled. For more information, refer to Configuring JDBC Connection String with SSL Encryption Enabled or Disabled on page 3521.
- Implemented preserving configuration during package update. For more information, see Pre-Upgrade Steps for Hive on page 339.

Known Issues

- In MAPR-HIVE-302, you cannot interact with Hive tables on PostgreSQL after upgrade.
- Vectorized execution is a new Hive feature that can show performance improvements in some cases and cause stability issues with others. The Hive vectorized execution feature has many bugs in Hive 2.x. It is recommended to turn off this feature at a system level and only use it for certain queries which work fine using it. You must evaluate the benefit of this feature against the potential stability issues on a case by case basis.

Changes in Security with Default Configuration

- Added the following property to the `hive-site.xml` configuration by default on a secured cluster:

Table

Property	Value
`hive.server2.use.SSL`	`true`

- Since HiveServer2 is configured to use SSL encryption by default starting from Hive-2.3 EEP 5.0.1, add `ssl=true;` to a JDBC connection string when PAM or MAPR-SASL authentication is used.
- Added world-readable permissions (644) for the `hive-site.xml` configuration file.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
288ce1a	2018-08-13	MAPR-HIVE-301: Avoid redundant creation of HiveConf object while creating transport object for connection

Hive 2.1.1-1808 (EEP 3.0.4) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1-1808.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Hive Version	2.1.1
Release Date	September 2018
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive/tree/2.1.1-mapr-1808
GitHub Release Tag	2.1.1-mapr-1808
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4. For more information, see Tez 0.8.4-1808 (EEP 4.1.2 and EEP 5.0.1) Release Notes on page 6500.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support HBase with Hive-2.1.1 starting from mapr-core-6.0.0.

last-updated: Apr 11, 2022

- MapR does not support LLAP with Hive-2.1.1 as Apache Slider is not a MapR ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- Added the UPDATE operator for MapR Database JSON tables in Tez mode. For more information, see Understanding the UPDATE Statement on page 3469.
- Added the `hive.metastore.allow.new.db.in.existing.directory` property with the default value as `false`. Set `hive.metastore.allow.new.db.in.existing.directory=true` in the `hive-site.xml` file to create a database if the directory already exists.

  CAUTION: Do not set the `hive.metastore.allow.new.db.in.existing.directory` using the Hive CLI or Beeline because it will not take effect. To change the value, set it only in the `hive-site.xml` file and then restart Hive Metastore and HiveServer2.

- You can configure JDBC connection string with SSL enabled or disabled. For more information, refer to Configuring JDBC Connection String with SSL Encryption Enabled or Disabled on page 3521.
- Implemented preserving configuration during package update. For more information, see Pre-Upgrade Steps for Hive on page 339.

Known Issues

- MAPR-HIVE-302 - Cannot interact with Hive tables on postgresql after upgrade.
- Vectorized execution is a new Hive feature that can show performance improvements in some cases and cause stability issues with others. The Hive vectorized execution features has many bugs in Hive 2.x so it has been disabled by default. It is recommended to turn off this feature at a system level and only use it for certain queries which work fine using it. You must evaluate the benefit of this feature against the potential stability issues on a case by case basis.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
288ce1a	2018-08-13	MAPR-HIVE-301: Avoided redundant creation of HiveConf object while creating transport object for connection
287ebc2	2018-08-08	MAPR-HIVE-300: Hive HCat does not create a proper "client" on MapR-SASL cluster without Hive metastore
192353c	2018-07-25	MSEN-11 Save file with newline at the end
60dd8cd	2018-07-10	MAPR-HIVE-272: HiveMapRDBJsonOutputFormat class must implement HiveOutputFormat interface
faad098	2018-06-25	MAPR-31641: Hive deletes failed queries with invalid table alias or column reference

Commit	Date (YYYY-MM-DD)	Comment
977818f	2018-06-27	MAPR-31803 : Fix for Bug 30031 results in users not being able to create databases on existing location
603e327	2018-06-25	MAPR-HIVE-257: Insert overwrite from empty table do not overwrite data (only on Tez)
97ca25d	2018-06-01	MAPR-HIVE-223: NPE during CREATE ROLE using SQL Standard Based Hive Authorization
85e38e8	2018-05-24	MAPR-31380 HeartBeat thread uses cancelled delegation token while connecting to meta
64d6523	2018-05-21	MAPR-HIVE-228 : Throw an exception while trying to update maprdb.column.id column
2c3c929	2018-04-20	MAPR-31175: hive.exec.tmp.maprfsvolume should be false on Tez mode
ea822ac	2018-04-23	MAPR-HIVE-194: Hive-2.3 and Hive-2.1, JSON artifacts are not updated
346c8cb	2018-04-12	MAPR-27663: PidFilePatternConverter does not append the pid to the log name
a9fb431	2018-04-11	MAPR-HIVE-190: Log writes in two hive.log files instead of one
e839526	2018-03-27	MAPR-HIVE-174 : Implement UPDATE syntax for MapR Database JSON documents
f0eba10	2018-03-21	MAPR-30940: Hive job fails by AccessControlException against files on the NM local disk
4284798	2018-04-11	MAPR-30895: Tez jobs are shown as KILLED in RM UI
968bfa7	2018-04-02	MAPR-HIVE-189 : Set world-readable permissions for hive conf files

This release by MapR also includes the following backported issues. For complete details, refer to the commit log for this project in GitHub.

Hive 2.1.1-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1-1803 EEP 4.1.1 and EEP 5.0.0.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

Hive Version	2.1.1
Release Date	March 2018
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	2.1.1-mapr-1803
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4. For more information, see Tez 0.8.4-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 6501.
- MapR does not support Hive on Spark, so you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

- MapR does not support HDFS encryption in Hive tables.
- MapR does not support HBase with Hive-2.1.1 starting from mapr-core-6.0.0.
- MapR does not support LLAP with Hive-2.1.1 as Apache Slider is not a MapR ecosystem component.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- Added PAM authentication support for HiveServer2 Web UI.
- Added REST API WebHCat SSL encryption support.
- Added HiveMetastore password encryption.
- Added separate files for HiveServer2 and HiveMetastore logs.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
ccf82995	2017-11-01	MAPR-29528: Cannot change hive.exec.scratchdir at runtime.
15ce7e3f	2017-10-26	MAPR-HIVE-103: Verify flag before disable logging in ECO configure.sh.
25a6248	2017-11-06	MAPR-HIVE-107: Set 777 permission to /user/hive/warehouse because of impersonation enabled by default.
88f00ba	2017-11-10	MAPR-29571: Maprcli command start up more than one HiveMetastore process on Suse.
9b0f52f8	2017-11-17	MAPR-23955: Running configure.sh -R changes permissions of hive logs.
2da240d0	2017-11-15	MAPR-29591: Flooding of WARNING: org.apache.parquet.CorruptStatistics: Ignoring statistics because created_by could not be parsed' in application logs.
57742b60	2017-11-15	MAPR-29743: [HIVE-2.1] Some messages are missed in hive.log if HiveServer2 and HiveMetastore share in log4j config.
484eba4	2017-11-24	MAPR-30116: Create sub-folder structure if hive.exec.scratchdir is changed in runtime.
cf2eb327	2017-12-06	MAPR-30201: Cannot start Hive CLI in embedded mode after running configure.sh -R after fresh installation.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
620c897	2017-12-07	MAPR-HIVE-118: Init metastore Uri if Derby DB is used by default and metastore is installed.
60e2cbd4	2017-11-14	MAPR-29712: UpdateInputAccessTimeHook fails for non-current database.
72108e7	2017-12-14	MAPR-30224: Cannot create /user/hive/warehouse using Hive configure.sh on fresh cluster.
4004495c	2017-12-13	MAPR-30248 WebHcat logs does not work on hive-2.1.
1ac82db7	2017-12-18	MAPR-30045: [Hive-2.1] Hive WebHcat DLL does not work, Hive Job issue.
4ffe2c8	2017-12-20	MAPR-30310 Configure.sh cannot copy WebHcat required lib into hadoop common due to cannot find hadoop_version variable.
414ec0e41	2017-12-21	MAPR-HIVE-139: Remove hardcoded password property removing from installer hive-site.xml and implement logic for it in Hive.
d059322	2018-01-12	MAPR-HIVE-142 Add catch block in configure.sh WebHCat script. Warning trying to create link when the link is already created.
b63f1291	2018-01-22	MAPR-30556: Incorrect work with MapR Database JSON tables.
76d5a36d	2018-01-22	MAPR-HIVE-140: HiveServer2 Web UI remains unsecured in 6.0 secured by default clusters.
ee119950	2018-01-26	MAPR-HIVE-147: Configure PAM + SSL for HS2 web UI on MAPR SASL cluster using configure.sh script.
4c529b1	2018-02-01	MAPR-30631: Kryo exception when deserializing HiveNullValueSequenceFileOutputFormat.
b16765c4	2018-02-07	MAPR-30719: Hive configure.sh overwrites custom hive.metastore.uris property for the first run.
235dd03	2018-01-19	MAPR-HIVE-111: Review file permissions for Hive.
19700c6	2018-02-15	MAPR-HIVE-143: REST API-WebHCat missing SSL support.
64021d7	2018-02-16	MAPR-HIVE-158: Configure REST-API WebHCat with SSL on MAPR SASL cluster using configure.sh script.
4a78363a	2018-02-19	MAPR-HIVE-146: Wrong owner of hiveversion file after hive configure.sh executed.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
d31e666e	2018-02-21	MAPR-30738: Running configure.sh -R changes group/owner of hive logs.

102ab8b3	2018-01-22	HIVE-18127: Do not strip '--' comments from shell commands issued from the CLIDriver.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
2fec4cea	2018-02-05	HIVE-17731: Add a backward compat option for external users to HIVE-11985.

Known Issues and Limitations

- The hive-site.xml file permissions is 640.
- For accessing and using Hive, administrators have the ability to manage permissions for "Other" users. There are at least two available options on how to enable the using of hive-site.xml:
  1. Add users who want to work with Hive to a mapr group.
  2. Set permission to 644 to make it world-readable.

Hive 2.1.1-1803 (EEP 3.0.3) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1-1803.

Hive 2.1.1-1710 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1-1710.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

Hive Version	2.1

last-updated: Apr 11, 2022

Release Date	November 2017
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/hive/tree/2.1.1-mapr-1710
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/, and select your EEP and OS to view the list of package names.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4.
- MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support Hbase-0.9X with Hive-2.1.1. Only Hbase-1.X is compatible with Hive-2.1.1.
- MapR does not support LLAP with Hive-2.1.1 since Apache Slider is not in MapR ecosystem.
- Starting from Hive 2.1, Hive needs to run the `schematool` command as an initialization step.

New Features

- Includes Hive support for MapR Database JSON tables.
- Includes MapR-SASL as default security for HiveServer 2 and Hive Metastore on secure cluster.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
7ea39f4	2017-10-25	MAPR-HIVE-104: The issue that caused TableClosedException when performing an operation on a closed table is now fixed.
ace4158	2017-09-19	MAPR-HIVE-70: The issue that caused TableClosedException when performing an operation on a closed table is now fixed.
e7314ca	2017-09-12	MAPR-29056: The issue that caused an exception when inserting data into table on AWS is now fixed.
2b313da	2017-09-11	MAPR-HIVE-21: Hive now includes support for MapR Database JSON tables from Hive. For more information, see Connecting Using Hive MapR Database JSON Connector on page 3466.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
f8f543c	2017-09-05	MAPR-28898: The issue that caused 'multiple SLF4J bindings' warnings is now fixed.
59ef497	2017-05-30	MAPR-HIVE-3: Hive is now secured by default. For more information, see Hive Security on page 3427.
d7f2dd1	2017-08-29	MAPR-HIVE-41: The issue that caused warnings on CentOS when trying to uninstall already removed Hbase JARs is now fixed.
6adf28d	2017-08-28	MAPR-28881: The `hive-site.xml` file now contains only needed properties because all unnecessary properties have been removed.
0133468	2017-07-21	MAPR-HIVE-42: The issue that caused HiveServer2 to not stop, but continue running when the cluster was shutdown (from the UI) is now fixed.
8a01d62	2017-08-24	MAPR-27403: Hive now uses Joda-time version 2.9.9 because some functionality were breaking in Joda-time version below 2.8.0.
0cca11a	2017-08-14	MAPR-28428: The issue that caused incorrect result for Hive join query with COALESCE in WHERE condition is now fixed.

This release by MapR also includes the following backported issues. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
2753757	2017-04-19	HIVE-16473: The issue that caused Hive-on-Tez to fail to write to an HBase table is now fixed.
60a5918	2017-09-26	HIVE-10378: The issue that caused Hive Update statement set keyword to work with lower case and not uppercase is now fixed. If incorrect column name is specified in the set clause, a warning is now returned.
51ed0ed	2016-11-15	HIVE-15208: The query string is now HTML encoded for Web UI.
f896f7d	2016-03-30	HIVE-13380: The decimal now has lower precedence than double in type hierarchy.
70af868	2016-07-22	HIVE-14251: Hive will now only perform implicit conversion within each type of group including string group, number group, or date group, and not across groups. So, in order to union a string type with a date type, an explicit cast from string to date or from date to string is needed.

Commit	Date (YYYY-MM-DD)	Comment
f9517f0	2017-09-06	HIVE-12274: The width of metastore text columns for general configuration storage has now been increased.
4c8bfb3	2017-08-17	HIVE-14564: The issue that caused an exception when SelectOperator did column pruning is now fixed.

Hive 2.1.1-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hive 2.1-1703.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

Hive Version	2.1
Release Date	August 2017
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/hive/tree/2.1.1-mapr-1707
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in this Release

No new features in this release.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
6044467	2017-07-12	MAPR-28346: The issue that caused permission related errors when Hive CLI was executed by a user other than the mapr user is now fixed.
d16c24d	2017-07-07	MAPR-28251: The issue that caused errors while inserting data into partitioned table on Kerberos is now fixed.
0168f6c	2017-06-20	MAPR-27941: The issue that caused Hive on Tez mode to not launch when `hive.aux.jars.path` was set is now fixed.
9ffd14d	2017-06-19	MAPR-27477: The issue that caused an exception from MapR filesystem when `hive.warehouse.subdir.inherit.perms` was set to `true` and user, who was not a member of parent owner group, was creating the DB on Hive is now fixed.

Commit	Date (YYYY-MM-DD)	Comment
b6e34d6	2017-06-14	MAPR-27799: The issue that caused Hive `DROP DATABASE` query to throw exceptions in the logs is now fixed.
78cb4a6	2017-06-13	MAPR-27646: The issue that caused Hive to duplicate column comments while passing information about partitions to Partition object FieldSchema object is now fixed.
271f527	2017-06-08	MAPR-27613: The issue that caused an exception when querying table using HiveServer2 is now fixed.
31940a3	2017-05-24	MAPR-27072: The issue that caused RowContainer.tmp to be written to the local filesystem and not the local volume is now fixed.
0eb653e	2017-06-01	MAPR-22115: The issue that caused Hive to prompt for username and password when using MapR SASL and Kerberos for authentication is now fixed.
6aad8e3	2017-05-24	MAPR-27033: The issue that caused Datanucleus MSSQLServerAdapter to generate incorrect syntax for OFFSET-FETCH clause when working with MS SQL SERVER that is greater than or equal to 2012 is now fixed.
e44cf88	2017-05-25	MAPR-27427: The issue that caused Hive parser to ignore comments when the line started with two dashes (`--`) is now fixed.
a894d68	2017-05-15	MAPR-27308: The issue that caused some queries with multiple inserts to fail in Hive 2.1 is now fixed.
2136184	2017-05-18	MAPR-27175: The issue that caused write-permission error when users from group different from table owner tried to write to table is now fixed. With this fix, the default configuration for log destination has been changed to use the home directory allowing each user to have separate log file.
7abb218	2017-05-26	MAPR-27483: The mismatch in hive and hbase in the result returned when counting number of records when there were NULL fields is now fixed by a new property, `hive.read.all.hbase.column`, which when set to: • `true` will allow Hive to read all columns from HBase table. • `false` may cause Hive to ignore null fields when counting number of records.

Commit	Date (YYYY-MM-DD)	Comment
6f824be	2017-05-19	MAPR-27234: The issue that caused Hive on Tez queries to MapR Database to fail is now fixed.
b016f63	2017-04-20	MAPR-HIVE-10: HiveServer2 PAM configuration is now consistent with MapR PAM configuration.
d521948	2017-04-20	MAPR-HIVE-23: The issue that cause `hive.warehouse.subdir.inherit.perms` property to not work with CTAS query is now fixed.
87dc95d	2017-04-10	MAPR-23637: The issue that caused Hive Server Dynamic Service Discovery to not work in secure MapR SASL cluster is now fixed.
ea5c811	2017-03-29	MAPR-26678: Hive now includes `hplsql-site.xml` file for HPL/SQL.
944eafb	2017-03-30	MAPR-HIVE-6: Incorrect implementation of HiveServer2 Authentication is now fixed.

This release by MapR includes the following backported issues. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
9ffd14d	2017-07-19	HIVE-11166: The issue that caused an exception when executing an insert into SQL statement on a HBase table with HBaseStorageHandler in HDBCServer of Spark is now fixed.
67d3b3c	2017-05-25	HIVE-15627: The `hive.vectorized.adaptor.usage.mode` will now vectorize all UDFs and not just those in supportedGenericUDFs.
2874bed	2017-05-24	HIVE-15361: The issue that caused INSERT dynamic partition on S3 to fail with a MoveTask failure is now fixed.
901d5cf	2017-05-24	HIVE-16161: The `packaging.minimizeJar` is now disabled for JDBC build to allow the standalone JDBC jar to have the necessary classes.
e6eff5d	2017-05-24	HIVE-16160: The issue that caused OutOfMemoryError when GC overhead limit exceeded on HiveServer2 is now fixed.
d35291b	2017-05-24	HIVE-15866: The issue that cause LazySimpleDeserializeRead to not recognize lower case variant is now fixed.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
49e3fdb	2017-05-24	HIVE-15848: The issue that caused count or sum distinct to be incorrect when `hive.optimize.reduce deduplication` was set to `true` is now fixed.
ac2d7b4	2017-05-23	HIVE-15754: The issue that caused exchange partition event to not generate notifications in `notification_log` is now fixed.
7ab50ee	2017-05-22	HIVE-15731: The issue that caused interrupt status on thread to not return sessions to the sessionPool is now fixed.
0a28540	2017-05-22	HIVE-15684: Fixed the posBigTable used in VectorMapJoinOuterFilteredOperator to prevent IndexOutOfBoundsException error.
2f3120e	2017-05-22	HIVE-15519: The issue that caused Hive decimal type column precision to return zero even when column has precision set is now fixed.
108da0e	2017-05-22	HIVE-15493: The issue that caused wrong result for LEFT outer join in Tez using MapJoinOperator is now fixed.
9ca0a75	2017-05-22	HIVE-15488: The issue that caused native Vector MapJoin to fail when trying to serialize BigTable rows with (unreferenced) complex types is now fixed.
bb191d5	2017-05-22	HIVE-15327: The issue that caused outerjoin to produce wrong results depending on joinEmitInterval value is now fixed.
6e9051b	2017-05-22	HIVE-16043: The `TezConfiguration.TEZ_QUEUE_NAME` will now be used instead of `tez.queue.name`.
b0b3de3	2017-05-22	HIVE-15421: The exception handling in DagUtils.localizeResource is now fixed to fail early with different messages for different failures.
3bcd439	2017-05-22	HIVE-14060: The localhost is now removed from Hive splits to allow for the allocation of "*" containers instead of waiting for heartbeat.
0e663e7	2017-05-18	HIVE-15199: The issue that caused INSERT INTO data on S3 to replace the old rows with new ones is now fixed.
4a7cad3	2017-05-18	HIVE-15236: The timestamp and date comparison will now happen in timestamp instead of string.

Commit	Date (YYYY-MM-DD)	Comment
87c33cc	2017-05-18	HIVE-14804: The issue that caused HPLSQL with multiple DB connections to not switch back to Hive is now fixed.
cd962e7	2017-05-18	HIVE-14706: The issue that caused column level lineage information to be returned as null is now fixed.
0b92a71	2017-05-18	HIVE-14607: The issue that caused ORC split generation to fail with IndexOutOfBoundsException is now fixed.
f2e3348	2017-05-18	HIVE-14336: VectorUDFAdaptor can now be configured to specify whether to attempt vectorization using `hive.vectorized.adaptor.usage.mode` property (whose value can be none, chosen, all) in `HiveConf.java` file.
8d5844f	2017-05-18	HIVE-13966: The `HiveConf.java` file now contains the following new properties to prevent DbNotificationListener from losing DDL operation notifications: • `hive.metastore.transactional.event.listeners` • `hive.metastore.event.listeners`
70785cf	2017-05-18	HIVE-13403: The issue that caused StreamingAPI to create empty buckets is now fixed.
84d3193	2016-08-25	HIVE-15331: The issue that caused decimal multiplication with high precision/scale to often return NULL is now fixed.

Feature Support

- MapR supports Hive-2.1.1 on Tez-0.8.4.
- MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support Hbase-0.9X with Hive-2.1.1. Only Hbase-1.X is compatible with Hive-2.1.1.
- MapR does not support LLAP with Hive-2.1.1 since Apache Slider is not in MapR ecosystem.
- Starting from Hive 2.1, Hive needs to run the schematool command as an initialization step.

Resolved Issues

None.

Hive 2.1-1703 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 2.1.1 Release Notes or the Apache Hive homepage.

Hive Version	2.1
Release Date	April 2017
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/hive/tree/2.1.1-mapr-1703
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)
API for this Version	See Hive 2.1 API on page 3543

New in This Release

This version of Hive includes the following:

- Hive Hybrid Procedural SQL On Hadoop (HPL/SQL)

  Hive Hybrid Procedural SQL On Hadoop (HPL/SQL), which is available in Hive 2.1, is a tool that implements procedural SQL for Hive.

  HPL/SQL is an open source tool that implements procedural SQL language for Apache Hive, SparkSQL, Impala, as well as any other SQL-on-Hadoop implementation, any NoSQL, and any RDBMS.

  HPL/SQL is a hybrid and heterogeneous language that understands syntaxes and semantics of almost any existing procedural SQL dialect, and you can use with any database (for example, running existing Oracle PL/SQL code on Apache Hive and Microsoft SQL Server, or running Transact-SQL on Oracle, Cloudera Impala, or Amazon Redshift).

  

  Note: Create the `hplsql-site.xml` file to configure HPL/SQL feature. See http://www.hplsql.org/configuration for more information.

- Dynamically partitioned hash join for Tez.
- Support for aggregate push down through joins.
- DBTokenStore support to HS2 delegation token.
- Hive View Column Authorization.
- UDF substring_index

  Returns the substring from string `str` before count occurrences of the delimiter.

- Quarter UDF

  The quarter from a string / date / timestamp returned by the QUARTER(date) function may be useful for different domains like retail, finance etc.

- Support for limited integer type promotion in ORC.
- ORC file dump in JSON format

  ORC file dump uses custom format. Will be useful to dump ORC metadata in json format so that other tools can be built on top it.

- UDF `aes_encrypt` and `aes_decrypt` with AES (Advanced Encryption Standard) algorithm.

  Oracle JRE supports AES-128 out of the box AES-192 and AES-256 are supported if Cryptography Extension (JCE) Unlimited Strength Jurisdiction Policy Files are installed.

- Possibility for Hive Parser to support multi col in clause (x,y..) in ((..),..., ()).
- Support of special characters in quoted table names.
- Support for "show create database".
- Support escaping carriage return and new line for LazySimpleSerDe.
- Banker's rounding BROUND UDF

  With banker's rounding, the value is rounded to the nearest even number. Also known as "Gaussian rounding", and, in German, "mathematische Rundung".

- Command to kill an ACID transaction.

  This cleans up all state related to this transaction. The initiator of this (if still alive) will get an error trying to heartbeat/commit and will become aware that the transaction failed.

- Support for modifying the numRows and dataSize for a table/partition.
- Support vectorizing when the input format is TEXTFILE and other formats for better Map Vertex performance.
- Support for NULLS FIRST/NULLS LAST.

  The NULLS FIRST and NULLS LAST options can be used to determine whether nulls appear before or after non-null data values when the ORDER BY clause is used.

- Supports aggregate functions in over clause.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
3b83fea	2017-01-22	MAPR-26541: The variable $BASEMAPR will now be initialized by $HOME_MAPR from parent pid and if it cannot be defined, will be set to /opt/mapr by default.
6ff94bc	2017-02-28	MAPR-25720: When restarting HS2, the issue that caused Session manager to delete operation_logs folder a second time after a huge delay is now fixed.
e8a6f79	2017-02-23	MAPR-26193: The issue that caused the "Permission Denied" message when launching a hive shell is now fixed.

Commit	Date (YYYY-MM-DD)	Comment
f69e9ee	2017-02-17	MAPR-25698: The missing `log4j2.component.properties` file is now included with Hive and the `log4j2.disable.jmx` property value is set to `false` by default to fix the AccessControlExceptionImport error when importing from MySQL to Hive.
7d3b630	2017-02-07	MAPR-26169: The issue that caused the FileNotFoundException when there was no file with localPath (for example, no reduce work) is now fixed.
8d40378	2017-02-07	MAPR-25952: When starting Hive, the issue that caused the message about absence of hbase is now fixed.
7afb69c	2017-01-30	MAPR-25938: The conflicts in the versions of included Sentry libraries which caused insert queries to fail with exception is now fixed.
13f2e20	2017-01-25	MAPR-25880: The missing HiveOperation field is now included in HiveSemanticAnalyzerHookContext to allow StateStore to acces the current HiveOperation.
e1f5878	2017-01-26	MAPR-25822: The issue that caused INSERT INTO 'table' VALUES command to overwrite previously inserted data is now fixed.

Known Issues and Limitations

Known Issues

Sqoop import to Hive as parquet file fails when the entire cluster is configured to use Tez.	This is because of sqoop's incompatibility with Tez. **Workaround:** Do not configure the entire cluster to use Tez.
Percentage sampling is not supported in `org.apache.hadoop.hive.ql.io.HiveInputFormat`.	Hive uses `org.apache.hadoop.hive.ql.io.HiveInputFormat` by default and so queries like `'SELECT * FROM tablename TABLESAMPLE(20 percent);'` will not work for Hive on Tez. **Workaround:** Instead of `org.apache.hadoop.hive.ql.io.HiveInputFormat`, use `org.apache.hadoop.hive.ql.io.CombineHiveInputFormat`. To change input format, do one of the following:

- Set `hive.tez.input.format` in hive shell. For example:

```
hive> set
hive.tez.input.format=org.apache.ha
doop.hive.ql.io.CombineHiveInputFor
mat;
```

- Add `org.apache.hadoop.hive.ql.io.CombineHiveInputFormat` to `hive-site.xml` file. For example:

```
<property>
  <name>hive.tez.input.format</
name>

<value>org.apache.hadoop.hive.ql.io
.CombineHiveInputFormat</value>
</property>
```

Limitations

- MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.
- MapR does not support HDFS encryption in Hive tables.
- MapR does not support Hbase-0.9X with Hive-2.1.1. Only Hbase-1.X is compatible with Hive-2.1.1.
- MapR does not support LLAP with Hive-2.1.1 since Apache Slider is not in the MapR ecosystem
- MapR does not support Apache Knox and Apache Ranger. HiveServer2 HTTP mode is not available with X-Forwarded-Host header for authorization/audits.
- MapR does not support masking and filtering of rows/columns since Apache Ranger is not in the MapR ecosystem.

Resolved Issues

None.

Hive 1.2.1 Release Notes

The following release notes for the Hive 1.2.1 component are included in the MapR distribution for Apache Hadoop:

Hive 1.2.1-1710 Release Notes
This section provides reference information, including new features, fixes, known issues, and limitations for Hive 1.2.1-1710.

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	November 2017

last-updated: Apr 11, 2022

MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1710[1]

* Although the version number in the GitHub source URL is 1.2.0, the content in GitHub applies to MapR Hive 1.2.1

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
bca7e4a	2017-07-12	MAPR-27613: The issue that caused an exception when querying table using HiveServer2 is now fixed.
ce549fa	2017-06-27	MAPR-28068: The issue that caused record reader to throw an exception when trying to read an empty split is now fixed.
b3be3a1	2017-06-15	MAPR-27799: The issue that caused Hive "DROP DATABASE" query to throw exceptions in the logs is now fixed.
5ce6342	2017-06-01	MAPR-22115: The issue that caused Hive to prompt for username and password when using MapR SASL and Kerberos for authentication is now fixed.
12d7524	2017-05-29	MAPR-27427: The issue that caused Hive parser to ignore comments when the line started with two dashes (`--`) is now fixed.
a50cbae	2017-05-24	MAPR-27033: The issue that caused Datanucleus MSSQLServerAdapter to generate incorrect syntax for OFFSET-FETCH clause when working with MS SQL SERVER that is greater than or equal to 2012 is now fixed.
bd2e507	2017-05-24	MAPR-27483: The mismatch in hive and hbase in the result returned when counting number of records when there were NULL fields is now fixed by a new property, `hive.read.all.hbase.column`, which when set to: • `true` will allow Hive to read all columns from HBase table. • `false` may cause Hive to ignore null fields when counting number of records.
ef1fd04	2017-04-24	MAPR-HIVE-13: Added Hive Integration HCatalog Unit Tests to the process of Hive auto testing.

Commit	Date (YYYY-MM-DD)	Comment
b7cbc74	2017-05-23	MAPR-26938: The issue that caused Hive metastore JVM to encrypt more than 256M of data in one shot and crush itself as result is fixed.
d901210	2015-08-04	MAPR-26310: The issue that caused Hive CLI startup to take some time when there were large number of databases is now fixed.
8c1aab1	2017-03-23	MAPR-26388: Hive will now process the version of Spark to determine whether spark-assemby JAR is needed.
40fb934	2017-03-21	MAPR-26325: The issue that caused Hive insert record to have a different column order than the select statement column order is now fixed.
ca0a9c4	2017-03-16	MAPR-26237: The issue that caused some queries with multiple inserts to fail in Hive 1.2 is now fixed.
e5570c1	2017-03-13	MAPR-26406: Hive 1.2 did not work in classic mode because `xercesImpl-2.9.1.jar` was not in the Hive classpath. This is now fixed.
4a5ef75	2017-03-13	MAPR-26138: The outdated `commons-lang3` in Hive was breaking Spark. This is now fixed.
195ec67	2017-03-09	MAPR-26337: The issue that caused exceptions while using Hive delegation tokens is now fixed.
5527271	2017-03-07	MAPR-26371: Some tests were working incorrectly because of missing `mapr.login.conf` file. This is now fixed.

This release by MapR includes the following backported issues. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
2692767	2017-05-31	HIVE-12790: The Metastore connection was leaking in HiveServer2 as a result of multiple open connections. This is now fixed.
c0654ff	2015-10-16	HIVE-12200: The issue that caused INSERT INTO table using a select statement without a FROM clause to fail is now fixed.
98be5eb	2017-04-26	HIVE-13510: The issue that caused dynamic partitioning to fail when remote metastore was being used is now fixed.
a4fe01f	2017-03-22	HIVE-12988: Includes immprovements to dynamic partition loading.

Commit	Date (YYYY-MM-DD)	Comment
fa0e50e	2017-03-21	HIVE-12908: Includes immprovements to dynamic partition loading.
df7488e	2017-03-20	HIVE-12907: Includes immprovements to dynamic partition loading.
028dde3	2017-03-20	HIVE-12897: Includes immprovements to dynamic partition loading.
966f2ae	2015-07-02	HIVE-11157: The issue that caused `Hive.get(HiveConf)` to return the same Hive object to different user sessions is now fixed.
0503550	2017-03-27	HIVE-13954: Parquet logs will now go to STDERR (similar to Hive) instead of STDOUT (which Hive uses for query output only).
3166549	2017-04-03	HIVE-15331: The issue that caused decimal multiplication with high precision/scale to often return NULL is now fixed.

Hive 1.2.1-1703 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	April 2017
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1703*
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

* Although the version number in the GitHub source URL is 1.2.0, the content in GitHub applies to MapR Hive 1.2.1

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
8552714	2017-03-03	MAPR-26326: The static variable didRegisterAllFuncs was used in static block before it was initialized, which returned a NPE. This is now fixed.
7f25cad	2017-02-13	MAPR-26108: The issue that caused Hive 1.2 to fail after installation and service restart is now fixed.
a09b18d	2017-02-08	MAPR-26059: The incorrect import in Hive junit tests is now fixed.
fe4d980	2017-02-08	MAPR-25227: Backported Apache Hive JUnit tests to Hive 1.2.
0628470	2017-01-25	MAPR-25845: Set scope is now 'provided' for Avro JAR files in Hive.

This release by MapR includes the following backported issues. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
ee73def	2016-07-15	HIVE-14004: The issue that caused minor compaction to return ArrayIndexOutOfBoundsException is now fixed.
c7632c6	2016-03-09	HIVE-13216: When opening a malformed ORC file, the issue with ORC Reader leaving file open until GC is now fixed.
84540a1	2015-07-02	HIVE-11102: The issue that caused ORC reader to not correctly estimate the size of ACID data files is now fixed.
f2ad544	2015-08-18	HIVE-11429: The default JDBC result set fetch size (# rows it fetches in one RPC call) has been increased to 1000 (from 50).
b7efd1a	2015-10-14	HIVE-11499: Datanucleus will no longer cache classloaders and cause UDFs to permgen leaks.
7a84fd2	2015-11-13	HIVE-11718: Hive JDBC ResultSet.setFetchSize(0) will now return the fetch size.
af87c41	2015-10-20	HIVE-11721: The issue that caused non-ascii characters to not work is now fixed.
0c99222	2015-10-23	HIVE-11901: Hive StorageBasedAuthorizationProvider will no longer require write permission on table for SELECT statements.
383e162	2015-09-26	HIVE-11950: WebHCat status file will now show UTF8 characters.

Commit	Date (YYYY-MM-DD)	Comment
335a188	2015-09-28	HIVE-11977: The issue that caused Hive queries on the table to fail when there was a zero length file with an external avro table in the top level directory is now fixed.
1eac0eb	2015-12-01	HIVE-12182: The ALTER TABLE PARTITION COLUMN command will no longer ignore partition column comments.
ba7a7f8	2015-11-12	HIVE-12365: The issue that caused resource paths, which were removed externally, to be sent to cluster as empty strings resulting in query failures is now fixed.
09c0a0e	2015-12-03	HIVE-12444: The issue that caused Global Limit optimization on ACID table (without base directory) to throw exception is now fixed.
09738e8	2015-12-04	HIVE-12505: The issue that caused insert overwrite command in same encrypted zone to fail to remove some existing files (resulting in incorrect results) is now fixed.
fb91540	2016-01-11	HIVE-12660: The issue that caused HS2 memory leak when used with .hiverc file is now fixed.
109b049	2016-01-05	HIVE-12664: The issue that caused the optimization check for reduce deduplication to only check the first child node for join (resulting in an exception) is now fixed.
1240255	2016-01-19	HIVE-12682: The issue that caused reducers in dynamic partitioning job to spend a lot of time running hadoop.conf.Configuration.getOverlay is now fixed.
a4de686	2016-03-10	HIVE-13144: The issue that caused HS2 to leak ZK ACL objects when the curator retried to create the persistent ephemeral node, which was deleted from ZK, is now fixed.
6d505ae	2016-02-26	HIVE-13160: When HMS was not ready, the issue that caused HS2 to not load UDFs on startup is now fixed.
f0cb6ee	2016-05-27	HIVE-13561: The issue that caused HiveServer2 to leak ClassLoaders when adding a JAR file is now fixed.
b824995	2016-07-13	HIVE-14210: ExecDriver will now call: • SSLFactory truststore reloader threads leaking in HiveServer2 • jobclient.close() function to trigger the clean up of resources after the submitted job completes.

Commit	Date (YYYY-MM-DD)	Comment
7263210	2016-07-21	HIVE-14282: The issue that caused HCatLoader ToDate() function to throw exception when filtering hive partition table by column of DATE datatype is now fixed.
f64f098	2016-07-28	HIVE-14349: UDFLike LIKE -> Regex conversion will now anchor the regexes making the vectorized LIKE use `matches()`.
75292a5	2016-11-01	HIVE-15099: The issue that caused `PTFOperator.PTFInvocation` to throw a NPE when the inputPart was not properly reset is now fixed.
f5ae95d	2016-12-13	HIVE-13452: StatsOptimizer will not return any rows on empty table with group by.
a7b6ab5	2016-11-19	HIVE-15247: The purge option for drop table will now be passed to storage handlers to give the storage handler more control on how to handle drop table.
71f90d7	2016-08-10	HIVE-14436: The Hive query run with mapReduce engine with `hive.optimize.skewjoin` set to `true` will no longer fail with an exception.
8f113da	2016-08-10	HIVE-13754: The issue that caused users reference count to go into negative values preventing tearDownIfUnused from closing the client connection when called and resulting in resource leak in HiveClientCache is now fixed.
7ff1638	2016-09-03	HIVE-10809: The issue that caused HCat FileOutputCommitterContainer to leave behind empty _SCRATCH directories when static partition was added through HCatStorer or HCatWriter is now fixed.
28140c9	2016-06-28	HIVE-14113: The issue that caused create function to fail, but show function to show the failed create function in the function list is now fixed.
9676bb0	2015-07-08	HIVE-11201: The issue that caused HCatalog to ignore user specified avro schema in the table definition, but generate its own avro based on Hive metastore is now fixed.
73736a4	2015-11-20	HIVE-12450: The issue that caused OrcFileMergeOperator to not use correct compression buffer size, but the default 256KB that the output file honored, is now fixed.

Commit	Date (YYYY-MM-DD)	Comment
9844138	2016-02-18	HIVE-13021: The issue that caused GenericUDAFEvaluator.isEstimable(agg) to always returns false is now fixed.

Hive 1.2.1-1611 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	December 9, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1611*
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

* Although the version number in the GitHub source URL is 1.2.0, the content in GitHub applies to MapR Hive 1.2.1

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
0dfe83b	2016-11-09	HIVE-12354: The issue that caused MapJoin with double keys to be slow on MR is now fixed.
ee401749	2016-11-07	HIVE-13632: The issue that caused Hive to fail when inserting empty array into parquet table is now fixed.
c636f923f	2016-11-03	MAPR-25105: The issue that caused data file and table directory to not inherit permissions from the parent directory is now fixed.
9405aa6	2016-10-26	MAPR-25039: The issue that caused load data to fail if the path from where data is loaded has asterisk is now fixed.
23a2e53	2016-10-10	MAPR-24542: The value for `datanucleus.schema.autoCreateAll` property is now `true` by default.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
14e848a	2016-10-07	HIVE-10956: The issue that caused HS2 to leak HMS connections is now fixed.
b90cb52	2016-09-30	MAPR-24696: The issue that caused Hive partition directory URI to be double-encoded is now fixed.
0779f7e	2016-09-22	HIVE-10685: The issue that caused `ALTER TABLE orders CONCATENATE` operation to create duplicate rows in table is now fixed.
eba492c	2016-09-20	MAPR-24425: The issue that caused `msck repair` command on partitioned table to return "Partitions not in metastore" error is now fixed.

Hive 1.2.1-1609 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	September 30, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1609*
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-1.2.201609261225-1.noarch.rpm • mapr-hive_1.2.201609261226_all.deb • mapr-hivemetastore-1.2.201609261225-1.noarch.rpm • mapr-hivemetastore_1.2.201609261226_all.deb • mapr-hiveserver2-1.2.201609261225-1.noarch.rpm • mapr-hiveserver2_1.2.201609261226_all.deb • mapr-hivewebhcat-1.2.201609261225-1.noarch.rpm • mapr-hivewebhcat_1.2.201609261226_all.deb

* Although the version number in the GitHub source URL is 1.2.0, the content in GitHub applies to MapR Hive 1.2.1

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
093203c4	2016-08-29	HIVE-5277: The issue causing HBaseStorageHandler to skip first rows with null values when only row key is selected is now fixed.

Hive 1.2.1-1608 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	September 1, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1608
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-1.2.201608311134-1.noarch.rpm • mapr-hive_1.2.201608311134_all.deb • mapr-hivemetastore-1.2.201608311134-1.noarch.rpm • mapr-hivemetastore_1.2.201608311134_all.deb • mapr-hiveserver2-1.2.201608311134-1.noarch.rpm • mapr-hiveserver2_1.2.201608311134_all.deb • mapr-hivewebhcat-1.2.201608311134-1.noarch.rpm • mapr-hivewebhcat_1.2.201608311134_all.deb

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
1fbbaa04	2016-08-16	HIVE-13120: The issue causing the ORC split generation in HiveServer2 to return permission errors is now fixed.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
ee26f8a0	2016-08-15	MAPR-24242: The incorrect timestamp format in the partition name when table was partitioned by timestamp and LOAD DATA was used is now fixed.
04034276	2016-08-12	MAPR-24248: The `isNonLocalScratchDirUsed` in `getLocalScratchDir()` method is now set to `false` to allow operations with scratch directories to use the local filesystem instead of the MapR filesystem.
cabc37a4f	2016-08-10	HIVE-11617: The issue causing explain job to (sometimes) not finish or be very slow when there are many lateral views is now fixed.
82de9cc3	2016-08-01	MAPR-24105: The issue causing Spark engine for Hive to fail with an execution error is now fixed.
5115eef0	2016-05-04	HIVE-13677: When folding CASE expressions, Hive no longer throws exception during Serialization.
79dc6054	2015-09-14	HIVE-11817: A query with OVER statement will no longer fail when table contains null values.

Hive 1.2.1-1607 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	July 29, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix and Ecosystem Support Matrix
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1607
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-1.2.201607240717-1.noarch.rpm • mapr-hive_1.2.201607240717_all.deb • mapr-hivemetastore-1.2.201607240717-1.noarch.rpm • mapr-hivemetastore_1.2.201607240717_all.deb • mapr-hiveserver2-1.2.201607240717-1.noarch.rpm • mapr-hiveserver2_1.2.201607240717_all.deb • mapr-hivewebhcat-1.2.201607240717-1.noarch.rpm • mapr-hivewebhcat_1.2.201607240717_all.deb

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
12e7cce	2016-07-22	MAPR- 24026/HIVE-11817: A query with OVER statement will no longer fail when table contains null values.
b77136e	2016-07-13	MAPR-23970: When running a query, checks are now included to determine if current filesystem is non-local before running getScratchDir() method, which assumes the filesystem is not local.
c1175423	2016-06-06	MAPR-23560: Symbolic links to the PID files to track memory utilization of HiveServer2 and HiveMetaStore processes are now available in `/opt/mapr/pid`.
70a5bcc	2016-06-02	HIVE-11498: HIVE authorization will skip (and no longer check) permissions for dummy entities.
0304149f	2016-05-20	MAPR-22357: The issue causing -1 to be returned is now fixed: • The property, `hive.rpc.query.plan` in `hive-site.xml` file, can be set to `true` to specify whether to send the query plan via local resource or RPC. • The parameter, `hive.kryo.buffer.size` in `hive-site.xml` file, can be used to control Kryo buffer size. The default value for Kryo buffer size is now 10 * 4096.

The following issues were backported from Apache Hive-1.2.2. You may also refer to the Apache Hive 1.2.2 Release Notes.

Commit	Date (YYYY-MM-DD)	Comment
c6d08f102b	2016-05-19	HIVE-9013: When auth is enabled, the `set` command will no longer expose the DB metastore password.
0544a99b2	2016-05-19	HOVE-10308: The issue that caused the `java.lang.IllegalArgumentException` when vectorization was executed has been fixed.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
161b711c	2016-05-18	HIVE-11151: The calcite rule will no longer add `is not null` filters on constants.
923163f9	2016-05-18	HIVE-11171: The issue that caused the join reordering algorithm to introduce projects between joints, which did not trigger the multijoin optimization in SemanticAnalyzer, has been fixed.
f96969f8c	2016-05-18	HIVE-11216: The issue that caused UDF GenericUDFMapKeys to throw NPE when a null map value was passed in has been fixed.
a5889f7	2016-05-18	HIVE-11224: The issue that caused AggregateStatsCache to trigger `java.util.ConcurrentModificationException` has been fixed.
90cd1f42ad	2016-05-18	HIVE-11301: The issue in thrift metastore that resulted in disconnecting when getting stats has been fixed.
c6a8f75fc1	2016-05-18	HIUVE-11344: The issue that made PartInfo object unusable if `HCatSplit.write` was called has been fixed.
a8ed673a	2016-05-18	HIVE-11470: The issue that caused DynamicPartFileRecordWriterContainer to throw a NullPointerException when fetching a local file-writer instance with null part-keys has been fixed.
90a3d4c3c	2016-05-18	HIVE11606: The issue that caused bucket map joins to produce incorrect results in case of container reuse has been fixed.
08b07ca2d	2016-05-18	HIVE-11745: The issue that caused alter table exchange partition with multiple partitions to not work has been fixed.
1efbb81f9c	2016-05-18	HOVE-12021: The issue that caused HivePreFilteringRule to introduce incorrect common operands has been fixed.
87f2d1b0	2016-05-18	HIVE-12083: The issue that caused an empty AggrStats object to be returned if partNames or colNames were empty has been fixed.
135871325	2016-05-18	HIVE-12344: The issue that caused projectNonColummnEquiConditions method in HiveCalciteUtil to assign the wrong type for newly created conditions has been fixed.

Commit	Date (YYYY-MM-DD)	Comment
6bfa219	2016-05-18	HIVE-12345: The issue that caused hidden configuration variables to be visible through beeline when connecting to HS2 has been fixed.
d95345809	2016-05-18	HIVE-12937: The issue that caused users of DbNotificationListener to have a large number of old notification events that were not deleted has been fixed.
492afa2778	2016-05-18	HIVE-13115: The issue that caused MetaStore Direct SQL getPartitions() method to throw an exception when the column schemas for a partition were null has been fixed.
a77035ef	2016-05-18	HIVE-10996: The issue that caused multi-join inner query to produce incorrect results has been fixed.
39e4a9ea5	2016-05-18	HIVE-11172: The issue that caused vectorization to return wrong results for an aggregate query with a where clause and without a group by has been fixed.
04844ad38	2016-05-18	HIVE-11517: The issue that caused query on a Q file (that uses ORC with vectorization enabled) to produce incorrect results has been fixed.
373ba93f	2016-05-18	HIVE-11605: The issue that caused incorrect results when converting to a bucket map join has been fixed.
2336c38b6	2016-05-18	HIVE-11988: Users who do not have permission to create table in hive can no longer import data for a table.
2489ffec	2016-05-18	HIVE-12437: The issue that caused SMB join in Tez to fail when one of the tables was empty has been fixed.
bfa62787	2016-05-18	HIVE-12947: The issue that caused SMB join to fail when reconnecting, during container re-use, the (already connected) work items has been fixed.
4abf5672	2016-05-18	HIVE-12981: ThriftCLIService will no longer use `getShortName()`, which assumes a short name is always the part before "@" and "/", as it is no longer compatible.

Hive 1.2.1-1605 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	June 6, 2016

MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1605
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-1.2.201606020917-1.noarch.rpm • mapr-hive_1.2.201606020917_all.deb • mapr-hivemetastore-1.2.201606020917-1.noarch.rpm • mapr-hivemetastore_1.2.201606020917_all.deb • mapr-hiveserver2-1.2.201606020917-1.noarch.rpm • mapr-hiveserver2_1.2.201606020917_all.deb • mapr-hivewebhcat-1.2.201606020917-1.noarch.rpm • mapr-hivewebhcat_1.2.201606020917_all.deb

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
0304149f	2016-05-20	MAPR-22357: The buffer underflow (while performing Hive queries) caused by small Kryo buffer size is now fixed with a new parameter, `hive.kryo.buffer.size` in `hive-site.xml` file, which can be used to control Kryo buffer size. The default value for Kryo buffer size is now `10 * 4096`.
b3e811b	2016-05-12	MAPR-23302: ListBucketing tables with uppercase skew values can now be created.
5673a07	2016-05-11	MAPR-23221: The mismatch between the MapR native library included in the standalone Hive JDBC jar file and the native library in MapR is now fixed. The standalone Hive JDBC jar file no longer inlcudes MapR native library.
130887f	2016-05-10	MAPR-22222: The delay as a result of a single reduce task in the last stage is now fixed with a new parameter, `hive.groupby.limit.extrastep`, which can be used to enable or disable a new MR job for sorting the final output.
b48f8e6	2016-05-10	MAPR-23264: The issue with access to Hive 1.2 table data is now fixed.

Commit	Date (YYYY-MM-DD)	Comment
0b3fa65	2016-04-28	MAPR-23220: The issue that caused IndexOutOfBoundsException when running a query in Hive 1.2 is now fixed.
7976893	2016-04-28	MAPR-23029: Changed the Primary Key for table PARTITION_STATS_V2 from varchar(4000) to varchar(3072) as MySQL does not support varchar(4000) as Primary Key.
fa8e936	2016-04-26	HIVE-12469: The commons-collections 3.2.1 library that allowed invocation of arbitrary code is now replaced with commons-collections 3.2.2 to resolve this issue.
703c2f3	2016-04-25	MAPR-23153: Hive will no longer create scratch dir with incorrect permissions when a CTAS query is run. If CTAS query is run, now, the table root directory with correct permissions from `fs.permissions.umask-mode` will be created first and then the scratch dir with permissions from `hive.scrach.dir.permissions` will be created.
41a827a	2016-04-14	MAPR-23082: Beeline will no longer fail with NullPointerException when MAPR-SASL is used.
	2016-04-14	MAPR-23084: The `datanucleus.schema.autoCreateAll` property in `hive-site.xml` file is now set to `true` by default.
9f82b07	2016-04-01	MAPR-22994: The issue causing Hive table creation on existing HBase table to fail has been fixed.

Hive 1.2.1-1603 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform.

Hive Version	1.2.1
Release Date	April 4, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 .
Source on GitHub	https://github.com/mapr/hive/tree/1.2.1-mapr-1603
Maven Artifacts	https://repository.mapr.com/maven/

last-updated: Apr 11, 2022

Package Names	The following packages are associated with this release: • mapr-hive-1.2.201604040723-1.noarch.rpm • mapr_hive_1.2.201604040723_all.deb • mapr-hivemetastore-1.2.201604040723-1.noarch.rpm • mapr_hivemetastore_1.2.201604040723_all.deb • mapr-hiveserver2-1.2.201604040723-1.noarch.rpm • mapr_hiveserver2_1.2.201604040723_all.deb • mapr-hivewebhcat-1.2.201604040723-1.noarch.rpm • mapr_hivewebhcat_1.2.201604040723_all.deb

New in this Release

This release of Apache Hive includes the following behavior change that is specific to MapR:

New default value for `datanucleus.schema.autoCreateAll` property	The default value for the `datanucleus.schema.autoCreateAll` property was change from `true` to `false` in the hive-default.xml.template file.

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
9f82b075	2016-04-01	MAPR-22994: Hive 1.2.1 no longer fails to create and query a Hive table on an existing HBase 1.1.1 table.
fab6e30	2016-03-30	MAPR-22966: Hiveserver2 no longer fails to start when it uses LDAP authentication on a secure cluster.
8bff9ae	2016-03-28	MAPR-22945: HiveServer2 no longer fails to start when PAM authentication is enabled.
ea85d79	2016-03-25	MAPR-22928: The `datanucleus.schema.autoCreateAll` property is now set to `false` by default.
b74becc	2016-03-14	MAPR-22848: Backported HIVE-11940 to improve the performance of the INSERT OVERWRITE query.
7f8a9ef	2016-02-29	MAPR-21949: Constant propagation optimizer no longer returns string values in an incorrect format.
3899330	2016-03-09	MAPR-22810: Backported HIVE-11841 so that `KeyValuesInputMerger` no longer creates huge logs.
449a587	2016-03-02	MAPR-22701: Backported HIVE-12875 to reduce the chance of an authorization vulnerability.

GitHub Commit	Date (YYYY-MM-DD)	Comment
40e2baa	2016-03-02	MAPR-22759: Hive is now able to identify MapR filesystem scheme while adding resources through CLI.
8a9a3d2	2015-03-24	MAPR-22691: Default values are now provided for HiveServer2 Kerberos principal and keytab.
517e885	2016-02-12	MAPR-20523: Queries that use any type of join between avro tables no longer fail or give incorrect results.
15c00db	2016-02-12	MAPR-22560: Backported HIVE-10021 so that "Alter index rebuild" statements no longer fail when HiveServer2 uses Sentry authorization.
763e8614	2016-01-26	MAPR-22254: Hive only invokes the open method when the plan file exists. Therefore, it no longer prints the following message to the Hive shell when the query does not have a reduce phase: "`LookupFid error No such file or directory(2)`."

Hive 1.2.1-1601 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Version	1.2.1
Release Date	February 1, 2016
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1601
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-1.2.201601281422-1.noarch.rpm • mapr-hive_1.2.201601281422_all.deb • mapr-hivemetastore-1.2.201601281422-1.noarch.rpm • mapr-hivemetastore_1.2.201601281422_all.deb • mapr-hiveserver2-1.2.201601281422-1.noarch.rpm • mapr-hiveserver2_1.2.201601281422_all.deb • mapr-hivewebhcat_1.2.201601281422_all.deb • mapr-hivewebhcat-1.2.201601281422-1.noarch.rpm

New in this Release

This release of Apache Hive includes the following behavior changes that are specific to MapR:

DataNucleus versions were updated.

The following DataNucleus versions were updated:

Component	Old Version	New Version
datanucleus-api-jdo	3.2.6	4.2.1

Component	Old Version	New Version
datanucleus-core	3.2.1.0	4.1.6
datanucleus-rdbms	3.2.9.0	4.1.7

DataNucleus properties were renamed.

The following DataNucleus properties were renamed:

Old Name	New Name
datanucleus.validateTables	datanucleus.schema.validateTable
datanucleus.validateConstraints	datanucleus.schema.validateCons
datanucleus.validateColumns	datanucleus.schema.validateColu
datanucleus.autoCreateSchema	datanucleus.schema.autoCreateAl

DataNucleus Property `datanucleus.fixedDatastore` was deleted.

Added integration with HBase 1.1.

For details on the features available in the open source version of this component, see the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
fe18d11	2016-01-12	MAPR-22108 Hive insert to HBase table no longer fails with `java.lang.RuntimeException`: `java.lang.NoSuchMethodError: org.apache.hadoop.hbase.client.Put.setDurability`
b189fa2	2015-12-07	MAPR-21228: Hive queries no longer fail with exception: Table '`hive.DELETEME1xx`' doesn't exist.
13a8406	2015-12-11	MAPR-20207: Backported HIVE-9599 to remove extra, conflicting jars from `hive-jdbc-standalone.jar`.

GitHub Commit	Date (YYYY-MM-DD)	Comment
7646ece	2015-11-19	MAPR-20263: Hive Metastore no longer incorrectly determines the authentication method when Hive jobs are created by other components such as Sqoop, Oozie, or Spark.
c4345c3	2015-11-16	MAPR-21349: The `insert overwrite` directory command no longer fails.
b817902	2015-11-06	MAPR-21315 Backported HIVE-10802 so that table join queries with a constant field in the select statement no longer throw an `IndexOutOfBoundsException`.
03d2c74	2015-11-04	MAPR-21238: Backported Hive-11502 so that map side aggregation is no longer extremely slow.

Hive 1.2.1-1510 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	November 20, 2015
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/hive/tree/1.2.0-mapr-1510
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-1.2.201511180952-1.noarch.rpm • mapr-hive_1.2.201511180952_all.deb • mapr-hivemetastore-1.2.201511180952-1.noarch.rpm • mapr-hivemetastore_1.2.201511180952_all.deb • mapr-hiveserver2-1.2.201511180952-1.noarch.rpm • mapr-hiveserver2_1.2.201511180952_all.deb • mapr-hivewebhcat-1.2.201511180952-1.noarch.rpm • mapr-hivewebhcat_1.2.201511180952_all.deb

New in this Release

This release of Apache Hive includes the following behavior change that is specific to MapR:

Flexible HiveServer2 Authentication Support

When the cluster is secure, HiveServer2 accepts both MAPR-SASL and PAM for in-bound authentication. This allows a single instance of HiveServer2 to accept

	both MapR-SASL authentication from Hue and PAM authentication from JDBC/ODBC connections.

For details on the features available in the open source version of this component, see the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub:

GitHub Commit	Date (YYY-MM-DD)	Comment
ad20274	2015-10-23	MAPR-21015: Backported HIVE-11456 so that HCatStorer honors the `mapreduce.output.basename`.
b724320	2015-10-22	MAPR-21055: The insert overwrite command no longer fails to remove old data files before it overwrites the table.
3fb70d8	2015-10-21	MAPR-21035: Hive 1.2 queries on parquet files no longer fail.
3e36752	2015-10-16	MAPR 20096: SMB Join no longer fails on Hive 1.2.
923ab18	2015-10-16	MAPR-19370: On a secure cluster, HiveServer2 now accepts both MapR-SASL and PAM authentication.
12bca74	2015-09-21	MAPR-20191: On the MapR 5.0 sandbox, the Hive classpath no longer contains newlines.
d9f47eb	2015-09-09	HIVE-11688: Backported HIVE-11688 to resolve the issue where OrcRawRecordMerger does not close the primary reader.

Hive 1.2.1-1508 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 1.2.1 changelog or the Apache Hive homepage.

Hive Version	1.2.1
Release Date	Sept 25, 2015
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	1.2.1-mapr-1508
MapR Version Compatibility	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

New in this Release

This is the initial release of Hive 1.2.1 for the MapR distribution for Hadoop. In addition to Hive 1.2.1 features, this release includes the following behavior changes and features:

- **HiveServer2 Authentication**

  On secure MapR clusters, HiveServer2 uses PAM by default.

- **WebHCat Changes**

  The warden.hcat.conf file is no longer installed with mapr-hive package. Instead, it is installed with the mapr-hivewebhcat package.

- **Cost-Based optimization**

  Cost-based optimization is enabled by default.

- **Hive ODBC Driver 2.1.8**

  For Hive 1.2.1, use Hive ODBC driver version 2.1.8 or above. This driver cannot be installed on CentOS 7.

Hive Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster and you can use SparkQL to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
bb40d76	2015-08-11	MAPR-19358: HiveServer2 and HiveMetastore no longer fail to start they are installed on MapR 5.0.
62592e8	2015-08-11	MAPR-19756: The Hive shell no longer fails to start.
d620ceb	2015-08-15	MAPR-19778: WebHCat service no longer displays a MalformedURLException in`/opt/mapr/logs/adminuiapp.log`.
e8f0545	2015-08-18	MAPR-20051: HiveMetastore no longer fails to create the tables correctly and no longer throws a lock exception when you try to run a query.
4769b27	2015-08-27	MAPR- 20197: templeton.storage.class property is now set to org.apache.hive.hcatalog.templeton.tool.HDFSStorage instead of org.apache.hcatalog.templeton.tool.HDFSStorage.
a546130	2015-08-31	MAPR-13215: On a secure cluster, hadoop.proxyuser.mapr.groups is now able to restrict the groups that can be impersonated.
2ad68d4	2015-09-01	Hadoop23Shims no longer includes HDFS encryption related code.

last-updated: Apr 11, 2022

Hive 1.0 Release Notes

The following release notes for the Hive 1.0 component are included in the MapR distribution for Apache Hadoop

Hive 1.0-1611 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform.

Version	1.0
Release Date	December 8, 2016
Source on GitHub	https://github.com/mapr/hive/tree/1.0.0-mapr-1611
MapR Version Compatibility	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	• mapr-hive-1.0.201612011449-1.noarch.rpm • mapr-hive_1.0.201612011449_all.deb • mapr-hivemetastore-1.0.201612011449-1.noarch.rpm • mapr-hivemetastore_1.0.201612011449_all.deb • mapr-hiveserver2-1.0.201612011449-1.noarch.rpm • mapr-hiveserver2_1.0.201612011449_all.deb • mapr-hivewebhcat-1.0.201612011449-1.noarch.rpm • mapr-hivewebhcat_1.0.201612011449_all.deb

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
e8300c35	2016-10-05	MAPR-24696: The issue that caused Hive partition directory URI to be double-encoded is now fixed.
98957a05	2016-10-04	MAPR-24425: The issue that caused `msck repair` command on partitioned table to return "Partitions not in metastore" error is now fixed.
e54cf84fc	2016-09-09	MAPR-24508: The `insert overwrite` command will now remove old data files before it overwrites the table.

Commit	Date (YYYY-MM-DD)	Comment
462ce1b5	2016-08-26	MAPR-24380: When the `load data local inpath <path_to_file> overwrite into <table>` command is run, Hive will now process each file separately instead of copying entire folder with files in it.

Hive 1.0-1608 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform.

Version	1.0
Release Date	September 1, 2016
Source on GitHub	https://github.com/mapr/hive/tree/1.0.0-mapr-1608
MapR Version Compatibility	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	• mapr-hive-1.0.201608311152-1.noarch.rpm • mapr-hive_1.0.201608311152_all.deb • mapr-hivemetastore-1.0.201608311152-1.noarch.rpm • mapr-hivemetastore_1.0.201608311152_all.deb • mapr-hiveserver2-1.0.201608311152-1.noarch.rpm • mapr-hiveserver2_1.0.201608311152_all.deb • mapr-hivewebhcat-1.0.201608311152-1.noarch.rpm • mapr-hivewebhcat_1.0.201608311152_all.deb

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
684b09a91	2016-08-18	MAPR-24275: The issue causing a query on hive to fail with an IllegalStateException is now fixed.
4a60eb1db	2016-08-12	MAPR-24248: The `isNonLocalScratchDirUsed` in `getLocalScratchDir()` method is now set to `false` to allow operations with scratch directories to use the local filesystem instead of the MapR filesystem.
e4f49cc398	2016-08-10	HIVE-11617: The issue causing explain job to (sometimes) not finish or be very slow when there are many lateral views is now fixed.

Commit	Date (YYYY-MM-DD)	Comment
3fcf5367	2016-07-16	MAPR-23970: When running a query, checks are now included to determine if current filesystem is non-local before running `getScratchDir()` method, which assumes the filesystem is not local.
d854ef03	2015-11-03	HIVE-12206: Hive no longer throws an exception when Kryo's classloader is set without the UDF jar.

Hive 1.0-1606 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform.

Version	1.0
Release Date	July 1, 2016
Source on GitHub	https://github.com/mapr/hive/tree/1.0.0-mapr-1606
MapR Version Compatibility	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	• mapr-hive-1.0.201606271053-1.noarch.rpm • mapr-hive_1.0.201606271053_all.deb • mapr-hivemetastore-1.0.201606271053-1.noarch.rpm • mapr-hivemetastore_1.0.201606271053_all.deb • mapr-hiveserver2-1.0.201606271053-1.noarch.rpm • mapr-hiveserver2_1.0.201606271053_all.deb • mapr-hivewebhcat-1.0.201606271053-1.noarch.rpm • mapr-hivewebhcat_1.0.201606271053_all.deb

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
2e82bd5	2016-06-09	HIVE-9839: If a HiveSQLException is thrown during a query, the opHandle is cleaned up if the query is synchronous and for asynchronous queries, the opHandle is retained and passed back for reporting errors.
9f51e20	2016-06-09	HIVE-12766: The objects created by Tez/Yarn will now be freed as TezTask will now close DagClient after execution.

Commit	Date (YYYY-MM-DD)	Comment
c1b67e6	2016-06-06	MAPR-23560: Symbolic links to the PID files to track memory utilization of HiveServer2 and HiveMetaStore processes are now available in `/opt/mapr/pid`.
9678f87	2016-06-02	MAPR-23029: Changed the Primary Key for table PARTITION_STATS_V2 from varchar(4000) to varchar(3072) as MySQL does not support varchar(4000) as Primary Key.
863c1a	2016-05-18	MAPR-21786: The issue with incorrect permissions (because of the fix for MAPR-19894) resulting in “Operation not permitted” error is now fixed.
71d345f	2016-05-16	MAPR-23302: ListBucketing tables with uppercase skew values can now be created.
9f67c78	2016-04-28	MAPR-23220: The issue that caused IndexOutOfBoundsException when running a query in Hive is now fixed.

Hive 1.0-1604 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform.

Version	1.0
Release Date	May 11, 2016
Source on GitHub	https://github.com/mapr/hive/tree/1.0.0-mapr-1604
MapR Version Compatibility	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
55d0842	2016-04-27	MAPR-23141: The issue that caused UNION ALL and ORDER BY queries to fail with ArrayIndexOutOfBoundsException has been fixed.
0be26b8	2016-04-14	MAPR-23084: Added and set `datanucleus.schema.autoCreateAll` property to `true` by default in `hive-site.xml` file to create necessary schema on startup if schema does not already exist.
48a3e13	2016-03-15	MAPR-22840: SHOW TABLE EXTENDED will now show the correct lastUpdateTime of partition's filesystem.
2cd55b9	2016-03-22	MAPR-22913: Backported HIVE-9749 (MAPR-20650) to provide the option to configure whether or not the Hive Metastore version should be updated automatically.
7e8e6dc7	2016-04-08	MAPR-23004: The issue (HIVE-11351) with getting ColumnInfo using RowResolver is now fixed.
ab257c5	2016-04-12	MAPR-22930: Backported HIVE-11592 to set an upperbound on the protobuf message size.
a6bc387	2016-04-12	MAPR-23039: Changed properties to allow Primary Key for PARTITION_STATS_V2 from varchar(4000) to varchar(3072).
e06d690	2016-04-14	MAPR-23082: The issue causing Beeline to fail with java.lang.NullPointerException when MAPRSASL was used has been fixed.
a9b20b3	2016-04-21	MAPR-23153: The issue causing wrong permissions when using CTAS query (with `hive.optimize.insert.dest.volume` set to `true`) in Hive has been fixed.

Hive 1.0-1603 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform.

Hive Version	1.0
Release Date	April 4 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 .
Source on GitHub	https://github.com/mapr/hive/tree/1.0.0-mapr-1603
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	The following packages are associated with this release: • mapr-hive-1.0.201603301009-1.noarch.rpm • mapr-hive_1.0.201603301009_all.deb • mapr-hivemetastore-1.0.201603301009-1.noarch.rpm • mapr-hivemetastore_1.0.201603301009_all.deb • mapr-hiveserver2-1.0.201603301009-1.noarch.rpm • mapr-hiveserver2_1.0.201603301009_all.deb • mapr-hivewebhcat-1.0.201603301009-1.noarch.rpm • mapr-hivewebhcat_1.0.201603301009_all.deb

New in this Release

This release of Apache Hive includes the following behavior change that is specific to MapR:

New default value for `datanucleus.schema.autoCreateAll` property	The default value for the `datanucleus.schema.autoCreateAll` property was change from `true` to `false` in the hive-default.xml.template file.

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
da7ff8a	2016-03-30	MAPR-22966: Hiveserver2 no longer fails to start when it uses LDAP authentication on a secure cluster.
9937578	2016-03-28	MAPR-22945: HiveServer2 no longer fails to start when PAM authentication is enabled.
82b7a2d	2016-03-25	MAPR-22928: The `datanucleus.schema.autoCreateAll` property is now set to `false` by default.
56462ca	2016-03-09	MAPR-22810: Backported HIVE-11841 so that `KeyValuesInputMerger` no longer creates huge logs.
cbd034c	2016-03-03	MAPR-21949: Constant propagation optimizer no longer returns string values in an incorrect format.
fa75cd5	2016-03-02	MAPR-22701: Backported HIVE-12875 to reduce the chance of an authorization vulnerability.
502b02a	2016-02-12	MAPR-22560: Backported HIVE-10021 so that "Alter index rebuild" statements no longer fail when HiveServer2 uses Sentry authorization.
1f2e744	2016-02-12	MAPR-20523: Queries that use any type of join between avro tables no longer fail or give incorrect results.

GitHub Commit	Date (YYYY-MM-DD)	Comment
d3d73cc	2016-02-09	MAPR-22435: `beeline.sh` no longer includes an unnecessary "if" statement.

Hive 1.0-1601 Release Notes

Below are release notes for the Hive component included in the MapR Distribution for Apache Hadoop.

Hive Version	1.0
Release Date	February 1, 2016
MapR Version Interoperability	See the Hive and HCatalog Support Matrix and the Ecosystem Support Matrix
Source on GitHub	https://github.com/mapr/hive/tree/1.0.0-mapr-1601
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-1.0.201601281548-1.noarch.rpm • mapr-hive_1.0.201601281549_all.deb • mapr-hivemetastore-1.0.201601281548-1.noarch.rpm • mapr-hivemetastore_1.0.201601281549_all.deb • mapr-hiveserver2-1.0.201601281548-1.noarch.rpm • mapr-hiveserver2_1.0.201601281549_all.deb • mapr-hivewebhcat-1.0.201601281548-1.noarch.rpm • mapr-hivewebhcat_1.0.201601281549_all.deb

New in this Release

This release of Apache Hive includes the following behavior change that is specific to MapR:

DataNucleus versions were updated.

The following DataNucleus versions were updated:

Component	Old Version	New Version
datanucleus-api-jdo	3.2.6	4.2.1
datanucleus-core	3.2.1.0	4.1.6
datanucleus-rdbms	3.2.9	4.1.7

DataNucleus properties were renamed.

The following DataNucleus properties were renamed:

Old Name	New Name
datanucleus.validateTables	datanucleus.schema.validateTable
datanucleus.validateColumns	datanucleus.schema.validateColu
datanucleus.validateConstraints	datanucleus.schema.validateCons
datanucleus.autoCreateSchema	datanucleus.schema.autoCreateAl

DataNucleus Property datanucleus.fixedDatastore was deleted.

For details on the features available in the open source version of this component, see the Apache Hive 1.0 changelog or the Apache Hive homepage.

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
b3c72d3	2015-12-09	MAPR-21752: When you load data into a table partition, Operation not permitted messages no longer display for chgrp and chmod commands.
96c96e7	2015-12-07	MAPR-21228: Hive queries no longer fail with exception: Table 'hive.DELETEME1xx' doesn't exist.
b03fb23	2015-12-03	MAPR-20263: Hive Metastore no longer incorrectly determines the authentication method when Hive jobs are created by other components such as Sqoop, Oozie, or Spark.
18c12ac	2015-12-02	MAPR-21631: Backported HIVE-9867 to migrate usage of deprecated Calcite methods. This prevents the ClassCastException from occurring when you submit Hive queries.
49ecd8e	2015-11-18	MAPR-21352: Upgrading hive-0.7.1 to hive-1.0 no longer fails at 008-HIVE-2246.mysql.sql.
d75123c	2015-11-04	MAPR-21238: Backported Hive-11502 so that map side aggregation is no longer extremely slow.
f102c02	2015-11-03	MAPR-20207: Backported HIVE-9599 to remove extra, conflicting jars from hive-jdbc-standalone.jar.
5f8c059	2015-10-30	MAPR-19894: Fixed the java.lang.NullPointerException in the MoveTask class.

Hive 1.0-1510 Release Notes

Below are release notes for the Hive component included in the MapR Distribution for Apache Hadoop.

Hive Version	1.0
Release Date	November 20, 2015
MapR Version Interoperability	See the Hive and HCatalog Support Matrix and the Ecosystem Support Matrix
Source on GitHub	https://github.com/mapr/hive/tree/1.0.0-mapr-1510
Maven Artifacts	https://repository.mapr.com/maven/

last-updated: Apr 11, 2022

Package Names	The following packages are associated with this release: • mapr-hive-1.0.201511180941-1.noarch.rpm • mapr-hive_1.0.201511180941_all.deb • mapr-hivemetastore-1.0.201511180941-1.noarch.rpm • mapr-hivemetastore_1.0.201511180941_all.deb • mapr-hiveserver2-1.0.201511180941-1.noarch.rpm • mapr-hiveserver2_1.0.201511180941_all.deb • mapr-hivewebhcat-1.0.201511180941-1.noarch.rpm • mapr-hivewebhcat_1.0.201511180941_all.deb

New in this Release

This release of Apache Hive includes the following behavior change that is specific to MapR:

Flexible HiveServer2 Authentication Support	When the cluster is secure, HiveServer2 accepts both MAPR-SASL and PAM for in-bound authentication. This allows a single instance of HiveServer2 to accept both MapR-SASL authentication from Hue and PAM authentication from JDBC/ODBC connections.

For details on the features available in the open source version of this component, see thehttps://issues.apache.org/jira/secure/ReleaseNote.jspa?version=12324986&styleName=Text&projectId=12310843Apache Hive 1.0 changelog or the Apache Hive homepage.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
c582f58	2015-10-27	MAPR-19894: The insert overwrite table partition command no longer ignores fs.permission.umask-mode when hive.optimize.insert.dest.volume is enabled.
9ad855a	2015-10-23	MAPR-21035 Hive 1.2 queries on parquet files no longer fail.
20a0ba9	2015-10-13	MAPR-19370: On a secure cluster, HiveServer2 now accepts both MapR-SASL and PAM authentication.
462be0a	2015-09-21	MAPR-20191: On the MapR 5.x sandbox, the Hive classpath no longer contains newlines.
bdf9916	2015-09-08	HIVE-11688: Backported HIVE-11688 to resolve the issue where OrcRawRecordMerger does not close the primary reader.

Hive 1.0-1508 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 1.0 changelog or the Apache Hive homepage.

Hive Version	1.0
Release Date	Sept 22, 2015
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	1.0.0-mapr-1508
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

New in this Release

This release of Hive 1.0 for the MapR distribution for Hadoop includes the following behavior changes:

- **HiveServer2 Authentication Changes** (Available for MapR cluster version 4.1 and above)

  On secure MapR clusters, MapR-SASL is not longer the default for HiveServer2. Instead, HiveServer2 uses PAM by default.

- **WebHCat Changes**

  The warden.hcat.conf file is no longer installed with mapr-hive package. Instead, it is installed with the mapr-hivewebhcat package.

- **Cost-based optimization**

  Cost-based optimization is disabled by default. For information on how to enable this option, see the Apache Hive documentation.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
3ce96ce	2015-05-18	MAPR-18725: Errors are no longer logged in Warden logs when Warden starts the WebHCat service.
75e1d7d	2015-06-16	MAPR-19150/Hive-9613: Left join query plan no longer outputs wrong column when using subquery.
5d3d28f	2015-06-16	MAPR-19155: On secure MapR clusters, HiveServer2 uses PAM by default.
80d5220	2015-06-23	MAPR-19208: The default log level for org.apache.hadoop.hive.serde2.avro.AvroDeserializer class is now debug instead of warn.
50fd1d3	2015-06-24	Includes HIVE-9976 fix.
547ddb2	2015-06-24	MAPR-19116: Includes HIVE-9976 and HIVE-10106 fixes.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
079d8a1	2015-06-24	MAPR-13215: The hadoop.proxyuser.mapr.groups property is now able to restrict the groups that can be impersonated.
bf6e670	2015-06-30	MAPR-19152: When you run a Hive UDF from within a Pig 0.15 console, Hive no longer logs a null pointer exception when SessionState.get() returns NULL.
11f1b69	2015-07-08	MAPR-19453: When you enable hive.warehouse.subdir.inherit.perms in hive-site.xml, Hive no longer creates tables with incorrect permissions. The tables now successfully inherit the permissions of the parent directory.
f580822	2015-07-27	MAPR-19698/HIVE-10929: On Tez, dynamic partitioning queries with union all statement no longer fail at org.apache.hadoop.hive.ql.exec.MoveTask with an "Invalid partition key & values" exception.
6db44f6	2015-07-30	MAPR-18222: Hive includes PARQUET-107 fix.
4f12a86 3a3c1d1	2015-08-03	MAPR-19029: HiveServer2 now honors the MapReduce Mode configuration in warden.hs2.conf.
9e4a5cd	2015-08-03	MAPR-19778: WebHCat service no longer displays a MalformedURLException in /opt/mapr/logs/adminuiapp.log.
3a516cd	2015-08-07	MAPR-19831/Hive-9855: Hive 1.0 skewjoin no longer fails with an "Invalid source or target" exception.
6f88d6e 1379459	2015-08-25	MAPR-19894: "Insert overwrite table partition" command no longer ignores fs.permission.umask-mode when hive.optimize.insert.dest.volume is enabled.
3d984ef	2015-09-01	MAPR-20281/HIVE-9199: DummyTxnManager can now determine the lockMode required for a DDL based on the output writetype.
60b1f39	2015-09-03	MAPR-20254/HIVE-10841: Join queries no longer produce incorrect data due to the failure to push down Hive predicate.

Hive 1.0-1504 Release Notes

The notes below relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Apache Hive 1.0 changelog or the Apache Hive homepage.

Hive Version	1.0-1504
Release Date	May 20, 2015

Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	1.0.0-mapr-1504
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

New in this Release

This is the initial release of Hive 1.0 for the MapR distribution for Hadoop. In addition to Hive 1.0 features, this release includes the following features:

- **MapR-SASL Support**

  On secure MapR clusters, MapR-SASL is supported and configured by default for HiveServer2 and HiveMetastore. Previously, Simple SASL was the default and authentication had to be configured manually.

- **Hive Scratch Directory Changes**

  By default, the Hive scratch directory is created in the same volume as the target table (hive.optimize.insert.dest.volume=true). Previously, `hive.optimize.insert.dest.volume` was set to `false`.

- **WebHCat Changes**
  - The default WebHCat log directory is now `/opt/mapr/hive/<hive-version>/logs/<username>/webhcat`. Previously, it was `/tmp/<username>/webhcat`.
  - WebHCat is now managed by Warden. The warden.hcat.conf file is installed with the mapr-hive package.

- **JDBC SASL QOP Parameter Changes**

  When you need to connect via JDBC to hiveserver2 using the SASL QOP parameter, use salsQop instead of sals.qop.

Important: The Hive 1.0 cost-based optimization is a beta feature and is not fully supported.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
3cbeb8c	2015-05-01	**MAPR-14214:** WebHCat Server is now managed by Warden.
b6899d3	2015-05-01	**MAPR-17726 (HIVE-5672):** An insert overwrite to HDFS no longer fails.
263ab62	2015-04-28	**MAPR-17791:** MapR now sets hive.exec.submit.local.task.via.child=false to enable Beeline to execute mapjoin tasks when HiveServer2 uses MapR-SASL authentication.
4060cfd	2015-04-23	**MAPR-18202:** Transaction compaction error no longer appears in Hive logs.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
2578314	2015-04-22	**MAPR-18255:** Web browsers are now able to connect to WebHCat.
db10116	2015-04-16	**MAPR-18234:** Hive no longer tries to clean up MapReduce temp directories that do not exist.
672e375	2015-04-16	**MAPR-18058:** MapReduce queries no longer fail with a java.io.IOException.
dc00c63	2015-04-13	**MAPR-18166:** Errors no longer occur when doing select * on transaction enabled ORC table.
08a82e9	2015-04-01	**MAPR-17912 (HIVE-10083):** SMBJoin no longer fails in the case where one table is uninitialized.
ddaa3f0	2015-03-31	**MAPR-17982:** MapReduce queries on external tables no longer fail with a java.io.IOException.
76839e2	2015-03-30	**MAPR-17907:** Error no longer appears in Hive logs when transactions are enabled.
09c3cf9	2015-03-26	**MAPR-17854:** Hue can now access the Hive Metastore.
44edb1c	2015-03-19	**MAPR-17790:** HiveServer2 is now able to start when it is configured to use Kerberos authentication.
a048ceb	2015-03-18	**MAPR-17742:** MapReduce jobs started by WebHCat no longer fail when Zero-config Resource Manager HA is configured.
f7b9409	2015-03-10	**MAPR-17600:** Hive no longer fails with a NullPointerException when trying to access Amazon S3 storage.
70cab74	2015-03-04	**MAPR-17526:** Warden is now able to start Hiveserver2 and Metastore when they use MapR-SASL authentication.
9d8d495	2015-02-26	**MAPR-17458:** TABLESAMPLE query no longer fails.
b5037b0	2015-02-17	**MAPR-17276:** Hive Metastore no longer fails to start on Ubuntu
dc37fb2	2015-02-13	**MAPR-17272:** By default, hive.metastore.sasl.enabled is set to true for WebHCat when the cluster is secure.
43cd431	2015-02-12	**MAPR-17135:** HiveServer2 and Hive Metastore are automatically configured to use MapR-SASL when the cluster is secure.

Commit	Date (YYYY-MM-DD)	Comment
2edf083	2015-02-06	**MAPR-17127:** The following warning messages no longer appear in the hive shell:  **Warning:** org.apache.hadoop.metrics.jvm.EventCounter is deprecated. Please use org.apache.hadoop.log.metrics.EventCounter in all the log4j.properties files.
6949cc7	2015-02-06	**MAPR-16960:** The hive shell no longer displays warning messages related to duplicate slf*.jar files.
37536f3	2015-02-06	**MAPR-17120:** WebHCat log files are now written to the following folder: `/opt/mapr/hive/hive-<version>/logs/<user>/webhcat`
2a0367c	2015-02-03	**MAPR-16962:** The status of HiveServer2 and Hive Metastore now displays correctly in the Control System when the cluster runs on Ubuntu nodes.
68461ff	2015-01-27	**MAPR-16786:** By default, MapR sets hive.optimize.insert.dest.volume=true
be34b2b	2015-01-28	**MAPR-16952:** By default, MapR sets hive.server2.thrift.sasl.qop=auth-conf
3bf4741	2015-01-26	**MAPR-16899:** HiveServer2 now has support for MapR-SASL authentication when the cluster is secure.
d21a425	2015-01-26	**MAPR-15559:** Hive Metastore now has support for MapR-SASL authentication when the cluster is secure.
9dab4a5	2015-01-19	**MAPR-16762:** WebHCat no longer fails to start on a cluster that runs YARN services.
ca51e98	2015-01-12	**MAPR-15587 (HIVE-9119):** A single zookeeper instance can now be reused and shared by ZooKeeperHiveLockManagers to reduce the number of ZooKeeper clients created for every instance of HiveServer2.

Hive 0.13.0 Release Notes

The following release notes for the Hive 0.13 component are included in the MapR distribution for Apache Hadoop:

Hive 0.13.0-1611 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

last-updated: Apr 11, 2022

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
d54769e7	2016-10-05	MAPR-24696: The issue that caused Hive partition directory URI to be double-encoded is now fixed.
0ec5dcc69	2016-09-08	HIVE-14696: The issue that caused Hive query to fail with MetaException when the metastore was overloaded is now fixed.
42cd70cb	2016-09-02	HIVE-8766: The issue that caused Hive query to fail with NucleusException when the metastore was overloaded is now fixed.

Hive 0.13.0-1608 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Hive Version	0.13.0

Release Date	September 1, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/hive/tree/0.13.0-mapr-1608
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-0.13.201608311115-1.noarch.rpm • mapr-hive_0.13.201608311115_all.deb • mapr-hivemetastore-0.13.201608311115-1.noarch.rpm • mapr-hivemetastore_0.13.201608311115_all.deb • mapr-hiveserver2-0.13.201608311115-1.noarch.rpm • mapr-hiveserver2_0.13.201608311115_all.deb • mapr-hivewebhcat-0.13.201608311115-1.noarch.rpm • mapr-hivewebhcat_0.13.201608311115_all.deb

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
e6fb977	2016-08-11	MAPR-23970: When running a query, checks are now included to determine if current filesystem is non-local before running `getScratchDir()` method, which assumes the filesystem is not local.
8583651	2016-08-05	HIVE-11617: The issue causing explain job to (sometimes) not finish or be very slow when there are many lateral views is now fixed.
1c7123f	2016-06-06	MAPR-23560: Symbolic links to the PID files to track memory utilization of HiveServer2 and HiveMetaStore processes are now available in `/opt/mapr/pid`.
3494663	2015-02-05	HIVE-7175: For connecting to HiveServer2 with LDAP authentication enabled to batch run commands, a password file can now be used instead of typing the password openly in the command line.

Hive 0.13.0-1605 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

last-updated: Apr 11, 2022

Hive Version	0.13.0
Release Date	June 6, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/hive/tree/0.13.0-mapr-1605
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-0.13.201605311455-1.noarch.rpm • mapr-hive_0.13.201605311455_all.deb • mapr-hivemetastore-0.13.201605311455-1.noarch.rpm • mapr-hivemetastore_0.13.201605311455_all.deb • mapr-hiveserver2-0.13.201605311455-1.noarch.rpm • mapr-hiveserver2_0.13.201605311455_all.deb • mapr-hivewebhcat-0.13.201605311455-1.noarch.rpm • mapr-hivewebhcat_0.13.201605311455_all.deb

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
ae79594	2016-05-17	MAPR-23302: ListBucketing tables with uppercase skew values can now be created.
1878e90	2016-04-25	MAPR-23153: Hive will no longer create scratch dir with incorrect permissions when a CTAS query is run. If CTAS query is run, now, the table root directory with correct permissions from `fs.permissions.umask-mode` will be created first and then the scratch dir with permissions from `hive.scrach.dir.permissions` will be created.
5c67d97	2016-04-14	MAPR-23082: Beeline will no longer fail with NullPointerException when MAPR-SASL is used.
cb63c6d	2016-04-14	MAPR-23084: The `datanucleus.schema.autoCreateAll` property in `hive-site.xml` file is now set to `true` by default.

Commit	Date (YYYY-MM-DD)	Comment
63ce07f	2016-04-01	MAPR-22719: The issue causing Hive 0.13 to incorrectly determine the authentication mechanism when installed on MapR 4.0.1 has been fixed. Regression of MAPR-22677: Backported HIVE-8320 to fix the Hive 0.13 and Hue integration error.
1d2e15c	2016-01-29	MAPR-22222: The delay as a result of a single reduce task in the last stage is now fixed with a new parameter, `hive.groupby.limit.extrastep`, which can be used to enable or disable a new MR job for sorting the final output.
91b0053	2016-03-29	MAPR-22943: Pig will no longer try to receive Hive Metastore's functions and only receive standard functions, which are registered with FunctionRegistry class.
7d914fa	2015-08-19	HIVE-11592: Backported HIVE-11592 to set an upperbound on the protobuf message size.

Hive 0.13.0-1603 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform.

Version	0.13
Release Date	April 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/hive/tree/0.13.0-mapr-1603
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release:

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
c97788c	2016-03-30	MAPR-22966: Hiveserver2 no longer fails to start when it uses LDAP authentication on a secure cluster.

last-updated: Apr 11, 2022

GitHub Commit	Date (YYYY-MM-DD)	Comment
69487f5	2016-03-28	MAPR-22945: HiveServer2 no longer fails to start when PAM authentication is enabled.
11efd3f	2016-03-25	MAPR-22928: The `datanucleus.schema.autoCreateAll` property is now set to `false` by default.
145d027	2016-02-19	MAPR-22677: Backported HIVE-8320 and HIVE-4625 so that Hcatalog jobs on secure clusters no longer fail due to the following reasons: • HiveServer2 tries to get delegation token from Hive Metastore even if the Hive Metastore is being used in embedded mode • Hiveserver2 session is called multiple times
9bfae6f	2016-02-25	MAPR-22719: The HiveServer2 authentication mechanisms is no longer determined incorrectly on MapR 4.0.1.
1df2fa6	2016-03-02	MAPR-22701: Backported HIVE-12875 to reduce the chance of an authorization vulnerability.

Hive 0.13.0-1602 Release Notes

Below are release notes for the Hive component included in the MapR Converged Data Platform.

Version	0.13
Release Date	March 4, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix on page 5631 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/hive/tree/0.13.0-mapr-1602
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-0.13.201603021517-1.noarch.rpm • mapr-hive_0.13.201603021517_all.deb • mapr-hivemetastore-0.13.201603021517-1.noarch.rpm • mapr-hivemetastore_0.13.201603021517_all.deb • mapr-hiveserver2-0.13.201603021517-1.noarch.rpm • mapr-hiveserver2_0.13.201603021517_all.deb • mapr-hivewebhcat-0.13.201603021517-1.noarch.rpm

	• mapr-hivewebhcat_0.13.201603021517_all.deb

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
d6cf120115	2016-02-11	MAPR-22560/HIVE-10021: "Alter index rebuild" statements no longer fail when HiveServer2 uses Sentry authorization.
6f17d2836	2016-02-09	MAPR-22435: `beeline.sh` no longer includes an unnecessary "if" statement.

Hive 0.13.0-1601 Release Notes

Below are release notes for the Hive component included in the MapR Distribution for Apache Hadoop.

Version	0.13
Release Date	February 1, 2016
MapR Version Interoperability	See Hive and HCatalog Support Matrix and Ecosystem Support Matrix (Pre-5.2 Releases)
Source on GitHub	https://github.com/mapr/hive/tree/0.13.0-mapr-1601
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-0.13.201601281525-1.noarch.rpm • mapr-hive_0.13.201601281525_all.deb • mapr-hivemetastore-0.13.201601281525-1.noarch.rpm • mapr-hivemetastore_0.13.201601281525_all.deb • mapr-hiveserver2-0.13.201601281525-1.noarch.rpm • mapr-hiveserver2_0.13.201601281525_all.deb • mapr-hivewebhcat-0.13.201601281525-1.noarch.rpm • mapr-hivewebhcat_0.13.201601281525_all.deb

New in this Release

This release of Apache Hive includes the following behavior changes that are specific to MapR:

Drill can now read parquet text data.

last-updated: Apr 11, 2022

DataNucleus versions were updated.

The following DataNucleus versions were updated:

Component	Old Version	New Version
datanucleus-rdbms	3.2.9	4.1.7
datanucleus-core	3.2.1.0	4.1.6
datanucleus-api-jdo	3.2.6	4.2.1

DataNucleus properties were renamed.

The following DataNucleus properties were renamed:

Old Name	New Name
datanucleus.validateTables	datanucleus.schema.validateTable
datanucleus.validateColumns	datanucleus.schema.validateColu
datanucleus.validateConstraints	datanucleus.schema.validateCons
datanucleus.autoCreateSchema	datanucleus.schema.autoCreateAl

DataNucleus Property datanucleus.fixedDatastore was deleted.

For details on the features available in the open source version of this component, see the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Feature Support

MapR does not support Hive on Spark. Therefore, you cannot use Spark as an execution engine for Hive. However, you can run Hive and Spark on the same cluster. You can also use Spark SQL and Drill to query Hive tables.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
b9e8d66	2015-10-24	MAPR-21474: Backported HIVE-7735 which implements Char and Varchar in ParquetSerDe.
3b9b65f	2015-10-24	MAPR-21474: Backported HIVE-8205 so that using strings in the group type no longer causes failures in ParquetSerDe.
a0f183f	2015-11-13	MAPR-21228: Hive queries no longer fail with exception: Table 'hive.DELETEME1xx' doesn't exist
a793ea1	2015-11-28	MAPR-21192: Backported HIVE-6847 so that Hive creates user-specific scratch directories.
0b1b177	2015-12-03	MAPR-20263: Hive Metastore no longer incorrectly determines the authentication method when Hive jobs are created by other components such as Sqoop, Oozie, or Spark.
5a54172	2016-01-11	MAPR-22100: Resolved Spark build issued which was caused by the backporting of MAPR-19408.

Hive 0.13.0-1510 Release Notes

Below are release notes for the Hive component included in the MapR Distribution for Apache Hadoop.

Version	0.13
Release Date	November 20, 2015
MapR Version Interoperability	See the Hive and HCatalog Support Matrix and the Ecosystem Support Matrix
Source on GitHub	https://github.com/mapr/hive/tree/0.13.0-mapr-1510
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hive-0.13.201511180922-1.noarch.rpm • mapr-hive_0.13.201511180922_all.deb • mapr-hivemetastore-0.13.201511180922-1.noarch.rpm • mapr-hivemetastore_0.13.201511180922_all.deb • mapr-hiveserver2-0.13.201511180922-1.noarch.rpm • mapr-hiveserver2_0.13.201511180922_all.deb • mapr-hivewebhcat-0.13.201511180922-1.noarch.rpm • mapr-hivewebhcat_0.13.201511180922_all.deb

New in this Release

This release of Apache Hive includes the following behavior changes that are specific to MapR:

Additional Properties	The following Hive properties were backported into this release: • hive.metastore.schema.verification.record.version • hive.server2.thrift.http.max.idle.time • hive.server2.thrift.http.worker.keepalive.time • hive.server2.session.check.interval • hive.server2.idle.session.timeout • hive.exec.orc.default.block.size You can override the default values by configuring different values for these properties in the hive-site.xml file. For details on these properties, see the Apache Hive Documentation.
Additional orcfiledump Options	The orcfiledump utility includes the option to print the timezone in ORC metadata files and to dump the content of the ORC files.
Flexible HiveServer2 Authentication Support	When the cluster is secure, HiveServer2 accepts both MAPR-SASL and PAM for in-bound authentication. This allows a single instance of HiveServer2 to accept both MapR-SASL authentication from Hue and PAM authentication from JDBC/ODBC connections.

last-updated: Apr 11, 2022

Beeline can Submit Multiple Queries at a Time	Beeline can submit multiple queries at a time when you use a semi-colon(;) in-between queries. For details on the features available in the open source version of this component, see the Apache Hive 0.13.0 changelog or the Apache Hive homepage .

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
70e1c5f	2015-10-16	MAPR-19370: On a secure cluster, HiveServer2 now accepts both MapR-SASL and PAM authentication.
88b368f	2015-10-07	MAPR-20814: Backported HIVE-8746 to enable ORC timestamp columns to account for daylight savings time changes.
8ab8f06	2015-10-03	MAPR-20866: Queries on a subset of the columns in a parquet schema no longer return NULL column values.
4f7f3e3	2015-09-25	MAPR-19408: Backported HIVE-7353 so that HiveServer2 no longer has JDOPersistanceManager leaks when HiveServer2 uses the embedded MetaStore.
40c2a4e	2015-09-24	MAPR-20650: Backported HIVE-9749 to provide the option to configure whether or not the Hive Metastore version should be updated automatically.
0e3c9c4	2015-09-21	MAPR-20191: On the MapR 5.x sandbox, the Hive classpath no longer contains newlines.
c58f426	2015-09-17	MAPR-20297: Backported HIVE-9877 to allow Beeline to submit multiple queries at a time.

Hive 0.13.0-1508 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Version	0.13.0
Release Date	Sept 22, 2015
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	0.13.0-mapr-1508
Maven Artifacts	https://repository.mapr.com/maven/

last-updated: Apr 11, 2022

New in this Release

This MapR release of Hive 0.13 includes the following behavior changes:

- **HiveServer2 Authentication Changes** (Available for MapR cluster version 4.1 and above)

  On secure MapR clusters, MapR-SASL is not longer the default for HiveServer2. Instead, HiveServer2 uses PAM by default.

- **WebHCat Changes**

  The warden.hcat.conf file is no longer installed with mapr-hive package. Instead, it is installed with the mapr-hivewebhcat package.

Fixes

Commit	Date (YYYY-MM-DD)	Comment
4130e1e	2015-05-18	MAPR-18725: Errors are no longer logged in Warden logs when Warden starts webhcat.
28046ce	2015-06-17	MAPR-19155: On secure MapR clusters, HiveServer2 uses PAM by default.
fef6a67	2015-06-23	MAPR-19208: The default log level for org.apache.hadoop.hive.serde2.avro.AvroDeserializer class is now debug instead of warn.
1240cce bf16b43	2015-06-25	MAPR-19029: HiveServer2 now honors the MapReduce Mode configured in warden.hs2.conf.
1fe17a2	2015-07-30	MAPR-18222: Hive includes PARQUET-107 fix.
20ad928	2015-08-03	MAPR-19778: WebHCat service no longer displays a MalformedURLException in `/opt/mapr/logs/adminuiapp.log`.
65a7e10	2015-09-2-15	MAPR-20281/ HIVE-9199: DummyTxnManager can now determine the lockMode required for a DDL based on the output writetype.
979f420	2015-09-03	MAPR-20254/HIVE-10841: Join queries no longer produce incorrect data due to the failure to push down Hive predicate.
39ec9bd	2015-09-08	MAPR-20423: HiveQL queries with LPAD function no longer fail with the ClassCastException.
462acf4	2015-09-10	MAPR-20523 and MAPR-20329: Queries that use any type of join between avro tables no longer fail or give incorrect results.

Hive 0.13.0-1504 Release Notes

The notes below relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

last-updated: Apr 11, 2022

Version	Hive 0.13.0-1504
Release Date	May 20, 2015
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	0.13.0-mapr-1504
Maven Artifacts	https://repository.mapr.com/maven/

Using Hive with Sentry and Impala

Hive 0.13 (1410 and later) works with Sentry 1.4 and Impala 1.4.1.

Using Hive with HBase

Hive 0.13 works with HBase 0.98.x.

New in this Release

- **MapR-SASL Support** (Available for MapR cluster version 4.1 and above)

  On secure MapR clusters, MapR-SASL is supported and configured by default for HiveServer2 and Hive Metastore.

- **WebHCat Changes**
  - The default WebHCat log directory is now /opt/mapr/hive/<hive-version>/logs/<username>/webhcat. Previously, it was /tmp/<username>/webhcat.
  - WebHCat is now managed by Warden. The warden.hcat.conf file is installed with the mapr-hive package.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
f562db3	2015-01-19	**MAPR-16762:** WebHCat no longer fails to start on a cluster that runs YARN services.
b246af9	2015-01-27	**MAPR-16786:** By default, MapR sets `hive.optimize.insert.dest.volume=true`.
c226a21	2015-01-22	**MAPR-16854:** WebHCat no longer returns a NoSuchMethodsError on startup.
1f583b0	2015-01-22	**MAPR-15559:** Hive Metastore now has support for MapR-SASL authentication when the cluster is secure.
6c37e83	2015-01-26	**MAPR-16899:** HiveServer2 now has support for MapR-SASL authentication when the cluster is secure.

Commit	Date (YYYY-MM-DD)	Comment
d617f6e	2015-01-28	**MAPR-16952:** By default, MapR sets hive.server2.thrift.sasl.qop=auth-conf.
0a8e267	2015-02-03	**MAPR-16962:** On Ubuntu systems, the service status for hiveserver2 and hivemetastore is now displayed correctly in the Control System.
c06f014	2015-02-06	**MAPR-16960:** The hive shell no longer displays warning messages related to duplicate slf*.jar files.
514f307	2015-02-06	**MAPR-17120:** WebHCat log files are now written to the following folder: `/opt/mapr/hive/hive-<version>/logs/<user>/webhcat`
499d865	2015-02-06	**MAPR-17127:** The following warning messages no longer appear in the hive shell: `WARNING: org.apache.hadoop.metrics.jvm.EventCounter is deprecated. Please use org.apache.hadoop.log.metrics.EventCounter in all the log4j.properties files.`
f8370ba	2015-02-11	**MAPR-17135:** HiveServer2 and Hive Metastore are automatically configured to use MapR-SASL when the cluster is secure.
608c855	2015-02-13	**MAPR-17272:** By default, hive.metastore.sasl.enabled is set to true for WebHCat when the cluster is secure.
d1d2300	2015-02-17	**MAPR-17276:** Hive Metastore no longer fails to start on Ubuntu.
5635c82	2015-02-26	**MAPR-17458:** A TABLESAMPLE query no longer fails.
b6941af	2015-03-04	**MAPR-17526:** Warden is now able to start HiveServer2 and Metastore when they use MapR-SASL authentication.
f7b9409	2015-03-10	**MAPR-17600:** Hive no longer fails with a NullPointerException when trying to access Amazon S3 storage.
dee7431	2015-03-13	**MAPR-17712:** Hive now returns a filtered database list when Sentry is enabled.
f5bf538	2015-03-19	**MAPR-17783:** Hive mapjoin queries no longer fail with a java.io.FileNotFoundException.

Commit	Date (YYYY-MM-DD)	Comment
9383589	2015-04-10	**MAPR-16186 (HIVE-8297):** Hive no longer returns wrong results for TIMESTAMP columns in RCFile format.
8f52355	2015-05-01	**MAPR-17726 (HIVE-5672):** An insert overwrite to HDFS no longer fails.
3cbeb8c	2015-05-01	**MAPR-14214:** WebHCat Server is now managed by Warden.

Hive 0.13.0-1501 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Hive Version	0.13.0-1501
Release Date	January 21, 2015
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	0.13-mapr-1501
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Using Hive with Sentry and Impala

Hive 0.13 (1410 and 1501) works with Sentry 1.4 and Impala 1.4.1.

Using Hive with HBase

Hive 0.13 works with HBase 0.98.x.

New in this Release

The default log directory for Hivesever2 has changed from `/tmp/<user>` to `/opt/mapr/hive/hive-<version>/logs/<user>`. Users will not be impacted by this change if the log directory is set in `/opt/mapr/hive.hive-<version>/conf/hive-log4j.properties`.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
491c048	2015-01-19	MAPR-16784: Secure Hive metastore no longer fails to start on a MapR 4.x cluster that runs MapReduce v1.
83e5b3b	2015-01-12	MAPR-15587/Hive-9119: Reduced the number of ZooKeeper clients created per running instance of HiveServer2.
6cf6531	2015-01-12	MAPR-16706: Hive beeline no longer hangs on a secure MapR 3.1.0 cluster.

Commit	Date (YYYY-MM-DD)	Comment
35ffc63	2014-12-22	MAPR-16535: TypeMismatchException no longer appears when calling Hadoop23Shims.createJobContext(Configuration conf, JobId jobId) API.
c99933a	2014-12-09	MAPR-15982: Hive service status check requires less CPU.
37f75d4	2014-12-14	MAPR-16184: On MapR 4.0.1, Hive statements using relative path URI to the filesystem no longer fail due to incorrect URI creation.
313f016	2014-11-21	MAPR-14270/HIVE-7279: format_number now supports the decimal datatype.
608c461	2014-11-20	MAPR-16090: hcat CLI no longer fails on a cluster that runs YARN.
4dff42b	2014-11-20	MAPR-15833: The hive metatool updateLocation command no longer fails.

Hive 0.13.0-1410 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Hive Version	0.13.0-1410
Release Date	November 19, 2014
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	hive-0.13-mapr-1410
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Using Hive with Sentry and Impala

Hive 0.13 (1410 and 1501) works with Sentry 1.4 and Impala 1.4.1.

Using Hive with HBase

Hive 0.13 works with HBase 0.98.x.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
bd18b73	2014-09-22	MAPR-15371: Partitions of type date behaved incorrectly with daylight savings time.

Commit	Date (YYYY-MM-DD)	Comment
5d96f2e	2014-10-02	MAPR-15481: When data was imported in Parquet format, Hive returned a null-pointer exception.
1485a0d	2014-10-24	MAPR-15696: Changes were made to support Sentry for Hive 13.
f1fe7ea	11-03-2014	MAPR-15816: HCatStorer failed to store data in a Hive table on a non-secure 4.0.1 unsecure running MRv1.
88a2938	11-03-2014	MAPR-15467: HiveServer2 failed to execute a join query when Kerberos authentication was enabled.

Hive 0.13.0-1409 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Hive Version	0.13
Release Date	Sept 30, 2014
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	0.13-mapr-1409
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
9c91b34	2014-09-13	MAPR-15246: Hive metastore starts in secure mode with Kerberos enabled.
7735233	2014-09-19	MAPR-15246: Hive metastore starts in secure mode with Kerberos enabled.
fac5bab	2014-09-19	MAPR-15193: Fixed Hive 0.13.0 runtime error.
bd18b73	2014-09-22	MAPR-15371: Partitions of type date handle daylight savings time correctly.
5e2334d	2014-09-22	MAPR-15393: Hive metastore picks up the correct principal name.

Hive 0.13.0-1408 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Hive Version	1.0

Release Date	Sept 22, 2015
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	1.0.0-mapr-1508
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
9daf945	4-Sept-2014	MAPR-15135: Created shims to handle hive queries in a mixed-mode cluster.
d798be2	2-Sept-2014	MAPR-14901: Change default port of HiveServer2 in warden.hs2.conf

Hive 0.13.0-1406 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Version	Hive 0.13.0-1406
Release Date	June 30, 2014
Source on GitHub	https://github.com/mapr/hive

MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
cf24ff5	23-Apr-2014	[HIVE-7009] Adds support for non-HDFS file systems for Hive+Tez jobs.

Hive 0.13.0-1405 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Hive 0.13.0 changelog or the Apache Hive homepage.

Version	Hive 0.13.0-1406
Release Date	June 6, 2014
Source on GitHub	https://github.com/mapr/hive
GitHub Release Tag	hive-0.13-mapr-1405

MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

New In This Release

This is the initial release of Hive 0.13 for the MapR distribution for Hadoop.

Known Issues

MapR Issue	Description
14397	Impala only runs with Hive 0.12. Earlier versions of Hive and Hive 0.13 are not supported with Impala.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

MapR 10677. Hive task temp files are now written to the task's spill directory in a MapRFS local volume instead of the local filesystem. To write temp files to the local filesystem, change the value of the hive.exec.tmp.maprfsvolume attribute in the hive-site.xml file to false.

Commit	Date (YYYY-MM-DD)	Comment
09529ed	14-May-2014	MapR 12909. Resolves scratchdir user permissions issues related to impersonation when starting HiveServer2 for the first time. When impersonation is enabled, HiveServer2 sets the permissions on the root scratch directory (by default, `/user/mapr-user/tmp/hive`) to 777. These permissions enable the creation of query-specific scratch subdirectories for impersonated users.
cbc8a7b	16-May-2014	[HIVE-6245] and MapR 13847. Resolves impersonation issues with remote MetaStore in HiveServer 2 when `hive.metastore.execute.setugi` property is set to true.
3e78db6	16-May-2014	MapR 13477. The LD_LIBRARY_PATH variable now includes the path to libjpam.so. Users no longer need to download and configure `libjpam.so` during HiveServer2 configuration.
7973de9	22-May-2014	MapR 13872. Improved support for Beeline with Hive 13 on MapR.
cf24ff5	23-Apr-2014	[HIVE-4133] Fixes a ClassNotFoundException error in the EventCounter.
a2f9ecd	23-Apr-2014	[HIVE-4969] and MapR 10948. The HCatLoader class now returns complete table information.

Commit	Date (YYYY-MM-DD)	Comment
5a02b20	23-Apr-2014	[HIVE-5631] and MapR 11291. Skewed tables can now have indexes created.
119d60c	23-Apr-2014	
fef36c1	24-Apr-2014	[HIVE-3844] and MapR 9663. Hive TIMESTAMP column type now supports required timestamp formats.
0efe07d	24-Apr-2014	MapR 8765. Hive now correctly computes the JobTracker location in case of failure.
be1996b	24-Apr-2014	MapR 11554. ASTNodeOrigin objects serialize and deserialize correclty.
b1d9ac7	24-Apr-2014	MapR 10677. Hive task temp files are now written to the task's spill directory in a MapRFS local volume instead of the local filesystem. To write temp files to the local filesystem, change the value of the hive.exec.tmp.maprfsvolume attribute in the `hive-site.xml` file to `false`.
27e9a32	25-Apr-2014	MapR 11012. Hive now uses scratch directories that are subdirectories of the target table's home directory, eliminating cross-volume copies and improving performance. This optimization is disabled by default. For details on how to enable the option, see Hive.

5bace77	25-Apr-2014	MapR 12673. When the cluster is secure, HiveServer2 has PAM authentication enabled with 'login' profile by default. The default configuration is equivalent to the following property values:
		`hive.server2.authentication=CUSTOM`
		`hive.server2.authentication.pam.profiles=login`
		`hive.server2.custom.authentication.class=org.apache.hive.service.auth.PamAuthenticationProvider`

a682974	01-May-2014	[HIVE-5677]. Fixes a condtion where Hive services generate errors when HIVE_OPTS is set.
5034b63	01-May-2014	[HIVE-4776] Adds an option to Hive to skip the first n rows of a file.
4b02a6a	01-May-2014	MapR 13010. Enhances support for Hive on YARN.

Commit	Date (YYYY-MM-DD)	Comment
23892ab	01-May-2014	MapR 12684. The /logs and /pids subdirectories are created when HiveServer 2 or Hive Metastore are launched if they do not already exist.
7d99556	05-May-2014	[HIVE-4629] Adds a GetLog() API to retrieve query logs.
54d8193	07-May-2014	[HIVE-6893] Resolves a concurrency error in the HiveMetastore server.
ff41cbf	07-May-2014	MapR 13024. Corrects a condition where upgrading the Hive metastore would incorrectly report the upgrade as failed due to a mismatch in the version string in the JAR file.

HttpFS Release Notes

The release notes for HttpFS included in the MapR Converged Data Platform contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

HttpFS 1.1.0.200 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.1.0.200
Release Date	January 2022
Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
GitHub Release Tag	1.1.0.200-eep-810
Maven Artifacts	http://repository.mapr.com/maven/
Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your MEP (EEP) and OS to view the list of package names

New in This Release

HttpFS 1.1.0.200-eep-810 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- Adds FIPS support.
- Upgrades commons-io.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
e7946c91	2021-12-15	HTTPFS-96: log4j updated to 1.3.0-mapr due vulnerability CVE-2019-17571, CVE-2021-4104
34c838ff	2021-12-01	HTTPFS-94: Updated jdom-1.1.jar due vulnerability CVE-2021-33813
34312110	2021-11-25	Added execute permission to configuration script
4234dba2	2021-11-19	HTTPFS-93: commons-io-2.4.jar vulnerability CVE-2021-29425
e009fb22	2021-11-18	HTTPFS-92: Updated Hadoop and Jetty version to the latest
02824dda	2021-10-06	HTTPFS-87 - Fix unit tests
36235297	2021-09-13	HTTPFS-82: HttpFS can't load SSL config and start with NPE
13709650	2021-09-09	Httpfs 73: Add FIPS support

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

None

Resolved Issues

None

HttpFS 1.1.0.100 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.1.0.100
Release Date	October 2021
Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
GitHub Release Tag	1.1.0.100-eep-800
Maven Artifacts	http://repository.mapr.com/maven/
Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your MEP (EEP) and OS to view the list of package names

New in This Release

HttpFS 1.1.0.100-eep-800 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- Adds XAttrs support (for details, see https://hadoop.apache.org/docs/current/hadoop-project-dist/hadoop-hdfs/WebHDFS.html#Extended_Attributes.28XAttrs.29_Operations)

last-updated: Apr 11, 2022

- Updates Jetty to 9.4.43.v20210629
- Updates Jackson v1 and v2 depenencies

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
49f1d8ab	2021-04-19	HTTPFS-68 - Fixed problem with starting httpfs on SLES
83f9eb5f	2021-04-29	Backport HDFS-6430 HTTPFS - Implement XAttr support (Yi Liu via tucu)
e371c077	2021-05-20	HTTPFS-69 fix bug with incremental install
eef38d0d	2021-07-12	Httpfs 70: Fixed unit tests
9e3db8fb	2021-07-28	HTTPFS-75: Update Jetty to 9.4.43.v20210629
e0dd2c6e	2021-08-03	HTTPFS-76: Remove sudo usage in HttpFS
e920552c	2021-08-17	HTTPFS-78: Update Jackson v1 and v2 depenencies
c1e7bcda	2021-09-02	HTTPFS-79: HttpFS can't find credential.provider.path and read encrypted password

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

None

Resolved Issues

None

HttpFS 1.1.0.0 - 2104 (EEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.1.0.0
Release Date	April 2021
HPE Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
GitHub Release Tag	1.1.0.0-mapr-710
Maven Artifacts	http://repository.mapr.com/maven/

Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your MEP and OS to view the list of package names

New in This Release

HttpFS 1.1.0.0-mapr-710 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Added credential provider support.
- Moved from Tomcat to Jetty.
- Service verifier

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
46deff33	2021-04-13	HTTPFS-67: Jetty updated to 9.4.39.v20210325 due CVE-2021-28165
eb3a0da1	2021-03-22	HTTPFS-65/66: Updated Jetty to 9.4.38.v20210224 and Hadoop to 2.7.5.0-mapr-710
7f870717	2021-03-22	HTTPFS-62: Add service verifier to HTTPFS package
78da3bdd	2021-03-12	Backported HDFS-6849. Replace HttpFS custom proxyuser handling with common implementation (tucu)
d58d6210	2021-02-24	HTTPFS-60: Fixed problem with creating file in HDFS.
6b39a262	2021-02-18	HTTPFS-59: Enable ssl by default for secure cluster
992be133	2021-02-09	HTTPFS-57: Upgrade jersey to the version 1.19
bad9ae7d	2021-01-20	HTTPFS-47: Moving HTTPFS to 4-digit artifacts version
ff3e5cfa	2020-10-12	HTTPFS-46: Delete mapr-security-web as it not need any more
d1b7727e	2020-10-11	HTTPFS-46: Update Hadoop dependency to MEP-7.1.0
79836a55 9a66beb8	2020-10-01	HTTPFS-37: Update Jetty to 9.4.28.v20200408 version and change symbol links for ssl-client.xml and ssl-server.xml
8009cddf	2020-10-01	HTTPFS-38: Move MAPR configuration from Tomcat to Jetty
c664fdd3	2020-10-01	HTTPFS-38: Move ssl security configuration from Tomcat to Jetty

last-updated: Apr 11, 2022

341dfe38	2020-10-01	HTTPFS-37: Fix logging configuration
7cf88816	2020-10-01	HTTPFS-38: Add support Mapr PAM Authentication
bc7a07dd	2020-10-01	HTTPFS-37: Fix java.lang.NoClassDefFoundError: javax/servlet/http/ HttpSessionIdListener
ab34685b	2020-10-01	HTTPFS-37: Write new script for running httpfs, delete tomcat directory
7d232d39	2020-10-01	MAPRFS-37: Fix bugs from backport HDFS-10860. Create a copy of the some classes from hadoop-common version 3.0.0
59fb2bcb	2020-10-01	Backported HDFS-10860. Switch HttpFS from Tomcat to Jetty. Contributed
951d7d32	2020-10-01	Backported HADOOP-10075. Update jetty dependency to version 9 (rkanter)
72037d12	2020-10-01	Backported HADOOP-10771. Refactor HTTP delegation support out of httpfs to common, PART 2. (tucu)
f04a9495	2020-10-01	Backported HDFS-3113 amendment, removing incorrectly committed files
dba6fff8	2020-10-01	Backported HDFS-3113. httpfs does not support delegation tokens. (tucu)

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- HTTPFS-69: If HttpFS fails to start after incremental installation, set the `httpfs.ssl.enabled` property to `false` at `httpfs-site.xml` configuration file and restart the HttpFS service.

Resolved Issues

- None.

HttpFS 1.0 - 2101 (EEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

Version	1.0
Release Date	January 2021
HPE Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
Maven Artifacts	http://repository.mapr.com/maven/
Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

HttpFS 1.0 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- Tomcat v9.0.39

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
b383888	2020-11-12	HTTPFS-49: upgrade tomcat version to 9.0.39

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

HttpFS 1.0 - 2009 (EEP 7.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for HttpFS 1.0 - 2009 for EEP 7.0.0.

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.0
Release Date	September 2020

- Bug fixes and updates.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
890de403	2021-02-09	HTTPFS-57: upgrate jersey to the version 1.19
5feefda8	2021-02-08	HTTPFS-56: update tomcat to 9.0.43 version

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

HttpFS 1.0 - 2101 (EEP 6.3.2) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

Version	1.0
Release Date	January 2021
HPE Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
Maven Artifacts	http://repository.mapr.com/maven/
Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

HttpFS 1.0 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- Tomcat v9.0.39

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
963eca1	2020-11-12	HTTPFS-49: upgrade tomcat version to 9.0.39

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

HttpFS 1.0 - 2101 (EEP 5.0.6) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

Version	1.0
Release Date	January 2021
MapR Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
Maven Artifacts	http://repository.mapr.com/maven/
Package Names	Navigate tohttps://package.mapr.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

HttpFS 1.0 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- Tomcat v9.0.39

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
963eca1	2020-11-12	HTTPFS-49: upgrade tomcat version to 9.0.39

For complete details, refer to the commit log for this project in GitHub.

HttpFS 1.0 - 2009 (EEP 6.3.1 and EEP 5.0.5) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for HttpFS 1.0 - 2009 for EEP 6.3.1 and EEP 5.0.5.

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.0
Release Date	September 2020
MapR Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Tomcat v9.0.36

Fixes

This MapR release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
99ac817	2019-12-23	HTTPFS-27: Add security headers for HTTPFS
a56fdae	2020-03-13	HTTPFS-28: No TLS protocol logging for httpfs
33dfdcb	2020-03-31	HTTPFS-31: Backported HDFS-6404 [HttpFS should use a 000 umask for mkdir and create operations
efda36b	2020-06-16	HTTPFS-36: Support jdk 11
b8621d7	2020-07-01	MAPRHADOOP-83: Updated tomcat version to 9.0.36
5e3d1ad	2020-07-01	HTTPFS-39: "org.apache.log4j.ConsoleAppender" object is not assignable to a "org.apache.log4j.Appender" variable

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

HttpFS-1.0-1904 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.0
Release Date	April 2019
MapR Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Tomcat is updated to v7.0.92.

Fixes

This MapR release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
d39f31a	2019-02-21	HTTPFS-22: Updated Tomcat version to 7.0.92

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

HttpFS-1.0-1901 (EEP 6.1.0) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.0
Release Date	February 2019
MapR Version Compatibility	See EEP Components and OS Support on page 5536

HttpFS-1.0-1808 (EEP 6.0.0) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.0

Release Date	September 2018
MapR Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs/
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Upgraded Tomcat version from 6.0.32 to 7.0.82.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4fe5706	2018-02-13	[MAPR-30661] HttpFS used vulnerable tomcat
c1645f6	2018-01-23	MAPR-25377-REOPEN warden.httpfs.conf should not have double quotes for service.env
8defb23	2018-01-22	MAPR-30557 Add support for arbitrary content type to WebHDFS
ee6641b	2018-01-20	MAPR-30449 configure.sh -R failed with HttpFS component
0697ffc	2018-01-20	MAPR-26377 warden.httpfs.conf should not have double quotes for service.env
2190de6	2017-10-28	MAPR-HTTPFS-11 HttpFS still configured on SSL after configure.sh --unsecure
029d8e2	2017-10-26	MAPR-HTTPFS-12 Update JSON lib at HttpFS
bf7c40a	2017-10-22	MAPR-HTTPFS-9 HttpFS should be restarted durring any configure.sh -R run
7fb9d19	2017-10-20	MAPR-HTTPFS-6 HttpFS Signature file is default and world readable
1ddaa89	2017-10-20	MAPR-29745-HttpFS configure.sh -R when HttpFS service added generates an error but does enable service
7a38196	2017-10-20	MAPR-HTTPFS-7 HttpFS is not using https by default
ca608a8	2017-10-18	MAPR-HTTPFS-4 Upload restart script into restart file
9695d4a	2017-10-12	MON-2236 HttpFS link in service page does not work

HttpFS-1.0-1710 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	1.0
Release Date	November 2017
MapR Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	N/A
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

The following features are new in this release:

- HttpFS now has its own `configure.sh` file.
- SSL is enabled by default on secure clusters (for mapr-core 6.0.0 only).

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
cb12cd7ec	2017-09-21	[MAPR-29298] Add support for content-type plain text in CheckUploadContentType Filter

Known Issues and Limitations

- None

Resolved Issues

- None

HttpFS 1.0-1703 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	1.0
Release Date	April 2017
MapR Version Compatibility	See EEP Components and OS Support on page 5536
GitHub Source	https://github.com/mapr/httpfs
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs).

New in This Release

No new features in this release.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
9a362ae	2017-03-28	[MAPR-26276] HttpFS can't stop correctly on secure clusters
008e322	2017-02-10	[MAPR-25758] CHECKACCESS operation missing
1a2835a	2017-02-15	[MAPR-22912] able to impersonate any user

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
5f84223	2016-10-24	[MAPR-25042] [HTTPFS] Set MapR-SASL as default authentication

Known Issues and Limitations

None

Resolved Issues

- None

HttpFS 1.0-1609 Release Notes

Below are release notes for the HttpFS component included in the MapR Converged Data Platform.

HttpFS Version	1.0
Release Date	September 30, 2016
MapR Version Interoperability	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/httpfs/tree/1.0-mapr-1609
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
0a81f04	2015-08-23	MAPR-24326: The issue causing the HttpFS service to shut down after an upgrade is fixed.

HttpFS 1.0-1606 Release Notes

Below are release notes for the HttpFS component included in the MapR Converged Data Platform.

HttpFS Version	1.0
Release Date	July 1, 2016
MapR Version Interoperability	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/httpfs/tree/1.0-mapr-1606
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-httpfs-1.0.201606271250-1.noarch.rpm • mapr-httpfs_1.0.201606271250_all.deb

New in this Release

This release of Apache HttpFS includes the following behavior change that is specific to MapR:

last-updated: Apr 11, 2022

- The `GET_BLOCK_LOCATIONS` operation is now supported.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
1a00513	2015-06-03	MAPR-23393: Backported HDFS-6874 so that HttpFS now supports the `GET_BLOCK_LOCATIONS` operation.
f33edb7	2016-05-19	MAPR-23400: The start and restart of the HttpFS service now behaves as expected on a Kerberos cluster.

HttpFS 1.0-1504 Release Notes

Version	1.0
Release Date	May 6, 2015
Source on GitHub	https://github.com/mapr/httpfs.git
GitHub Release Tag	1.0-mapr-1504
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

This release of HttpFS Version 1.0 for the MapR Distribution for Apache Hadoop includes the following feature:

- PAM Authentication

Fixes

Commit	Date (YYYY-MM-DD)	Comment
f691ac6	2015-05-05	MAPR-17413: Parameter 'len' saved for backward compatibility.
16305ed	2015-04-29	MAPR-17413 Change API to default Apache API: parameter len length.
6fd122e	2015-04-28	MAPR-17413: Add the ability to read chunk file from filesystem.
1da8cde	2015-04-15	MAPR-18036: [Hue 3.7] Exception at File Browser page.
c87c8f6	2015-04-06	MapR-SASL support
e3379c0	2015-02-04	MapR-SASL support
44849dc	2014-12-09	MAPR-13476: Certificate user mapping support for client cert authentication
0e488c6	2014-11-14	MAPR-13476: HttpFS authentication with client key

Commit	Date (YYYY-MM-DD)	Comment
8f0d394	2014-11-13	MAPR-13476: PAM authentication refactoring
bfacc5e	2014-11-04	MAPR-13476: PAM user&password authentication

HttpFS 1.0-1501 Release Notes

Version	1.0
Release Date	January 21, 2015
Source on GitHub	https://github.com/mapr/httpfs.git
GitHub Release Tag	1.0-mapr-1501
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
e2cc13d	2014-12-24	MAPR-16534: Copying a large file from Hue to a Hive table through HttpFS resulted in only 4096 bytes of the file being copied to the target.

HttpFS 1.0-1409 Release Notes

Version	1.0
Release Date	September 30, 2014
Source on GitHub	https://github.com/mapr/httpfs.git
GitHub Release Tag	1.0-mapr-1409
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

As of HttpFS 1.0-1409, you can configure httpFS with security. For more information, refer to MapR's HttpFS documentation for *SSL Security for HttpFS*.

HttpFS 1.0-1406 Release Notes

Version	HttpFS 1.0-1406
Release Date	June 30, 2014
Source on GitHub	https://github.com/mapr/httpfs.git
GitHub Release Tag	1.0-mapr-1406
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.

last-updated: Apr 11, 2022

Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
54fe9d8	12-May-2014	[HDFS-4733] The username pattern for HttpFS is now configurable in the httpfs-site.xml file.
f142a44	27-Jun-2014	MapR 13570. Preferentially calls the IOUtils.copyBytes() method from the 2.3.0 Hadoop API when available, improving file browser response time with large files.

HttpFS 1.0-1401 Release Notes

Version	HttpFS 1.0
Release Date	January 13, 2014
Source on GitHub	https://github.com/mapr/httpfs
GitHub Release Tag	1.0-mapr-1401
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
e1bb581	10-Jan-2013	Fix for MapR. The Zookeeper JAR file is sourced from the Hadoop library instead of the HttpFS library.

Hue Release Notes

The release notes for Hue component included in the MapR Converged Data Platform contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Hue 4.6.0.300 - 2201 (EEP 8.1.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.6.0.300-2201.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage:

- Changelog for Hue 4.6

- Changelog for Hue 4.5
- Changelog for Hue 4.4

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.6.0.300
Release Date	January 2022
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/4.6.0.300-eep-810
GitHub Release Tag	4.6.0.300-eep-810
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names

New in This Release

This Hue release:

- Provides the ability to configure a custom port fo the S3-fs endpoint.
- Disables Impala, Pig, and Sqoop1 applications by default.
- Updates the list of dependencies in Hue to resolve CVE vulnerabilities.
- Allows connection to an S3 server that uses self-signed certificates.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
6b36590	2021-10-28	MHUE-480 [drill] Backport Drill JDBC client refactoring from Hue 4.3
119d3ae	2021-11-03	MHUE-484 Fix ssl_password_script.sh to resolve issue on Core 7/ Ubuntu 18
2c3191d	2021-11-11	MHUE-238 Provide an ability to configure custom port for S3-fs endpoint
b3bee61	2021-11-18	PR1123 [aws] s3datetime_to_timestamp parse timestamp with Z(minio.io)
0fa24ae	2021-11-19	MHUE-477 [build-boxes] Fix Hue installation on Ubuntu Focal
422b8a4	2021-12-01	fix(boto): S3 region parser references unassigned variable when S3 is colocated
4472b8e	2021-12-01	HUE-9435 [aws] Fix issue with aws behind proxy and make S3_USE_SIGV4 default when region is set
7d3c9d6	2021-12-22	MHUE-491 Disable Sentry, Impala and Pig apps
862faa9	2021-12-24	MHUE-491 Disable Pig in interpreter list
007af8a	2021-12-28	MHUE-491 Disable Sqoop1 in interpreter list
2f5828c	2022-01-07	MHUE-487 Backport fix for CVE-2021-3177

last-updated: Apr 11, 2022

65f6d2a	2022-01-09	MHUE-487 Hue CVE fixes for Jan 2022 release
37dfea4	2022-01-09	HUE-5095 [backend] Python requests library should put port information in log message
c8ee955	2022-01-10	MHUE-487 Revert upgrade of cryptography because it breaks build
7a8c4b6	2022-02-03	MHUE-500 Allow to connect to S3 server that uses self-signed certificates

For complete details, refer to the commit log for this project in GitHub.

Resolved Issues

This release resolves the following issues:

- MHUE-480 - Configured to use Zookeeper connection type does not work for Drill
- MHUE-484 - Fix ssl_password_script.sh which breaks Hue on Ubuntu 18.04
- MHUE-477 - Fix Hue compatibility with Ubuntu 20.04

Known Issues and Limitations

- Hue 4.6 is not compatible with FIPS-enabled setup.
- MapR Data Platform does not support the integration between Hue 4.6.0 and the following components:
  - Solr Search
  - ZooKeeper
- MHUE-209 Hue cannot create a table from a `*.csv` file via importer from ADLS.
- Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.
- When the `[notebook]` section of the `hue.ini` contains a Drill entry that precedes the Hive entry, the Table Browser uses the Drill back end. This can be turned off by changing the `force_hs2_metadata=true` setting in the `[metastore]` section of the `hue.ini` file.

Note: In Hue 4.3.0-1912, support for the integration of Drill with the Table Browser in Hue was added as an experimental feature.

Hue 4.6.0.200 - 2110 (EEP 8.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.6.0.200-2110.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage:

- changelog for Hue 4.6
- changelog for Hue 4.5
- changelog for Hue 4.4

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.6.0.200
Release Date	October 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/4.6.0.200-eep-800
GitHub Release Tag	4.6.0.200-eep-800
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names

New in This Release

No new features were introduced in this release.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
64a5614	2021-05-21	MHUE-470 Hue not starts because of wrong permissions of metrics file
5dc5f7b	2021-09-21	MHUE-476 SSL key and certificate could not be found or have a problem
b4ebcb1	2021-09-21	MHUE-474 Remove usage of sudo in Hue

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- MapR Data Platform does not support the integration between Hue 4.6.0 and the following components:
  - Solr Search
  - ZooKeeper
- MHUE-209 Hue cannot create a table from a `*.csv` file via importer from ADLS.
- Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.
- When the `[notebook]` section of the `hue.ini` contains a Drill entry that precedes the Hive entry, the Table Browser uses the Drill back end. This can be turned off by changing the `force_hs2_metadata=true` setting in the `[metastore]` section of the `hue.ini` file.

Note: In Hue 4.3.0-1912, support for the integration of Drill with the Table Browser in Hue was added as an experimental feature.

Hue 4.6.0.0 - 2104 (EEP 7.1.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.6.0.0-2104.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage:

- changelog for Hue 4.4

last-updated: Apr 11, 2022

- changelog for Hue 4.5
- changelog for Hue 4.6

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.6.0.0
Release Date	April 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/4.6.0.100-mapr-710
GitHub Release Tag	4.6.0.0-mapr-710
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Hue 4.6.0.0 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- MHUE-436: Ability to disable the automatic creation of user home directories in the filesystem, by setting `ensure_home_directory` to `false` in the `[desktop] [[auth]]` section of the `hue.ini` file.
- Service verifier

Fixes

This MapR release includes the following fixes on the base release:

GitHubCommitNumber	Date (YYYY-MM-DD)	MapR Fix Number and Description
54cddb8	2021-01-12	MHUE-436 Make creation of users home directory configurable (fix for Hue 4.6)
bfa33a4	2021-02-10	MHUE-444 Upgrade virtualenv to 16.7.10 to fix PIP CVE vulnerability (fix for Hue 4.6)
afe0cc8	2021-02-12	MHUE-451 Various vulnerabilities in Hue (fix for Hue 4.6)
736efa2	2021-04-06	MHUE-455 Add service verifier to Hue package
3787ba0	2021-04-08	MHUE-459 Use CentOS 7 image to build Hue 4.6 to resolve SLES 15 issues

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- MapR does not support the integration between Hue 4.6.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.6.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.

- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.
- Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.
- When the `[notebook]` section of the `hue.ini` contains a Drill entry that precedes the Hive entry, the Table Browser uses the Drill back end. This can be turned off by changing the `force_hs2_metadata=true` setting in the `[metastore]` section of the `hue.ini` file.

Note: In Hue 4.3.0-1912, support for the integration of Drill with the Table Browser in Hue was added as an experimental feature.

Hue 4.6.0.0 - 2009 (EEP 7.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.6.0.0-2009.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage:

- changelog for Hue 4.4
- changelog for Hue 4.5
- changelog for Hue 4.6

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.6.0.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/4.6.0.0-mapr-700
GitHub Release Tag	4.6.0.0-mapr-700
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- The Hue package no longer includes the Simba Drill JDBC driver and instead includes the Drill JDBC driver from the mapr-drill-internal package (MHUE-383). To connect to Drill using the Drill JDBC Interpreter you need to have the mapr-drill-internal package installed on the node with the Hue server.
- The Drill ODBC interpreter is optionally available in Hue through the SQLAlchemy interface. It requires the Simba Drill ODBC drivers installed on the system and available only on RedHat/CentOS (MHUE-327).
- Environment configuration files for Hue server should now be configured in the `${HUE_HOME}/desktop/conf/env.d` directory instead of `${HUE_HOME}/bin/env.d`.
- Hue now has the following HTTP security headers configured by default (MAPR-CORE-307):
  - X-Content-Type-Options
  - X-XSS-Protection

last-updated: Apr 11, 2022

  - Strict-Transport-Security
  - Content-Security-Policy
- TLSv1 and TLSv1.1 were disabled (MHUE-328)
- In kerberized environments, the Hue kt_renewer process is started automatically with Hue server (MHUE-387).

Note: In Hue 4.3.0-1912, support for the integration of Drill with the Table Browser in Hue was added as an experimental feature.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
2d46a11	2020-02-24	MAPR-CORE-307: Add security headers to Hue
e032a6a	2020-03-05	Get rid of redundant logging of JDBC connections
b087bff	2020-03-11	MHUE-328 Disable TLSv1 and TLSv1.1 protocol for Hue 4.6
9ecba78	2020-03-11	MHUE-327 Remove trailing semicolon before execution queries through SQL Alchemy ODBC
68c801d	2020-03-16	MHUE-326 Update Protobuf version to 3.11.1
4fd06d8	2020-03-16	MHUE-332 Could not install table for Hive examples in Hue
74bb9b8	2020-03-18	MHUE-345 Dynamically set Hive version for hive_conf_dir in hue.ini
2c00d3a	2020-03-18	MHUE-328 Show list of enabled ciphers
7a7318b	2020-03-26	MHUE-327 Add SQLAlchemy Drill and its dependencies
d337bd8	2020-04-07	MHUE-348 Internal Server Error while open Hive page
b625f35	2020-04-08	MHUE-330 Error - Hue editor does not use database from databases block for requests
4b92ac5	2020-04-24	MHUE-366 Fix login issue for LDAP users accessing for the first time
c9de095	2020-04-28	MHUE-327 Provide an ability to do the user impersonation with Drill ODBC
2f44f81	2020-04-30	MHUE-356 Set right thrift_version in beeswax
94286d8	2020-05-06	HUE-9175 [core] Upgrade thrift-0.9.1 to thrift-0.13.0
04d9bbd	2020-05-06	HUE-9175 [editor] Regenerate impala and hive thrift from 0.9 to 0.13

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
52ab5ca	2020-05-06	Hue Aquascan CVEs (#1095)
30b92b9	2020-05-06	HUE-9223 [frontend] Fix high risk npm package vulnerabilities
94bc2f5	2020-05-08	MHUE-363 Update Hue 3d-party libraries to fix Security Vulnerabilities / fix of JS libraries
9e30862	2020-06-01	MHUE-384 Drill on HUE does not work when all ZK nodes are mentioned in the hue.ini
b991e7e	2020-06-26	MHUE-387 Add management tools for kt_renewer in Hue
050c5b4	2020-06-26	MHUE-391 Fix import of maprsecurity module on 11 Java
61325a9	2020-07-13	MHUE-393 Job Browser "TypeError: 'NoneType' object is not iterable" when non-admin user try to kill Tez job
29951d5	2020-07-17	MHUE-400 Hue-4.6 not starting on Centos-8.1 (mapr-sasl)
d2a27c0	2020-07-22	MHUE-397 An error occurred while watching the sqoop job running
e66fa5f	2020-07-23	MHUE-378 Hive do not work on non-secure setup
21204bc	2020-07-30	MHUE-411 Update Pig directory path to Pig 0.17.0
7c18d15	2020-07-30	HUE-9288 [editor] Fix selection type variable substitution in the editor
d5b1b67	2020-07-31	MHUE-412 Error while open Hive page in Hue
47397ee	2020-08-05	MHUE-412 Error while open Hive page in Hue
0ea47de	2020-08-06	MHUE-329 Error in logs after install Hue
55dfee0	2020-08-07	MHUE-419 Livy session cannot start on Kerberos cluster
8f83f95	2020-08-10	MHUE-413 Errors after run Impala query
5db3882	2020-08-12	HUE-9290 [frontend] Properly close certain html tags
76c2034	2020-08-12	MHUE-398 Error clicking on the job link in properties
fab2c58	2020-08-12	MHUE-417 Disable "Explain" button for interpreters that do not suppot this feature
b06c801	2020-08-14	MHUE-352 File browser in Hue does not open files that contain "#" symbol in the name

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
755de7c	2020-08-14	MHUE-429 Fix Livy examples for Python 3
7655382	2020-08-17	MHUE-431 TSocket read 0 bytes while opening HBase page in Hue on Kerberos
3672b30	2020-08-21	MHUE-388 Hue to leverage the usage of HA of Hiveserver2
c920c63	2020-08-21	MHUE-352 File browser in Hue does not open files that contain "#" symbol in the name
7bcd5a6	2020-08-26	MHUE-415 Execute USE statement for Drill ODBC and PostgreSQL queries
10652bd	2020-08-28	MHUE-373 Cannot confirm kill jobs in popup
de472b4	2020-08-29	MHUE-383 Switch to Drill drivers from mapr-drill-internal package
8bbaa2c	2020-09-01	MHUE-352 File browser in Hue does not open files that contain "#" symbol in the name
ec23886	2020-09-02	MHUE-435 Cannot connect to Drill on Ubuntu

Known Issues and Limitations

- MapR does not support the integration between Hue 4.6.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.6.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.

Note:

- Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.
- When the `[notebook]` section of the `hue.ini` contains a Drill entry that precedes the Hive entry, the Table Browser uses the Drill back end. This can be turned off by changing the `force_hs2_metadata=true` setting in the `[metastore]` section of the `hue.ini` file.

Hue 4.3.0.500 - 2201 (EEP 6.3.6) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.3.0.500-2201.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage:

- Changelog for Hue 4.3

- Changelog for Hue 4.2
- Changelog for Hue 4.1
- Changelog for Hue 4.0

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.3.0.500
Release Date	January 2022
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/4.3.0.500-mapr-636
GitHub Release Tag	4.3.0.500-mapr-636
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names

New in This Release

This Hue release:

- Updates the list of Hue dependencies to resolve CVE vulnerabilities.
- Updates Log4j 1.2.17 to Log4j 1.3.1-mapr, which resolves a couple of minor vulnerabilities.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
acd646f	2021-09-21	MHUE-470 Hue not starts because of wrong permissions of metrics file
b68660d	2021-10-26	MHUE-480 Configured to use Zookeeper connection type does not work for Drill
e9170cc	2021-10-26	MHUE-480 Fix dependencies in Drill connector
c2efd43	2021-10-27	MHUE-480 Fix Protobuf and Guava dependencies in Drill connector
3489d1e da6d2d1	2022-01-05 2022-01-31	MHUE-493 Switch to log4j 1.3.0-mapr Update log4j to 1.3.1-mapr
bcbf294	2022-01-09	MHUE-487 Hue CVE fixes for Jan 2022 release
d7ca610	2022-01-10	MHUE-487 Revert upgrade of cryptography as it breaks build

For complete details, refer to the commit log for this project in GitHub.

Resolved Issues

This release resolves the following issues:

- MHUE-470 - Hue not starts because of wrong permissions of metrics file
- MHUE-480 - Configured to use Zookeeper connection type does not work for Drill

last-updated: Apr 11, 2022

Known Issues and Limitations

- MapR Data Platform does not support the integration between Hue 4.3.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.3.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use data-fabric-SASL authentication.
- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.
- Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

Note: In Hue 4.3.0-1912, support for the integration of Drill with the Table Browser in Hue was added as an experimental feature.

Hue 4.3.0.400 - 2104 (EEP 6.3.4) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.3.0.400 - 2104.

The notes below relate specifically to the MapR Data Platform distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage:

- changelog for Hue 4.0
- changelog for Hue 4.1
- changelog for Hue 4.2

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.3.0.400
Release Date	April 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/4.3.0.400-mapr-634
GitHub Release Tag	4.3.0.400-mapr-634
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Hue 4.6.0.100 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- MHUE-451: Updated list of libraries in Hue to resolve CVE vulnerabilities.

Fixes

This release includes the following fixes on the base release:

GitHubCommitNumber	Date (YYYY-MM-DD)	MapRFixNumberandDescription

last-updated: Apr 11, 2022

ee6e06e	2021-02-09	MHUE-450 Fix Jackson Databind vulnerabilities
5da59b8	2021-02-10	MHUE-444 Upgrade virtualenv to 16.7.10 to fix PIP CVE vulnerability
941db66	2021-02-10	MHUE-441 Update Django to 1.11.29 to fix CVE vulnerabilities
66f2806	2021-02-11	MHUE-443 Update PyYAML to 5.3.1 to resolve CVE vulnerabilities
6d00d1b	2021-02-12	MHUE-451 Various vulnerabilities in Hue component
25146a2	2021-02-12	MHUE-451 Fix issues with updated cryptography and tablib
b2482d2	2021-02-12	DFDEVOPS-1549 Update CentOS 7 build images to 7.4 to have OpenSSL 1.0.2
d438ef9	2021-02-12	HUE-9225 [core] Upgrade certain third-party python libraries that has identified vulnerabilities (#1102)
65e02ac	2021-02-19	MHUE-456 update Zookeeper
7e18d7b	2021-02-20	MHUE-441 Fix Kerberos issues on Ubuntu

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- The MapR Data Platform does not support the integration between Hue 4.3.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.3.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use data-fabric-SASL authentication.
- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.
- Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

Resolved Issues

- MHUE-441: Kerberos on Ubuntu does not work for Hive/Impala and HBase/Data Fabric Database applications.

  Note: In Hue 4.3.0-1912, support for the integration of Drill with the Table Browser in Hue was added as an experimental feature.

Hue 4.3.0.300 - 2101 (EEP 6.3.2) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.3.0.300-2101.

The notes below relate specifically to the MapR Data Platform distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage:

- changelog for Hue 4.0
- changelog for Hue 4.1
- changelog for Hue 4.2

last-updated: Apr 11, 2022

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.3.0.300
Release Date	January 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/4.3.0.300-mapr-632
GitHub Release Tag	4.3.0.300-mapr-632
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- MHUE-445: The Thrift library was updated to version 0.13.0.
- MHUE-436: You can now disable creation of the home directory in DFS on the first user login by changing the value of the `ensure_home_directory` parameter in the `desktop.auth` section of `hue.ini`.
- MHUE-437: Hue 4.3 is now compatible with CentOS 8.

Fixes

This release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
900d872	2021-01-11	MHUE-437 Make Hue 4.3 compatible with CentOS 8
7c7d300	2021-01-11	MHUE-445 Update Thrift libraries to fix Security Vulnerabilities
0a17050	2021-01-12	MHUE-436 Make creation of users home directory configurable

Known Issues and Limitations

- The MapR Data Platform does not support the integration between Hue 4.3.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.3.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use data-fabric-SASL authentication.
- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use the cluster mode. Set `livy.spark.deployMode=cluster` in the `${LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851:

```
Unable to start spark thrift server against secured hive metastore(GSS
initiate
                    failed)
```

- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.

  Note: Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

- LIVY-42: Livy UI is not accessible on Kerberos.

Resolved Issues

MHUE-386: Hue 4.3.0 in EEP 6.3.0 and 6.3.1 is not supported for Red Hat Enterprise Linux (RHEL) or CentOS 8.x. However, Hue 4.3.0.300 in EEP 6.3.2 can be used with RHEL or CentOS 8.x.

Note: In Hue 4.3.0-1912, support for the integration of Drill with the Table Browser in Hue was added as an experimental feature.

Hue 4.3.0.200 - 2009 (EEP 6.3.1) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.3.0.200-2009.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage:

- changelog for Hue 4.0
- changelog for Hue 4.1
- changelog for Hue 4.2

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.3.0.200
Release Date	September 2020

GitHub Release Tag	4.3.0.200-mapr-631
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Hue now has the following HTTP security headers configured by default (MAPR-CORE-307):
  - X-Content-Type-Options
  - X-XSS-Protection
  - Strict-Transport-Security
  - Content-Security-Policy
- TLSv1 and TLSv1.1 were disabled (MHUE-328).
- In kerberized environments, the Hue kt_renewer process is started automatically with Hue server (MHUE-387).

last-updated: Apr 11, 2022

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4107ec7	2020-01-10	MAPR-CORE-307: Add security headers to Hue
0597366	2020-03-11	MHUE-328 Disable TLSv1 and TLSv1.1 protocol
9bf9796	2020-03-18	MHUE-328 Show list of enabled ciphers
a9a42dc	2020-04-24	MHUE-366 Fix login issue for LDAP users accessing for the first time
2b5a0f9	2020-05-06	MHUE-357 Fix Jackson vulnerability
69c79b2	2020-06-01	MHUE-384 Drill on HUE does not work when all ZK nodes are mentioned in the hue.ini
cb7681a	2020-06-25	MHUE-387 Add management tools for kt_renewer
d203fe8	2020-07-13	MHUE-393 Job Browser "TypeError: 'NoneType' object is not iterable" when non-admin user try to kill Tez job
a010403	2020-07-24	HUE-8887 [editor] Hive LLAP and Hive Service Discovery connectors
239b56c	2020-07-30	HUE-8605 [metadata] Only show the Table Privilege tab when Sentry is enabled
08f2043	2020-08-07	MHUE-388 Hue to leverage the usage of HA of Hiveserver2

Known Issues and Limitations

- MapR does not support the integration between Hue 4.3.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.3.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use the cluster mode. Set `livy.spark.deployMode=cluster` in the `${LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851:

```
Unable to start spark thrift server against secured hive metastore(GSS
initiate
                    failed)
```

- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.

  Note: Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

- LIVY-42: Livy UI is not accessible on Kerberos.

Hue 4.3.0.100-1912 (EEP 6.3.0) Release Notes
This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.3.0-1912.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information on:

- changelog for Hue 4.0
- changelog for Hue 4.1
- changelog for Hue 4.2

or the Hue homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	Hue: 4.3.0.100 Livy: 0.5.0
Release Date	December 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Hue: https://github.com/mapr/hue/tree/4.3.0.100-mapr-630 Livy: https://github.com/mapr/livy/tree/0.5.0-mapr-1912

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- In the Simba Drill Drivers included in the Hue package, `joda-time` library was updated to 2.10.3.
- `joda-time` was also updated to 2.10.3 in the Livy package.
- Jetty was updated to 9.4.22 in Livy to avoid CVE issues.

Fixes

This MapR release includes the following fixes on the base release:

Hue Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
a833c27	2019-05-08	HUE-8833: [editor] Error - hidden popup menu in the presentation section

347e360	2019-11-18	MHUE-317: Job progress is not updated dynamically
de1fc42	2019-11-21	HUE-319 Update joda-time dependency for in Drill drivers

Livy Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
28d75b3	2019-11-08	[LIVY-526] Upgrade jetty version
345e789	2019-11-12	MLIVY-59 Update Livy Jetty version to 9.4
d81192a	2019-11-19	MLIVY-63 Replacing joda-time-*.jar with joda-time-2.10.3.jar

Known Issues and Limitations

- MapR does not support the integration between Hue 4.3.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.3.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MAPR-2561: DB Query in Hue cannot execute more than one query.
- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use the cluster mode. Set `livy.spark.deployMode=cluster` in the `{LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851:

```
Unable to start spark thrift server against secured hive metastore(GSS
initiate failed)
```

- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.

Note: Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

- LIVY-42: Livy UI is not accessible on Kerberos.

Resolved Issues

- MHUE-302 Broken link to Table Browser in table description in left assistant panel
- MHUE-303 Integration of Table Browser with Drill is not supported

Note: In Hue 4.3.0-1912, support for the integration of Drill with the Table Browser in Hue was added as an experimental feature.

Hue 4.3.0-1904 (EEP 6.2.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.3.0-1904.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information on:

- changelog for Hue 4.0

Fixes

This MapR release includes the following fixes on the base release:

Hue Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
30d39a92	15.03.19	MHUE-242: HUE 4.2.0 has Drill JDBC 1.5.9.1018 which is not compatible with Drill 1.14.0 and 1.15.0
a9ee7e90	21.03.19	MHUE-248: Error with default value in variable for HUE-4.3
7471813e	21.03.19	MHUE-251: Boolean variable substitution fails with coercion error
8d74dedb	22.03.19	MHUE-252: Error with redirect to page for Hue-4.3
74e94383	01.03.19	MHUE-253: Oozie workflow submission failed
319ee1a8	02.01.19	MHUE-259: Error while run new Coordinator
522c28bc	01.04.19	MHUE-254: Can't reload job in mini job browser
f0ab1ba6	05.04.19	MHUE-254: Can't kill job in mini job browser
257cd92f	02.04.19	MHUE-257: Can't close context menu
0de424e5	01.04.19	MHUE-258: No redirect after changing url in command line in job browser
256cf1d7	07.01.19	MHUE-260: Can't create new database in tables browser for Hive
25c51d56	04.04.19	MHUE-261: Error while click 'Refresh' button in tables browser
061b0cdd	08.04.19	MHUE-266: Error while run oozie workflow job for HiveServer2 Script

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
b8437285	09.04.19	MHUE-272: Error while open sqoop2 page in hue-4.3
76b837eb	09.04.19	MHUE-271: Installer does not configure sqoop2
81785854	10.04.19	MHUE-268: Cannot create a table in a newly created database, also 'Refresh' button does not work.
de426eb9	11.04.19	MHUE-199: Error when changing owner for s3
f23deeed	12.04.19	MHUE-275: Can't save file after use 'Save as' button in Azure
be221bd0	08.04.19	MHUE-265: Error while share documents
91a74325	15.04.19	MHUE-187: R session for R Editor in Hue cannot start
9452fb7d	17.04.19	MHUE-141: Example maprdb tables are not downloaded on MAPR-SASL cluster
089d385f	22.01.19	MHUE-280: After adding new requests - the order of launching requests does not change
0445a1be	22.04.19	MHUE-282: Altus API is not configured while open Impala page in Hue
eef21af9	22.04.19	MHUE-182: Not active 'Run' button for Spark Submit Python

Livy Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
2733eac	2019-03-15	LIVY-60 Use Spark jars from cluster instead of pack it in Livy
f2ac34d	2019-04-16	MLIVY-61 Enable access-control in Livy by default on secure clusters

Known Issues and Limitations

- MapR does not support the integration between Hue 4.3.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.3.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MAPR-2561: DB Query in Hue cannot execute more than one query.
- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use the cluster mode. Set `livy.spark.deployMode=cluster` in the `{LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851: "Unable to start spark thrift server against secured hive metastore(GSS initiate failed)".
- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.

Note: Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

- LIVY-42: Livy UI is not accessible on Kerberos.
- MHUE-302: Broken link to Table Browser in table description in left assistant panel.
- MHUE-303: Integration of Table Browser with Drill is not supported.

  Note: When the `[notebook]` section of the `hue.ini` contains a Drill entry that precedes the Hive entry, the Table Browser uses the Drill back end. This can be turned off by setting `force_hs2_metadata=true` in the `[metastore]` section of the `hue.ini`.

Resolved Issues

- None.

Fixes

This MapR release includes the following fixes on the base release:

Hue Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
7d19798	2018-12-14	MHUE-218 Configuration of HUE for creating json report with available metrics
ec9807c	2018-12-21	MHUE-216 An error occurred while watching the job running with Oozie 5.0

Livy Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
8643c36	2019-01-15	MLIVY-55 Update spark 2.3.2.0 jars for livy for MEP-6.0.1 and MEP-6.1.0 releases
3260882	2019-01-16	MLIVY-55 Add spark-2.3-mapr profile

Known Issues and Limitations

- MapR does not support the integration between Hue 4.2.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.2.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MAPR-2561: DB Query in Hue cannot execute more than one query.
- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use the cluster mode. Set `livy.spark.deployMode=cluster` in the `{LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851: "Unable to start spark thrift server against secured hive metastore(GSS initiate failed)".
- MHUE-141 Example MapR Database tables are not downloaded on MAPR-SASL cluster.
- MHUE-158 Error when change timezone in Oozie coordinator.
- HUE-7712 Livy-batch not available in HUE 4.1.
- MHUE-187 R session for R Editor in Hue cannot start.
- MHUE-192 Error, when create Impala table via Table Browser.
- MHUE-206 ERROR "Failed to extract json message" when try to export Hive query result to ADLS.
- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.

Note: Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

- LIVY-42: Livy UI is not accessible on Kerberos.
- MHUE-302: Broken link to Table Browser in table description in left assistant panel.
- MHUE-303: Integration of Table Browser with Drill is not supported.

Note: When the `[notebook]` section of the `hue.ini` contains a Drill entry that precedes the Hive entry, the Table Browser uses the Drill back end. This can be turned off by setting `force_hs2_metadata=true` in the `[metastore]` section of the `hue.ini`.

Resolved Issues

- None.

Hue 4.2.0-1808 (EEP 6.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 4.2.0-1808.

last-updated: Apr 11, 2022

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information on:

- changelog for Hue 4.0
- changelog for Hue 4.1
- changelog for Hue 4.2

or the Hue homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	Hue: 4.2.0 Livy: 0.5.0
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Hue: https://github.com/mapr/hue/tree/4.2.0-mapr-1808 Livy: https://github.com/mapr/livy/tree/0.5.0-mapr-1808
GitHub Release Tag	Hue: 4.2.0-mapr-1808 Livy: 0.5.0-mapr-1808
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Improved Drill integration, see Integrate Hue with Drill on page 3655.
- Improvements in scripts used to manage the Hue Database.
- Hue uses `/opt/mapr/conf/ssl_truststore.pem` file to verify SSL connections with other services on MapR cluster and `/opt/mapr/conf/ssl_keystore.pem` as its certificate.
- For Livy upgrades, from Livy 0.3 and above, user configuration files are saved during upgrade.
- Starting with EEP 6.0, MapR SASL authentication, encryption, and impersonation for Livy is enabled by default on secure clusters. For more information, see Configure Livy with Security on page 3839.
- Support for integrating Hue with ADLS. For more information, see Browsing ADLS data, querying it with SQL and exporting the results back in Hue 4.2.

Known Issues and Limitations

- MapR does not support the integration between Hue 4.2.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 4.2.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.

- MAPR-2561: DB Query in Hue cannot execute more than one query.
- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use the cluster mode. Set `livy.spark.deployMode=cluster` in the `{LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851: "Unable to start spark thrift server against secured hive metastore(GSS initiate failed)".
- MHUE-141 Example maprdb tables are not downloaded on MAPR-SASL cluster.
- MHUE-158 Error when change timezone in oozie coordinator.
- HUE-7712 Livy-batch not available in HUE 4.1.
- MHUE-187 R session for R Editor in Hue cannot start.
- MHUE-192 Error, when create Impala table via Table Browser.
- MHUE-206 ERROR "Failed to extract json message" when try to export Hive query result to ADLS.
- MHUE-209 Hue cannot create a table from *.csv file via importer from ADLS.

Note: Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

- LIVY-42: Livy UI is not accessible on Kerberos.
- MHUE-302: Broken link to Table Browser in table description in left assistant panel.
- MHUE-303: Integration of Table Browser with Drill is not supported.

Note: When the `[notebook]` section of the `hue.ini` contains a Drill entry that precedes the Hive entry, the Table Browser uses the Drill back end. This can be turned off by setting `force_hs2_metadata=true` in the `[metastore]` section of the `hue.ini`.

Resolved Issues

- HUE-6074: [notebook] Execute snippets as Oozie batch.

Fixes

This MapR release includes the following fixes on the base release:

Hue Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
212fe65	2018-05-01	MHUE-103 Hue querying Drill: Support for Outbound Impersonation
896aa92	2018-05-04	MHUE-119 Error when try to move/ copy large file via file browser

5028ed6	2018-08-07	MHUE-181 Turn off debug logging at Hue in log.conf

Livy Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4fb484e	2018-08-07	MLIVY-51 Fix misconfiguration issue in livy.conf
4f09642	2018-08-02	MLIVY-51 Livy service are not started after Incremental Install
d4c1423	2018-07-20	MZEP-109 Move DSR startup scripts out of Livy
45e074f	2018-07-18	MLIVY-37 Set hadoop.scope to provided in pom.xml
f468f04	2018-07-17	MLIVY-37 The key store and trust store password for livy should be taken from ssl-server.xml
acb639f	2018-07-16	MLIVY-50 MaprFS jar should not be part of livy package - it should be taken from /opt/mapr/lib
e450053	2018-07-10	MLIVY-49 Add to livy conf livy.repl.enable-hive-context to true if Spark is configured on Hive
a51286e	2018-07-09	[LIVY-466][RSC] Fix RSCDriver exception during RPC shutdown
f949020	2018-07-09	MLIVY-47 Errors in SparkR with Spark 2.3
0325f78	2018-07-05	MLIVY-46 Livy session is dead due to old hadoop jar in livy
b4d413f	2018-06-08	MLIVY-36 Configure.sh fails during the first running
e5808a0	2018-06-06	MLIVY-35 Warning with message from Spark job that jpam was added multiple times
2a151d1	2018-05-30	MLIVY-30 Need to secure all the passwords in livy.conf using Hadoop CredentialProvider
97e17c0	2018-05-29	MLIVY-33 Enable SASL for Remote Spark Client
c54b292	2018-05-23	MLIVY-27 Livy service cannot start on 6.1.0 cluster
b3d1b41	2018-05-03	MLIVY-25 security-by-default changes for configure.sh
13cb262	2018-05-02	MLIVY-25 Add multiauth authentication

Hue 3.12.0 - 2009 (EEP 5.0.5) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 3.12.0-2009.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information in the following change logs or the Hue homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	3.12.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/3.12.0-mapr-2009
GitHub Release Tag	3.12.0-mapr-2009
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
e8574e8	2020-03-05	MHUE-331 Hue to Hive communication over TLSv1.2 not working in Hue-3.12
ad72736	2020-03-11	MHUE-328 Disable TLSv1 and TLSv1.1 protocol for Hue
bced09a	2020-03-18	MHUE-328 Show list of enabled ciphers
e9b0034	2020-05-14	MHUE-366 Fix login issue for LDAP users accessing for the first time

Known Issues and Limitations

- MapR does not support the integration between Hue 4.3.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 3.12.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MAPR-25661: DB Query in Hue cannot execute more than one query.
- HUE-6074: [notebook] Execute snippets as Oozie batch.
- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use the cluster mode. Set `livy.spark.deployMode=cluster` in the `${LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851:

```
Unable to start spark thrift server against secured hive metastore(GSS
initiate failed)
```

Note: Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

last-updated: Apr 11, 2022

Resolved Issues

None.

Hue 3.12.0-1912 (EEP 5.0.4) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 3.12.0-1912.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information on this changelog or the Hue homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	Hue: 3.12.0
Release Date	December 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue/tree/3.12.0-mapr-1912
GitHub Release Tag	3.12.0-mapr-1912
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
e0a7344	2019-04-30	HUE-7213 [editor] Mark the correct statement when executing selection after the first line.
0719b0	2019-05-03	HUE-8140 [editor] Improve multi-statement execution.

Known Issues and Limitations

- MapR does not support the integration between Hue 3.12.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 3.12.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MAPR-2561: DB Query in Hue cannot execute more than one query.
- HUE-6074: [notebook] Execute snippets as Oozie batch.

- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use the cluster mode. Set `livy.spark.deployMode=cluster` in the `{LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851:

```
Unable to start spark thrift server against secured hive metastore (GSS
initiate failed)
```

Note: Hue uses python parquet lib to read parquet files. This library does not support all possible parquet formats.

Resolved Issues

- None.

Hue 3.12.0-1901 (EEP 4.1.3 and EEP 5.0.2) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 3.12.0-1901.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information on this changelog or the Hue homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	Hue: 3.12.0 Livy: 0.3.0
Release Date	January 2018

Hue 3.12.0-1710 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 3.12.0-1710 and Livy 0.3.0-1710.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information on this changelog or the Hue homepage.

Version	Hue: 3.12.0 Livy: 0.3.0
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Hue: https://github.com/mapr/hue.git Livy: https://github.com/mapr/livy.git

GitHub Release Tag	Hue: 3.12.0-mapr-1710 Livy: 0.3.0-mapr-1710
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Livy was introduced as a separate package to replace Hue Livy. For MapR Livy documentation, see Livy on page 3839.

Fixes

This MapR release includes the following fixes on the base release:

Hue Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
49c77a3	2017-10-23	MHUE-90 Hue upgrade issue
041c398	2017-10-18	DEVOPS-1904 Build Hue for MEP-3.0.2 on CentOS 6
9541f9e	2017-10-16	MAPR-29572 Hue notebooks do not work when metastore blacklisted
56e0e00	2017-10-16	MAPR-29689 [Hue 3.12] validate property in hue.ini is ignored
0449e3d	2017-10-13	MAPR-29569 Ensure that Hue will work on CentOS 6 / SuSE 12
d08ccaf	2017-10-11	MHUE-81 Implement customSecure flag
bbac9f8	2017-10-09	MAPR-29569 Hue doesn't start after fresh install on suse via installer 1.7
6fc8630	2017-10-02	HUE-71 Adding Hue build images.
dfd31ff	2017-10-02	MHUE-47 Remove backuping of hue.ini in configure.sh
b674bbb	2017-10-02	MHUE-63 Fix issue with MySQL library on CentOS 7 / SUSE 12
4f89cde	2017-09-29	IN-1146 Installer set wrong hbase_conf_dir in hue.ini
05d5196	2017-09-27	MAPR-28638 (HUE-3.12] Hue Job Browser throws error when Beeswax is blacklisted
ac904ea	2017-09-26	MAPR-HUE-47 Refactoring Hue configuration steps and security by default
354768e	2017-09-21	MAPR-28561 [Hue 3.12] Failed to execute Hive Example in Workflow Editor on MapR-Secure cluster
de4b233	2017-09-19	Code cleanup after fixes for MHUE-57 and MHUE-66

last-updated: Apr 11, 2022

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
ff2f191	2017-09-12	MHUE-57 Remove obsolete maprsecurity.so library from Hue
120e2e9	2017-09-12	MHUE-66 HTTPS by default on secure cluster
4e2f0e8	2017-09-08	MHUE-62 Update internal Python version
047d492	2017-09-06	MAPR-28564 [HUE-3.12] Unable to submit HiveServer2 Oozie job from Hue in MAPRSASL secured cluster
e687ff5	2017-08-18	MAPR-HUE-60 Fix Hue sqoop tests to work on MapR

Livy Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
663d595	2017-10-27	MLIVY-14 Script that starts Livy in Zeppelin PACC does not work on Ubuntu
9338c58	2017-10-26	MZEP-51 Added ability to set livy.rsc.rpc.server.address on container startup
88bea98	2017-10-26	MZEP-51 Test Zeppelin with bridge Docker network
52179ff	2017-10-22	MSPARK-99 SparkVersion file is not present in /opt/mapr/spark
88c0220	2017-10-21	MZEP-47 No possibility to work with hive tables via spark (livy interpreter) in Zeppelin in PACC
b31031e	2017-10-20	MLIVY-13 Livy restart file can't restart service
e31bdc6	2017-10-20	LIVY-11 have configure.sh issue warning if security is turned on
08647ac	2017-10-17	MZEP-22 Possibility to work with different versions of Python Zeppelin
40407eb	2017-10-12	MLIVY-12 Permissions of livy-restart file
3a3d6a2	2017-10-05	MZEP-41 Zep PACC: Modify livy conf to configure spark (on yarn) configuration
2e339a7	2017-10-04	MZEP-30 Create script to start Livy in container environment
0e77b8b	2017-10-02	MLIVY-10 Add mapr classpath to livy CLASSPATH
7da2e2d	2017-10-02	MLIVY-10 Update Spark version in Livy dependencies
26bd8ff	2017-09-21	LIVY-8 Configure.sh doesn't work with new 6.0.0 builds
bb3ef3a	2017-09-07	LIVY-5 Adds configure.sh script

d6c4d15	2017-08-16	DEVOPS-1662 Fix of build on CentOS 6: update build dependencies of livy-python-api
fbcc2ff	2017-08-16	MAPR-LIVY-2 Livy should be a standalone project

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- MapR does not support the integration between Hue 3.12.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 3.12.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MAPR-2561: DB Query in Hue cannot execute more than one query.
- HUE-6074: [notebook] Execute snippets as Oozie batch.
- MAPR-28087: Livy cannot use the Hive Interpreter. To work around this issue, use `cluster` mode. Set livy.spark.deployMode=cluster in {LIVY_CONF}/livy.conf. This issue is caused by Spark 11851 ("Unable to start spark thrift server against secured hive metastore(GSS initiate failed").

Note: Hue uses python parquet lib to read the parquet files. This library does not support all possible parquet formats.

Resolved Issues

- Issue MAPR-18668 "Hue+MySQL doesn't work on RH/CentOS7" fixed, as long as issue with broken `libffi.so` and `libsas12.so` libraries on RedHat/CentOS 7.

Hue 3.12.0-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 3.12.0-1707.

The following notes relate specifically to the MapR distribution for Apache Hadoop. You can find additional information on this changelog or the Hue homepage.

Version	3.12.0
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.12.0-mapr-1707
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

No new features.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
8b30312	2017-05-11	MAPR-27012 [Hue 3.12] Refactor how Interpreters are disabled in Notebook UI
3fa4304	2017-05-24	MAPR-27502 [Hue 3.12] Failed to get result size for Hive snippets
c733979	2017-05-26	MAPR-27503 [Hue 3.12] Hue cannot connect to RM API on first run on secure cluster
217651f	2017-06-07	MAPR-27488 [HUE-3.10] Unable to access saved notebook after upgrade from HUE-3.9 to HUE-3.10 (fix for 3.12.0)
939057f	2017-06-13	MAPR-27758 [Hue 3.12] Cannot install Impala examples when impersonation is enabled
b49f950	2017-06-13	MAPR-27616 User with read permissions for Notebook can remove another's permissions (fix for 3.12.0)
b7b32ea	2017-06-19	MAPR-27973 [Hue 3.12] Hue error when execute migrate to empty DB
d5cbe8	2017-06-19	APR-27972 [Hue 3.12] Test user cannot run jobs via Job Designer
eedf9ca	2017-06-22	MAPR-28019 [Hue 3.12] User cannot edit workflows in Job Designer
0476f17	2017-06-22	MAPR-28020 [Hue 3.12] Problem with layout in Oozie coordinator submit window
3361e28	2017-06-22	MAPR-28022 [Hue 3.12] User with privileges for use only notebooks has empty popup "Query Editor"

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Livy is supported only for use with Hue. The Livy home directory is `/opt/mapr/hue-livy/hue-livy-3.12.0/`.
- MapR-28087: Hue Livy cannot use Hive Interpreter. To work around this issue, use cluster mode. Set `livy.spark.deployMode=cluster` in `{LIVY_CONF}/livy.conf`.
- MapR does not support the integration between Hue 3.12.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 3.12.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.

- MapR-18668: Hue does not work on RedHat 7 / CentOS 7 / SuSE 12 when it is configured to use a MySQL database. When this issue occurs, the Control System displays the "Hue Down Alarm." Use this workaround:

  1. Run the following commands to install MariaDB and the RedHat 6 compatibility library:

     ```
     yum install mariadb
     rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa mariadb|cut -d-
     -f2)/rhel7-amd64/rpms/MariaDB-$(rpm -qa mariadb|cut -d-
     -f2)-centos7-x86_64-compat.rpm
     ```

  2. Run the following commands to reconfigure Hue:

     ```
     cd /opt/mapr/hue/hue-3.12.0/
     source ./build/env/bin/activate
     hue syncdb --noinput
     hue migrate
     deactivate
     ```

  3. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes <node_with_hue>
     ```

- MapR-2561: DB Query in Hue cannot execute more than one query.
- Hue-6074: [notebook] Execute snippets as Oozie batch.

Note: Hue uses python parquet lib to read the parquet files. This library does not support all possible parquet formats.

Resolved Issues

None.

Hue 3.12.0-1703 Release Notes

The following notes relate specifically to the MapR distribution for Apache Hadoop.

Version	3.12.0
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.12.0-mapr-1703
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

The following is new in this release:

- Hue integration with Drill.

Important: Note these considerations for Hue 3.12.0:

- Livy is supported only for use with Hue. The Livy home directory is:

  ```
  /opt/mapr/hue-livy/hue-livy-3.12.0/
  ```

- MapR does not support the integration between Hue 3.12.0 and the following components:
  - Solr Search
  - Zookeeper
- Integration between Hue 3.12.0 and Sentry 1.7 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.

Fixes

This MapR release includes the following new fixes on the base release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
e3c9a57	2016-12-22	[MAPR-25612] Changed sh script permission, added output in stdout for start command.
e9f5ae9c	2016-12-30	[MAPR-25540] Hue adds the Sentry privilege of URIs for Hive with "maprfs:////", not "maprfs:///".
4479477	2017-01-17	MAPR-25588 Hue cannot rename Sqoop link.
c67c658fc	2017-01-20	MAPR-25668 Pig job cannot display succeed status after job finish via Hue.
be333ff8	2017-01-23	MAPR-25669 Spark Oozie example fails via Hue Workflows.
30e9d8	2017-01-23	MAPR-25684 Oozie job in Hue cannot be submitted by non-mapr user.
7505afa	2017-01-26	[MAPR-25653] Hue cannot execute correctly saved query in db query tab.
35acd20	2017-02-01	[MAPR-25673] List of Notebooks does not correspond to the actual.
acd9126	2017-02-01	[Mapr 25593] Update default paths to Hive, HBase, Pig and Sentry at hue.ini.
b2bd166	2017-02-02	[MAPR-25697] Select current time in Hue rdbms doesn't work.
697bec0	2017-02-02	MAPR-25935 No logs for some finished Oozie jobs.
64bd0baf	2017-02-02	MAPR-25652 Hue cannot save new query in DB Query tab.
f2a59d9c	2017-02-02	MAPR-25882 Job browser doesn't display logs of jobs via classic mode.
44dc41d	2017-02-06	[MAPR-25925] Can't move directory correctly on AWS.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
b634a15	2017-02-06	MAPR-25799 Hue Drill notebook does't work on Kerberos cluster.
df63f92c	2017-02-07	[MAPR-25921] Action "change owner/ group" in S3 Browser doesn't work.
55fd441	2017-02-07	MAPR-25782 Hue Drill notebook doesn't display correct result for dfs storage query.
bd8f011	2017-02-07	MAPR-25683 Error trying to export query result from Pig Notebook.
6f401a	2017-02-21	[MAPR-HUE-21] Link metadata doesn't have page.
94639b2	2017-02-21	[MAPR-HUE-12] Pig scripts incorrectly open in new tab.
5ef5d76	2017-02-22	[MAPR-HUE-10] Hue Hive editor cannot save query result to non-default DB.
7e6432f	2017-02-22	[MAPR-HUE-22] Excessive values of destination for copy/move should be removed.
f3b6805	2017-02-27	MAPR-HUE-32 Update default confs: set submit_to=True for yarn_cluster by default, and fix Oozie 4 compatibility issue.
5a2d6bc	2017-02-27	[MAPR-HUE-29] Hue cannot connect to JobTracker.
2a9f3ff	2017-02-27	MAPR-HUE-14 Hue cannot migrate some Oozie data to PostgreSQL database.
0e7bacb	2017-02-27	[MAPR-HUE-18] Hue doesn't display job details in JobBrowser after job starting.
35cc9fa	2017-02-27	MAPR-HUE-20 Hue opens the same page in new tab when you press scroll wheel on the title of drop-down lists.
b57616c	2017-03-01	MAPR-HUE-19 Search for Sqoop links doesn't work for all content.
3612987	2017-02-28	MAPR-HUE-31 Improve Hue with Drill configuration.
c15b81d	2017-03-01	[MAPR-HUE-16] Hue doesn't work with HBase 1.1.8 (maprdb) in mapr-secure cluster.
58ca6ee	2017-03-02	MAPR-HUE-34 Cannot work with Spark Notebooks from non-mapr user.
577a6a9	2017-03-02	[MAPR-HUE-16] [hue-3.12.0] Added "blob:" to default conf.
db01210	2017-03-06	[MAPR-HUE-21] Link metadata doesn't have page (reopen).

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
c52dd6d	2017-03-06	[MAPR-HUE-9] Hue doesn't correctly display progress of Oozie Job.
16b7912	2017-03-06	MAPR-HUE-13 New folder creation window has wrong position.
6e721fb	2017-03-06	[MAPR-HUE-28] Can't run any example for sample notebook.
cb5e3e4	2017-03-07	[MAPR-HUE-33] Hue cannot save Impala query result to file.
0561744	2017-03-10	[MAPR-HUE-39] Characters duplicated when typed in the notebooks.
ade1463	2017-03-10	[MAPR-HUE-9] Hue doesn't correctly display progress of Oozie Job (reopen).
0761b1b	2017-03-10	MAPR-HUE-20 Hue opens the same page in new tab when we press scroll wheel on the title of drop-down lists (reopen).
daddd3f	2017-03-13	MAPR-HUE-11 Hue cannot start on SUSE Kerberos cluster.
b5b1bf9	2017-03-14	[MAPR-HUE-17] Hue new create table wizard has an error when create table passed.
3409063	2017-03-16	MAPR-HUE-44 Hue doesn't work when Beeswax in blacklist.
f5172eb	2017-03-16	[DEVOPS-1323] Add java_home env to make file.
973691e	2017-03-16	MAPR-HUE-40 Can't submit Pig script via Notebooks.

Known Issues and Limitations

- **MAPR-18668:** Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database. When this issue occurs, the Control System displays the "Hue Down Alarm." Use this workaround:

  1. Run the following commands to install MariaDB and the RedHat 6 compatibility library:

     ```
     yum install mariadb
     rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa mariadb|cut -d-
     -f2)/rhel7-amd64/rpms/MariaDB-$(rpm -qa mariadb|cut -d-
     -f2)-centos7-x86_64-compat.rpm
     ```

  2. Run the following command to create a symlink for the Cyrus SASL library:

     ```
     ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
     ```

3. Run the following commands to reconfigure Hue:

```
source /opt/mapr/hue/hue-3.10.0/build/env/bin/activate
/opt/mapr/hue/hue-3.10.0/build/env/bin/hue syncdb --noinput
/opt/mapr/hue/hue-3.10.0/build/env/bin/hue migrate
```

4. Run the following command to restart Hue:

```
maprcli node services -name hue -action restart -nodes <space
separated list of hostnames>
```

Note: Hue uses the python parque lib to read the parquet files. This library does not support all possible parquet formats.

- [MAPR-2561] DB Query in Hue can't execute more than one query.
- [HUE-6704] Hue is not able to execute Oozie snippets.

Resolved Issues

None.

Hue 3.10.0-1707 Release Notes
This section provides reference information, including new features, fixes, known issues, and limitations for Hue 3.10.0-1707.

The notes below relate specifically to the MapR distribution for Apache Hadoop. You can find additional information on this changelog or the Hue homepage.

Version	3.10.0
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.10.0-mapr-1707
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

No new features.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
0bc600a	2017-05-26	MAPR-27488 [HUE-3.10] Unable to access saved notebook after upgrade from HUE-3.9 to HUE-3.10
af99c1d	2017-06-13	MAPR-27616 User with read permissions for Notebook can remove another permissions

last-updated: Apr 11, 2022

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
ab82658	2017-06-19	MAPR-27973 [Hue 3.12] Hue error when execute migrate to empty DB (fix for 3.10.0)

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Hue integration with Spark is an experimental feature.
- The Livy version is a snapshot. Livy is supported only for use with Hue. The Livy home directory is `/opt/mapr/hue-livy/hue-livy-3.10.0/`.
- MapR does not support the integration between Hue 3.10.0 and the following components:
  - Solr Search
  - ZooKeeper
- Integration between Hue 3.10.0 and Sentry 1.6 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- MapR-18668: Hue does not work on RedHat 7 / CentOS 7 / SuSE 12 when it is configured to use a MySQL database. When this issue occurs, the Control System displays the "Hue Down Alarm." Use this workaround:

  1. Run the following commands to install Maria and the Red Hat 6 compatibility library:

     ```
     yum install mariadb
     rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa mariadb|cut -d-
     -f2)/rhel7-amd64/rpms/MariaDB-$(rpm -qa mariadb|cut -d-
     -f2)-centos7-x86_64-compat.rpm
     ```

  2. Run the following commands to reconfigure Hue:

     ```
     cd /opt/mapr/hue/hue-3.12.0/
     source ./build/env/bin/activate
     hue syncdb --noinput
     hue migrate
     deactivate
     ```

  3. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes <node_with_hue>
     ```

Note: Hue uses python parquet lib to read the parquet files. This library does not support all possible parquet formats.

Resolved Issues

None.

Hue 3.10.0-1703 Release Notes

The notes below relate specifically to the MapR distribution for Apache Hadoop.

Version	3.10.0
Release Date	April 2017
MapR Version Interoperability	See the EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.10.0-mapr-1703
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

Important: Note these considerations for Hue 3.10.0:

- The Livy version is a snapshot.
- Hue integration with Spark is an experimental feature.
- Livy is supported only for use with Hue. The Livy home directory is:

```
/opt/mapr/hue-livy/hue-livy-3.10.0/
```

- MapR does not support the integration between Hue 3.10.0 and the following components:
  - Solr Search
  - Zookeeper
- Integration between Hue 3.10.0 and Sentry 1.6 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.

Fixes

This MapR release includes the following new fixes on the base release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
df551f0	2016-12-30	[MAPR-25540] Hue adds the Sentry privilege of URIs for Hive with "maprfs:////", not "maprfs:///"
d1dab93	2017-02-06	[MAPR-26005] Too many logs on migrate and syncdb operations

Known Issues and Limitations

- **MAPR-18668:** Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database. When this issue occurs, the Control System displays the "Hue Down Alarm." Use this workaround:
  1. Run the following commands to install MariaDB and the RedHat 6 compatibility library:

```
yum install mariadb
rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa mariadb|cut -d-
-f2)/rhel7-amd64/rpms/MariaDB-$(rpm -qa mariadb|cut -d-
-f2)-centos7-x86_64-compat.rpm
```

2. Run the following command to create a symlink for the Cyrus SASL library:

```
ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
```

3. Run the following commands to reconfigure Hue:

```
source /opt/mapr/hue/hue-3.10.0/build/env/bin/activate
/opt/mapr/hue/hue-3.10.0/build/env/bin/hue syncdb --noinput
/opt/mapr/hue/hue-3.10.0/build/env/bin/hue migrate
```

4. Run the following command to restart Hue:

```
maprcli node services -name hue -action restart -nodes <space
separated list of hostnames>
```

Note: Hue uses the python parque lib to read the parquet files. This library does not support all possible parquet formats.

Resolved Issues

None.

Hue 3.9.0-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Hue 3.9.0-1707.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information on this changelog or the Hue homepage.

Version	3.9.0
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.9.0-mapr-1707
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

No new features.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
8532e7f	2017-06-01	MAPR-27630 [HUE-3.9] Hue unable to connect to thrift for some users

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- MapR does not support the integration between Hue 3.9.0 and the following components:

  - Sentry 1.4
  - Solr Search
  - ZooKeeper
- Integration between Hue 3.9.0 and Sentry 1.6 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- Spark is available as a beta feature. R with Spark 1.3.1 and 1.4.1 is not supported.
- Hive SQL only works with Hive 1.2 and Oozie 4.2.0.
- MAPR-20358: Hive job from Job Designer examples fail on YARN mode without the Oozie patch for 2015-10-23:
- HUE-2673: Hue displays a timeout error when a new session is not started within 60 seconds due to the lack of YARN resources.
- MapR-18668: Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database. When this issue occurs, the MapR Control System (MCS) displays the "Hue Down Alarm." Use this workaround:
  1. Run the following commands to install MariaDB and the RedHat 6 compatibility library:

     ```
     yum install mariadb
     rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa mariadb|cut -d-
     -f2)/rhel7-amd64/rpms/MariaDB-$(rpm -qa mariadb|cut -d-
     -f2)-centos7-x86_64-compat.rpm
     ```

  2. Run the following command to create a symlink for the Cyrus SASL library:

     ```
     ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
     ```

  3. Run the following commands to reconfigure Hue:

     ```
     cd /opt/mapr/hue/hue-3.12.0/
     source ./build/env/bin/activate
     hue syncdb --noinput
     hue migrate
     deactivate
     ```

  4. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes <node_with_hue>
     ```

Resolved Issues

None.

Hue 3.9.0-1703 Release Notes

The notes below relate specifically to the MapR distribution for Apache Hadoop.

Version	3.9.0
Release Date	April 2017

MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.9.0-mapr-1703
Maven Artifacts	See Maven Artifacts for MapR on page 4155.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

None.

Fixes

This MapR release includes the following new fixes on the base release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
382479f	2017-12-30	[MAPR-25540] Hue adds the Sentry privilege of URIs for Hive with "maprfs:////", not "maprfs:///"

Known Issues and Limitations

Note these important limitations:

- MapR does not support the integration between Hue 3.9.0 and the following components:
  - Sentry 1.4
  - Solr Search
  - Zookeeper
- The integration between Hue 3.9.0 and Sentry 1.6 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.
- Spark is available as a beta feature. R with Spark 1.3.1 and 1.4.1 is not supported.
- Hive SQL only works with Hive 1.2 and Oozie 4.2.0.
- **MAPR-20358:** Hive job from Job Designer examples fail on YARN mode without the Oozie patch for 2015-10-23:
  - HUE-2673: Hue displays a timeout error when a new session is not started within 60 seconds due to the lack of YARN resources.
  - MapR-18668: Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database. When this issue occurs, the MapR Control System (MCS) displays the "Hue Down Alarm." Use this workaround:

    1. Run the following commands to install MariaDB and the RedHat 6 compatibility library:

```
yum install mariadb
rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa mariadb|cut -d-
-f2)/rhel7-amd64/rpms/MariaDB-$(rpm -qa mariadb|cut -d-
-f2)-centos7-x86_64-compat.rpm
```

2. Run the following command to create a symlink for the Cyrus SASL library:

```
ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
```

3. Run the following commands to reconfigure Hue:

```
source /opt/mapr/hue/hue-3.10.0/build/env/bin/activate
/opt/mapr/hue/hue-3.10.0/build/env/bin/hue syncdb --noinput
/opt/mapr/hue/hue-3.10.0/build/env/bin/hue migrate
```

4. Run the following command to restart Hue:

```
maprcli node services -name hue -action restart -nodes <space
separated list of hostnames>
```

Resolved Issues

None.

Hue 3.10.0-1611 Release Notes

The notes below relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Cloudera Hue changelog or the Cloudera Hue home page.

Version	3.10.0
Release Date	December 9, 2016
MapR Version Interoperability	See the EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.10.0-mapr-1611
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

Important: Note these considerations for Hue 3.10.0:

- The Livy version is a snapshot. Livy is supported only for use with Hue.
- MapR does not support the integration between Hue 3.10.0 and the following components:
  - Solr Search
  - Zookeeper
- Integration between Hue 3.10.0 and Sentry 1.6 is supported on secure clusters that use Kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.

The following are new in this release:

- Support for Spark 2.0.1. **Hue integration with Spark is an experimental feature**.
- Support for Sqoop2 1.99.7.

- Livy is moved to its own directory:

```
/opt/mapr/hue-livy/hue-livy-3.10.0/
```

Fixes

This MapR release includes the following new fixes on the base release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
2f44b6d	2016-08-05	[MAPR-2415][hue-3.10.0] - Added missing variable "hive_mechanism"
7dc6616	2016-09-05	[MAPR-24250] Hue 3.10 doesn't install example queries for hive 1.2 and Impala 2.5.0
7fbb091	2016-09-07	[MAPR-24153] Job browser doesn't display details of active job using classic mode
755bf6d	2016-09-08	MAPR-24493 Disabled adding/deleting users in Hue Web UI for PAM and editing user for LDAP (commit for Hue 3.10)
af8cb1c	2016-09-14	[MAPR-24010][hue-3.10.0] Updated hive, hbase, sentry and pig default version.
4480bf3	2016-09-14	MAPR-24153 Job browser doesn't display details of active job using classic mode
959320	2016-09-14	MAPR-24565 {Hue 3.10] Error in "Check configuration" tab for classic mode
8d553d7	2016-09-15	[MAPR-24010]{hue-3.10.0] Changed sentry version from 1.7.0 to 1.6.0
e50dc9a	2016-10-06	MAPR-24840 [Hue 3.10] Link "Location" does not work for tables from "Metastore Manager" tab.
4b91812	2016-10-07	MAPR-24788 Errors when trying to run Spark examples from Sample Notebook
db3b592	2016-10-11	MAPR-24872 [Hue 3.10] Error while opening temporary table details in "Metastore" stab
f1aa4db	2016-10-11	MAPR-24694 [Hue 3.10] Hue can't save result of hive query using Spark notebooks
773048e	2016-09-27	[MAPR-24950] Firefox doesn't support Hue feature dragging tables
09e49f3	2016-10-20	MAPR-25000 [Hue 3.10] Wrong display of Livy sessions in Spark Notebooks
13511d8	2016-10-24	MAPR-25040 [Hue 3.10] Hue build fails
92bfb08	2016-10-26	MAPR-24986 Stack of bugs in Hue Editor, Hue Sentry and Hue DBMS
c76ca23	2016-10-28	MAPR-24857 [Hue 3.10] Hue 3.10 doesn't work with new version of Sqoop2
443762c	2016-10-27	MAPR-24937 [Hue 3.9] Reflected XSS (Hue>Spark beta>>Notebook) (Commit for Hue 3.10)
083ec13	2016-11-02	MAPR-25017 [Hue 3.10] Cannot start session until close existing sessions on Sample Notebook page
923a602	2016-06-14	[MAPR-25109][Hue 3.10] Cannot add Impala to blacklist of hue.ini

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
e2a13c3	2016-08-19	MAPR-24936 - [Hue 3.9] Reflected XSS (Hue>>Hive>>Settings) (Commit for Hue 3.10)
42d715b	2016-11-08	MAPR-25019 [Hue 3.10] Hue + Hive + SSL doesn't work after switching mode on a Kerberos cluster
f7238e5	2016-11-09	[MAPR-25201] Add some commentary to the hue.ini file for regex
50fb043	2016-11-15	[MAPR-25248] Migrate Livy to external repository
9432387	2016-11-15	MAPR-25222 [Hue 3.10] Hue livy sessions don't work correctly when Spark mode is yarn (fix R sample)
0f5ba6f1	2016-11-22	MAPR-25284 Notebooks application is unavailable when beeswax was added to blacklist application
f8a5cdf7	2016-11-28	MAPR-25309 A user with notebook.access and spark.access privileges in HUE could not use notebooks
d0fde67	2016-11-30	MAPR-25363 [Hue 3.10] Failed to open parquet file using FileBrowser
73d3b14	2016-11-30	MAPR-25346 [Hue 3.10] Spark sample snippets do not work after upgrade from Hue 3.9 to Hue 3.10

Known Issues and Limitations

- **MAPR-18668:** Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database. When this issue occurs, the Control System displays the "Hue Down Alarm." Use this workaround:

  1. Run the following commands to install MariaDB and the RedHat 6 compatibility library:

     ```
     yum install mariadb
     rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa mariadb|cut -d-
     -f2)/rhel7-amd64/rpms/MariaDB-$(rpm -qa mariadb|cut -d-
     -f2)-centos7-x86_64-compat.rpm
     ```

  2. Run the following command to create a symlink for the Cyrus SASL library:

     ```
     ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
     ```

  3. Run the following commands to reconfigure Hue:

     ```
     source /opt/mapr/hue/hue-3.10.0/build/env/bin/activate
     /opt/mapr/hue/hue-3.10.0/build/env/bin/hue syncdb --noinput
     /opt/mapr/hue/hue-3.10.0/build/env/bin/hue migrate
     ```

  4. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes <space
     separated list of hostnames>
     ```

  Note: Hue uses the python parque lib to read the parquet files, and this library doesn't support all possible parquet formats.

last-updated: Apr 11, 2022

Resolved Issues

Commit	Data (YYYY-MM-DD)	Comment
943238	2016-11-18	MAPR-25222 [Hue 3.10] Hue livy sessions don't work correctly when spark mode is yarn and fixed R example.

Hue 3.9.0-1609 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	3.9.0
Release Date	September 30, 2016
MapR Version Interoperability	See Hue Support Matrix on page 5634.
Source on GitHub	https://github.com/mapr/hue/tree/3.9.0-mapr-1609
GitHub Release Tag	3.9.0-mapr-1609
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hue-3.9.0.201609271316-1.noarch.rpm • mapr-hue_3.9.0.201609271316_all.deb • mapr-hue-base-3.9.0.201609271316-1.noarch.rpm • mapr-hue-base_3.9.0.201609271316_all.deb • mapr-hue-livy-3.9.0.201609271316-1.noarch.rpm • mapr-hue-livy_3.9.0.201609271316_all.deb

Important Notes

- MapR does not support the integration between Hue 3.9.0 and the following components: Sentry 1.4, Solr Search, and Zookeeper.

  Note: The integration between Hue 3.9.0 and Sentry 1.6 is supported on secure clusters that use kerberos authentication, but it is not supported on secure clusters that use MapR-SASL authentication.

- Spark is available as a beta feature. R with Spark 1.3.1 and 1.4.1 is not supported.
- Hive SQL example only works with Hive 1.2 and Oozie 4.2.0.

Fixes

This release by MapR includes the following fixes on the base release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comments
af8cb1cef	2016-09-01	MAPR-24010: This fix updates the default paths to Hive and HBase in the hue.ini.

GitHub Commit	Date (YYYY-MM-DD)	Comments
2db5883283	2016-09-09	MAPR-24493: This fix disables adding or deleting users in the Hue Web UI when the authentication type is PAM, and disables editing users for LDAP.

Known Issues

- MapR-20358: Hive job from Job Designer examples fails on YARN mode without Oozie patch for 2015-10-23.
- HUE-2673: Hue displays a timeout error when a new session is not started within 60 seconds due to the lack of YARN resources.
- MapR-18668: Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database.

  When this issue occurs, the MapR Control System (MCS) displays the "Hue Down Alarm."

  Workaround:

  1. Run the following commands to install MariaDB and the Redhat 6 compatibility library:

     ```
     yum install mariadb
     ```

     ```
     rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa
     mariadb|cut -d- -f2)/rhel7-amd64/rpms/MariaDB-$(rpm -qa mariadb|
     cut -d- -f2)-centos7-x86_64-compat.rpm
     ```

  2. Run the following command to create a symlink for the Cyrus SASL library:

     ```
     ln -s /usr/lib64/libsasl2.so.3.0.0 /usr/lib64/libsasl2.so.2
     ```

  3. Run the following commands to reconfigure Hue:

     ```
     source /opt/mapr/hue/hue-3.9.0/build/env/bin/activate
     ```

     ```
     /opt/mapr/hue/hue-3.9.0/build/env/bin/hue syncdb --noinput
     ```

     ```
     /opt/mapr/hue/hue-3.9.0/build/env/bin/hue migrate
     ```

  4. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes
     <space-separated list of hostnames>
     ```

Hue 3.9.0-1607 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the Cloudera Hue changelog or the Cloudera Hue homepage.

Version	3.9.0
Release Date	July 29, 2016

MapR Version Interoperability	See Hue Support Matrix on page 5634.
Source on GitHub	https://github.com/mapr/hue/tree/3.9.0-mapr-1607
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-hue-3.9.0.201607121533-1.noarch.rpm • mapr-hue_3.9.0.201607121533_all.deb • mapr-hue-base-3.9.0.201607121533-1.noarch.rpm • mapr-hue-base_3.9.0.201607121533_all.deb • mapr-hue-livy-3.9.0.201607121533-1.noarch.rpm • mapr-hue-livy_3.9.0.201607121533_all.deb

Important Notes

- MapR does not support the integration between Hue 3.9.0 and the following components: Sentry 1.4, Solr Search, and Zookeeper.

  Note: The integration between Hue 3.9.0 and Sentry 1.6 is supported on secure clusters that use kerberos authentication but it is not supported on a secure clusters that use MapR-SASL authentication.

- Spark is available as a beta feature. R with Spark 1.3.1 and 1.4.1 is not supported.
- Hive SQL example only works with Hive 1.2 and Oozie 4.2.0.

Fixes

GitHub Commit	Date (YYYY-MM-DD)	Comments
b85a13d	2016-02-23	MAPR-22575: The Hue File Browser is now able to view the bz2 file format.
74f2099	2016-15-04	MAPR-23388: Hue links were changed from gethue.tumblr.com to gethue.com.
910fe6b	2016-05-19	MAPR-23375: The Spark python notebooks issue was fixed.
b1ad23e	2016-06-08	MAPR-23396: The installation of the Pig example no longer generates errors because the user id in the example is different from the default Hue user id.
5a7c872	2016-07-18	MAPR-24010: In the beeswax section of the hue.ini, the default Hive version was changed to 1.2 and the default HBase versions was changed to 1.1.1.

Known Issues

- MapR-20358: Hive job from Job Designer examples fails on YARN mode without oozie patch for 2015-10-23.
- HUE-2673: Hue displays a timeout error when a new session is not started within 60 seconds due to the lack of YARN resources.
- MapR-18668: Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database.

  When this issue occurs, the Control System displays the "Hue Down Alarm."

  Workaround:

  1. Run the following commands to install MariaDB and the Redhat 6 compatibility library:

     ```
     yum install mariadb
     ```

     ```
     rpm -ivh --nodeps http://yum.mariadb.org/<mariadb_version>/rhel7-amd64/
     rpms/MariaDB-<mariadb_version>-centos7-x86_64-compat.rpm
     ```

  2. Run the following command to create a symlink for the Cyrus SASL library:

     ```
     ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
     ```

  3. Run the following command to reconfigure Hue:

     ```
     bash -c "./opt/mapr/hue/hue-3.9.0/build/env/bin/activate; /opt/
     mapr/hue/hue-3.9.0/build/env/bin/hue
           syncdb --noinput; /opt/mapr/hue/hue-3.9.0/build/env/bin/hue
     migrate"
     ```

  4. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes <space
     separated list of
           hostnames>
     ```

Hue 3.9.0-1510 Release Notes

The following notes relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Cloudera Hue changelog or the Cloudera Hue homepage.

Version	3.9.0
Release Date	November 20, 2015
MapR Version Interoperability	See Hue Support Matrix on page 5634.
Source on GitHub	https://github.com/mapr/hue/tree/3.9.0-mapr-1510
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	The following packages are associated with this release: • mapr-hue-3.9.0.201511191616-1.noarch.rpm • mapr-hue_3.9.0.201511191616_all.deb • mapr-hue-base-3.9.0.201511191616-1.noarch.rpm • mapr-hue-base_3.9.0.201511191616_all.deb • mapr-hue-livy-3.9.0.201511191616-1.noarch.rpm • mapr-hue-livy_3.9.0.201511191616_all.deb

Important Notes

- MapR does not support integration between Hue 3.9.0 and the following components: Sentry, Solr Search, and Zookeeper.
- Spark is available as a beta feature. R with Spark 1.3.1 and 1.4.1 is not supported.
- Hive SQL example only works with Hive 1.2 and Oozie 4.2.0.

Fixes

GitHub Commit	Date (YYYY-MM-DD)	Comment
5a7c872	2015-10-20	MAPR-21019: When Hue submits Oozie jobs, Hue uses the default_jobtracker_host value (maprfs:///) instead of the jobtracker host:port address.
5f7812d	2015-09-15	MAPR-20441: Hue now automatically detects the Sqoop security settings and Hue.ini no longer contains the sqoop_conf_dir property.
569dbf5	2015-09-15	MAPR-20438: Hue is now able to connect to the ResourceManager on secure cluster because the path to ssl_cacerts in the hue.ini was corrected.
6fd0484	2015-09-07	MAPR-20357: Job browser is now able to display jobs when the cluster runs in classic mode.
ecdd711	2015-09-07	MAPR-20440: Hue now automatically detects the Hive security mechanism and therefore hive action statements in Oozie workflows no longer fail.

Known Issues

- HUE-2673: Hue displays a timeout error when a new session is not started within 60 seconds due to the lack of YARN resources.
- MapR-20358: Hive job from Job Designer examples fails on YARN mode without oozie patch for 2015-10-23.

- MapR-18668: Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database.

  When this issue occurs, the Control System displays the "Hue Down Alarm."

  Workaround:

  1. Run the following commands to install MariaDB and the Redhat 6 compatibility library:

     ```
     yum install mariadb
     ```

     ```
     rpm -ivh --nodeps http://yum.mariadb.org/$(rpm -qa mariadb|cut -d-
             -f2)/rhel7-amd64/rpms/
     MariaDB-5.5.41-centos7_0-x86_64-compat.rpm
     ```

  2. Run the following command to create a symlink for the Cyrus SASL library:

     ```
     ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
     ```

  3. Run the following command to reconfigure Hue:

     ```
     bash -c "./opt/mapr/hue/hue-3.9.0/build/env/bin/activate; /opt/
     mapr/hue/hue-3.9.0/build/env/bin/hue
           syncdb --noinput; /opt/mapr/hue/hue-3.9.0/build/env/bin/hue
     migrate"
     ```

  4. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes <space
     separated list of
           hostnames>
     ```

Hue 3.8.1 Release Notes

The following Hue 3.8.1 component release notes are included in the MapR distribution for Apache Hadoop.

Hue 3.8.1-1604 Release Notes

The following notes relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Cloudera Hue changelog or the Cloudera Hue homepage.

Version	3.8.1
Release Date	May 4, 2016
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	https://github.com/mapr/hue/tree/3.8.1-mapr-1604
MapR Version Compatibility	See Hue Support Matrix on page 5634.
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	The following packages are associated with this release: • mapr-hue-3.8.1.201604271202-1.noarch.rpm • mapr-hue_3.8.1.201604271202_all.deb • mapr-hue-base-3.8.1.201604271202-1.noarch.rpm • mapr-hue-base_3.8.1.201604271202_all.deb • mapr-hue-livy-3.8.1.201604271202-1.noarch.rpm • mapr-hue-livy_3.8.1.201604271202_all.deb

Important:

- MapR does not support integration between Hue 3.8.1 and the following components: Sentry, Solr Search, and Zookeeper.

Fixes

GitHub Commit	Date (YYYY-MM-DD)	Comment
cb701de	2016-04-08	MAPR-23047: Hue no longer fails to delete Sqoop jobs by name when the name contain one or more white spaces.

Known Issues

- **MAPR-18668:** Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database.

  When this issue occurs, the Control System displays the `"Hue Down Alarm."`

  Workaround:

  1. Run the following commands to install MariaDB and the Redhat 6 compatibility library:

     ```
     yum install mariadb
     ver=$(rpm -qa mariadb|cut -d- -f2)
     rpm -ivh --nodeps http://yum.mariadb.org/$ver/rhel7-amd64/rpms/
     MariaDB-$ver-centos7-x86_64-compat.rpm
     ```

  2. Run the following command to create a symlink for the Cyrus SASL library:

     ```
     ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
     ```

  3. Run the following command to reconfigure Hue:

     ```
     bash -c "source /opt/mapr/hue/hue-<version>/build/env/bin/activate;
           /opt/mapr/hue/hue-<version>/build/env/bin/hue syncdb --noinput;
           /opt/mapr/hue/hue-<version>/build/env/bin/hue migrate"
     ```

  4. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes <space
     separated list of
           hostnames>
     ```

Hue 3.8.1-1507 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Cloudera Hue changelog or the Cloudera Hue homepage.

Version	3.8.1
Release Date	August 5, 2015
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.8.1-mapr-1507
MapR Version Compatibility	See Hue Support Matrix on page 5634.
Maven Artifacts	https://repository.mapr.com/maven/

Important:

- MapR does not support integration between Hue 3.8.1 and the following components: Sentry, Solr Search, and Zookeeper.
- Hue 3.8.1 supports Sqoop2 on a MapR 5.0.

New in this Release

This release of Hue version 3.8.1 for the MapR Distribution for Apache Hadoop includes the following features:

- MapR-SASL security support between Hue 3.8.1 and Sqoop2 1.99.6
- Livy server can be managed by warden. The `warden.livy.conf` file is installed along with the `mapr-hue-livy` package.

Fixes

Commit	Date (YYYY-MM-DD)	Comment
a9b8e06	2015-07-17	MAPR-19601: The warden.livy.conf file is installed along with the mapr-hue-livy package so that the Livy Server can be managed by Warden.
781b2fc	2015-06-04	MAPR-18650: You no longer need to reload the HBase Browser in order to see newly created MapR Database tables. Instead, you need to re-open the directory that contains the table.
d37d3d6	2015-05-19	MapR-18605: MapR Database examples have been added.

Known Issues

- MapR-18668: Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database.

  Workaround:

last-updated: Apr 11, 2022

1. Run the following commands to install MariaDB and the Redhat 6 compatibility library:

```
yum install mariadb
rpm -ivh --nodeps http://yum.mariadb.org/$
(rpm -qa mariadb|cut -d- -f2)/rhel7-amd64/rpms/
MariaDB-5.5.41-centos7_0-x86_64-compat.rpm
```

2. Run the following command to create a symlink for the Cyrus SASL library:

```
ln -s /lib64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
```

3. Run the following command to reconfigure Hue:

```
bash -c "./opt/mapr/hue/hue-3.8.1/build/env/bin/activate; /opt/
mapr/hue/hue-3.8.1/build/env/bin/hue syncdb --noinput; /opt/mapr/hue/
hue-3.8.1/build/env/bin/hue migrate"
```

4. Run the following command to restart Hue:

```
maprcli node services -name hue -action restart -nodes <space
separated list of hostnames>
```

Hue 3.7.0 Release Notes

The following Hue 3.7.0 component release notes are included in the MapR distribution for Apache Hadoop.

Hue 3.7.0-1506 Release Notes

The notes below relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Hue github page and the release notes for Version 3.7.

Version	3.7.0
Release Date	July 10, 2015
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.7.0-mapr-1506
MapR Version Compatibility	See Hue Support Matrix on page 5634.
Maven Artifacts	https://repository.mapr.com/maven/

Note: This version of Hue does not support Sentry.

Fixes

Commit	Date (YYYY-MM-DD)	Comment
65b2bb6	2015-05-25	MAPR-18823: Hue is now able to communicate with Hive when the hue.ini security settings are automatically configured to use MapR-SASL.
625bf6c	2015-06-12	MAPR-19099: On a secure MapR cluster, Impala is now able to work with Hue.

Known Issues

MapR-17229: The HBase examples provided in Hue 3.7 will not load in HBase 0.94.x because HBase 0.94.x uses a different thrift version than Hue 3.7.

MapR-17314: When you run Hue 3.7 with a Hadoop version that is less than 2.5.1, the Job Browser hangs if you attempt to kill running YARN applications from the Job Browser window. This issue occurs with MapR version 4.0.1 as it uses Hadoop 2.4.1.

MapR-18668: Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database.

When this issue occurs, the Control System displays the "Hue Down Alarm."

Workaround:

1. Run the following commands to install MariaDB and the Redhat 6 compatibility library:

```
yum install mariadb
rpm -ivh --nodeps http://
yum.mariadb.org/$(rpm -qa mariadb|
cut -d- -f2)/rhel7-amd64/rpms/
MariaDB-5.5.41-centos7_0-x86_64-com
pat.rpm
```

2. Run the following command to create a symlink for the Cyrus SASL library:

```
ln -s /lib/64/libsasl2.so.3.0.0 /
lib64/libsasl2.so.2
```

3. Run the following command to reconfigure Hue:

```
bash -c "./opt/
mapr/hue/hue-3.7.0/build/env/bin/
activate; /opt/mapr/hue/hue-3.7.0/
build/env/bin/hue
syncdb --noinput; /opt/mapr/hue/
hue-3.7.0/build/env/bin/hue
migrate"
```

4. Run the following command to restart Hue:

```
maprcli node services -name
hue -action restart -nodes <space
separated list of hostnames>
```

Hue 3.7.0-1505 Release Notes

The notes below relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Hue github page and the release notes for Version 3.7.

Version	3.7.0
Release Date	June 2, 2015
Source on GitHub	https://github.com/mapr/hue.git

last-updated: Apr 11, 2022

GitHub Release Tag	3.7.0-mapr-1505
MapR Version Compatibility	See Hue Support Matrix on page 5634.
Maven Artifacts	https://repository.mapr.com/maven/

Note: This version of Hue does not support Sentry.

New in this Release

This release of Hue version 3.7 for the MapR distribution for Apache Hadoop includes the following features:

- MapR-SASL security support between Hue and the following components:
  - YARN on MapR 4.0.1 or greater
  - HttpFS 1.0-1504 and greater on MapR 4.0.1 or greater
  - Hive 0.13-1504 and Hive 1.0-1504 or greater on MapR 4.1 or greater
  - Oozie 4.0.1 or greater on MapR 4.0.1 or greater

  The ability to configure a file size restriction for the File Browser. The file size is specified by the file_size property in the hue.ini file. The default is 1.0 GB.
- In a new installation, Hue automatically determines the following values that you would otherwise configure in the hue.ini file:
  - resourcemanager_api_url
  - proxy_api_url
  - history_server_api_url
  - security_enabled
  - mechanism
- Support for multiple PAM modules. By default, Hue is configured to use PAM authentication for new installations.
- Support for Hive 1.0
- The ability to configure Hue to display Hive 1.0 logs by setting the `use_get_log_api` property to true in the [beeswax] section of the `hue.ini` file.

Fixes

Commit	Date (YYYY-MM-DD)	Comment
3a912cc	2015-03-11	MAPR-13476: Support for SSL mutual certificate-based authentication to HttpFS.
f78b5ef	2015-03-26	MAPR-17765: The following error no longer displays while updating Hue: "IntegrityError: (1062, "Duplicate entry '1' for key 'PRIMARY'")".

Commit	Date (YYYY-MM-DD)	Comment
3cbc369	2015-04-03	MAPR-15976: secure.sh script auto-generates keys required for security configuration.
b5ed618	2015-04-08	MAPR-17413: Added a property to restrict the size of files that can be viewed from the File Browser.
e7d2328	2015-04-14	MapR-18179: Hue UI no longer throws an error after a successful installation performed with the MapR Installer.
fd7696	2015-04-28	MAPR-17413: Changed API parameter len to length.
853e44e	2015-05-05	MAPR-18334: Added getTablesWithoutMemorize function for loading list of tables without cache.

Known Issues

- **MapR-17229:** The HBase examples provided in Hue 3.7 will not load in HBase 0.94.x because HBase 0.94.x uses a different thrift version than Hue 3.7.
- **MapR-17314:** When you run Hue 3.7 with a Hadoop version that is less than 2.5.1, the Job Browser hangs if you attempt to kill running YARN applications from the Job Browser window. This issue occurs with MapR version 4.0.1 as it uses Hadoop 2.4.1.
- **MapR-18668:** Hue does not work on RedHat/CentOS 7 when it is configured to use a MySQL database.

  When this issue occurs, the Control System displays the "Hue Down Alarm."

  Workaround:

  1. Run the following commands to install MariaDB and the Redhat 6 compatibility library:

     ```
     yum install mariadb
     rpm -ivh --nodeps http://yum.mariadb.org/$
     (rpm -qa mariadb|cut -d- -f2)/rhel7-amd64/rpms/
     MariaDB-5.5.41-centos7_0-x86_64-compat.rpm
     ```

  2. Run the following command to create a symlink for the Cyrus SASL library:

     ```
     ln -s /lib/64/libsasl2.so.3.0.0 /lib64/libsasl2.so.2
     ```

  3. Run the following command to reconfigure Hue:

     ```
     bash -c "./opt/mapr/hue/hue-3.7.0/build/env/bin/activate; /opt/
     mapr/hue/hue-3.7.0/build/env/bin/hue syncdb --noinput; /opt/mapr/hue/
     hue-3.7.0/build/env/bin/hue migrate"
     ```

  4. Run the following command to restart Hue:

     ```
     maprcli node services -name hue -action restart -nodes <space
     separated list of hostnames>
     ```

- **MapR-18823:** Hue is unable to communicate with Hive when the hive-site.xml is empty and the hue.ini security settings are automatically configured to use MapR-SASL.

  Workaround: Add the following properties to hive-site.xml with values based on the configuration you require:

  - hive.metastore.sasl.enabled
  - hive.metastore.uris
  - hive.server2.authentication
  - hive.server2.enable.doAs (optional)
  - hive.server2.thrift.sasl.qop

  For example:

```
<property>
<name>hive.metastore.sasl.enabled</name>
<value>true</value>
<description>if true, the metastore thrift interface will be secured with
SASL.</description>
</property>

<property>
 <name>hive.server2.authentication</name>
 <value>MAPRSASL</value>
 <description>authentication type</description>
</property>

<property>
 <name>hive.server2.enable.doAs</name>
 <value>false</value>
</property>

<property>
  <name>hive.server2.thrift.sasl.qop</name>
  <value>auth</value>
<property>

<property>
  <name>hive.metastore.uris</name>
  <value>thrift://localhost:9083</value>
  <description> URI where clients contact Hive metastore server </
description>
</property>
```

Hue 3.7.0-1503 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Hue github page and the release notes for Version 3.7.

Version	3.7.0
Release Date	March 27, 2015
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.7.0-mapr-1503

MapR Version Compatibility	See Hue Support Matrix on page 5634. **Note:** This version of Hue does not support Sentry.
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

Commit	Date (YYYY-MM-DD)	Comment
6989a77	2015-03-13	MAPR-17586: ThriftJobTrackerPlugin is able to start on a MapR version 3.1.1 Kerberos secure cluster.
b8fd140	2015-03-13	MAPR-17533: You can view task logs in the Job Browser when you run Hue 3.7 with a secure MapR cluster.
ae62ff4	2015-03-13	MAPR-17413: Large files can be successfully uploaded and viewed in the Hue File Browser.

Known Issues

- MapR-17314:When you run Hue 3.7 with a Hadoop version that is less than 2.5.1, the Job Browser hangs if you attempt to kill running YARN applications from the Job Browser window. This issue occurs with MapR version 4.0.1 as it uses Hadoop 2.4.1.
- MapR-17229: The HBase examples provided in Hue 3.7 will not load in HBase 0.94.x because HBase 0.94.x uses a different thrift version than Hue 3.7.

Hue 3.7.0-1502 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Hue github page and the release notes for Version 3.7.

Version	3.7.0
Release Date	March 9, 2015
Source on GitHub	https://github.com/mapr/hue.git
GitHub Release Tag	3.7.0-mapr-1502
MapR Version Compatibility	See Hue Support Matrix on page 5634.
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

This is the initial release of Hue Version 3.7 for the MapR Distribution for Apache Hadoop.

It includes the following features in addition to those listed in the release notes for Version 3.7:

- With Hbase 0.98.7 or above, the Hbase Browser displays the MapR filesystem directories and MapR Database tables. For more information, see MapR's Hue documentation for *Managing MapR Database Tables in Hue 3.x*.
- With MapR 4.0.2 or above, Hue supports MapR-SASL security with JobTracker. For more information, see MapR's Hue documentation to *Configure Hue to use MapR-SASL*.

Note: This version of Hue does not support Sentry.

last-updated: Apr 11, 2022

Fixes

- MapR-17314:When you run Hue 3.7 with a Hadoop version that is less than 2.5.1, the Job Browser hangs if you attempt to kill running YARN applications from the Job Browser window. This issue occurs with MapR version 4.0.1 as it uses Hadoop 2.4.1.
- MapR-17229: The HBase examples provided in Hue 3.7 will not load in HBase 0.94.x because HBase 0.94.x uses a different thrift version than Hue 3.7.
- MapR-17533: You cannot view task logs in the Job Browser when you run Hue 3.7 with a secure MapR cluster. Instead, you can view the task logs in the hadoop user logs directory (/opt/mapr/hadoop/hadoop-<version>/logs/userlogs).

Impala Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for Impala, included in the MapR Data Platform, contain notes specific to HPE only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior HPE releases, see Previous Versions on page 6578.

Impala 2.12.0.600 - 2110 (EEP 6.3.5) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Impala. For more information, see Apache Impala 2.12 Release Notes or the Apache Impala Guide.

Version	2.12.0.600

None.

Impala 2.10.0-1803 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Impala 2.10.0-1803.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Impala component included in the MapR Converged Data Platform.

Impala Version	2.10.0
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/impala
Release Tag	2.10.0-mapr-1803
Hive support	2.1
HBase support	1.1.8
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

This release of Impala includes new features and behavior changes that are specific to MapR. See New Features in Impala 2.10 for MapR on page 3691 for a full list and descriptions of new features and behaviors.

Fixes

This release of Impala on MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
aa72637c	2018-01-19	[MAPR-30570] Fixed LOAD DATA errors.
3de65a1e	2018-01-23	[MAPR-30548] Impala could not start on CentOS with jdk 1.7.
716875ac	2018-01-29	[MAPR-29157] Impala could not get credentials to work with AWS from core-site.xml in Impala conf directory.

Known Issues

None

Limitations

See Impala Limitations.

Fixed Issues

None

last-updated: Apr 11, 2022

Impala 2.7.0-1710 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Impala 2.7.0-1710.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Impala component included in the MapR Converged Data Platform.

Impala Version	2.7.0
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/impala
Release Tag	2.7.0-mapr-1710
Hive support	2.1
HBase support	1.1.8
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

No new features in this release.

Fixes

This release of Impala on MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
2e33fe3	2017-08-02	[MAPR-28575] Impala cannot access MapR Database tables
66948f1	2017-08-18	[MAPR-28621/IMPALA-4363] Add Parquet timestamp validation
aacdbd5e	2017-08-18	Fix a potential pitfall with DiskIoMgr::CancelContext().

Known Issues

[MAPR-29157] Impala can't get credentials to work with AWS from core-site.xml in Impala conf directory.

[MAPR-29618] Impala catalog cannot start on SUSE 12.2 mapr-core-6.0 secure cluster.

Limitations

No new limitations in this release.

Fixed Issues

[MAPR-27403] Impala 2.7.0 does not work with the AWS S3 filesystem on systems running Java 8. This issue relates to a library conflict with joda-time.

last-updated: Apr 11, 2022

Impala 2.7.0-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Impala 2.7.0-1707.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Impala component included in the MapR Converged Data Platform.

Impala Version	2.7.0
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/impala
Release Tag	2.7.0-mapr-1707
Hive support	2.1
HBase support	1.1.8
Package Names	See Package Names for MapR Ecosystem Packs (EEPs).

New in This Release

No new features in this release.

Fixes

This release of Impala on MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

Commit	Date(YYYY-MM-DD)	Comment
4b567ccc	2017-07-21	[IMPALA-5253/MAPR-28508] The appropriate Thrift transport in the StatestoreSubscriber is used.
bd61e00d	2017-06-30	[IMPALA-3641/MAPR27796] DROP IF EXISTS does not return the object name in the RPC response a table or database is not actually dropped.
6c8d67a6	2017-04-19	[IMPALA-5005/MAPR-26889] The server can send an out of order SASL COMPLETE message.

Known Issue

[MAPR-27403] Impala 2.7.0 does not work with the AWS S3 filesystem on systems running Java 8. This issue relates to a library conflict with joda-time.

Limitations

No new limitations in this release.

Fixed Issues

No fixed issues in this release.

last-updated: Apr 11, 2022

Impala 2.7.0 - 1703 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Impala component included in the MapR Converged Data Platform.

Impala Version	2.7.0
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/impala
Release Tag	2.7.0-mapr-1703
Hive support	2.1
HBase support	1.1.8
Package Names	See Package Names for MapR Ecosystem Packs (EEPs).

New in This Release

This release of Impala includes new features and behavior changes that are specific to MapR. See New Features in Impala 2.7.0 for MapR for a complete list of new features and feature descriptions.

In addition to support on RedHat and CentOS, Impala 2.7.0 is also supported on SUSE 12 SP1. See EEP 3.0 Components and OS Support.

Fixes

This release of Impala on MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

Commit	Date(YYYY-MM-DD)	Comment
15ab181a	2017-02-02	[MAPR-25934] Altering a partition no longer fails in Impala.
3cf7720e	2017-02-03	[MAPR-25985] Impala starts on SUSE clusters.
3cf7720e	2017-02-03	[MAPR-25988] Running COMPUTE STATS on partitioned tables no longer fails.
220a6d7f	2017-02-06	[MAPR 16579] The MapR Impala configuration script is no longer hard coded to use hadoop-2.4.1.
08cb0217	2017-02-17	[MAPR-26034] CTAS queries no longer remove all files from the /user volume.
2339fca5	2017-03-01	[MAPR-26182] Impala 2.7 works with Hue 3.12.
294d4c59	2017-03-07	[MAPR-26022] The Impala daemon starts on SUSE clusters.

Known Issue

Performance regression for TPCH query 10. See IMPALA-1.

last-updated: Apr 11, 2022

Limitations

See Impala Limitations.

Fixed Issues

None

Impala 2.5.0-1703 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Impala 2.5.0-1703.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Impala component included in the MapR Converged Data Platform.

Impala Version	2.5.0
Release Date	April 2017
MapR Version Interoperability	See Impala Support Matrix on page 5635 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/impala
Release Tag	2.5.0-mapr-1703
Hive support	1.2
HBase support	1.1.x
Package Names	See Package Names for MapR Ecosystem Packs (EEPs).

Fixes

This release of Impala on MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
741d346	2017-02-16	[MAPR-26034] CTAS queries no longer remove all files from the /user volume.

Known Issues

[MAPR-27463] Impala 2.5.0 does not support SSL when configured on Kerberos.

Impala 2.5.0 - 1606 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Impala component included in the MapR Distribution for Apache Hadoop.

Version	2.5.0
Release Date	June 30, 2016
MapR Version Interoperability	Works with MapR version 5.1.0 and later. See Impala Support Matrix on page 5635 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.

last-updated: Apr 11, 2022

Source on GitHub	https://github.com/mapr/impala
Release Tag	2.5.0-mapr-1606
Hive Support	1.2
HBase Support	1.1.1
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) if you are running 5.2 and install EEP 1.1.1, EEP 2.0, or any subsequent EEP release: The following packages are associated with Impala 2.5.0 - 1606 if you are running 5.1 and you install Impala from the https://package.mapr.com/releases/ecosystem-5.x/ repository, or if you are running 5.2 and install EEP 1.0.0 or 1.1.0: • mapr-impala-2.5.0.201606222231-1.noarch.rpm • mapr-impala-statestore-2.5.0.201606222231-1.noarch.rpm • mapr-impala-server-2.5.0.201606222231-1.noarch.rpm • mapr-impala-catalog-2.5.0.201606222231-1.noarch.rpm

New in this Release

This release of Impala includes new features and behavior changes that are specific to MapR. See New Features in Impala 2.5.0 for MapR for a full list and descriptions of new features and behaviors.

Fixed Issue

The performance issue tracked by IMPALA-1755 is now resolved.

Fixes

This release by MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
fc0b0aa2	2016-05-20	[IMPALA-3375] Improve TopN performance with a trivial Compare object.
0d3bd54f	2016-05-20	[IMPALA-2548] Codegen Tuple::MaterializeExprs() and use in TopN node.
75a048e	2016-05-20	[IMPALA-3385] Fix crashes on accessing error_log.
8ce0ce6	2016-05-20	[IMPALA-2076] Correct execution time tracking for DataStreamSender.
4605ee4	2016-05-20	[IMPALA-2399] Check for mem limit in allocations in parquet scanner and decompressor.
9ce2136	2016-05-20	[IMPALA-3141] Send dummy filters when filter production is disabled.

last-updated: Apr 11, 2022

8a6dfa0d	2016-05-20	[IMPALA-3395] Old HT filter code uses wrong expr type.
5d134fb7	2016-05-20	[IMPALA-3270] & [IMPALA-3237] Improve handling of unsupported data types.
0a09b2a	2016-05-20	[IMPALA-3194] Allow queries materializing scalar type columns in RC/sequence files.
99896f6a	2016-05-20	[IMPALA-1928] Fix Thrift client transport wrapping order.

Impala 2.2.0 - 1608 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Impala component included in the MapR Distribution for Apache Hadoop.

Version	2.2.0
Release Date	September 1, 2016
MapR Version Interoperability	See Impala Support Matrix on page 5635 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/impala
Release Tag	2.2.0-mapr-1608
Hive Support	1.2
HBase Support	98.12, 1.1
Package Names	The following packages are associated with this release: • mapr-impala-2.2.0.201608311322-1.noarch.rpm • mapr-impala-catalog-2.2.0.201608311322-1.noarch.rpm • mapr-impala-server-2.2.0.201608311322-1.noarch.rpm • mapr-impala-statestore-2.2.0.201608311322-1.noarch.rpm

Known Issue

Impala 2.2.0 has a known performance bug tracked by IMPALA-1755.

Fixes

This release by MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
2de4d7f	2016-06-22	MAPR-23749/IMPALA-2348: The Catalog service closes the connection to the Hive metastore after table invalidation to allow new connections for subsequent operations.

Commit	Date (YYYY-MM-DD)	Comment
777a46d	2016-08-05	MAPR-23828: The `DESCRIBE [FORMATTED] table` statement correctly displays column metadata.

Impala 2.2.0 - 1602 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Impala component included in the MapR Distribution for Apache Hadoop.

Version	2.2.0
Release Date	February 24, 2016
MapR Version Interoperability	See Impala Support Matrix on page 5635 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/impala.
Release Tag	2.2.0-mapr-1602
Hive Support	1.2
Package Names	The following packages are associated with this release: • mapr-impala-2.2.0.201602231403-1.noarch.rpm • mapr-impala-statestore-2.2.0.201602231403-1.noarch.rpm • mapr-impala-server-2.2.0.201602231403-1.noarch.rpm • mapr-impala-catalog-2.2.0.201602231403-1.noarch.rpm

New in this Release

This release of Impala includes new features and behavior changes that are specific to MapR. See New Features in Impala 2.2.0 for MapR for a full list and descriptions of new features and behaviors.

Known Issue

Impala 2.2.0 has a known performance bug tracked by IMPALA-1755.

Fixes

This release by MapR includes the following fixes. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
3c89c74	2016-01-22	MAPR-22240: You can create and use UDFs when the filesystem changes from C++ to JAVA.
e33bdf3	2016-01-14	MAPR-22160: You can successfully run a SELECT query on partitioned Hive tables after issuing the COMPUTE STATS statement in Impala.

Commit	Date (YYYY-MM-DD)	Comment
713305a	2015-12-07	MAPR-21559: Impala can connect to the Hive metastore when each component is running on a different node and they both have Kerberos enabled.
97eed5f	2015-12-07	MAPR-21532: JAVA_HOME points to the correct library path in the Impala 2.2.0 package.
4711700	2015-12-03	MAPR-21261: You can open Parquet tables created in Impala from the Hive shell.
2b45524	2015-12-03	MAPR-21187: You can issue the LOAD DATA statement through the Impala shell.
4e52e73	2015-12-03	MAPR-21340: You can use Sentry 1.6 to configure Sentry authorization for Impala,
9739ca1	2015-10-21	MAPR-21088: Impala can query MapR Database files.
8714b15	2015-10-21	MAPR-21083: You can created user-defined functions (UDFs) in Impala.

Impala 1.4.1-1501 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Version	1.4.1
Release Date	January 14, 2015
Source on GitHub	https://github.com/mapr/impala
GitHub Release Tag	1.4.1-mapr-1501
MapR Version Interoperability	See Impala Support Matrix on page 5635 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.

This release of Impala includes some updated package files that do not affect Impala performance or functionality.

Important:

- Impala on MapR version 4.0.1 requires mapr-patch-4.0.1.27334.GA-28668.x86_64.rpm. Contact support to obtain the patch. If Oozie is running on the cluster, after you apply the patch you must regenerate the Oozie WAR file to pick up the new binary.
- Impala on MapR version 4.0.2 does not require a patch.
- This release of Impala only works with Sentry in file-based storage mode.

Impala 1.4.1-1410 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Version	1.4.1
Release Date	November 19, 2014
Source on GitHub	https://github.com/mapr/impala
GitHub Release Tag	1.4.1-mapr-1410
MapR Version Interoperability	See Impala Support Matrix on page 5635 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Important:

- Impala 1.4.1 requires MapR version 4.0.1 with mapr-patch-4.0.1.27334.GA-28668.x86_64.rpm. You must contact support to obtain the patch.
- If Oozie is running on the cluster, after you apply the patch you must regenerate the Oozie WAR file to pick up the new binary.

New Features

Impala 1.4.1 offers some new features for improved performance and functionality, including admission control. For a full list of new features and their descriptions, refer to New Features in Impala 1.4.1 for MapR.

Important: This release of Impala only works with Sentry in file-based storage mode.

Resolved Issues

Impala 1.4.1 on MapR version 4.0.1 with patch `mapr-patch-4.0.1.27334.GA-28668.x86_64.rpm` resolves the following known issues:

MapR Issue	Description
15155	Impala returns results when you run queries that include the UNION ALL clause.
14863	Installing Impala packages no longer updates the mapr-hive package with Hive 0.12.
14397	Impala supports Hive 0.13.
14391	The following message that was inapplicable to MapR filesystem no longer appears in the Impala message log: `hdfs-scan-node.cc:401] Unknown disk id. This will negatively affect performance. Check your hdfs settings to enable block location metadata.`
13802	Warden starts all services when you install Impala on Ubuntu systems.
12793	The Impala daemon uses memory without exceeding the limits set for Impala.

Fixes

Commit	Date (YYYY-MM-DD)	Comment
2e768c9	28-Oct-2014	MapR 14870. The `-authorized_proxy_user_config=mapr=*` option is set by default in env.sh to enable impersonation for Impala.
5fe101f	07-Sept-2014	MapR 13802. Warden starts all Impala services on Ubuntu.

Livy Release Notes

The release notes for Livy component included in the MapR Data Platform contain notes specific to MapR Data Platform only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR Data Platform releases, see Previous Versions on page 6578.

Livy 0.7.0.200 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. You can find additional information on the Livy release notes page or Livy homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.7.0.200
Release Date	January 2022
HPE Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/livy/tree/0.7.0.200-eep-810
GitHub Release Tag	0.7.0.200-eep-810
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP(MEP) and OS to view the list of package names.

New in This Release

- MLIVY-96: Updated dependencies in Livy to be compatible with Spark 3.2 .
- MLIVY-98: Fixed incompatibility of Livy Python modules with Python 3.8.
- MLIVY-97, MLIVY-99: Ensured Livy worked on FIPS-enabled cluster. Added support of SCRAM-SHA-256 SASL mechanism for communication between Livy server and Livy session Spark Applications.
- MLIVY-92: Updated dependencies in Livy to resolve CVE vulnerabilities.
- MLIVY-100: Updated `log4j 1.2.17` to `log4j 1.3.1-mapr` to resolve vulnerabilities.

Fixes

This MapR release includes the following fixes on the base release:

last-updated: Apr 11, 2022

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
1daea08	2021-12-09	MLIVY-96 Update dependencies to be compatible with Spark 3.2
96d6457	2021-12-24	Mock ast.Module to work with Python 3.8
78fc627	2022-01-04	MLIVY-70 Switch to log4j 1.3.0-mapr
7b018f7	2022-01-21	MLIVY-97 Fix Livy on FIPS-enabled cluster
f28d269	2022-01-24	MLIVY-99 Fix Livy for older cores
80417bf	2022-01-24	MLIVY-92 CVE fixes
4922f62	2022-01-25	MLIVY-92 Fix Livy after last round of CVE fixing
5c2abf2	2022-01-25	MLIVY-92 Resolve dependencies issues
ad6697d	2022-01-25	MLIVY-100 Update log4j v1 to the 1.3.1-mapr
700c1bb	2022-01-27	MLIVY-97 Change the way of enabling SCRAM-SHA-256 on FIPS setup
70263f8	2022-02-02	MLIVY-101 Build Livy ECO EEP 8.1.0 components with DF v 6.2.0

For complete details, refer to the commit log for this project in GitHub.

Resolved issues

- MLIVY-98: Fixed incompatibility of Livy Python modules with Python 3.8.

Known Issues and Limitations

- When you enable the SSL in a mixed (FIPS and non-FIPS) configuration, Spark application run fails. To run Spark applications, set `spark.ssl.ui.enabled` option to `false` in `spark-defaults.conf` configuration file.
- Hive-compatible JDBC / ODBC server introduced in Livy 0.7 is not available in MapR distribution.

Livy 0.7.0.100 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. You can find additional information on the Livy release notes page or Livy homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.7.0.100
Release Date	October 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/livy/tree/0.7.0.100-eep-800
GitHub Release Tag	0.7.0.100-eep-800

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP(MEP) and OS to view the list of package names.

New in This Release

- Support for Spark 3.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4068bf1	2021-09-14	SPARK-884 Update Kryo version
9e57289	2021-09-14	SPARK-884 Backport changes for org.apache.livy.rsc.driver.SparkEntries from upstream
6677a0e	2021-09-15	MLIVY-90 No result after executing the script for SparkR
713c93a	2021-09-21	MLIVY-88 Remove usage of sudo in Livy

Known Issues and Limitations

- Hive-compatible JDBC / ODBC server introduced in Livy 0.7 is not available in MapR distribution.

Livy 0.7.0.0 - 2104 (EEP 7.1.0) Release Notes

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. You can find additional information on the Livy release notes page or Livy homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.7.0.0
Release Date	April 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/livy/tree/0.7.0.0-mapr-710
GitHub Release Tag	0.7.0-mapr-710
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Livy Server was updated to 0.7 version.
- Service verifier
- Configuration of MapR authentication was refactored.

last-updated: Apr 11, 2022

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
34aaf00	2021-04-06	MLIVY-84 Add verify_service script
5d9ad7f	2021-04-15	MLIVY-87 Add missing Kerberos properties to livy.conf

Known Issues and Limitations

- Hive-compatible JDBC / ODBC server introduced in Livy 0.7 is not available in MapR distribution.
- MAPR-28087: Livy cannot use the Hive Interpreter. Workaround: Use the cluster mode. Set `livy.spark.deployMode=cluster` in the `${LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851 - Unable to start Spark thrift server against secured hive metastore (GSS initiate failed).
- LIVY-42: Livy UI is not accessible on Kerberos.

Livy 0.5.0 - 2009 (EEP 7.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Livy 0.5.0-2009.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You can find additional information on the Livy release notes page or Livy homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.5.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/livy/tree/0.5.0-mapr-2009
GitHub Release Tag	0.5.0-mapr-2009
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
05c464b	2020-05-14	MLIVY-64 Add security headers to Livy
df56acd	2020-05-14	MLIVY-71 Fix Guava to be compatible with Guava in Core/Hadoop
a2a2afe	2020-05-15	MLIVY-72 Update jQuery to fix vulnerability

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4613caa	2020-05-15	MLIVY-66 Update bootstrap to fix vulnerability
b6358a2	2020-07-02	MLIVY-73 Errors in Livy on CentOS 8 with java11
a128805	2020-07-13	MLIVY-73 Errors in Livy on CentOS 8 with java11
89fe852	2020-07-13	MLIVY-74 Session can not start
73837c2	2020-07-15	MLIVY-74 Session can not start
960a78c	2020-07-29	MLIVY-76 Error in Livy PySpark example
63ceb98	2020-08-14	MLIVY-75 Error in Livy during service start

Known Issues and Limitations

- MAPR-28087: Livy cannot use the Hive Interpreter. Workaround: Use the cluster mode. Set `livy.spark.deployMode=cluster` in the `${LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851 - Unable to start Spark thrift server against secured hive metastore (GSS initiate failed).
- LIVY-42: Livy UI is not accessible on Kerberos.

Livy 0.5.0 - 2201 (EEP 6.3.6) Release Notes

The notes below relate specifically to the MapR Technologies Distribution for Apache Hadoop. You can find additional information on the Livy release notes page or Livy homepage.

These release notes contain only MapR Technologies specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.5.0
Release Date	January 2022
HPE Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/livy/tree/0.5.0-mapr-2201
GitHub Release Tag	0.5.0-mapr-2201
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- MLIVY-100: Updated `log4j 1.2.17` to `log4j 1.3.1-mapr` to resolve vulnerabilities.

Fixes

This MapR Technologies release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
14b7aaf	2022-01-06	MLIVY-70 Switch to log4j 1.3.0-mapr

last-updated: Apr 11, 2022

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
1ac7153	2022-01-25	MLIVY-100 Update log4j to the 1.3.1-mapr

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- MAPR-28087: Livy cannot use the Hive Interpreter. Workaround: Use the cluster mode. Set `livy.spark.deployMode=cluster` in the `${LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851 - Unable to start Spark Thrift Server against secured Hive Metastore (GSS initiate failed).

Livy 0.5.0 - 2104 (EEP 6.3.4) Release Notes

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. You can find additional information on the Livy release notes page or Livy homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.5.0
Release Date	April 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/livy/tree/0.5.0-mapr-2009
GitHub Release Tag	0.5.0-mapr-2104
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Backported fix for LIVY-547: [LIVY-547][SERVER] Livy kills session after `livy.server.session.timeout` even if the session is active.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
a68df98	2021-03-24	MLIVY-85 Backport [LIVY-547] [SERVER] Livy kills session after livy.server.session.timeout even if the session is active

Known Issues and Limitations

- MAPR-28087: Livy cannot use the Hive Interpreter. Workaround: Use the cluster mode. Set `livy.spark.deployMode=cluster` in the `${LIVY_CONF}/livy.conf` file. This issue is caused by Spark 11851 - Unable to start Spark thrift server against secured hive metastore (GSS initiate failed).
- LIVY-42: Livy UI is not accessible on Kerberos.

Mahout Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for Mahout component included in the MapR Converged Data Platform contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Mahout 0.12.0 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following Mahout 0.12.0 component release notes are included in the MapR distribution for Apache Hadoop.

Mahout 0.12.0-1611 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Mahout component included in the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Mahout home page.

Version	0.12.0
Release Date	December 9, 2016
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/mahout/tree/0.12.0-mapr-1611
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Note: Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2.

New in This Release

This release of Mahout 0.12.0 is only available with EEP 2.0 and includes support for Spark v2.0.1.

Note: Spark versions prior to v2.0.1 are not compatible.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
7a6d7c4	2016-11-21	MAPR-24808: Spark version was moved to v2.0.1 and Scala to v2.11.

Mahout 0.12.0-1609 Release Notes

last-updated: Apr 11, 2022

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Mahout component included in the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Mahout home page.

Version	0.12.0
Release Date	September 30, 2016
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/mahout/tree/0.12.0-mapr-1609
Package Names	• `mapr-mahout-0.12.0.201609271030-1.noarch.rpm` • `mapr-mahout_0.12.0.201609271030_all.deb`

New in this Release

This release of Mahout 0.12.0 includes backports of all the patches included in Apache Mahout 0.12.1 and 0.12.2. For details on the fixes available in the open source version of this component, see changelog for Apache Mahout 0.12.1 and Apache Mahout 0.12.2.

Mahout 0.12.0-1605 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Mahout component included in the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Mahout home page.

Version	0.12.0
Release Date	June 6, 2016
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/mahout/tree/0.12.0-mapr-1605
Package Names	• mapr-mahout-0.12.0.201605311533-1.noarch.rpm • mapr-mahout_0.12.0.201605311533_all.deb

New in This Release

This is the initial release of version 0.12.0 of Mahout for the MapR Distribution for Hadoop. For more information, see the Release Notes.

Mahout 0.11.0 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following Mahout 0.11.0 component release notes are included in the MapR distribution for Apache Hadoop.

Mahout 0.11.0-1604 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Mahout component included in the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Mahout home page.

Mahout Version	0.11.0
Release Date	May 4, 2016
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/mahout/tree/0.11.0-mapr-1604
Package Names	• mapr-mahout-0.11.0.201604271224-1.noarch.rpm • mapr-mahout_0.11.0.201604271224_all.deb

New in this Release

All patches from Apache Mahout 0.11.2 have been backported into this release.

Fixes

This release from MapR includes the following fixes on the base Apache release. These fixes were back-ported from Mahout version 0.11.2. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
a075065	2016-03-23	Changed Spark version from Apache to MapR (Spark 1.5.2).
e43e3b3	2016-03-09	MAHOUT-1802: The optimizer, instead of generating checkpoints, now uses the cached checkpoints if available.
14a84d4	2016-03-09	MAHOUT-1801: Improved the speed of Sparse Matrix operations using FastUtil.
fdcb104	2016-03-09	MAHOUT-1640: Improved speed in vector benchmarks through better collections.
f2e763c	2016-03-08	Upgraded dependency to Spark 1.5.2.
91a2456	2016-03-08	MAHOUT-1800: Pared down overuse of classtag.
06f5993	2016-01-16	MAHOUT-1797: Fixed typos in `SPARK_ASSEMBLY_BIN`.
47e46b7	2016-01-06	MAHOUT-1785: Replaced (deprecated) `spark.kryoserializer.buffer.mb` parameter in the Spark configuration with `spark.kryoserializer.buffer`.

Mahout 0.11.0-1601 Release Notes

last-updated: Apr 11, 2022

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Mahout component included in the MapR Distribution for Apache Hadoop.

Mahout Version	0.11.0
Release Date	February 1, 2016
Source on GitHub	https://github.com/mapr/mahout/tree/0.11.0-mapr-1601
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-mahout-0.11.0.201601281739-1.noarch.rpm • mapr-mahout_0.11.0.201601281739_all.deb

New in this Release

This release of Apache Mahout includes the following behavior changes that are specific to MapR:

- All patches from Apache Mahout 0.11.1 have been backported into this release.
- Includes support for Spark 1.4.1 and Spark 1.5.2.

For details on the features available in the open source version of this component, see Apache Mahout Release Notes and the Apache Mahout homepage.

Note: When using Mahout-Samsara, the cluster requires Spark 1.3.1.

Mahout 0.11.0-1509 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Version	0.11.0
Release Date	Oct 5, 2015
Source on GitHub	https://github.com/mapr/mahout/tree/0.11.0-mapr-1509
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-mahout-0.11.0.201509301721-1.noarch.rpm • mapr-mahout_0.11.0.201509301721_all.deb

New in this Release

For details on the features available in the open source version of this component, see Apache Mahout Release Notes and the Apache Mahout homepage.

Important: When using Mahout-Samsara, the cluster requires Spark 1.3.1.

Fixes

This release from MapR includes the following fixes on the base Apache release. These fixes were back-ported from Mahout version 0.10.1 For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
078edc1	2015-09-10	MAPR-20481: Mahout Spark job no longer fails after switching the cluster MapReduce mode to classic mode.

Mahout 0.10.0 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following Mahout 0.10.0 component release notes are included in the MapR distribution for Apache Hadoop.

Mahout 0.10.0-1507 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the Mahout component included in the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Mahout homepage.

Version	0.10.0
Release Date	August 5, 2015
Source on GitHub	https://github.com/mapr/mahout.git
GitHub Release Tag	0.10-mapr-1507
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release from MapR includes the following fixes on the base Apache release. These fixes were back-ported from Mahout version 0.10.1 For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
c9ee4f3	2015-06-10	MAHOUT-1704: Minimized the dependency jar for h2o so that it only includes necessary run-time classes.
d880b7a	2015-06-10	MAHOUT-1697:Math-scala and spark module docs are no longer packaged under the wrong path in the bin distribution archive.
358620d	2015-06-10	MAHOUT-1696: QRDecomposition.solve(...) no longer returns incorrect Matrix types.
e6d7525	2015-06-10	MAHOUT-1690: Resolved the issue where vector dumper flags are expecting arguments.

last-updated: Apr 11, 2022

Commit	Date (YYYY-MM-DD)	Comment
7907998	2015-06-10	MAHOUT-1693: FunctionalMatrixView no longer materializes row vectors when it is run in scala shell.

Mahout 0.10.0-1505 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the Mahout component included in the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Mahout homepage.

Version	0.10.0
Release Date	June 2, 2015
Source on GitHub	https://github.com/mapr/mahout.git
GitHub Release Tag	0.10-mapr-1505
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

This is the initial release of version 0.10.0 of Mahout for the MapR Distribution for Hadoop.

Fixes

This release from MapR includes the following fixes on the base Apache release. These fixes were back-ported from Mahout version 0.10.1 For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
ef5e912	2015-Apr-20	$MAHOUT_HOME and $SPARK_HOME are now exported automatically.

MapR Event Store For Apache Kafka Client Release Notes

The release notes for MapR Event Store For Apache Kafka clients included in the MapR Converged Data Platform.

MapR Event Store For Apache Kafka C Client 0.11.3 - 1803 Release Notes

Release notes for the MapR Event Store For Apache Kafka C client included in the MapR Converged Data Platform. The notes below relate specifically to the MapR Converged Data Platform.

Version	0.11.3
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

This is a release of the MapR Event Store For Apache Kafka C Client for EEP 5.0 (and above) that suppported by MapR cluster version 6.0.1 (and above). This C Client is is a binding for librdkafka 0.11.3.

Fixes

- N/A

Known Issues and Limitations

none

Resolved Issues

None.

MapR Event Store For Apache Kafka Python Client 0.11.3 - 1803 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for MapR Event Store For Apache Kafka Python Client as of EEP 5.0 or above.

Release notes for the MapR Event Store For Apache Kafka Python client included in the MapR Converged Data Platform. The notes below relate specifically to the MapR Converged Data Platform. You can use MapR Event Store For Apache Kafka Python Client EEP 5.0 (and above) on MapR cluster version 6.0.1 (and above).

Version	0.11.3
Release Date	March 2018
Source on GitHub	
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

This is a release of the MapR Event Store For Apache Kafka Python Client for EEP 5.0 (and above) that suppported by MapR cluster version 6.0.1 (and above). This Python Client is is a binding for librdkafka 0.11.3.

Fixes

- N/A

Known Issues and Limitations

- You cannot use the MapR Installer to install the MapR Event Store For Apache Kafka Python Client. To install the MapR Event Store For Apache Kafka Python Client, use pip to manually install the package. See Installing MapR Event Store For Apache Kafka Python Client on page 198 for more information.

MapR Event Store For Apache Kafka C#/.NET 0.11.3 - 1803 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for MapR Event Store For Apache Kafka C#/.NET Client as of EEP 5.0 or above.

Release notes for the MapR Event Store For Apache Kafka C#/.NET client included in the MapR Converged Data Platform. The notes below relate specifically to the MapR Converged Data Platform. You can use MapR Event Store For Apache Kafka Python Client EEP 5.0 (and above) on MapR cluster version 6.0.1 (and above).

last-updated: Apr 11, 2022

Version	0.11.3
Release Date	March 2018
Source on GitHub	
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

This is a new release of the MapR Event Store For Apache Kafka C#/.NET Client for EEP 5.0 (and above) that suppported by MapR cluster version 6.0.1 (and above). This C#/.NET Client is a binding for librdkafka 0.11.3.

Fixes

- N/A

Known Issues and Limitations

- You cannot use the MapR Installer to install the MapR Event Store For Apache Kafka C#/.NET Client. See Installing MapR Event Store For Apache Kafka C#/.NET Client on page 200 for more information.

MapR Event Store For Apache Kafka C Client 0.9.1 - 1703 Release Notes

Release notes for the MapR Event Store For Apache Kafka C client included in the MapR Converged Data Platform. The notes below relate specifically to the MapR Converged Data Platform.

Version	0.9.1
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

This is the initial release of the MapR Event Store For Apache Kafka C Client. You can use MapR Event Store For Apache Kafka C Client on MapR cluster version 5.2.1 and above.

Fixes

- Fix for bug 778 (Double free when using "topic.blacklist" setting) has been backported into this release.

Known Issues and Limitations

- **MapR-26629:**Application memory usage may be high due to fragmentation when Glibc Malloc is in use. In this case, consider tuning the MAX_MALLOC_ARENA environment variable or the M_ARENA_MAX tunable to a lower value, such as 1. When the value is 1, the amount of fragmentation decreases and the memory usage generally decreases by 3 or 4 times as well.
- **MapR-26602:**Kafka script `bin/kafka-consumer-groups.sh` cannot be used to obtain the consumer group list.
- **MapR-26331:**MapR Event Store For Apache Kafka C Client commits when "enable.auto.commit"= true and "auto.commit.interval.ms"=0. Apache librdkafka, does not commit in this case.

- **MapR-26279:**When a producer application creates multiple threads using pthread_create() and also calls rd_kafka_destroy(), the Streams C client logs the following error:

  ```
  rdkafka.c:527:rd_kafka_destroy_app: assert: !*"failed to join main
  thread"
  ```

  This issue also occurs with Apache librdkafka 0.9.1.

Resolved Issues

None.

MapR Event Store For Apache Kafka Python Client 0.9.2-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for MapR Event Store For Apache Kafka Python Client 0.9.2-1707.

Release notes for the MapR Event Store For Apache Kafka Python client included in the MapR Converged Data Platform. The notes below relate specifically to the MapR Converged Data Platform.

Version	0.9.2
Release Date	August 2017
Source on GitHub	https://github.com/mapr/confluent-kafka-python/tree/0.9.2-mapr-1707
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

There are no new features in this release.

You can use MapR Event Store For Apache Kafka Python Client on MapR cluster version 5.2.1 and above.

Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
ee1add2	Jun 2, 2017	MAPR-KAFKA-12 Change package markings

Known Issues and Limitations

- You cannot use the MapR Installer to install the MapR Event Store For Apache Kafka Python Client. To install the MapR Event Store For Apache Kafka Python Client, use pip to manually install the package. See the MapR Installation documentation.

MapR Event Store For Apache Kafka Python Client 0.9.2 - 1703 Release Notes

Release notes for the MapR Event Store For Apache Kafka Python client included in the MapR Converged Data Platform. The notes below relate specifically to the MapR Converged Data Platform.

Version	0.9.2
Release Date	April 2017
Source on GitHub	https://github.com/mapr/confluent-kafka-python/tree/0.9.2-mapr-1703

MapR Version Interoperability	See the EEP Components and OS Support on page 5536.
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

This is the initial release of the MapR Event Store For Apache Kafka Python Client. You can use MapR Event Store For Apache Kafka Python Client on MapR cluster version 5.2.1 and above.

Fixes

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
96dc364	2017-3-23	MAPR-26494: Renamed package and refactored code.

Known Issues and Limitations

- You cannot use the MapR Installer to install the MapR Event Store For Apache Kafka Python Client. To install the MapR Event Store For Apache Kafka Python Client, use pip to manually install the package. See the MapR Installation documentation.

MapR Event Store For Apache Kafka Tools Release Notes

The release notes for MapR Event Store For Apache Kafka tools included in the MapR Converged Data Platform.

Kafka Streams Release Notes

The release notes for the Kafka Streams component included in the MapR Converged Data Platform contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Kafka Streams 2.6.1.100 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. See Apache Kafka 2.6.1 release notes or the Apache Kafka Streams homepage for more information.

Version	2.6.1.100
Release Date	January 2022
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/kafka
GitHub Release Tag	2.6.1.100-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka Streams 2.6.1.100 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- CVE fixes
- Bug fixes

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
0d14450	2022-01-25	MAPR-KAFKA-839 Updated log4j version to 1.3.1-mapr
20b0965	2022-01-12	MAPR-KAFKA-771 Make ListConsumerGroupsResult constructor accessible from outside the package.
cabe9f4	2021-12-16	MAPR-KAFKA-826 Added force override of log4j version
6b76e00	2021-12-15	MAPR-KAFKA-826 Updated log4j version
f59ab85	2021-11-19	MAPR-KAFKA-800 Skip already existing stream creation
17e8dbe	2021-11-19	MAPR-KAFKA-804 Netty CVE for kafka components
022472e	2021-11-16	MAPR-KAFKA-786 Added publishing of kafka-streams-test-utils
7a256fd	2021-11-15	MAPR-KAFKA-799 Backport KAFKA-12211 NoSuchFileException will be thrown if hasPersistentStores is false when creating stateDir
8e73665	2021-11-11	MAPR-KAFKA-796 Update dependencies versions for MEP-8.1
6f93f7e	2021-11-09	MAPR-KAFKA-793 KafkaProducer throws NPE to spring-kafka (additional commit)
44b509a	2021-11-08	MAPR-KAFKA-793 KafkaProducer throws NPE to spring-kafka

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Transactions are not supported.
- Pattern subscription is not supported.
- The application reset tool hangs if it runs when the Kafka Streams application is running.
- The application reset tool may throw a Null Pointer Exception when the date or duration parameter is used.
- The application reset tool does not reset to intermediate offset if the topic has multiple partitions.

- MAPR-KAFKA-581: Stream hangs in rebalancing state. The workaround is to set a larger timeout. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None.

Kafka Streams 2.6.1.0 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. See Apache Kafka 2.6.1 release notes or the Apache Kafka Streams homepage for more information.

Version	2.6.1.0
Release Date	October 2021
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/kafka
GitHub Release Tag	2.6.1.0-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka Streams 2.6.1.0 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- Kafka-664: When a Consumer application (in HPE Ezmeral Data Fabric Event Data Streams) calls `consumer.poll()`, the Consumer does not read any data from the topic if the timeout (`request.timeout.ms`) is set to 0. In previous releases, Consumers read one message.

If you plan to upgrade from Kafka 2.1.1 to 2.6.1, you may want to review Changes in Kafka 2.6.1 on page 3863.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
`360bf7ab, b0507115`	2021-10-11	KAFKA-783 Add log4j properties for MM2.
`c9a89245`	2021-10-06	KAFKA-781 Avoid overwriting task user name.
`e3f52c9394`	2021-09-25	KAFKA-770 Configuration topic which stores offsets should store the topics' names without Mapr Stream name.
`69565a337e`	2021-09-23	KAFKA-761 Seek to beginning of Mapr partitions before reading logs from configuration's topics.
`343c082fbc`	2021-09-16	KAFKA-762 NPE while starting kafka-connect service on core 7.0.0
`ba61df9ded`	2021-07-17	KAFKA-654 Make MirrorMaker 2 fully functional with Mapr Streams

bd0c93efd2	2021-09-08	KAFKA-757 mapr-security-web jar should be taken from the cluster
6ad6204cdf	2021-09-05	KAFKA-758 Update the maven artifact version strings to eep
20f177c8fb	2021-09-01	KAFKA-752 KafkaConsumer.pause() throws NoSuchElementException
cc0c8eaf13	2021-08-25	KAFKA-751 Protobuf and JsonSchema formats were added to Schema Registry 6.0.0
290bf71f61	2021-08-19	KAFKA-746 Remove workaround implemented due to the difference in work of poll(0) between Mapr and Apache Kafka.
32cfddfd2a	2021-08-18	KAFKA-725 Update hadoop dependency
9910062bb7	2021-08-17	KAFKA-745 Update Jackson dependencies
61e6625b43	2021-08-13	KAFKA-686 Service verifier was added to Kafka Connect
ecc67384f7	2021-08-10	KAFKA-680 Jetty CVE for kafka components
8fb65fa77b	2021-07-08	KAFKA-724 Avoid appearing NPE when using MirrorMaker
ca2adcf2d9	2021-07-02	KAFKA-654 The value of property AUTO_COMMIT_INTERVAL_MS_CONFIG has Long type
e326b73eb2	2021-05-25	KAFKA-714 mapr-streams dependency was replaced with kafka-eventstreams
29e9fe9f14	2021-05-24	KAFKA-715 Hadoop dependency was updated to 2.7.5.100-mapr-720-SNAPSHOT
e6a7e80417	2021-03-03	KAFKA-681 Avoid appearing NPE when using MirrorMaker
00b0b4b438	2021-02-24	KAFKA-679 Hadoop version was changed to 2.7.4.0-mapr-710
b02d49328f	2021-02-23	KAFKA-676 Workaround for not implemented method MarlinAdminClientImpl.describeConfigs
939b524487	2021-02-19	KAFKA-650 Kafka connect JDBC code base was upgraded to version 10.0.1
6dff118ef9	2021-02-15	KAFKA-649 Kafka connect code base was upgraded to version 10.0.0
18c41383c0	2021-02-11	KAFKA-670 Avoid potential use of Apache methods in Mapr Kafka 2.6
210c161329	2021-01-14	KAFKA-660 TaskManager should be inited before adding records to tasks.

last-updated: Apr 11, 2022

c2898ea40c	2021-01-21	KAFKA-666 Synchronized blocks with monitor object 'taskmanager' were removed.
0882ab8b3a	2021-01-12	KAFKA-662 InternalStreamCompacted attribute was removed from StoreChangelogReader
5bd960288c	2021-01-05	KAFKA-659 Avoid appearing NullPointerException

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Transactions are not supported.
- Pattern subscription is not supported.
- The application reset tool hangs if it runs when the Kafka Streams application is running.
- The application reset tool may throw a Null Pointer Exception when the date or duration parameter is used.
- The application reset tool does not reset to intermediate offset if the topic has multiple partitions.
- MAPR-KAFKA-581: Stream hangs in rebalancing state. The workaround is to set a larger timeout. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None.

Kafka Streams 2.1.1.200 - 2104 (MEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. See Apache Kafka 2.1.1 Release Notes or the Apache Kafka Streams homepage for more information.

Version	2.1.1.200
Release Date	April 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka
GitHub Release Tag	2.1.1.200-mapr-710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Streams 2.1.1.200 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4d9def8021	2021-04-12	MAPR-KAFKA-696 Partition is returned in consumer.assignment(), but seekToEnd fails with "No current assignment for partition"
651c04c420	2021-03-31	MAPR-KAFKA-686 Service verifier was added to Kafka Connect
23e005ac30	2021-04-01	MAPR-KAFKA-692 Update Hadoop dependency to 2.7.5.0-mapr-710-SNAPSHOT
0af5f9d9d4	2021-03-30	MAPR-KAFKA-685 CVE-2018-10237,CVE-2020-8908 vulnerabilities in Kafka
83081395	2021-03-03	MAPR-KAFKA-681 Avoid appearing NPE when using MirrorMaker

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Pattern subscription is not supported.
- The application reset tool hangs if it runs when the Kafka Streams application is running.
- The application reset tool may throw a Null Pointer Exception when the date or duration parameter is used.
- The application reset tool does not reset to intermediate offset if the topic has multiple partitions.
- MAPR-KAFKA-581: Stream hangs in rebalancing state. The workaround is to set a larger timeout. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None.

Kafka Streams 2.1.1.100 - 2101 (MEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. See Apache Kafka 2.1.1 Release Notes or the Apache Kafka Streams homepage for more information.

Version	2.1.1.100
Release Date	January 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka
GitHub Release Tag	2.1.1.100-mapr-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Streams 2.1.1.100 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
87b900a79	2021-01-09	MAPR-KAFKA-661 Bump jetty to v9.4.35
a25b751d2	2020-11-09	MAPR-KAFKA-639 ClassCastException: Non-string value for key task.user: null

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Pattern subscription is not supported.
- The application reset tool hangs if it runs when the Kafka Streams application is running.
- The application reset tool may throw a Null Pointer Exception when the date or duration parameter is used.
- The application reset tool does not reset to intermediate offset if the topic has multiple partitions.
- MAPR-KAFKA-581: Stream hangs in rebalancing state. The workaround is to set a larger timeout. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None.

Kafka Streams 2.1.1.0 - 2009 (MEP 7.0.0) Release Notes

The following notes relate specifically to the MapR distribution for Apache Kafka. See Apache Kafka 2.1.1 Release Notes or the Apache Kafka Streams homepage for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	2.1.1.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka
GitHub Release Tag	2.1.1.0-mapr-700
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

N/A

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
fa80ee2	2019-03-30	MAPR-KAFKA-280 mapr version is changed to 6.2.0-mapr-SNAPSHOT
9a9e3ce	2019-05-15	MAPR-KAFKA-331 Kafka uses 2.7.4 version of hadoop.
4ffa437	2019-07-05	MAPR-KAFKA-399 Jetty version was updated at Kafka to latest 9.4 (as of 06/28 - it is 9.4.19.v20190610).
941f2b8	2020-04-06	MAPR-KAFKA-564 Update gradle version and fix config files in order to build with java 11
7a51ece	2020-07-09	MAPR-KAFKA-582 Update ZK to v3.5.6
33152eb	2020-07-09	MAPR-KAFKA-588 Create only absent internal streams for KStreams

Known Issues and Limitations

- Pattern subscription is not supported.
- The Application Reset tool hangs if it runs when the Kafka Streams application is running.
- The Application Reset tool may throw a Null Pointer Exception if the date or duration parameter is used.
- The Application Reset tool does not reset to intermediate offset if the topic has multiple partitions.
- MAPR-KAFKA-581: Stream hangs in rebalancing state; caused by MS-915: MapR Stream application hangs inside cycle. Workaround: Increase the value of the `streams.rpc.timeout.ms` parameter, as described in Enabling Soft Mount and Setting the Timeout on page 420 and Configuration Parameters on page 2772.

Resolved Issues

- None.

Kafka Streams 1.1.1 - 2201 (EEP 6.3.6) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. See Apache Kafka 1.1 ReleaseNotes or the Apache Kafka Streams homepage for more information.

Version	1.1.1
Release Date	January 2022
MapR Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka
GitHub Release Tag	1.1.1-mapr-2201
Maven Artifacts	https://repository.mapr.com/maven/

last-updated: Apr 11, 2022

Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Streams 1.1.1 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- CVE fixes
- Bug fixes

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
07937bf	2022-01-10	MAPR-KAFKA-835 Updated log4jv2 version
7dbed35	2021-04-13	MAPR-KAFKA-699 Hadoop mapreduce client core jar was added to the classpath for executing connectors
cdef034	2021-04-12	MAPR-KAFKA-696 Partition is returned in consumer.assignment(), but seekToEnd fails with "No current assignment for partition"

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Pattern subscription is not supported.
- The application reset tool hangs if it runs when the Kafka Streams application is running.
- The application reset tool may throw a Null Pointer Exception if the date or duration parameter is used.
- The application reset tool does not reset to intermediate offset if the topic has multiple partitions.
- MAPR-KAFKA-581: Stream hangs in rebalancing state. The workaround is to set a larger timeout. This issue is caused by MS-915: MapR Stream application hangs inside cycle

Resolved Issues

- None.

Kafka Streams 1.1.1 - 2104 (MEP 6.3.4) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. See Apache Kafka 1.1 ReleaseNotes or the Apache Kafka Streams homepage for more information.

Version	1.1.1
Release Date	April 2021
MapR Version Interoperability	See MEP Components and OS Support

N/A

Fixes

N/A

Known Issues and Limitations

- Pattern subscription is not supported.
- Application Reset Tool hangs if it runs when Kafka Streams application is running.
- Application Reset Tool may throw Null Pointer Exception if date or duration parameter is used.
- Application Reset Tool doesn't reset to intermediate offset if topic has multiple partitions.

Resolved Issues

- KAFKA-505: kafka-connect configure.sh processes --EC option incorrectly.
- MS-911: MEP6 with Kafka 1.1.1 fails interact through SSL.

Kafka Streams 1.1-1808 Release Notes

The following notes relate specifically to the MapR distribution for Apache Kafka. See Apache Kafka 1.1 Release Notes or the Apache Kafka Streams homepage for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.1
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka/tree/1.1.1-mapr-1808
GitHub Release Tag	1.1-mapr-1808

Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- This is the first release of MapR Kafka Streams.

  The MapR Kafka Streams is included in EEP repositories beginning with MEP-6.0.0. Kafka Streams is a Java library for building streaming applications and microservices, specifically ones that transform input MapR Event Store For Apache Kafka topics into output MapR Event Store For Apache Kafka topics.

  Feature Support

  - Application Reset Tool
  - Secure internal topic creation

Fixes

N/A

Known Issues and Limitations

- Pattern subscription is not supported.
- Application Reset Tool hangs if it runs when Kafka Streams application is running.
- Application Reset Tool may throw Null Pointer Exception if date or duration parameter is used.
- Application Reset Tool doesn't reset to intermediate offset if topic has multiple partitions.

Resolved Issues

- None

KSQL Release Notes

The release notes for the KSQL component included in the MapR Converged Data Platform contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

KSQL 6.0.0.100 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	6.0.0.100
Release Date	January 2022
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/ksql
GitHub Release Tag	6.0.0.100-eep-810
Maven Artifacts	https://repository.mapr.com/maven/

last-updated: Apr 11, 2022

Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

KSQL 6.0.0.100 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- Federal Information Processing Standards (FIPS) support (valid for core 7.0.0 and later). .
- CVE fixes.
- Bug fixes.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
59d3a86	2022-01-26	MAPR-KAFKA-839 Updated log4j version to 1.3.1-mapr
8ed2a69	2022-01-25	MAPR-KAFKA-837 Avoid IndexOutOfBounds error
e475458	2022-01-25	MAPR-KAFKA-837 Update vert.x version to the one which is works with netty 4.1.69.Final
3036b52	2022-01-19	MAPR-KAFKA-836 Add providers before vert.x starts to read security properties
a69ebf6	2021-12-21	MAPR-KAFKA-792 FIPS support was added with changes in vertx-core
7f7bce7	2021-12-17	MAPR-KAFKA-803 Changed kafka-streams-test-utils version to eep snapshot
a1edebe	2021-12-01	MAPR-KAFKA-808 Kafka-ksql CVE fixes (additional fix)
2f50a62	2021-11-25	MAPR-KAFKA-808 Kafka-ksql CVE fixes
0446c5e	2021-11-24	MAPR-KAFKA-800 Skip already existing stream creation by KSQL
19ffc24	2021-11-15	MAPR-KAFKA-798 KSQL cli logs contain errors about metrics submission
ea4cd7a	2021-11-11	MAPR-KAFKA-796 Update dependencies versions
82d7c5f	2021-10-27	MAPR-KAFKA-784 Add security java options if FIPS mode is enabled
cf49faf	2021-10-15	MAPR-KAFKA-782 All eep jars that can be taken from /opt/mapr/kafka was excluded

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- You cannot upgrade KSQL from 4.x to 5.x/6.x versions; you must uninstall KSQL 4.x and then install the newer version.
- Concurrent queries on a table can result in a null pointer exception.
- The SHOW TOPICS command does not print information about active consumers and consumer groups.
- MAPR-KAFKA-437: Dropping streams/tables may take up to five minutes. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”
- MAPR-KAFKA-427: KSQL server periodically responds with a 403 code only. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None.

KSQL 6.0.0.0 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	6.0.0.0
Release Date	October 2021
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/ksql
GitHub Release Tag	6.0.0.0-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

KSQL 6.0.0.0 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- None

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
ae254aca1c	2021-09-08	MAPR-KAFKA-757 mapr-security-web and maprdb jars should be taken from the cluster
5da53e1e6b	2021-09-05	MAPR-KAFKA-758 Update the maven artifact version strings to eep
1f57181607	2021-08-31	MAPR-KAFKA-749 Incorrect access mode for scripts in bin directory
51fd694f20	2021-08-31	MAPR-KAFKA-737 Implement authentication.cookie.expiration property support

3d16826412	2021-08-26	MAPR-KAFKA-750 Cannot create table because producer is clossed
6228621cf4	2021-08-19	MAPR-KAFKA-741 Make verify_service executable
608c4ec5e5	2021-08-18	MAPR-KAFKA-745 Update Jackson dependencies
95381a5e8b	2021-08-17	MAPR-KAFKA-725 Update hadoop dependency version
c99c6f314e	2021-08-16	MAPR-KAFKA-744 Vulnerabilities in http-client
4cdd4d68c0	2021-08-13	MAPR-KAFKA-741 Add service verifier to Kafka KSQL
428cba4c9f	2021-08-11	MAPR-KAFKA-680 Jetty CVE for kafka components
553dba7156	2021-08-03	MAPR-KAFKA-736 KSQL start fails in non-interactive mode
a244d69947	2021-08-02	MAPR-KAFKA-735 KSQL server crashes if truststore is in not default location

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- You cannot upgrade KSQL from 4.x to 5.x/6.x versions; you must uninstall KSQL 4.x and then install the newer version.
- Concurrent queries on a table can result in a null pointer exception.
- The SHOW TOPICS command does not print information about active consumers and consumer groups.
- MAPR-KAFKA-437: Dropping streams/tables may take up to five minutes. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”
- MAPR-KAFKA-427: KSQL server periodically responds with a 403 code only. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None.

KSQL 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	5.1.2.200
Release Date	April 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/ksql
GitHub Release Tag	5.1.2.200-mapr-710
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

KSQL 5.1.2.200 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Service verifier

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
58c7cf9912	2021-04-05	MAPR-KAFKA-690 Add service verifier to Kafka KSQL
b6ca1ab18d	2021-04-01	MAPR-KAFKA-697 Jersey 1.19 was excluded from the project
da5dd67088	2021-03-19	MAPR-KAFKA-692 Update Hadoop dependency to 2.7.5.0-mapr-710-SNAPSHOT

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- The SHOW TOPICS command does not print information about active consumers and consumer groups.
- MAPR-KAFKA-437: Dropping streams/tables may take up to five minutes. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”
- MAPR-KAFKA-427: KSQL server periodically responds with a 403 code only. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None.

KSQL 5.1.2.100 - 2101 (MEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	5.1.2.100
Release Date	January 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/ksql
GitHub Release Tag	5.1.2.100-mapr-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

last-updated: Apr 11, 2022

New in This Release

KSQL 5.1.2.100 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
e5dd2e9f	2021-01-08	KAFKA-661 Bump jetty to v9.4.35

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- The SHOW TOPICS command does not print information about active consumers and consumer groups.
- MAPR-KAFKA-437: Dropping streams/tables may take up to five minutes. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”
- MAPR-KAFKA-427: KSQL server periodically responds with a 403 code only. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None.

KSQL 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes

The following notes relate specifically to the KSQL component included in the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.2.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/ksql
GitHub Release Tag	5.1.2.0-mapr-700
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Additional security features.
- KSQL works with Avro format using Mapr Schema Registry.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
b855332	2019-03-19	MAPR-KAFKA-281 Symlink to /opt/mapr/ksql-$version/bin/ksql to run as a default application is created.
e05a761	2019-03-28	MAPR-KAFKA-255 Security (Basic, Kerberos and MapRSasl) is enabled on server side
835473f	2019-04-05	MAPR-KAFKA-256 Impersonation for KSQL was added.
e5bc4df	2019-04-08	MAPR-KAFKA-251 SSL/TLS for KSQL CLI
7d79754	2019-04-09	MAPR-KAFKA-253 Authenticate with entering username and hidden password
89565f2	2019-04-11	MAPR-KAFKA-252 Maprsasl for KSQL cli
5b7da76	2019-04-22	MAPR-KAFKA-305 Cookies authentication for KSQL
42536b1	2019-04-22	MAPR-KAFKA-194 Authentication for KSQL
1dc8734	2019-05-11	MAPR-KAFKA-331 KSQL uses 6.2 version of mapr.
1d69d2a	2019-05-17	MAPR-KAFKA-318 Authorization filter for KSQL.
d1189f0	2019-06-05	MAPR-KAFKA-360 Ksql client does not start when auth type is "basic" and user without ticket
e2636b9	2019-06-11	MAPR-KAFKA-377 Add separate configuration property to enable or disable authorization property
49af0ec	2019-06-19	MAPR-MAPR-KAFKA-382: Replace "authentication.method" property in ksql config with "authentication.enable"
82986b6	2019-07-05	MAPR-KAFKA-396 KSQL reads info about SR urls from zookeeper
f622cd8	2019-10-06	MAPR-CORE-327 Security headers and custom headers for KSQL
f063e37	2020-04-29	MAPR-KAFKA-564 Edit pom files to build ksql with java 11
f8ba9d9	2020-05-05	MAPR-KAFKA-573 Update version of commons-beanutils jar
ee957f9	2020-05-05	MAPR-KAFKA-582 Update ZK to v3.5.6

Known Issues and Limitations

- The `show topics` command doesn't print information about active consumers and consumer groups.

- MS-915 (MapR Stream application hangs inside cycle) causes the following issues:
  - MAPR-KAFKA-437: DROP statements run on streams or tables can delay for approximately five minutes.
  - MAPR-KAFKA-427: The KSQL server periodically responds with a 403 code.
    - Workaround: Increase the value of the `streams.rpc.timeout.ms` parameter, as described in Enabling Soft Mount and Setting the Timeout on page 420 and Configuration Parameters on page 2772.

Resolved Issues

- None

KSQL 4.1.1-2201 (EEP 6.3.6) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	4.1.1
Release Date	January 2022
HPE Version Interoperability	See EEP Components and OS Support.
Source on GitHub	https://github.com/mapr/ksql
GitHub Release Tag	4.1.1-mapr-2201
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for Ezmeral Ecosystem Packs (EEPs).

New in This Release

KSQL 4.1.1 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- CVE fixes
- Bug fixes

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	HPE Fix Number and Description
92024b7	2022-01-26	MAPR-KAFKA-839 Updated log4j version to 1.3.1-mapr
4a7f2c5	2021-12-21	MAPR-KAFKA-826 Updated log4j version
9b5a9c3	2020-12-11	MAPR-KAFKA-383 Set public read permissions for KSQL directories
c75b19b	2020-12-11	MAPR-KAFKA-656 Update jetty version
4c71935	2020-05-05	MAPR-KAFKA-573 Update versions of commons-*.jar
9e64cb0	2020-03-17	MAPR-KAFKA-562 Create health check for KSQL
279deab	2020-03-05	MAPR-KAFKA-555 Add option to control log compaction for KStreams
95cc6ca	2020-02-12	MAPR-KAFKA-542 Fix for class not found exception (versions of connect jars are calculated dinamically)

6f8cf8e	2018-11-29	MAPR-KAFKA-158 Copyright 2017 Confluent Inc message doesn't appear when starting up KSQL.
f220e4c	2018-10-17	MAPR-MS-513 Fix for configs overriding
7297843	2018-10-05	MAPR-MS-515 Mapr specific jars are taken from cluster.
d1d7b3e	2018-09-19	MAPR-MS-511 Fix for Error: File exists

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- The SHOW TOPICS command does not print information about active consumers and consumer groups.
- MAPR-KAFKA-437: Dropping streams/tables may take up to five minutes. This issue is caused by MS-915: “MapR Stream application hangs inside cycle.”
- MAPR-KAFKA-427: KSQL server periodically responds with a 403 code only. This issue is caused by MS-915: “MapR Stream application hangs inside cycle”

Resolved Issues

- None

KSQL 4.1.1-1808 Release Notes

The following notes relate specifically to the KSQL component include in the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.1.1
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	4.1.1-mapr-1808
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- This release is the first MapR release of KSQL for MapR Event Store For Apache Kafka.

  The MapR KSQL is included in EEP repositories beginning with MEP-6.0.0. KSQL is the streaming SQL engine that provides interactive/non-interactive SQL interface for stream processing on Kafka. This allows launching Kafka Streams applications with no need to write code in Java/Python.

  Feature Support

  - Secure creation of command store topic
  - Default stream

Fixes

N/A

Known Issues and Limitations

- The `show topics` command doesn't print information about active consumers and consumer groups.

Resolved Issues

- None

Kafka Connect Release Notes

The release notes for the Kafka Connect component included in the MapR Converged Data Platform contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, seeEEP Release Notes on page 5658 . To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Kafka Connect HDFS 10.0.0.100 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	10.0.0.100
Release Date	January 2022
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/kafka-connect-hdfs
GitHub Release Tag	10.0.0.100-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka Connect HDFS 10.0.0.100 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- CVE fixes

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4e4f3cd	2021-12-31	MAPR-KAFKA-834 Updated log4jv2 version
8e5cd0d	2021-12-14	MAPR-KAFKA-824 CVE-2021-44228 - Log4j vulnerability in Kafka HDFS Con
d654f94	2021-11-25	MAPR-KAFKA-805 Compress-commons CVE for kafka components

2a4633e	2021-11-25	MAPR-KAFKA-805 Gson CVE for kafka components
ab56cff	2021-11-25	MAPR-KAFKA-805 Netty CVE for kafka components

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect HDFS 10.0.0.0 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	10.0.0.0
Release Date	October 2021
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/kafka-connect-hdfs
GitHub Release Tag	10.0.0.0-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka Connect HDFS 6.0.0.0 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- None

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
df8d31b	2021-09-09	MAPR-KAFKA-704 Kafka Connect lib dir contains Kafka client jar
d0eb929	2021-09-07	MAPR-KAFKA-757 mapr-security-web and maprdb jars should be taken from the cluster
041943d	2021-09-05	MAPR-KAFKA-758 Update the maven artifact version strings to eep
cb558bd	2021-08-26	MAPR-KAFKA-751 Protobuf and Json Schema connect converters were added.
5ac9da4	2021-08-18	MAPR-KAFKA-745 Update Jackson v1 and v2 dependencies

28ab440	2021-08-16	MAPR-KAFKA-744 Vulnerabilities in http-client
f36b2e4	2021-08-11	MAPR-KAFKA-725 Update hadoop, hive, hbase dependencies
1fbf6c5	2021-05-25	MAPR-KAFKA-715 Hadoop dependency was updated to 2.7.5.100-mapr-720-SNAPSHOT
5472301	2021-02-25	MAPR-KAFKA-675 Skip checking the creation of mapr hadoop directory.
4afca95	2021-02-24	MAPR-KAFKA-678 hadoop-client and hadoop-yarn-client version should be 2.7.4.0-mapr

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect HDFS 5.1.2.200 - 2104 (EEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	5.1.2.200
Release Date	April 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-connect-hdfs
GitHub Release Tag	5.1.2.200-mapr-710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Connect HDFS 5.1.2.200 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Service verifier

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
3c82f9f	2021-04-02	MAPR-KAFKA-698 Update Hive dependency to 2.3.8-mapr-SNAPSHOT

173cd5c	2021-03-22	MAPR-KAFKA-692 Update Hadoop dependency to 2.7.5.0-mapr-710-SNAPSHOT

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect HDFS 5.1.2.100 - 2101 (EEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	5.1.2.100
Release Date	January 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-connect-hdfs
GitHub Release Tag	5.1.2.100-mapr-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Connect HDFS 5.1.2.100 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4e01a19	2021-01-18	MAPR-KAFKA-661 Change version of Hadoop dependencies and remove jetty notices
c0efe3b	2021-01-08	MAPR-KAFKA-661 Exclude jetty libs

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect HDFS 5.1.2.0 - 2009 (EEP 7.0.0) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.2.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-connect-hdfs

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect HDFS 4.1.0 - 2104 (EEP 6.3.4) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	4.1.0
Release Date	April 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-connect-jdbc
GitHub Release Tag	4.1.0-mapr-2104
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Connect HDFS 4.1.0 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- None

last-updated: Apr 11, 2022

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
3e6adec	2021-04-13	KAFKA-702 Hadoop version updated to 2.7.0-mapr-1808

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect HDFS 4.1.0 - 2101 (EEP 6.3.2) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

Version	4.1.0
Release Date	January 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-connect-hdfs
GitHub Release Tag	4.1.0-mapr-2101
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Connect HDFS 4.1.0 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
8a5bfa9	2020-12-24	MAPR-KAFKA-656 Update Hive version
f264feb	2019-04-19	MAPR-KAFKA-301: exclude non-mapr hadoop libs

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect HDFS 4.1.0-1808 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.1.0
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	4.1.0-mapr-1808
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Added support of SSL encryption, impersonation, and PAM authentication for Kafka Connect REST API.
- Added support security by default for Kafka Connect.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
b76f3038	2018-05-25	KAFKA-102 HDFS Connector rewrites files in MapR filesystem after re-balancing
ce7c368d	2018-06-08	KAFKA-120 Build connect-hdfs with Hive v2.3

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect HDFS 4.0.0-1808 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

last-updated: Apr 11, 2022

Version	4.0.0
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	4.0.0-mapr-1808
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release
Multiple issues were fixed.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
caaa7386	2018-03-26	KAFKA-88 Remove assignment before rebalancing
eb03bd0	2018-04-19	KAFKA-102 HDFS Connector rewrites files in MapR filesystem after re-balancing

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect HDFS 4.0.0-1803 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	4.0.0
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	4.0.0-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release
Multiple issues were fixed.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
f46a3a2	Feb 9, 2018	KAFKA-72 NullPointerException after creating the HDFS connector
0afc78f	Feb 15, 2018	KAFKA-80 Error when create HDFS connector with ParquetFormat
6c04272	Feb 16, 2018	KAFKA-82 Remove jar that contains libMapRClient

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect HDFS 2.0.1-1710 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	2.0.1
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	2.0.1-mapr-1710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Kafka Connect HDFS 2.0.1-1710 introduces the following enhancements or MapR platform-specific behavior changes:

- You can use configure.sh to configure this component.

Fixes

Changes have been made to the mapr-kafka package and to the packaging process

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect JDBC 10.0.1.100 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

Version	10.0.1.100
Release Date	January 2022
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/kafka-connect-jdbc
GitHub Release Tag	10.0.1.100-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

- CVE fixes

Fixes

This release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
aac690b	2021-11-22	MAPR-KAFKA-806 Gson CVE for kafka components
c573a05	2021-11-22	MAPR-KAFKA-806 PostgreSQL CVE for kafka components
68b2963	2021-11-22	MAPR-KAFKA-806 Commons compress CVE for kafka components

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect JDBC 10.0.1.0 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop.

Version	10.0.1.0
Release Date	October 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/kafka-connect-jdbc
GitHub Release Tag	10.0.1.0-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

- None

Fixes

This release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
1b52890	2021-09-05	MAPR-KAFKA-758 Update the maven artifact version strings to eep
d0b64f5	2021-08-26	MAPR-KAFKA-751 Protobuf and Json Schema connect converters were added.
e2e9b83	2021-08-18	MAPR-KAFKA-745 Update Jackson dependency

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect JDBC 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	5.1.2.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-connect-jdbc
GitHub Release Tag	5.1.2.0-mapr-700
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Hive connector supports Avro format.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
ff47526	2019-02-28	MAPR-KAFKA-285 Kafka-connect-jdbc uses kafka: 2.1.1.0-mapr
4794ac5	2020-05-05	MAPR-KAFKA-582 Update ZK to v3.5.6

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
ae5f25e	2020-06-04	MAPR-KAFKA-603 Update jacoco and spotbugs plugin

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect JDBC 4.1.0 - 2201 (EEP 6.3.6) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	4.1.0
Release Date	January 2022
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-connect-jdbc
GitHub Release Tag	4.1.0-mapr-2201
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Connect JDBC 4.1.0 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- CVE fixes

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
9077d4a	2022-01-25	MAPR-KAFKA-839 Updated log4j version to 1.3.1-mapr
8a3fc0d	2021-12-21	MAPR-KAFKA-826 Updated log4j version

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect JDBC 4.1.0 - 2101 (EEP 6.3.2) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	4.1.0
Release Date	January 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-connect-jdbc
GitHub Release Tag	4.1.0-mapr-2101
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Connect JDBC 4.1.0 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- The Hive connector supports Avro format.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
a0289cde	2021-01-20	MAPR-KAFKA-665 Kafka Connect JDBC artifact version is incorrect
978012d2	2019-12-02	MAPR-KAFKA-507 support of java.sql.BIT

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect JDBC 4.1.0-1808 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.1.0
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	4.1.0-mapr-1808
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Added support of SSL encryption, impersonation, and PAM authentication for Kafka Connect REST API.
- Added support security by default for Kafka Connect.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
7274afd3	2018-06-08	KAFKA-67 Add workaround for isSigned for Hive

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect JDBC 4.0.0-1803 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	4.0.0
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	4.0.0-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

The JDBC Sink Connector was added.

Fixes

Changes have been made to the mapr-kafka package and to the packaging process.

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
7523a17	Feb 9, 2018	KAFKA-67 JDBC-source connector could not produce data from Hive table into the topic.

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect JDBC 2.0.1-1710 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Confluent home Kafka Connect JDBC page

Version	2.0.1-1710
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	2.0.1-mapr-1710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Kafka Connect JDBC 2.0.1-1710 introduces the following enhancements or MapR platform-specific behavior changes:

- You can use configure.sh to configure this component.

Fixes

Changes have been made to the mapr-kafka package and to the packaging process

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect 10.0.0.100 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. See Apache Kafka 2.6.1 release notesor the Apache Kafka Streams homepagefor more information.

Version	10.0.0.100
Release Date	January 2022

HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka Connect 10.0.0.100-2201 introduces the following enhancements or HPE platform-specific behavior changes:

- Federal Information Processing Standards (FIPS) support (valid for core 7.0.0 and later). .

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
5ac2089	2022-02-01	MAPR-KAFKA-842 Change default value for "listeners" property for kafka-connect
7c5c9cc	2021-12-22	MAPR-KAFKA-774 Kafka-connect service does not restart after running configure.sh script
078d514	2021-11-16	MAPR-KAFKA-794 Kafka Connect doesn't use field which is not present in core 6.2
53e77e1	2021-11-12	MAPR-KAFKA-785 Fix Kafka Connect work with enabled FIPS
e76de0a	2021-10-25	MAPR-KAFKA-785 Kafka Connect works with enabled FIPS

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Connect 5.1.2.0 - 2009 (EEP 7.0.0) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.2.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Additional security features.

Fixes

Changes have been made to the mapr-kafka package and to the packaging process.

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
d2b01a7	2019-05-22	MAPR-KAFKA-338 Enable authentication and impersonation by default only for secure clusters
72d879a	2019-06-14	MAPR-KAFKA-338 Impersonate Kafka Connect with authenticated user otherwise with current
ba6b3ac	2019-06-14	MAPR-KAFKA-339 Add multi-authentication mechanism for Connect REST API
dbdf61b	2019-10-19	MAPR-CORE-322 Security headers and custom headers for kafka rest
f2433b7	2020-07-09	MAPR-KAFKA-405 Automatic url retrieval for SR
c2d8cb0	2020-08-10	MAPR-KAFKA-617 Exclude kerberos auth authentication type from MultiMechsAuthenticationHandler

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka Connect 4.1.0-1808 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.1.0
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	4.1.0-mapr-1808

Resolved Issues

- None

Kafka Connect 2.0.1-1801 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Kafka Connect 2.0.1-1801.

These notes are for the Kafka Connect for MapR Streams component included in the MapR Converged Data Platform.

Important: Use the latest patch for core MapR v6.0.0.

Version	2.0.1
Release Date	February 2018
MapR Version Compatibility	See EEP Components and OS Support on page 5536
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

This release of Kafka Connect includes fixes to Kafka distributed mode for MapR Streams.

Fixes

This MapR release includes the following new fixes since the latest Kafka Connect 2.0.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
0a88073	2017/11/28	MAPR-30006 Replace seektoend and set poll timeout
cdedaee	2017/08/07	MAPR-30290 Set TTL of metadata stream to infinity

Known Issues and Limitations

Distributed mode is only supported on MapR 5.2.1 and above.

Kafka Connect 2.0.1-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Kafka Connect 2.0.1-1707.

These notes are for the Kafka Connect for MapR Streams component included in the MapR Converged Data Platform.

Version	2.0.1
Release Date	August 2017
MapR Version Compatibility	See EEP Components and OS Support on page 5536
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

The Kafka Connect for MapR Streams service can be started, restarted, and stopped via the maprcli nodes services command.

Fixes

There are no fix updates in this release.

Known Issues and Limitations

Distributed mode is only supported on MapR 5.2.1 and above.

Kafka Connect 2.0.1-1703 (EEP 3.x) Release Notes

Release notes for the Kafka Connect for MapR Event Store For Apache Kafka component included in the MapR Converged Data Platform.

Version	2.0.1
Release Date	April 2017
MapR Version Compatibility	See EEP Components and OS Support on page 5536
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

This release of Kafka Connect includes updates to the HDFS Connector. The JDBC Connector was not updated.

Fixes

MapR Fix	Description
MAPR-26184	Removed close of topic partition writers in DataWriter close.

last-updated: Apr 11, 2022

MapR Fix	Description
MAPR-26606	Kafka Connect HDFS is now built with Hive 2.1.1.

Known Issues and Limitations

Distributed mode is only supported on MapR 5.2.1 and above.

Kafka Connect 2.0.1-1703 (EEP 2.x) Release Notes

Release notes for the Kafka Connect for MapR Event Store For Apache Kafka component included in the MapR Converged Data Platform.

Version	2.0.1
Release Date	April 2017
MapR Version Compatibility	See EEP Components and OS Support on page 5536
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

This release of Kafka Connect includes updates to the HDFS Connector. The JDBC Connector was not updated.

Fixes

MapR Fix	Description
MAPR-26184	Removed close of topic partition writers in DataWriter close.

Known Issues and Limitations

Distributed mode is only supported on MapR 5.2.1 and above.

Kafka Connect 2.0.1-1611 Release Notes

Release notes for the Kafka Connect for MapR Event Store For Apache Kafka component included in the MapR Converged Data Platform.

Version	2.0.1
Release Date	December 9, 2016
MapR Version Compatibility	See Ecosystem Support Matrix
Source on GitHub	n/a
GitHub Release Tag	2.0.1-mapr-1611
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in the Release

This release is the first MapR release of the Kafka Connect for MapR Event Store For Apache Kafka. The `kafka-connect-jdbc` package is a Kafka Connector used to import data from any relational database with a JDBC driver into MapR Event Store For Apache Kafka or Apache Kafka topics. The `kafka-connect-hdfs` package is a Kafka Connector for copying data between MapR Event Store For Apache Kafka or Apache Kafka and MapRFS. See the Apache Kafka Connect for more information.

Known Issues and Limitations

The following are either known issues or limitations.

- Ensure that the latest MapR patch version is installed before using the JDBC and HDFS connectors. The latest MapR patch contains a fix associated with Kafka Connect for MapR streams functionality.
- Distributed mode is not available in MapR version 5.2.0.

Kafka REST Release Notes

The release notes for the Kafka REST component included in the MapR Converged Data Platform contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Kafka REST Proxy 6.0.0.100 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. You may also be interested in the Apache Kafka REST Proxy 6.0.0.0 changelog or the Apache Kafka REST Proxy project homepage.

Version	6.0.0.100
Release Date	January 2022
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	6.0.0.100-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka REST Proxy 6.0.0.100 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- Federal Information Processing Standards (FIPS) support (valid for core 7.0.0 and later). .
- CVE fixes.

Fixes

This release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
c8b56ab	2021-11-26	MAPR-KAFKA-809 Gson CVE for kafka components
8f413c0	2021-11-11	MAPR-KAFKA-796 Update dependencies versions
b4d85bc	2021-11-04	MAPR-KAFKA-787 Change error message for not supporting API

8d06f39	2021-10-27	MAPR-KAFKA-784 Add security java options if FIPS mode is enabled

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka REST Proxy 6.0.0.0 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. You may also be interested in the Apache Kafka REST Proxy 6.0.0.0 changelog or the Apache Kafka REST Proxy project homepage.

Version	6.0.0.0
Release Date	October 2021
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/kafka-rest

Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka REST Proxy 6.0.0.0 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
f4361740	2021-09-27	MAPR-KAFKA-729 Replace sudo command with maprexecute in Kafka REST Server
98f4487f	2021-09-21	MAPR-KAFKA-753 Incorrect pid in the /opt/mapr/pid/kafka-rest.pid after fresh install kafka-rest
245062f3	2021-09-14	MAPR-KAFKA-756 Consumer doesn't read data from topic
99280f05	2021-09-08	MAPR-KAFKA-757 mapr-security-web jars should be taken from the cluster

851ea5d3	2021-09-05	MAPR-KAFKA-758 Update the maven artifact version strings to eep
e9a8c7ed	2021-08-18	MAPR-KAFKA-745 Update Jackson dependency version
4e56e605	2021-08-13	MAPR-KAFKA-689 Service verifier was added to Kafka Rest
9d91ef73	2021-08-09	MAPR-KAFKA-725 Update hadoop, hive, hbase dependencies for kafka
f62d66e3	2021-05-27	MAPR-KAFKA-714 mapr-streams dependency was replaced with kafka-eventstreams
89b52ebb	2021-05-25	MAPR-KAFKA-715 Hadoop dependency was updated to 2.7.5.100-mapr-720-SNAPSHOT
f9b4747a	2021-03-02	MAPR-KAFKA-677 Responses for API v3 negative cases are produced correctly
de7d0181	2021-02-26	MAPR-KAFKA-680 Jetty version differ from the default ones was excluded from project.
2dcc3cc8	2021-02-24	MAPR-KAFKA-679 Hadoop version was changed to 2.7.4.0-mapr-710
d0fb611e	2021-02-10	MAPR-KAFKA-673 AdminClient instance should be created for certain user

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka REST Proxy 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. You may also be interested in the Apache Kafka REST Proxy 5.1.2 changelog or the Apache Kafka REST Proxy project homepage.

Version	5.1.2.200
Release Date	April 2021
MapR Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	5.1.2.200-mapr-710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka REST Proxy 5.1.2.200 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Kafka Rest works with the Avro format through the Schema Registry.
- Service verifier

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
16ee375f	2021-03-31	MAPR-KAFKA-689 Service verifier was added to Kafka Rest
4dcb0bd7	2021-03-19	MAPR-KAFKA-692 Update Hadoop dependency to 2.7.5.0-mapr-710-SNAPSHOT
fef0187d	2021-03-05	MAPR-KAFKA-683 Topic's existence is checked by the mdObserver specific for the current user.

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka REST Proxy 5.1.2.100 - 2101 (MEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka. You may also be interested in the Apache Kafka REST Proxy 5.1.2 changelog or the Apache Kafka REST Proxy project homepage.

Version	5.1.2.100
Release Date	January 2021
MapR Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	5.1.2.100-mapr-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka REST Proxy 5.1.2.100 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- Kafka Rest works with the Avro format through Schema Registry.

Fixes

This HPE release includes the following fixes on the base release.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
42fe966b	2021-01-18	KAFKA-661 Override version of connect-runtime dependency
7732d93b	2020-11-11	MAPR-KAFKA-640 Multiple thread-leaks if impersonation enabled

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka REST Proxy 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Kafka REST Proxy 5.1.2 changelog or the Apache Kafka REST Proxy project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.2.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	5.1.2.0-mapr-700
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Kafka REST works with the Avro format using Mapr Schema Registry.

Fixes

This release includes bug fixes for configuration scripts. For complete details, refer to the commit log for this project in Github.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
8dd460c	2019-03-12	MAPR-KAFKA-283 MULTIAUTH will be used as a default authentication method

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
7b533f9	2019-03-12	MAPR-KAFKA-285 Kafka Rest uses rest utils 5.1.2.0-mapr and kafka-client 2.1.1.0-mapr
088de14	2019-03-12	MAPR-KAFKA-293 Kafka Rest uses 2.1.1.0-mapr version of Kafka_scala.
6f00a3e	2019-04-17	MAPR-KAFKA-302 Refactoring of impersonation for Kafka Rest 5.1.2
18549f1	2019-04-23	MAPR-KAFKA-313 Avro in Kafka Rest works with default stream
4911ede	2019-04-26	MAPR-KAFKA-316 Kafka Rest uses default Mapr Schema Registry port's settings.
9ad58ae	2019-05-11	MAPR-KAFKA-331 Kafka Rest uses 6.2.0 version of mapr and 2.7.4 version of hadoop.
c41d9d5	2019-06-18	MAPR-KAFKA-354 Kafka REST was integrated with secure Schema Registry
581957	2019-06-19	MAPR-KAFKA-382: "authentication.method" property was replaced in Kafka Rest config with "authentication.enable"
39f7d50	2019-07-08	MAPR-KAFKA-404 Automatic Setup of Schema Registry url for Kafka Rest
03a2df8	2019-08-09	MAPR-KAFKA-188 Enable JMX authentication by default
29bea42	2019-10-18	MAPR-CORE-329 Security headers and custom headers for Kafka Rest
d83d02e	2020-04-13	MAPR-KAFKA-568 update log4j artifact for kafka-rest 5.1.2
3d2ef4f	2020-05-05	MAPR-KAFKA-582 Update ZK to v3.5.6
f852ffd	2020-06-10	MAPR-KAFKA-604 Update spotbugs plugin to build kafka rest with java 11
df090d1 3f1bff8 cef0836	2020-06-26 2020-07-02 2020-08-13	MAPR-KAFKA-607 Schema Registry Discovery options was added
0cc7c69 4d64bab 3a8ab95 0f311ab	2020-08-25 2020-08-25 2020-08-28 2020-08-28	MAPR-KAFKA-556 JMX long term support was added
4cf21e7 1a5f1eb 4bc803d	2020-08-25 2020-08-25 2020-08-26	MAPR-KAFKA-387 Partition exists checks for /offsets API was added

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka REST 4.1.0 - 2201 (EEP 6.3.6) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop. You may also be interested in the Apache Kafka REST Proxy 4.1.0 changelog or the Apache Kafka REST Proxy project homepage.

Version	4.1.0
Release Date	January 2022
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	4.1.0-mapr-2201
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka REST 4.1.0 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- CVE fixes

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4bc6188	2021-12-30	MAPR-KAFKA-833 Updated log4jv2 version
7293406	2021-12-15	MAPR-KAFKA-825 CVE-2021-44228 - Log4j vulnerability in Kafka REST

For complete details, refer to the commit log for this project in Github.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka REST 4.1.0 - 2101 (MEP 6.3.2) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Hadoop. You may also be interested in the Apache Kafka REST Proxy 4.1.0 changelog or the Apache Kafka REST Proxy project homepage.

last-updated: Apr 11, 2022

Version	4.1.0
Release Date	January 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	4.1.0-mapr-2101
Maven Artifacts	https://repository.mapr.com/maven/

Fixes

This release includes bug fixes for configuration scripts. For complete details, refer to the commit log for this project in Github.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
7630302	2019-11-22	KAFKA-504 – Parsing of configure.sh options is fixed. --EC | -EC option is processed correctly

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka REST 4.1.0-1808 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.1.0
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	4.1.0-mapr-1808
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Remove certificate generation, kafka should use certs from the {MAPR_HOME}/conf/ directory.
- Remove key/keystore passwords and keystore values from config file.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
7b8f23883651b9a6c341a1a4c8f120cc322013d8	July 11, 2018	KAFKA-138 Kafka should not generate certificates and keys for ssl to "${KAFKA_HOME}/conf" folder
7b8f23883651b9a6c341a1a4c8f120cc322013d8	July 11, 2018	KAFKA-143 SSL properties should be taken directly from ssl-client.xml

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka REST 4.0.0-1803 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	4.0.0
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	4.0.0-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Added support for Kafka API v2

- Impersonation
- PAM authentication
- You can use configure.sh to configure this component

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
1eca085	Feb 5, 2018	KAFKA-60 Does not consume messages from one partition of the topic
08519b3	Feb 5, 2018	KAFKA-68 Added impersonation for requests to APIv2
be88ae4	Feb 5, 2018	KAFKA-85 Fixed delay 5 seconds for "/topics"; request

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None

Resolved Issues

- None

Kafka REST 2.0.1-1803 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	2.0.1
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	2.0.1-mapr-1710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

N/A

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
53ce7ea	March 19, 2018	KAFKA-96 Could not produce message to topic in hybrid mode.
bb917b2	March 17, 2018	KAFKA-75 Kafka-REST gateway always eventually runs out of memory.

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

Kafka REST 2.0.1-1710 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	2.0.1
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	2.0.1-mapr-1710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Kafka REST 2.0.1-1710 introduces the following enhancements or MapR platform-specific behavior changes:

- Impersonation
- PAM authentication
- You can use configure.sh to configure this component

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
<commit_tag>	<yyyy-mm-dd>	<description_of_fix>
5d6d2cd	Sep 27, 2017	KAFKA-26 Enable impersonation for Kafka REST by default
735ca38	Sep 21, 2017	KAFKA-23 Configure.sh should remove not_configured_yet
c45d729	Sep 15, 2017	KAFKA-5 Adds impersonation to Kafka REST
d7a960b	Sep 6, 2017	KAFKA-1 Removes restart kafka-rest from configure.sh
aad565d	Aug 30, 2017	KAFKA-1 Add configure.sh script
8959902	Aug 21, 2017	MAPR-28814 Kafka-rest doesn't work in hybrid mode on MapR sasl

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
4fd710d	Aug 14, 2017	MAPR-28771 Fixed Kafka REST java.lang.NoClassDefFoundError: com/mapr/fs/MapRFileSystem on 6.0 core

For complete details, refer to the commit log for this project in GitHub.

Kafka REST 2.0.1-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Kafka REST Proxy 2.0.1-1707.

Release notes for the Kafka REST Proxy for MapR Streams component included in the MapR Converged Data Platform.

These notes relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Kafka REST Proxy info.

Version	2.0.1
Release Date	August 2017
MapR Version Compatibility	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	2.0.1-mapr-1707
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in this Release

You can configure excluded protocols and ciphers with the following added properties:

- ssl.disabled.protocols.
- ssl.cipher.suites.exclude

Fixes

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
69eaa0c	Jun 20, 2017	MAPR-27995 - Service restart via 'maprcli' does not work on Suse 12.1
c05287b	Jun 20, 2017	KAFKA-2 Change Kafka REST default ssl.protocol to TLSv1.2

Known Issues and Limitations

- Impersonation is not supported for Kafka REST Proxy for MapR Streams. Kafka REST is run as **mapr user** which means that you must explicitly give **mapr user** permissions to consume and produce from/to streams. For example, the `consumeperm` parameter must be set to **mapr user** to be able to consume and the `produceperm` parameter must be set to **mapr user** to be able to produce.

Kafka REST 2.0.1-1703 Release Notes

Release notes for the Kafka REST Proxy for MapR Event Store For Apache Kafka component included in the MapR Converged Data Platform.

Version	2.0.1
Release Date	April 2017
MapR Version Compatibility	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/kafka-rest
GitHub Release Tag	2.0.1-mapr-1703
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in this Release

This release of includes the following performance-related behavior changes:

- By default, `streams.buffer.max.time.ms` is now 0. Previously, it was 3000.
- By default, `consumer.request.timeout.ms` is now 1. Previously, it was 1000.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
ec4daf1	2017-01-16	MAPR-25552: Updated default configuration to improve performance.
12d47e5	2016-12-01	MAPR-25319: Removed the check for topic existence with KafkaConsumer.listTopics() when producing to topic or partition
96a74a4	2016-12-01	MAPR-24904 Adjusted Producer/ Consumer performance tools for streams topics

Known Issues and Limitations

- Impersonation is not supported for Kafka REST Proxy for MapR Event Store For Apache Kafka. Kafka REST is run as **mapr user** which means that you must explicitly give **mapr user** permissions to consume and produce from/to streams. For example, the `consumeperm` parameter must be set to **mapr user** to be able to consume and the `produceperm` parameter must be set to **mapr user** to be able to produce.

Kafka REST 2.0.1-1611 Release Notes

Release notes for the Kafka REST Proxy for MapR Event Store For Apache Kafka component included in the MapR Converged Data Platform.

Version	2.0.1
Release Date	December 9, 2016
MapR Version Compatibility	See Ecosystem Support Matrix
Source on GitHub	n/a
GitHub Release Tag	2.0.1-mapr-1611

Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in the Release

This release is the first MapR release of the Kafka REST Proxy for MapR Event Store For Apache Kafka.

Known Issues and Limitations

The following are either known issues or limitations.

- Impersonation is not supported for Kafka REST Proxy for MapR Event Store For Apache Kafka. Kafka REST is run as **mapr user** which means that you must explicitly give **mapr user** permissions to consume and produce from/to streams. For example, the `consumeperm` parameter must be set to **mapr user** to be able to consume and the `produceperm` parameter must be set to **mapr user** to be able to produce.

Kafka Schema Registry Release Notes

This feature is presented as a developer preview. Developer previews are not tested for production environments, and should be used with caution.

The release notes for the Kafka Schema Registry component included in the MapR Converged Data Platform contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Kafka Schema Registry 6.0.0.100 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	6.0.0.100
Release Date	January 2201
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/schema-registry
GitHub Release Tag	6.0.0.100-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka Schema Registry 6.0.0.100 - 2201 introduces the following enhancements or HPE platform-specific behavior changes:

- Federal Information Processing Standards (FIPS) support (valid for core 7.0.0 and later). .
- CVE fixes.

Fixes

This HPE release includes the following fixes on the base release:

last-updated: Apr 11, 2022

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
5e9ecf0	2021-11-30	MAPR-KAFKA-810 Gson CVE for kafka components
1a10948	2021-11-30	MAPR-KAFKA-810 Commons compress CVE for kafka components
51edd36	2021-11-17	MAPR-KAFKA-802 Schema Registry starts on the cluster with FIPS disabled
19eca68	2021-11-11	MAPR-KAFKA-796 Update dependencies versions
0639c9b	2021-11-04	MAPR-KAFKA-788 Removed old Kafka licenses and notices
70314bd	2021-10-27	MAPR-KAFKA-784 Add security java options if FIPS mode is enabled

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Schema Registry 6.0.0.0 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	6.0.0.0
Release Date	October 2021
HPE Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/schema-registry
GitHub Release Tag	6.0.0.0-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

Kafka Schema Registry 6.0.0.0 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
90a62fe2c	2021-09-09	MAPR-KAFKA-757 mapr-security-web jar should be taken from the cluster
895247849	2021-09-05	MAPR-KAFKA-758 Update the maven artifact version strings to eep

3ae046f00	2021-08-25	MAPR-KAFKA-751 Protobuf and Json Schema jars is present in Schema Registry package as Avro jars.
6d241d46d	2021-08-19	MAPR-KAFKA-741 Make verify_service executable
20e5affeb	2021-08-18	MAPR-KAFKA-745 Update Jackson dependencies
28e444832	2021-08-03	MAPR-KAFKA-717 kafka-eventstreams.jar was added to classpath
bbed535c7	2021-05-29	MAPR-KAFKA-715 Hadoop jars should be taken from cluster
189220edd	2021-05-27	MAPR-KAFKA-714 mapr-streams dependency was replaced with kafka-eventstreams
e995cab97	2021-05-25	MAPR-KAFKA-715 Hadoop dependency was updated to 2.7.5.100-mapr-720-SNAPSHOT
0cdde9a77	2021-02-24	MAPR-KAFKA-679 Hadoop version was changed to 2.7.4.0-mapr-710
869273aa6	2021-02-03	MAPR-KAFKA-671 Kafka version was changed from 2.6.0 to 2.6.1
94c2442c6	2021-01-25	MAPR-KAFKA-667 The usage of option BOOTSTRAP_SERVERS was removed.

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Schema Registry 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	5.1.2.200
Release Date	April 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/schema-registry
GitHub Release Tag	5.1.2.200-mapr-710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Schema Registry 5.1.2.200 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Service verifier

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
e6351ffcd	2021-04-02	MAPR-KAFKA-691 Service verifier was added to Schema Registry (data is pasted in correct log file)
5cd141cef	2021-04-01	MAPR-KAFKA-697 Jersey 1.19 was excluded from the project
e8c9940f6	2021-03-23	MAPR-KAFKA-695 Kafka unit tests fail with UnknownHostException
9842a8471	2021-03-22	MAPR-KAFKA-694 Build fails because of bug MPLUGIN-336
bd9dd9aaf	2021-03-22	MAPR-KAFKA-692 Update Hadoop dependency to 2.7.5.0-mapr-710-SNAPSHOT

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Schema Registry 5.1.2.100 - 2101 (MEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Kafka.

Version	5.1.2.100
Release Date	January 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/schema-registry
GitHub Release Tag	5.1.2.100-mapr-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (MEPs).

New in This Release

Kafka Schema Registry 5.1.2.100 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
e5dd2e9f	2021-01-08	KAFKA-661 Bump jetty to v9.4.35

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Schema Registry 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes

The following notes relate specifically to the Kafka Schema Registry component included in the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.2.0
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/schema-registry
GitHub Release Tag	5.1.2.0-mapr-700
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/labs/mapr-schema-registry and select your EEP and OS to view the list of package names

New in This Release

- The MapR Schema Registry is included in MEP repositories beginning with MEP-7.0.0.
- Additional security features.

For more information, see Kafka Schema Registry.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
0a91336	2019-02-28	MAPR-KAFKA-285 Schema Registry uses kafka: 2.1.1.0-mapr and rest utils 5.1.2.0-mapr
5384e6c	2019-03-16	MAPR-KAFKA-272 Enable security in SR for secure clusters
f6bfe4c	2019-03-17	MAPR-KAFKA-296 MULTIAUTH authentication is enabled by default
4cd9935	2019-03-18	MAPR-KAFKA-206: Create Authorization filter for Schema Registry
8b4f207	2019-04-16	MAPR-KAFKA-247 Mapr Sasl For schema registry
aff241b	2019-04-25	MAPR-KAFKA-314 Authorization filter for cookies auth
5683f85	2019-04-25	MAPR-KAFKA-309 Cookie authentication for Schema Registry

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
0e66c3f	2019-05-11	MAPR-KAFKA-331 Mapr streams version is 6.2.0-mapr.
e9f1b08	2019-05-23	MAPR-KAFKA-343 Log compaction is enabled for Schema Registry kafka store internal stream
f02e245	2019-06-11	MAPR-KAFKA-377: Add separate configuration property to enable or disable authorization property
7074c09	2019-06-17	MAPR-KAFKA-363 schema.registry.service.id property is added.
a0291bd	2019-06-19	MAPR-KAFKA-382: Replace "authentication.method" property in ksql config with "authentication.enable"
6d0a12d	2019-06-24	MAPR-KAFKA-371 Utils to read SR Urls on client side
7762fc2	2019-10-15	MAPR-CORE-328 Security and custom headers for Schema Registry
7.56E+08	2020-04-06	MAPR-KAFKA-564 Build schema registry with java 11
95e12ac	2020-05-05	MAPR-KAFKA-582 Update ZK to v3.5.6

Known Issues and Limitations

- None.

Resolved Issues

- None.

Kafka Schema Registry 4.1.1-1901 Release Notes

The following notes relate specifically to the Kafka Schema Registry component included in the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.1.1
Release Date	February 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	n/a
GitHub Release Tag	4.1.1-mapr-1901
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/labs/mapr-schema-registry and select your EEP and OS to view the list of package names

New in This Release

- This release is the first MapR release of Kafka Schema Registry for MapR Event Store For Apache Kafka.
- This feature is presented as a developer preview. Developer previews are not tested for production environments, and should be used with caution.
- Because it is a developer preview feature, the Kafka Schema Registry is not provided in the MEP 6.1 repository. You must download the packages from https://package.mapr.hpe.com/labs/mapr-schema-registry. Using the MapR Installer to install the Kafka Schema Registry is not currently supported.
- For more information, see Kafka Schema Registry.

Fixes

N/A

Known Issues and Limitations

- None.

Resolved Issues

- None.

MapR Monitoring Release Notes

The release notes for MapR Monitoring components included in the MapR Converged Data Platform contains notes specific to MapR only.

Monitoring Components - EEP 8.1.0 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 8.1.0 release contains the following monitoring-component versions: • Collectd 5.12.0.310 • Fluentd 1.10.3.300 • Opentsdb 2.4.1.300 • Elasticsearch 6.8.8.410 • Grafana 7.5.10.310 • Kibana 6.8.8.400
Release Date	January 2022
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 8.1.0 includes updates to Collectd, Elasticsearch, and Grafana.

  To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.

Fixes

Principal fixes in this release include:

- COLD-218 - nfs3 errors in collectd_daemon.log
- COLD-219 - Need to add configurable filter for jmx to specify process names we want to attach to for jmx collection
- ES-88 - Fix vulnerabilities including CVE-2021-44228

Known Issues and Limitations

Log monitoring is not supported in installations with FIPS-enabled nodes in EEP 8.1.0.

Resolved Issues

None.

Monitoring Components - EEP 8.0.0 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 8.0.0 release contains the following monitoring-component versions: • Collectd 5.12.0.300 • Fluentd 1.10.3.300 • Opentsdb 2.4.1.300 • Elasticsearch 6.8.8.400 • Grafana 7.5.10.300 • Kibana 6.8.8.400
Release Date	October 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 8.0.0 includes updates to all of the monitoring components. In particular, the Collectd, Grafana, and Open TSDB versions changed significantly. Open TSDB now uses a four-digit version. See About the MapR Patch Version on page 5520.

  To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.

last-updated: Apr 11, 2022

- In Grafana 7.5.x, the steps to display sample dashboards are different from the steps used in previous versions of Grafana. For more information, see Sample Dashboards in Grafana on page 1384.

Fixes

Principal fixes in this release include:

- COLD-206: Activate Java logging in collectd
- COLD-213: need to update types.db with new metrics
- KIB-55: configure.sh fails to extract certs when clustername is not all lowercase
- OTSDB-121: CVE-2018-10237,CVE-2020-8908 vulnerabilities in Guava
- OTSDB-130: ot_purgeData.log log rotation fails when selinux is enabled and enforcing

Known Issues and Limitations

None.

Resolved Issues

None.

Monitoring Components - EEP 7.1.1 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 7.1.1 release contains the following monitoring-component versions: • Collectd 5.10.0.0 • Fluentd 1.10.3.200 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.300 • Grafana 7.5.2.200 • Kibana 6.8.8.300
Release Date	October 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 7.1.1 includes updates to all monitoring components.
- In Grafana 7.5.x, the steps to display sample dashboards are different from the steps used in previous versions of Grafana. For more information, see Sample Dashboards in Grafana on page 1384.

Fixes

Principal fixes in this release include:

- COLD-206: Activate Java logging in collectd
- COLD-208: Collectd Log rotation fails when SELinux is enabled
- ES-85: Configure.sh fails to get ip address of interface on SLES
- FLUD-54: Fluentd log rotation fails when SELinux is enabled
- FLUD-59: Configure.sh failed to extract certs when clustername is not all lowercase
- KIB-54: Fix es_mgmt.sh not getting correct return codes - 688 changed format
- KIB-55: Configure.sh fails to extract certs when clustername is not all lowercase
- OTSDB-121: CVE-2018-10237,CVE-2020-8908 vulnerabilities in Guava
- OTSDB-128: Opentsdb.err file is overwritten / not preserved on restart
- OTSDB-130: Ot_purgeData.log log rotation fails when selinux is enabled and enforcing
- SPYG-1146: Centos8.4 Searchguard - SearchGuardSSLNettyHttpServerTransport - Exception during establishing a SSL connection: javax.net.ssl.SSLHandshakeException: Received fatal alert: bad_certificate

Known Issues and Limitations

This release contains the following known issues and limitations:

- **SPYG-1146:** In Elasticsearch 6.8.8, Elasticsearch generates a fatal exception when used with Java 11.0.12 on RHEL/CentOS 8.3 or 8.4. This issue can occur in EEP 7.0.0, 7.0.1, or 7.1.0. The following message can be seen in the monitoring log in the Elasticsearch log directory:

  ```
  Unable to check whether cluster is sane: None of the configured nodes are
  available: [{#transport#-1}{mMuDVg1_TFytqJ-sgcTNjQ}
  {m2-mapreng-vm167242.mip.storage.hpecorp.net}{10.163.167.242:9300}]
  06:17:07.986 [elasticsearch[_client_][transport_worker][T#1]] ERROR
  com.floragunn.searchguard.ssl.http.netty.SearchGuardSSLNettyHttpServerTran
  sport - Exception during establishing a SSL connection:
  javax.net.ssl.SSLHandshakeException: Received fatal alert: bad_certificate
  javax.net.ssl.SSLHandshakeException: Received fatal alert: bad_certificate
      at sun.security.ssl.Alert.createSSLException(Alert.java:131) ~[?:?]
      at sun.security.ssl.Alert.createSSLException(Alert.java:117) ~[?:?]
      at sun.security.ssl.TransportContext.fatal(TransportContext.java:336)
  ```

  Workaround: Use one of the following workarounds:

  - Do not run Elasticsearch with Java 11.0.12. If you see this problem, reinstall 11.0.11 or an earlier Java release.

- If you want to continue running Elasticsearch with Java 11.0.12, use the following `keytool` command to import the certificates. You must provide the truststore password and cluster name:

```
cat /opt/mapr/conf/ca/signing-ca.pem | keytool \
    -import \
    -v \
    -keystore /opt/mapr/conf/ssl_usertruststore \
    -storepass <truststore_password> \
    -noprompt -alias <cluster_name>-root-signing-ca
```

- **ES-85:** In EEP 7.x.x with SLES 15 SP2, the Elasticsearch `configure.sh` module generates an error saying it cannot find a DNS or IP address. The `configure.sh` command succeeds, but Elasticsearch fails to start because it is not configured correctly.

  Workaround: Upgrade to EEP 7.1.1 or later, where this issue is fixed.

Resolved Issues

- None.

Monitoring Components - EEP 7.1.0 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 7.1.0 release contains the following monitoring-component versions: • Collectd 5.10.0.0 • Fluentd 1.10.3.0 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.300 • Grafana 7.5.2.200 • Kibana 6.8.8.300
Release Date	May 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 7.1.0 includes updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. In particular, Grafana was updated from version 6.7.4.0 to version 7.5.2.200. To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.
- In Grafana 7.5.x, the steps to display sample dashboards are different from the steps used in previous versions of Grafana. For more information, see Sample Dashboards in Grafana on page 1384.

Fixes

Principal fixes in this release include:

- COLD-205: RM queue metrics is not seen through Collectd RESTApi Plugin due to commons-codec upgrade
- ES-75: /opt/mapr/elasticsearch/elasticsearch-6.8.8/bin/curator missing
- ES-76: bump curator to 5.8.3 version - official 5.8.2 has a couple of merge issues
- ES-77: incorrect mapping of 4th digit cause upgrade problems from mep6 to mep7
- GRAF-63: CVE-2020-13430,CVE-2020-24303 vulnerabilities in Grafana up to 7.0.0
- OTSDB-117: CVE-2020-25649,CVE-2020-35728 etc. vulnerabilities in Jackson Databind
- OTSDB-119: CVE-2017-5929 logback vulnerability

Known Issues and Limitations

This release contains the following known issues and limitations:

- None.

Resolved Issues

- None.

MapR Monitoring Components - EEP 7.0.1 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 7.0.1 release contains the following monitoring-component versions: • Collectd 5.10.0.0 • Fluentd 1.10.3.0 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.0 • Grafana 6.7.4.0 • Kibana 6.8.8.0
Release Date	January 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 7.0.1 includes updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.

Fixes

Principal fixes in this release include:

- COLD-202: fast-jmx using outdated and insecure version of jackson databind
- GRAF-61: unable to login in grafana on a fresh cluster install with core-6.2 + MEP-7.0
- OTSDB-115: fix zk jar version for build and remove from pkg
- OTSDB-116: bump jackson version to 2.9.10 or newer due to CVEs

Known Issues and Limitations

This release contains the following known issues and limitations:

- **ES-77**: During an upgrade from EEP 6.x to EEP 7.0.0 or EEP 7.0.1, some monitoring components do not get updated because of an error in the fourth digit of the package version. This issue can occur during manual upgrades or upgrades performed using the Installer. The affected components can include any or all of the following:
  - Elasticsearch
  - Fluentd
  - Grafana
  - Kibana

  Workaround: See Reinstalling Monitoring Components After an Upgrade on page 364.

Resolved Issues

- None.

MapR Monitoring Components - EEP 7.0.0 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 7.0.0 release contains the following monitoring-component versions: • Collectd 5.10.0.0 • Fluentd 1.10.3.0 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.0 • Grafana 6.7.4.0 • Kibana 6.8.8.0
Release Date	September 2020
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 7.0.0 includes updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. To compare Monitoring component versions, see MEP Components and OS Support.

Fixes

Principal fixes in this release include:

- **ES-20**: Elastic Search Key management seems unnecessarily complex. For more information, see "Simplified Installation for Log Monitoring" in Installation and Upgrade Notes (MapR 6.1.0) on page 39.
- **COLD-168**: Collectd process leak memory.
- **GRAF-57**: Grafana: SSRF Incorrect access control vulnerability (CVE-2020-13379).

Known Issues and Limitations

This release contains the following known issues and limitations:

- **COLD-162**: Graphs in the MapR Control System do not display metrics for MapR File System operations when hostname aliases are used. **Workaround:** Use fully qualified domain names when you install the Data Fabric through the MapR Installer. Run `hostname -f` to verify that the fully qualified domain name is returned. If the command returns a short hostname, the issue will persist.
- **ES-77**: During an upgrade from EEP 6.x to EEP 7.0.0 or EEP 7.0.1, some monitoring components do not get updated because of an error in the fourth digit of the package version. This issue can occur during manual upgrades or upgrades performed using the Installer. The affected components can include any or all of the following:
  - Elasticsearch
  - Fluentd
  - Grafana
  - Kibana

  Workaround: See Reinstalling Monitoring Components After an Upgrade on page 364.
- **FLUD-51**: In the `fluentd.conf` file, the log file name for Kibana is `kibana.log`. The file name is incorrect; the file name should be `kibana_daemon.log`. As long as the `fluentd.conf` file has the incorrect log-file name, you will not see Kibana log entries in Elasticsearch. **Workaround:** In the `fluentd.conf` file, change `kibana.log` to `kibana_daemon.log`, and restart Fluentd.
- **KIB-45**: The Kibana default index and example dashboard are not loaded at system startup. **Workaround:** Run the following command, and restart Fluentd:

  ```
  chmod +x /opt/mapr/kibana/kibana-6.8.8/bin/es_mgmt.sh
  ```

See Known Issues at Release (MapR 6.1.0) on page 47 and Troubleshoot MapR Monitoring Installation Errors on page 172.

Resolved Issues

- None.

Monitoring Components - EEP 6.3.6 Release Notes

The notes below relate specifically to the MapR Data Platform.

last-updated: Apr 11, 2022

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.3.6 release contains the following monitoring-component versions: • Collectd 5.8.1.210 • Fluentd 1.10.3.110 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.110 • Grafana 7.5.2.110 • Kibana 6.8.8.110
Release Date	January 2022
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- In EEP 6.3.6, minor changes were made to the monitoring component versions. To compare monitoring component versions, see Component Versions for Released EEPs on page 5586.

Fixes

Principal fixes in this release include:

- COLD-218 - nfs3 errors in collectd_daemon.log
- COLD-219 - Need to add configurable filter for jmx to specify process names we want to attach to for jmx collection
- ES-88 - Fix vulnerabilities including CVE-2021-44228

Known Issues and Limitations

This release contains the following known issues and limitations:

MFS-10783

After a manual installation of release 6.1.0 or 6.1.1 on RHEL or CentOS 8.x, Collectd fails to start. Error messages indicate that `libcrypto.so.10` cannot open a shared object file.

Workaround: Install the `compat-openssl10` package using the following command, and restart Collectd:

```
yum install compat-openssl10
```

Alternatively, you can install the `compat-openssl10` package during the course of manual installation before installing the `mapr-*` packages. See Step 3: Install Cluster Service Packages on page 150.

last-updated: Apr 11, 2022

Resolved Issues

- None.

Monitoring Components - EEP 6.3.5 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.3.5 release contains the following monitoring-component versions: • Collectd 5.8.1.201 • Fluentd 1.10.3.100 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.100 • Grafana 7.5.2.100 • Kibana 6.8.8.100
Release Date	October 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- In EEP 6.3.5, none of the monitoring component versions changed. To compare monitoring component versions, see Component Versions for Released EEPs on page 5586.
- In Grafana 7.5.x, the steps to display sample dashboards are different from the steps used in previous versions of Grafana. For more information, see Sample Dashboards in Grafana on page 1384.

Fixes

Principal fixes in this release include:

- COLD-206: Activate Java logging in collectd
- OTSDB-121: CVE-2018-10237,CVE-2020-8908 vulnerabilities in Guava
- OTSDB-130: ot_purgeData.log log rotation fails when selinux is enabled and enforcing

Known Issues and Limitations

This release contains the following known issues and limitations:

- None.

Resolved Issues

- None.

MapR Monitoring Components - EEP 6.3.4 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.3.4 release contains the following monitoring-component versions: • Collectd 5.8.1.201 • Fluentd 1.10.3.100 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.100 • Grafana 7.5.2.100 • Kibana 6.8.8.100
Release Date	May 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 6.3.4 includes updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. In particular, Grafana was updated from version 6.7.4.100 to version 7.5.2.100. To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.
- In Grafana 7.5.x, the steps to display sample dashboards are different from the steps used in previous versions of Grafana. For more information, see Sample Dashboards in Grafana on page 1384.

Fixes

Principal fixes in this release include:

- COLD-205: RM queue metrics is not seen through Collectd RESTApi Plugin due to commons-codec upgrade
- ES-75: /opt/mapr/elasticsearch/elasticsearch-6.8.8/bin/curator missing
- ES-76: bump curator to 5.8.3 version - official 5.8.2 has a couple of merge issues
- ES-77: incorrect mapping of 4th digit cause upgrade problems from mep6 to mep7
- GRAF-63: CVE-2020-13430,CVE-2020-24303 vulnerabilities in Grafana up to 7.0.0
- OTSDB-117: CVE-2020-25649,CVE-2020-35728 etc. vulnerabilities in Jackson Databind
- OTSDB-119: CVE-2017-5929 logback vulnerability

Known Issues and Limitations

This release contains the following known issues and limitations:

- None.

Resolved Issues

- None.

MapR Monitoring Components - EEP 6.3.3 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.3.3 release contains the following monitoring-component versions: • Collectd 5.8.1.201 • Fluentd 1.10.3.100 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.100 • Grafana 6.7.4.100 • Kibana 6.8.8.100
Release Date	March 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP6.3.3 includes updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. An update can include a change to the package timestamp and does not necessarily include a change to the package version. To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.

Fixes

Principal fixes in this release include:

- COLD-184: collectd-5.10.0.0.202006121008 crash in inflateReset2 -> free @ fs/common/zlib/inflate.c:169
- COLD-205: RM queue metrics is not seen through Collectd RESTApi Plugin due to commons-codec upgrade
- ES-75: /opt/mapr/elasticsearch/elasticsearch-6.8.8/bin/curator missing
- ES-76: bump curator to 5.8.3 version - official 5.8.2 has a couple of merge issues
- GRAF-28: The node dashboard fqdn dropbox do not show all the nodes in cluster

Known Issues and Limitations

This release contains the following known issues and limitations:

- None.

Resolved Issues

- None.

MapR Monitoring Components - EEP 6.3.2 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.3.2 release contains the following monitoring-component versions: • Collectd 5.8.1.201 • Fluentd 1.10.3.100 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.100 • Grafana 6.7.4.100 • Kibana 6.8.8.100
Release Date	January 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP6.3.2 includes updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.

Fixes

Principal fixes in this release include:

- COLD-202: fast-jmx using outdated and insecure version of jackson databind
- GRAF-61: unable to login in grafana on a fresh cluster install with core-6.2 + MEP-7.0
- OTSDB-115: fix zk jar version for build and remove from pkg
- OTSDB-116: bump jackson version to 2.9.10 or newer due to CVEs

Known Issues and Limitations

This release contains the following known issues and limitations:

- None.

Resolved Issues

- None.

MapR Monitoring Components - EEP 6.3.1 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

These release notes contain only Data Fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.3.1 release contains the following monitoring-component versions: • Collectd 5.8.1.200 • Fluentd 1.10.3.0 • Opentsdb 2.4.0 • Elasticsearch 6.8.8.0 • Grafana 6.7.4.0 • Kibana 6.8.8.0
Release Date	September 2020
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

None

Fixes

None.

Known Issues and Limitations

None

See Known Issues at Release (MapR 6.1.0) on page 47 and Troubleshoot MapR Monitoring Installation Errors on page 172.

Resolved Issues

None.

MapR Monitoring Components - EEP 6.3.0 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

last-updated: Apr 11, 2022

Version	The EEP 6.3.0 release contains the following monitoring-component versions: • Collectd 5.8.1.200 • Fluentd 1.4.0.100 • Opentsdb 2.4.0 • Elasticsearch 6.5.3.200 • Grafana 6.0.2.100 • Kibana 6.5.3.200
Release Date	December 2019
MapR Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 6.3.0 includes minor updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. To compare MapR Monitoring component versions, see MEP Components and OS Support.

Fixes

None.

Known Issues and Limitations

This release contains the following known issues and limitations:

- COLD-162: Graphs in the MapR Control System do not display metrics for MapR Filesystem operations when hostname aliases are used. **Workaround:** Use fully qualified domain names when you install MapR through the MapR Installer. Run `hostname -f` to verify that the fully qualified domain name is returned. If the command returns a short hostname, the issue will persist.

See Known Issues at Release (MapR 6.1.0) on page 47 and Troubleshoot MapR Monitoring Installation Errors on page 172.

Resolved Issues

- None.

MapR Monitoring Components - EEP 6.2.0 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.2.0 release contains the following monitoring component versions: • Collectd 5.8.1.100 • Fluentd 1.4.0.0 • Opentsdb 2.4.0 • Elasticsearch 6.5.3.100 • Grafana 6.0.2.0 • Kibana 6.5.3.100
Release Date	April 2019
MapR Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 6.2.0 includes minor updates to Collectd, Elasticsearch, and Kibana, and new versions of Fluentd and Grafana. To compare MapR Monitoring component versions, see MEP Components and OS Support.
- MapR Monitoring now displays updated Hive JMX Metrics.
- MapR Monitoring now displays new Spark JMX Metrics.

Fixes

None.

Known Issues and Limitations

See Known Issues at Release (MapR 6.1.0) on page 47 and Troubleshoot MapR Monitoring Installation Errors on page 172.

Resolved Issues

- None.

MapR Monitoring Components - EEP 6.1.0 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.1.0 release contains the following monitoring component versions: • Collectd 5.8.1.0 • Fluentd 1.3.2.0 • Opentsdb 2.4.0 • Elasticsearch 6.5.3.0 • Grafana 5.4.2.0 • Kibana 6.5.3.0
Release Date	February 2019
MapR Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 6.1.0 includes new versions of the following MapR Monitoring components: Collectd, Fluentd, Elasticsearch, and Kibana. To compare MapR Monitoring component versions, see Component Versions for Released EEPs.
- MapR Monitoring now displays the Hive JMX Metrics on page 1341.

Fixes

None.

Known Issues and Limitations

See Known Issues at Release (MapR 6.1.0) on page 47 and Troubleshoot MapR Monitoring Installation Errors on page 172.

Resolved Issues

- None.

MapR Monitoring Components - EEP 6.0.0 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 6.0.0 release contains the following monitoring component versions: • Collectd 5.8.0 • Fluentd 1.1.2 • Opentsdb 2.4.0 • Elasticsearch 6.2.3 • Grafana 4.6.1 • Kibana 6.2.3
Release Date	September 2018
MapR Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

EEP 6.0.0 includes new versions of the following MapR Monitoring components: Collectd, Fluentd, Elasticsearch, and Kibana. To compare MapR Monitoring component versions, see Component Versions for Released EEPs.

If you are upgrading from another release to MapR 6.1, you might need to perform extra steps to convert or preserve the Elasticsearch and Kibana indexes before upgrading. See Pre-Upgrade Steps for MapR Monitoring on page 342.

Fixes

None.

Known Issues and Limitations

See Known Issues at Release (MapR 6.1.0) on page 47 and Troubleshoot MapR Monitoring Installation Errors on page 172.

Resolved Issues

- None.

MapR Monitoring Components - EEP 5.0.7 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 5.0.7 release contains the following monitoring-component versions: • Collectd 5.7.2 • Fluentd 0.14.20 • Opentsdb 2.4.0 • Elasticsearch 5.4.1 • Grafana 7.5.2.0 • Kibana 5.4.1
Release Date	May 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP 5.0.7 includes updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. In particular, Grafana was updated from version 6.7.4.200 to version 7.5.2.0. To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.
- In Grafana 7.5.x, the steps to display sample dashboards are different from the steps used in previous versions of Grafana. For more information, see Sample Dashboards in Grafana on page 1384.

Fixes

Principal fixes in this release include:

- COLD-205: RM queue metrics is not seen through Collectd RESTApi Plugin due to commons-codec upgrade
- ES-75: /opt/mapr/elasticsearch/elasticsearch-6.8.8/bin/curator missing
- ES-76: bump curator to 5.8.3 version - official 5.8.2 has a couple of merge issues
- ES-77: incorrect mapping of 4th digit cause upgrade problems from mep6 to mep7
- GRAF-63: CVE-2020-13430,CVE-2020-24303 vulnerabilities in Grafana up to 7.0.0
- OTSDB-117: CVE-2020-25649,CVE-2020-35728 etc. vulnerabilities in Jackson Databind
- OTSDB-119: CVE-2017-5929 logback vulnerability

Known Issues and Limitations

This release contains the following known issues and limitations:

- None.

Resolved Issues

- None.

MapR Monitoring Components - EEP 5.0.6 Release Notes

The notes below relate specifically to the MapR Data Platform.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	The EEP 5.0.6 release contains the following monitoring-component versions: • Collectd 5.7.2 • Fluentd 0.14.20 • Opentsdb 2.4.0 • Elasticsearch 5.4.1 • Grafana 6.7.4.200 • Kibana 5.4.1
Release Date	January 2021
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

- EEP5.0.6 includes updates to Collectd, Fluentd, Opentsdb, Elasticsearch, Grafana, and Kibana. To compare Monitoring component versions, see Component Versions for Released EEPs on page 5586.

Fixes

Principal fixes in this release include:

- COLD-202: fast-jmx using outdated and insecure version of jackson databind
- GRAF-61: unable to login in grafana on a fresh cluster install with core-6.2 + MEP-7.0
- OTSDB-115: fix zk jar version for build and remove from pkg
- OTSDB-116: bump jackson version to 2.9.10 or newer due to CVEs

Known Issues and Limitations

This release contains the following known issues and limitations:

- None.

Resolved Issues

- None.

MapR Monitoring Components - EEP 5.0.5 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

These release notes contain only Data Fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

last-updated: Apr 11, 2022

Version	The EEP 5.0.5 release contains the following monitoring-component versions: • Collectd 5.7.2 • Fluentd 0.14.20 • Opentsdb 2.4.0 • Elasticsearch 5.4.1 • Grafana 6.7.4.0 • Kibana 5.4.1
Release Date	September 2020
Version Interoperability	Component Versions for Released EEPs
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

None

Fixes

None.

Known Issues and Limitations

None

See Known Issues at Release (MapR 6.1.0) on page 47 and Troubleshoot MapR Monitoring Installation Errors on page 172.

Resolved Issues

None.

MapR Monitoring Components - EEP 5.0.0 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

Version	The EEP 5.0.0 release contains the following monitoring component versions: • Collectd 5.7.2 • Fluentd 0.14.20 • Opentsdb 2.4.0 • Elasticsearch 5.4.1 • Grafana 4.6.1 • Kibana 5.4.1
Release Date	March 2018
MapR Version Interoperability	EEP Components and OS Support on page 5536

Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

MapR introduces enhanced security settings for the following Monitoring components:

- Grafana - For more information, see Logging on to Grafana on page 1382.
- Kibana - For more information, see Logging on to Kibana on page 1396.

Fixes

None.

Known Issues and Limitations

See Known Issues at Release (MapR 6.1.0) on page 47.

Resolved Issues

- None.

MapR Monitoring Components - EEP 4.1.0 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

Version	The EEP 4.1.0 release contains the following monitoring component versions: • Collectd 5.7.2 • Fluentd 0.14.20 • Opentsdb 2.4.0 • Elasticsearch 5.4.1 • Grafana 4.4.2 • Kibana 5.4.1
Release Date	February 2018
MapR Version Interoperability	EEP Components and OS Support on page 5536
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

MapR Monitoring in the EEP 4.1.0 release introduces the following enhancements:

- File permissions changed to ensure compliance with the MapR Security Policy.
- The following rules are added for specifying metric names:
  - Strings are case sensitive: for example, "Sys.Cpu.User" is stored separately from "sys.cpu.user".
  - Spaces are not allowed.
  - Only the following characters are allowed: a to z, A to Z, 0 to 9, -, _, ., / or Unicode letters (as per the specification).

- Metric and tags are not limited in length, though you must try to keep the values fairly short.

Fixes

None

Known Issues and Limitations

See Known Issues at Release (MapR 6.1.0) on page 47

Resolved Issues

- **FLUD-17:** Fluent SSL verification enabled for HTTPS requests.
- **FLUD-21:** Administrator passwords removed from the FluentD log files.
- **FLUD-20:** Log rotate is fixed.

MapR Monitoring Components - EEP 4.0 Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

Version	The EEP 4.0.0 release contains the following monitoring component versions: • Collectd 5.7.2 • Fluentd 0.14.20 • Opentsdb 2.4.0 • Elasticsearch 5.4.1 • Grafana 4.4.2 • Kibana 5.4.1
Release Date	November 2017
MapR Version Interoperability	EEP Components and OS Support on page 5536
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

MapR Monitoring in the EEP 4.0.0 release introduces the following enhancements:

- An upgraded component stack.
- A default security feature that secures the MapR cluster and supported ecosystem components, including MapR Monitoring, using MapR-SASL and wire-level encryption, as well as the ability to configure custom security.
- A Spyglass on Streams feature that uses Streams as the default mechanism through which metrics flow from collectd to OpenTSDB.

  Note: Writing to an external OpenTSDB is not supported from release 6.0 onwards.

- MapR Monitoring now provides metrics for the YARN Resource Manager and Node Manager.

Fixes

None

Known Issues and Limitations

See Known Issues at Release (MapR 6.1.0) on page 47

Resolved Issues

- **COLD-4:** By default, collectd reads files from the custom configuration file directory (/opt/mapr/collectd/conf/) on nodes without support for the wordexp function, eliminating the need to include Filter "*.conf" in the collectd.conf configuration file.
- **SPYG-838:** On secure clusters, JMX ports can no longer be accessed without authentication, eliminating the need to setup a password on each Node Manager and Resource Manager node.
- **KIB-1:** A syntax error in export_cert.sh no longer causes an error message when you run configure.sh on a node with Kibana installed in a secure cluster.

MapR Monitoring Components - EEP 3.x.x Release Notes

The notes below relate specifically to the MapR Converged Data Platform.

Version	The EEP 3.0.0 release contains the following monitoring component versions: • Collectd 5.7.1 • Fluentd 0.14.00 • Opentsdb 2.3.0 • Elasticsearch 2.3.3 • Grafana 4.1.2 • Kibana 4.5.4
Release Date	April 2017
MapR Version Interoperability	EEP Components and OS Support on page 5536
Package Names	Package Names for MapR Ecosystem Packs (EEPs) on page 5737

New in This Release

MapR Monitoring - EEP 3.0.0 release introduces the following enhancements:

- New metrics are now available for MapR Event Store For Apache Kafka, disks, and topology.
- You can now configure fluentd to forward logs to syslog servers.
- Metrics are now tagged by default with ClusterName.
- You can store custom collectd configuration files under the /opt/mapr/collectd/conf/ directory. Collectd will include configuration files from this directory at runtime and the files will not be altered during an upgrade.

Fixes

None

last-updated: Apr 11, 2022

Known Issues and Limitations

- **COLD-4: On nodes without support for the wordexp function, collectd does not read files from the custom configuration file directory (/opt/mapr/collectd/conf/).**

  Workaround:

  1. Open the /opt/mapr/collectd/collectd-5.7.1/etc/collectd.conf file.
  2. Add the following lines to the end of the file:

     ```
     <Include "/opt/mapr/collectd/conf/">
      Filter "*.conf"
     </Include>
     ```

  3. Restart the collectd service.

     ```
     maprcli node services -name collectd -nodes <space separated list of
     collectd nodes> -action restart
     ```

- **KIB-1: On secure clusters, a syntax error in export_cert.sh causes in the following error message when you run configure.sh on a node where Kibana is installed:**

  ```
  <TIMESTAMP>: ERROR: Failed to configure ssl for kibana
  ```

  This error appears in both the configure.sh console output and in the log file (/opt/mapr/logs/configure.log).

  Workaround:

  1. Open the /opt/mapr/kibana/kibana-4.5.4/bin/export_cert.sh file.
  2. Locate the following line:

     ```
     CLUSTERNAME=$(cat /opt/mapr/conf/mapr-clusters.conf | awk '{print $1}
     | head -n 1')
     ```

  3. Replace that line with the following line:

     ```
     CLUSTERNAME=$(cat /opt/mapr/conf/mapr-clusters.conf | awk '{print $1}'
     | head -n 1)
     ```

     Notice that the location of the second backtick is different in this line.

  4. Save changes to the file and re-run configure.sh.

- **SPYG-838: On secure clusters, JMX ports can be accessed without authentication.**

  Workaround: Complete the following steps to setup a password on each Node Manager and Resource Manager node:

  1. Under `/opt/mapr/conf`, create the following files:
     - jmxremote.access
     - jmxremote.password

2. Set the owner and group to the `mapr` user:

```
chown mapr:mapr jmxremote.access
chown mapr:mapr jmxremote.password
```

3. Set file permissions to read-only:

```
chmod 400 jmxremote.access
chmod 400 jmxremote.password
```

4. Add the following entries to jmxremote.password:

```
mapr mapr
root mapr
```

5. Add the following entries to jmxremote.access:

```
mapr    readonly
```

6. In the `#Enable JMX for MaprMonitoring` section of the yarn file (/opt/mapr/hadoop/hadoop-2.x.x/bin/yarn), update the `JMX_OPTS` parameter to the following:

```
JMX_OPTS="-Dcom.sun.management.jmxremote -Dcom.sun.management.jmxremote
.authenticate=true
-Dcom.sun.management.jmxremote.password.file=/opt/mapr/conf/
jmxremote.password
-Dcom.sun.management.jmxremote.access.file=/opt/mapr/conf/
jmxremote.access
-Dcom.sun.management.jmxremote.ssl=false
-Dcom.sun.management.jmxremote.port"
```

7. In collectd.conf file (/opt/mapr/collectd/collectd-<version>/etc/collectd.conf), add the following connection parameters:

```
<Connection>
user "mapr"
password "mapr"
ServiceURL "service:jmx:rmi:///jndi/rmi://mfs82.qa.lab:8025/jmxrmi"
#IncludePortInHostname true
Collect "QueueMetrics"
ttl 120
</Connection>
<Connection>
user "mapr"
password "mapr"
ServiceURL "service:jmx:rmi:///jndi/rmi://mfs82.qa.lab:8027/jmxrmi"
#IncludePortInHostname true
Collect "NodeManagerMetrics"
ttl 120
</Connection>
```

8. Restart the Collectd, NodeManager, and Resource Manager services running on this node.

Resolved Issues

- SPYG-757: CollectD no longer fails to retrieve Resource Manager metrics. CollectD determines which is the active Resource Manager before it collects ResourceManager metrics.
- SPYG-806: After you install OpenTSDB, you no longer need to configure the clusterID, fqdnID, or VolumeID in the default dashboards.
- SPYG-811: Grafana no longer expects OpenTSDB versions less than or equal to version 2.1. Dashboards now load as expected.
- SPYG-609: Users no longer need to configure an index pattern before viewing logs in Kibana.

S3 Gateway Release Notes

The S3 Gateway was formerly known as the *Object Store with S3-Compatible API*. The release notes for the S3 Gateway component included in the MapR Data Platform contain notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior releases, see Previous Versions on page 6578.

S3 Gateway 2.2.0.0 - 2110 (EEP 8.0.0) Release Notes

This section provides reference information, including new features, patches, and known issues for the 2.2.0.0 release of the S3 Gateway.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

S3 Gateway Version	2.2.0.0
Release Date	October 2021
Version Interoperability	See EEP Components and OS Support on page 5536.
Maven Artifacts	https://repository.mapr.com/maven/
Source on GitHub	https://github.com/mapr/minio/
GitHub Release Tag	2.2.0.0-eep-800
Package Names	• mapr-objectstore-client-2.2.0.0 • mapr-objectstore-gateway-2.2.0.0 To view the list of package names, navigate to Package Names for MapR Ecosystem Packs (EEPs) on page 5737, and select your EEP and OS.
Documentation	• S3 Gateway on page 3959 • Installing S3 Gateway on page 204 • Configuring S3 Gateway on page 3961

New in This Release

S3 Gateway 2.2.0.0 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- Objectstore with S3-Compatible API is now called S3 Gateway in MapR Data Platform product documentation.
- FS mode added for LDAP integration.
- MinIO updated to RELEASE.2021-04-22T15-44-28Z.
- MC (MinIO Client) updated to RELEASE.2021-04-22T17-40-00Z.

Fixes

This data-fabric release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
5b18bbda	2021-04-29	S3-247: Added LDAP integration support for FS mode
6e50767b	2021-08-25	S3-268: Changed log rotation

For complete details, refer to the commit log for this project in GitHub.

Known Issues

- S3-261: The MinIO password is stored in cleartext.

Resolved Issues

- S3-268: Fixed an issue in logrotate that caused the S3 gateway to stop running in the cluster.

S3 Gateway 2.1.0.0 - 2104 (EEP 7.1.0) Release Notes

This section provides reference information, including new features, patches, and known issues for the 2.1.0.0 release of the S3 Gateway.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

S3 Gateway Version	2.1.0.0
Release Date	April 2021
Version Interoperability	See EEP Components and OS Support on page 5536.
Maven Artifacts	https://repository.mapr.com/maven/
Source on GitHub	https://github.com/mapr/minio/
GitHub Release Tag	2.1.0.0-mapr-710
Package Names	• mapr-objectstore-client-2.1.0.0 • mapr-objectstore-gateway-2.1.0.0 To view the list of package names, navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS.
Documentation	• S3 Gateway on page 3959 • Installing S3 Gateway on page 204 • Configuring S3 Gateway on page 3961

New in This Release

S3 Gateway 2.1.0.0 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Multi-volume support
- Distributed mode support
- Service verifier
- Minio updated to RELEASE.2021-03-17T02-33-02Z
- MC updated to RELEASE.2021-03-23T05-46-11Z

Fixes

This data-fabric release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
69ef372e	2021-03-24	[S3-244] Added new ldap configuration and config migrations
a693008f	2021-03-15	[S3-240] Added service verifier
96c85fbf	2021-03-03	[S3-236] Added support of multi volumes
07af4968	2021-02-26	[S3-167] Added implementation of distributed mode for MapR FS
d6d2bf0d	2021-01-25	[S3-233] Added skip of Streams config during migration
d71a60f9	2021-01-25	[S3-234] Fixed clean start in FS mode

For complete details, refer to the commit log for this project in GitHub.

Known Issues

- None.

Resolved Issues

- S3-234: The objectstore no longer fails to start the first time in FS mode.
- S3-241: The old folder is no longer present after upgrade to new minor version.
- S3-244: CVE-2021-21362 MinIO vulnerability resolved.

S3 Gateway 2.0.0.0 - 2009 (EEP 7.0.0) Release Notes

This section provides reference information, including new features, patches, and known issues for the 2.0.0.0 release of the S3 Gateway.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

S3 Gateway Version	2.0.0.0
Release Date	September 2020
Version Interoperability	See EEP Components and OS Support on page 5536.
Maven Artifacts	https://repository.mapr.com/maven/
Source on GitHub	https://github.com/mapr/minio/

GitHub Release Tag	2.0.0.0-mapr-7.0.0

Documentation	• S3 Gateway on page 3959 • Installing S3 Gateway on page 204 • Configuring S3 Gateway on page 3961

New in This Release

- S3 gateway - support NFS in S3 OUT
- Added support for MinIO LDAP integration
- Added support of virtual-hosted–style URI
- Updated the MinIO code base to RELEASE.2020-04-10T03-34-42Z
- Added the MinIO client (mc) to `mapr-objectstore-client` package

Fixes

This data-fabric release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
5f2661441	2020-07-30	[S3-215] Added possibility to enable virtual-hosted–style URI
6a9b7c4d5	2020-07-29	[S3-208] Added passthrough for LDAP properties for
5eb644086	2020-07-29	[S3-195] Removed hardcode of password for ssl
e08e2eabd	2020-05-15	[S3-164] Added FS mode
f5fd04758	2020-04-17	[S3-163] Added support of UID and GID
6a07e9cb2	2020-04-14	[S3-162] Added integration with MapR Kafka
bdb193cff	2020-04-14	[S3-152] Add metadata for files uploaded directly to file system

For complete details, refer to the commit log for this project in GitHub.

Known Issues

- None.

Resolved Issues

- YARN-113: The MapR File System does not have access to s3a when fs.s3a.endpoint property contains the domain as a string.

S3 Gateway 1.0.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes

This section provides reference information, including new features, patches, and known issues for the 1.0.1 release of the S3 Gateway.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

MapR Object Store with S3-compatible API Version	1.0.1
Release Date	February 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	• mapr-objectstore-client-1.0.1 • mapr-objectstore-gateway-1.0.1 Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

None.

Fixes

This MapR release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
7d6a339	2018-12-17	S3-136: Minio GUI defaults to Open first bucket in multi tenant environment

For complete details, refer to the commit log for this project in GitHub.

Known Issues

- YARN-113: The MapR FileSystem does not have access to `s3a` when `fs.s3a.endpoint` property contains the domain as a string.
- S3-122: Events sent by Kafka notification does not contain bucket owner information, in case S3 Gateway is running in `S3-Only` mode.

Resolved Issues

None.

S3 Gateway 1.0.0-1808 (EEP 6.0.0) Release Notes

This section provides reference information, including new features, patches, and known issues for the 1.0.0 release of the S3 Gateway.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

MapR Object Store with S3-compatible API Version	1.0.0

Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	• mapr-objectstore-client-1.0.0 • mapr-objectstore-gateway-1.0.0 Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

This is the first release of the MapR Object Store with S3-compatible API (MapR Object Store). The MapR Object Store is included in EEP repositories beginning with EEP 6.0.0. The MapR Object Store is a S3 REST API compatible object store that enables you to use the S3 API to store and retrieve S3 objects from your cluster. Support for S3 REST API fundamentally provides an S3 REST API proxy server for MapR Data Platform.

Known Issues

- YARN-113: The MapR FileSystem does not have access to `s3a` when `fs.s3a.endpoint` property contains the domain as a string.
- S3-122: Events sent by Kafka notification does not contain bucket owner information, in case S3 Gateway is running in `S3-Only` mode.

Resolved Issues

None.

Myriad Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for the Myriad component included in the MapR Converged Data Platform contain notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Myriad 0.2-1710 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Release notes for the Myriad 0.2 component included in the MapR Converged Data Platform.

Myriad Version	0.2
Release Date	November 2017
MapR Version Interoperability	Pre-MapR 5.2: Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 MapR 5.2 and later: EEP Components and OS Support

last-updated: Apr 11, 2022

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in this Release

The following features are new in this release:

- Accept GPU reservations
- Secure Myriad REST API
- Install from a tarball.

GPU Reservation

The Myriad 0.2 GPU reservation feature provides the capability to allocate resources from GPU-capable machines to Myriad. It allows Myriad tasks (Resource manager, Node Manager) to run in Mesos containers with GPU resources. This feature is enabled by default; configuration is not needed.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Description
0c2f74f	2017-08-23	Accept GPU reservations.
970e756	2016-10-12	Add https/ssl support for Myriad REST APIs and UI.
b9c1fda	2016-11-04	Address review comments.
c027b95	2016-11-04	Support Authentication in Myriad UI and REST APIs.

Myriad 0.1-1602 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Release notes for the Myriad 0.1 component included in the MapR Converged Data Platform.

Package Names	The following repository is associated with this release: • Mesosphere repository: http://repos.mesosphere.io See Package Names for MapR Ecosystem Packs (EEPs).

Note: MapR does not support Myriad on secure clusters.

New in this Release

This release is the first MapR release of the Myriad component.

Oozie Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for Oozie component included in the MapR Converged Data Platform contains notes specific to MapR only. More details are available on the Apache Oozie project website.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Oozie 5.2.1.0 Release Notes

The following Oozie 5.2.1.0 component release notes are included in the HPE Ezmeral Data Fabric.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Oozie 5.2.1.200 - 2201 (EEP 8.1.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Oozie. You may also be interested in the Apache Oozie 5.2.1 changelog or the Apache Oozie project homepage.

Version	5.2.1.200
Release Date	January 2022
HPE Version Interoperability	See the Interoperability Matrix, Ecosystem Support Matrix, and Oozie Support Matrix
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	5.2.1.200-eep-810
Maven Artifacts	http://repository.mapr.com/maven/.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Oozie 5.2.1.200 - 2201 introduces the following new feature:

- Starting from EEP-8.1.0, Oozie supports FIPS.

last-updated: Apr 11, 2022

- Updated the following:
  - Netty
  - Derby
  - Jython Standalone
  - JUnit
  - Log4j
  - Jetty
  - Gson
  - Graphviz
  - Commons Collections
  - XML Graphics Commons
  - Commons Compress
  - Netty4
  - Spark to version 3.2.0.0
- Starting from EEP-8.1.0, Oozie does not support Pig and Sqoop.

Fixes

This release by MapR includes the following patches on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
0035192a	2022-02-04	OOZ-331: JMX SSL options always false for MEP7+ releases
a6be3d7d	2022-01-26	OOZ-328: Added mapr-security-web jar to Jetty for JMX
5ca08852	2022-01-25	OOZ-327: Updated log4j v1 to the 1.3.1-mapr
15eb8fc6	2022-01-14	OOZ-326: Fixed error during initial configuration
204aa00b	2022-01-04	OOZ-325: Use mapr-shaded-avatica instead of apache avatica
f6f88010	2021-12-30	OOZ-324: Oozie cannot start on Core-6.2 with MEP-8.1.0
6d9a00bd	2021-12-24	OOZ-322 - fix findAndCopyJar function
4d9572da	2021-12-24	OOZ-285 - drop pig and sqoop from examples
7eef76a6	2021-12-22	OOZ-319: Oozie web UI issue manipulation of pop-up window
1a1a366c	2021-12-21	OOZ-321 Upgrade netty to 4.1.72.Final version

86011971	2021-12-20	OOZ-320: Excluded Log4j 1 from Hive, Hive2 and HCat actions
0f8b97d8	2021-12-20	OOZ-316: Added disruptor for HCatalog action for Log4j 2
95324f7a	2021-12-20	OOZ-316: Added disruptor to Hive2 action for compatibility with Log4j 2.16.0
189dbbfd	2021-12-15	OOZ-314 Upgrade org.apache.derby
7f4e9f15	2021-12-15	OOZ-313 Upgrade jython-standalone
8c128735	2021-12-15	OOZ-310: Updated log4j to 1.3.0-mapr version
abd9e759	2021-12-14	OOZ-311 Upgrade junit to version 4.13.1
6a2a4620	2021-12-13	OOZ-310: log4j updated to 1.2.17-mapr due vulnerability CVE-2019-17571
cc1b5370	2021-12-10	OOZ-307: Fixed mapreduce job on fips node
7d19a060	2021-12-01	OOZ-308: Updated jdom to org.apache.servicemix.bundles.jdom v2.0.5_1
ee9bfd9c	2021-11-19	OOZ-299: Removed netty-3 due vulnerability CVE-2019-20444
1de5c5d2	2021-11-19	OOZ-303: httpclient-4.5.7.jar vulnerability CVE-2020-13956
6bbaa988	2021-11-18	OOZ-301: Updated gson-2.8.5.jar due vulnerability WS-2021-0419
de222d4e	2021-11-18	Updated Jetty version to the latest
185c602e	2021-11-18	OOZ-297: Fixed build after graphviz update
8c78e419	2021-11-18	Updated Hive version for MEP 8.1 release
6263f34f	2021-11-18	OOZ-295: commons-collections4-4.0.jar vulnerability: CVE-2015-4852, CVE-2015-6420, CVE-2015-7501
ed65f36d	2021-11-18	OOZ-297: xmlgraphics-commons-2.3.jar vulnerability: CVE-2020-11988
7490e709	2021-11-18	Updated Hadoop version to correct for this release
1590ff1d	2021-11-18	OOZ-298: Updated commons-compress-1.20.jar due vulnerabilities CVE-2021-35515, CVE-2021-35516, CVE-2021-35517, CVE-2021-36090
6a3c2042	2021-11-18	OOZ-293: Updated Netty4 to the latest version
1e88365a	2021-11-18	OOZ-288: Upgrade Spark version to 3.2.0.0

last-updated: Apr 11, 2022

698577c8	2021-11-18	OOZ-291: Updated HBase version
f6bfb54a	2021-11-01	OOZ-285: Drop Pig and sqoop support
260fc242	2021-10-12	OOZ-283: Excluded hive-exec from spark sharelib
5e5bf269	2021-09-22	OOZ-280: Oozie service failed to start, because jmx agent can't get ssl credentials
1b10e878	2021-09-22	OOZ-254 add BouncyCastle support

Oozie 5.2.0.0 Release Notes

The following Oozie 5.2.0.0 component release notes are included in the MapR Converged Data Platform.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Oozie 5.2.0.100 - 2101 (EEP 7.0.1) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Oozie. You may also be interested in the Apache Oozie 5.2.0 changelog or the Apache Oozie project homepage.

Version	5.2.0.100
Release Date	January 2020
HPE Version Interoperability	See theInteroperability Matrix,Ecosystem Support Matrix, andOozie Support Matrix

Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	5.2.0.100-mapr-701
Maven Artifacts	http://repository.mapr.com/maven/.
Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

Oozie 5.2.0.100 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
3dcde87	2020-09-10	OOZ-212 Fix SSLServerConnectorFactory setting key password instead of keystore password
e2c99a8	2020-10-09	OOZ-196 Migrate UI to JQuery 3.5.1
dde8750	2020-10-09	OOZ-214 Detect OOZIE_URL for secured clusters
a9a8c5f	2020-11-10	OOZ-216 Use Jackson BOM
De4482b b139099	2020-12-01	OOZ-218 Update Spark to 2.4.7.0 and Scala to 2.12
cae4631	2020-12-04	OOZ-221: Update XercesImpl to 2.12.0
8ac9eb9	2020-12-09	OOZ-222: Update maprbuildversion*.jar at Oozie_home after configure.sh
cbcd590	2020-12-14	OOZ-219: Remove redundant warning messages in oozie status command
6327a0e	2020-12-17	OOZ-224: Updated jetty to 9.4.35.v20201120
d40fce6	2020-12-22	OOZ-225: Fixed spark-standalone mode for spark action
623164e	2021-01-05	OOZ-227: Fixed spark-hive actions

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 5.2.0.0 - 2009 (EEP 7.0.0) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Oozie 5.2.0.0 for EEP 7.0.0.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

You may also be interested in the Apache Oozie 5.2.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.2.0.0
Release Date	September 2020
MapR Version Compatibility	See EEP Components and OS Support on page 5536 and Oozie Support Matrix on page 5636.
GitHub Source	https://github.com/mapr/oozie
GitHub Release Tag	5.2.0.0-mapr-700
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
1264425	2020-05-26	OOZ-171 Update Fasterxml Jackson to 2.9.10
577ef4e5	2020-04-29	OOZ-173 Update Netty v3 to to 3.10.6, Netty v4 to 4.1.49
1bdd3da	2020-04-29	OOZ-177 Update Quartz to v2.3.2
0aa596c	2020-05-07	OOZ-183 Update Guava to 28.2-jre
d89e5c8	2020-05-19	OOZ-184 Update htrace to 4.2.0
d89e5c8	2020-08-04	OOZ-200 Update JLine
006bde8	2020-04-29	OOZ-159 Remove classifier for Pig dependency as deprecated
afb9706	2020-05-04	OOZ-185 Exclude org.apache.tomcat artifacts from hive-service
b6ee783	2020-08-18	OOZ-188 Secure JMX Support
c25b4081	2020-06-05, 2020-06-16	OOZ-187 Disable TLSv1, SSLv2Hello, TLSv1.1 by default

Commit	Date (YYYY-MM-DD)	Comment
189c4f0	2019-05-30	OOZ-141 Avoid copying commons-configuration since it causes uninstallation warning
1bb20e0c	2020-07-07	OOZ-191 Use oozie_fqdn in base url only. Configure 11000 to 11443 redirection
9a2c512	2020-07-17	OOZ-192: OOZIE-3592 Do not print misleading SecurityException for successful jobs
fb203475	2020-07-24	OOZ-197 Copy mapr-ojai driver to common sharelibs
e215051a	2020-08-12	OOZ-189: Uncomment OOZIE_CLIENT_OPTS at oozie-client-env.sh for secure client node
df79451b	2020-08-07	OOZ-198 Update Avatica to 1.17.0 (to conform Hive version), add Avatica to common libs.
6239016b	2020-08-13	OOZ-205: Oozie spark action fails at yarn-cluster/client mode
245cf50	2020-08-13	OOZ-206: Sqoop action on unsecure cluster fails
e4c23e5	2020-08-26	OOZ-211 Update Disruptor lib to 3.4.2 for Oozie Hive Sharelibs
7f21deb0	2020-08-27	OOZ-207 Update slf4j to 1.7.25

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 5.1.0 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following Oozie 5.1.0 component release notes are included in the MapR Converged Data Platform.

Oozie 5.1.0.800 - 2201 (EEP 6.3.6) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following notes relate specifically to the MapR Technologies Distribution for Apache Oozie. You may also be interested in the Apache Oozie 5.1.0 changelog or the Apache Oozie project homepage.

Version	5.1.0.800
Release Date	January 2022

HPE Version Interoperability	See the Interoperability Matrix,Ecosystem Support Matrix, and Oozie Support Matrix
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	5.1.0.800-mapr-636
Maven Artifacts	http://repository.mapr.com/maven/.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP(MEP) and OS to view the list of package names.

New in This Release

Oozie 5.1.0.800 - 2201 introduces dependency updates, but no significant new features.

Fixes

This release by MapR Technologies includes the following patches on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
86c67575	2022-01-25	OOZ-327: Updated log4j v1 to the 1.3.1-mapr
0b757355	2022-01-18	OOZ-315: Excluded jackson-core-asl and jackson-mapper-asl 1.9.13 version
a1400fe0	2022-01-14	OOZ-326: Fixed error during initial configuration
9e26bd3c	2022-01-04	OOZ-325: Use mapr-shaded-avatica instead of apache avatica
f10dbe6d	2021-12-24	OOZ-322: fix findAndCopyJar function
2f0edd31	2021-12-22	OOZ-319: Oozie web UI issue manipulation of pop-up window
942d8f97	2021-12-21	OOZ-321 Upgrade netty to 4.1.72.Final version
11a72a1b	2021-12-20	OOZ-320: Excluded Log4j 1 from Hive, Hive2 and HCat actions
740c9141	2021-12-17	OOZ-316: Updated disruptor to 3.4.2 version for compatibility with Log4j 2.16.0
ad8b7fcc	2021-12-17	OOZ-318: Exclude avatita from Oozie core
5d916535	2021-12-15	OOZ-314: Upgrade org.apache.derby
64ff4a92	2021-12-15	OOZ-313: Upgrade jython-standalone
6c5c7a93	2021-12-14	OOZ-311: Upgrade junit to version 4.13.1
6859fb84	2021-12-13	OOZ-310: log4j updated to 1.2.17-mapr due vulnerability CVE-2019-17571

ec4ea5ac	2021-12-01	OOZ-308: Updated jdom to org.apache.servicemix.bundles.jdom v2.0.5_1
a724355e	2021-11-23	OOZ-299: Removed netty-3 due vulnerability CVE-2019-20444
20917fec	2021-11-23	OOZ-303: httpclient-4.5.7.jar vulnerability CVE-2020-13956
997f84c5	2021-11-23	OOZ-301: Updated gson-2.8.5.jar due vulnerability WS-2021-0419
50747319	2021-11-23	OOZ-305: Updated jackson-databind to 2.11.1
996fd1e0	2021-11-23	Backport OOZIE-3507 Upgrade to Dozer 6 (asalamon74 via kmarton)
d5d75394	2021-11-23	OOZ-304: jackson-mapper-asl-1.9.13.jar vulnerability: CVE-2019-10172
596ff42f	2021-11-23	OOZ-295: commons-collections4-4.0.jar vulnerability: CVE-2015-4852, CVE-2015-6420, CVE-2015-7501
b11f43c5	2021-11-23	OOZ-300: Updated Jetty to 9.4.44.v20210927
cc9bac3d	2021-11-23	OOZ-297: xmlgraphics-commons-2.3.jar vulnerability: CVE-2020-11988
7af70b42	2021-11-23	OOZ-293: Updated Netty4 to the latest version

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 5.1.0.700 - 2110 (EEP 6.3.5) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following notes relate specifically to the MapR Data Platform Distribution for Apache Oozie. You may also be interested in the Apache Oozie 5.1.0 changelog or the Apache Oozie project homepage.

Version	5.1.0.700
Release Date	October 2021
HPE Version Interoperability	See the Interoperability Matrix,Ecosystem Support Matrix, and Oozie Support Matrix
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	5.1.0.700-mapr-635
Maven Artifacts	http://repository.mapr.com/maven/.

last-updated: Apr 11, 2022

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP(MEP) and OS to view the list of package names.

New in This Release

Oozie 5.1.0.700 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- Updated Jetty to version 9.4.41.v20210516 .

Fixes

This release by MapR includes the following patches on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
51f298db	2021-07-19	OOZ-259 - Update jetty to the 9.4.41.v20210516

Known Issues and Limitations

- You must use `hive-exec-core`(not `hive-exec`) library to apply Sqoop action for Hive import in Parquet and Avro formats.

Resolved Issues

- None.

Oozie 5.1.0.600 - 2104 (EEP 6.3.4) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Oozie. You may also be interested in the Apache Oozie 5.1.0 changelog or the Apache Oozie project homepage.

Version	5.1.0.600
Release Date	April 2021
HPE Version Interoperability	See theInteroperability Matrix,Ecosystem Support Matrix, andOozie Support Matrix
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	5.1.0.600-mapr-634
Maven Artifacts	http://repository.mapr.com/maven/.
Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your MEP and OS to view the list of package names

New in This Release

Oozie 5.1.0.600 - 2104 introduces bug fixes and updates, but no significant new features.

Fixes

This HPE release includes the following fixes on the base release:For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
751e7d6f	2021-04-13	OOZ-244: Jetty updated to 9.4.39.v20210325 due CVE-2021-28165
ef7d0f6c	2021-03-15	OOZ-237: Updated Jetty to 9.4.38.v20210224

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 5.1.0.500 - 2101 (EEP 6.3.2) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Oozie. You may also be interested in the Apache Oozie 5.1.0 changelog or the Apache Oozie project homepage.

Version	5.1.0.500
Release Date	January 2020

- None.

Fixes

This MapR release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
e024242	2020-04-21	OOZ-178 Update Apache Commons Libs

Commit	Date (YYYY-MM-DD)	Comment
6385250	2020-04-29	OOZ-171 Update Fasterxml Jackson to 2.7.9 (Jackson Databind to 2.7.9.7)
91e080d	2020-04-29	OOZ-173 Update Netty v3 to to 3.10.6, Netty v4 to 4.1.49
2aa707f	2020-04-29	OOZ-177 Update Quartz to v2.3.2
8eaf813	2020-04-29	OOZ-159 Remove classifier for Pig dependency as deprecated
026da11	2020-05-19	OOZ-185 Exclude org.apache.tomcat artifacts from hive-service
2f9c303 651050d	2020-05-20 2020-05-23	OOZ-167 add JMX option handling
8a5899f	2020-06-05	OOZ-187 Disable TLSv1, SSLv2Hello, TLSv1.1 by default
cfd1d17	2020-06-22	OOZ-141 Avoid copying commons-configuration since it causes uninstallation warning
737f517	2020-07-08	OOZ-191 Use oozie_fqdn in base url only. Configure 11000 to 11443 redirection
ae7903b	2020-07-17	OOZ-192: OOZIE-3592 Do not print misleading SecurityException for successful jobs
9dca36e	2020-07-24	OOZ-197 Copy mapr-ojai driver to common sharelibs
2fcfd03	2020-08-12	OOZ-189: Uncomment OOZIE_CLIENT_OPTS at oozie-client-env.sh for secure client node

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 5.1.0.300-1912 (EEP 6.3.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 5.1.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.0.300

Release Date	December 2019
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie/
GitHub Release Tag	5.1.0.300-mapr-630
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- Added configurable HTTP security headers. For more information, see Configuring Security Headers for Web Servers for Oozie on page 3993.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
50117f1	2019-09-24	OOZ-147: Update Commons BeanUtils to 1.9.4
f4e3f0a	2019-06-06	OOZ-138: OozieDB only updates when DB version is different
8bcbd31	2019-07-23	OOZ-145: Update Hive to 2.3.5, add 'hive-maprdb-json-handler' dependency
5f30c55	2019-08-07	OOZ-145: Add 'hive-maprdb-json-common' dependency
fe7108bb	2019-06-05	OOZ-140: Backport fix Apache's OOZIE-3415 from 5.2.0
fe717f57 48d4995a	2019-05-19 2019-06-04	OOZ-136: Prevent scripts execution with incomplete libs
646ad22a	2019-05-30	OOZ-141: Exclude unused artifacts from libs
16d9ae2a	2019-10-08	CORE-306: HTTP Security headers
0e5e119a	2019-09-25	OOZ-146: Avoid SLF4J implementations in outcome libs

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 5.1.0.200-1904 (EEP 6.2.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 5.1.0.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.0.200
Release Date	April 2019
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie/
GitHub Release Tag	5.1.0.200-mapr-620
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- Spark artifacts version updated to version 2.4.0.
- Jetty version upgrade version 9.3.25.v20180904.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
72cd9f5	2019-03-06	OOZ-114:Update Spark version at Oozie to v2.4.0
bde4bd1	2019-03-06	OOZ-123: version used by latest version is lower than previous version
7b6421a	2019-03-05	OOZ-120: Jetty version upgrade v9.3.25.v20180904
9e1113	2019-02-28	OOZ-121: Duplicate jersey-core jars make the AM link unavailable
1367fd0	2019-05-16	OOZ-137: YARN jobs are submitted as the submitter instead of administrator, if they are different users. Impersonation did not work only for several cases

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 5.1.0-1904 (EEP 6.1.1) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

last-updated: Apr 11, 2022

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 5.1.0.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.0
Release Date	April 2019
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie/
GitHub Release Tag	oozie-5.1.0-mapr-1904
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- Spark artifacts version updated to version 2.3.3.
- Jetty version upgrade version 9.3.25.v20180904.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
0fca106c	2019-03-25	OOZ-125:Update Spark version at Oozie to v2.3.3
31e71be	2019-03-06	OOZ-123: version used by latest version is lower than previous version
017e3ef	2019-03-05	OOZ-120: Jetty version upgrade v9.3.25.v20180904
bb24c68	2019-02-28	OOZ-121: Duplicate jersey-core jars make the AM link unavailable
1367fd0	2019-05-16	OOZ-137: YARN jobs are submitted as the submitter instead of administrator, if they are different users. Impersonation did not work only for several cases

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 5.1.0.0-1901 (EEP 6.1.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 5.1.0.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	5.1.0.0
Release Date	February 2019
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie/
GitHub Release Tag	oozie-5.1.0-mapr-1901
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • `mapr-oozie-5.1.0<>.rpm` • `mapr-oozie_5.1.0<>.deb`

New in This Release

None.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
c8769ae	2018-12-14	MAPR-OOZIE-96: Oozie sends callback to wrong URL
a01531d	2018-12-18	MAPR-OOZIE-93: Oozie Spark action executor accesses local volumes on remote nodes via NFS
a016307	2018-12-21	MAPR-OOZIE-97: Support 4 digits version scheme for Oozie
75c9fa2	2018-12-27	MAPR-OOZIE-82: spark-sql-kafka jar is missing in oozie shared lib for Spark
24f6724	2018-12-28	MAPR-OOZIE-95: 'JavaPackage' object is not callable when launching Oozie Workflow with SparkSession

Known Issues and Limitations

None.

Resolved Issues

None.

Oozie 4.3.0 Release Notes

The following Oozie 4.3.0 component release notes are included in the MapR Converged Data Platform.

Oozie 4.3.0 - 2009 (EEP 5.0.5) Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Oozie 4.3.0 for EEP 5.0.5.

You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.3.0
Release Date	September 2020
MapR Version Compatibility	See EEP Components and OS Support on page 5536 and Oozie Support Matrix on page 5636.
GitHub Source	https://github.com/mapr/oozie
GitHub Release Tag	oozie-4.3.0-mapr-2009
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
80ca7c6 d502bd6	2020-03-27 2020-04-03	OOZ-163: Disable TLSv1 and TLSv1.1 protocol for Oozie
306ef78	2020-06-04	OOZ-186: Oozie Java JMX Server Insecure Configuration Remote Code Execution Vulnerability
d35258a	2020-06-24	OOZ-178 Update Apache Commons Libs

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 4.3.0-1912 (EEP 5.0.4) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.3.0
Release Date	December 2019
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie/
GitHub Release Tag	oozie-4.3.0-mapr-1912
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
bd171ed3 55ce50ff	2019-09-24 2019-10-28	OOZ-147: Update Commons Configuration to 1.10
5043e183	2019-06-06	OOZ-138: OozieDB only updates when DB version is different
eddaa80c	2019-09-25	OOZ-146: Avoid SLF4J implementations in outcome libs

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 4.3.0-1904 (EEP 6.0.2) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.3.0
Release Date	April 2019

MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie/
GitHub Release Tag	oozie-4.3.0-mapr-1904
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- Added new option: oozie.action.null.args.allowed.
- Spark artifacts version updated to version 2.3.3.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
19825b4f	2019-04-08	OOZ-126 oozie jobs are failing with Null pointer
d9ee745	2019-02-28	OOZ-121: Duplicate jersey-core jars make AM link unavailable
95b685c	2019-03-25	OOZ-125: Update Spark version at Oozie to v2.3.3
882b9f4	2019-03-05	OOZ-122: multiple versions of metrics-core in oozie.war

Known Issues and Limitations

- None.

Resolved Issues

- None.

Oozie 4.3.0-1904 (EEP 5.0.3) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	4.3.0
Release Date	April 2019
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636

Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • `mapr-oozie-4.3.0<>.rpm` • `mapr-oozie_4.3.0<>.deb`

New in This Release

Updated sharelib versions:

- Spark 2.3.0
- Hive 2.3.0
- Sqoop 1.4.7

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
5f8e992	2018-03-14	MAPR-30894: High frequency LAST_ONLY coord job with many past time actions killed Oozie server
0a697e5	2018-04-27	Updated TDCH version to 1.5.4
cb45b30	2018-05-16	MAPR-OOZIE-42: Updated Hive version to 2.3
9385ca6	2018-05-18	MAPR-31411: Updated Tomcat version to 6.0.53
26d94f7	2018-06-08	MAPR-OOZIE-43: Updated Spark version to 2.3
b1f2b87	2018-06-14	MAPR-OOZIE-60: Used mapr-security-web for getting SSL keystore password
d0ac12c	2018-08-05	Backport OOZIE-2807 Oozie gets RM delegation token even for checking job status

Known Issues and Limitations

None.

Resolved Issues

None.

Oozie 4.3.0-1808 (EEP 3.0.4, EEP 4.1.2, and EEP 5.0.1) Release Notes

Oozie 4.3.0-1803 (EEP 5.0.0) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage.

Version	4.3.0
Release Date	March 2018
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	oozie-4.3.0-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • `mapr-oozie-4.3.0<>.rpm` • `mapr-oozie_4.3.0<>.deb`

New in This Release

This release includes fix for [CVE-2017-15712] Apache Oozie Server vulnerability.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
7f91032	2018-02-06	MAPR-OOZIE-37: Enable Oozie client impersonation by default

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
855a250	2018-02-09	Backport OOZIE-3147 Misleading documentation of oozie.service.PurgeService.purge.limit configuration property
6aed912	2018-02-12	MAPR-30596: Include maprbuildversion jar into oozie shared lib for spark
92c4b24	2018-02-27	MAPR-OOZIE-38: Oozie should be able to work with Spark 2.2

Known Issues and Limitations

None.

Resolved Issues

None.

Oozie 4.3.0-1803 (EEP 4.1.1) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage.

Version	4.3.0
Release Date	March 2018
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	oozie-4.3.0-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • `mapr-oozie-4.3.0<>.rpm` • `mapr-oozie_4.3.0<>.deb`

New in This Release

This release includes fix for [CVE-2017-15712] Apache Oozie Server vulnerability.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

None.

Oozie 4.3.0-1801 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage.

Version	4.3.0
Release Date	February 2018
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	oozie-4.3.0-mapr-1801
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • `mapr-oozie-4.3.0<>.rpm` • `mapr-oozie_4.3.0<>.deb`

New in This Release

No new features.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
774411c	2017-12-29	Backport OOZIE-1401: Enable PurgeCommand to purge the workflow jobs without end_time
d55de42	2018-01-16	MAPR-OOZIE-28: Add restart file for Oozie
75d0793	2018-01-16	MAPR-30440: Add mysql jdbc library by default

Known Issues and Limitations

MAPR-30627: Oozie Sqoop-Hive job fails on unsecured clusters starting from the Oozie 4.3.0-1710 release.

Note: The `sqoop jar` is released earlier than Oozie 4.3.0-1710.

Workaround: Manually update `sqoop share lib` in Oozie by using these commands:

```
cp /opt/mapr/sqoop/sqoop-1.4.6/sqoop-1.4.6-mapr-&lt;sqoop_version&gt;.jar
          /opt/mapr/oozie/oozie-4.3.0/share/lib/sqoop/
```

```
{OOZIE_HOME}/bin/oozie-setup.sh sharelib create -fs
maprfs:/// -locallib /opt/mapr/oozie/oozie-4.3.0/share
```

```
{OOZIE_HOME}/bin/oozie admin -sharelibupdate
```

Resolved Issues

None.

Oozie 4.3.0-1710 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage

Version	4.3.0
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	oozie-4.3.0-mapr-1710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- Simplified Security - Starting in the MapR 6.0 and EEP 4.0 releases, you can use the "Enable Security" check box in the installer to enable security for the core platform and the installed ecosystem components. Alternatively, you can use the `configure.sh -secure` command to enable security for the core and the ecosystem components. See Configuring Oozie on a Secure Cluster on page 3990 for details on how this impacts Oozie.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
815c5c9	2017-08-08	MAPR-28720: Fix loading of Spark Driver UI
d22a566	2017-08-22	MAPR-28880: Fix Oozie so it works with TimeLine Server
b559b59	2017-08-23	MAPR-27486: Fix Oozie SSL configuration so it is not reset after calling ./configure.sh -R
2e92787	2017-09-07	MAPR-29044: Allow setting custom keystore for SSL

Known Issues and Limitations

- Oozie works only with Spark 2.1.0 and Hive 2.1.

Resolved Issues

- None.

Oozie 4.3.0-1707 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage

Version	4.3.0
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	oozie-4.3.0-mapr-1707
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release

No new features.

Fixes

No new fixes.

Known Issues and Limitations

- Oozie works only with Spark 2.1.0 and Hive 2.1.

Resolved Issues

- None.

Oozie 4.3.0-1703 Release Notes

The notes below relate specifically to thhive MapR Distribution for Apache Hadoop. The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.3.0 changelog or the Apache Oozie project homepage

Version	4.3.0
Release Date	April 2017
MapR Version Interoperability	See EEP 3.0 Components and OS Support on page 5575
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	oozie-4.3.0-mapr-1703
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	See Package Names for MapR Ecosystem Packs (EEPs) on page 5737.

New in This Release
Added support for Hive 2.1 and Spark 2.1.0.

Fixes

This MapR release includes the following fixes on the base release:

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
583940c	2017-01-26	MAPR-25776: Oozie Hive2 action failed with " Delegation token only supported over remote client with kerberos authentication" on kerberized cluster
6855624	2017-01-27	MAPR-23180: Oozie temporary files moved to System.getProperty("java.io.tmpdir")/oozieTmp
33c6fb0	2017-02-07	MAPR-25989: Added Tez dependencies to Hive action
3c478bb	2017-02-20	MAPR-26195: Add default Tez configuration to Oozie
c537c84	2017-02-21	MAPR-26191: Oozie servers cannot authenticate on MapR-SASL cluster when HA enabled
7ba0945	2017-02-27	MAPR-26256: Changed Hive dependencies for Spark-Hive action
ca6b2ca	2017-03-13	APR-26454: Sqoop import to Hive from Oozie failed
b8097aa	2017-03-13	MAPR-26429: Oozie web UI failed HTTP Status 500

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Oozie works only with Spark 2.1.0 and Hive 2.1.

Resolved Issues

- None.

Oozie 4.2.0 Release Notes

The following Oozie 4.2.0 component release notes are included in the MapR Converged Data Platform.

Oozie 4.2.0-1710 (EEP 2.x) Release Notes

The notes below relate specifically to MapR's Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.2.0 changelog or the Apache Oozie project http://oozie.apache.org/

Version	4.2.0
Release Date	November 2017

MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/oozie

last-updated: Apr 11, 2022

New in This Release

Oozie 4.2.0-1611 introduces the following enhancements or MapR platform-specific behavior changes:

- Oozie 4.2.0 bundled with Pig 0.16
- Oozie 4.2.0 bundled with Spark 2.0.1

Fixes

This MapR release includes the following fixes on the base Apache release.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
abbd4b9	2016-10-19	MAPR-24455: Changed the Pig version to 0.16.0.
900615e	2016-10-26	MAPR-24455: Changed the Spark version to 2.0.1.

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

This version of Oozie 4.2.0-1611, which is included in EEP 2.0, is not compatible with Spark 1.6.1 or earlier versions of Spark.

Resolved Issues

None.

Oozie 4.2.0-1611 (EEP 1.x) Release Notes

The notes below relate specifically to the MapR distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.2.0 changelog or the Apache Oozie project homepage.

Version	4.2.0
Release Date	December 9, 2016
MapR Version Interoperability	See EEP Components and OS Support
Source on GitHub	https://github.com/mapr/oozie
GitHub Release Tag	oozie-4.2.0-mapr-1611

New in this Release

This release of Apache Oozie includes the following behavior change that is specific to MapR:

Logging Enhancement	When you set the `user.name` parameter in the `job.properties` file and user impersonation is enabled, the `oozie.log` file indicates the following information for each job: • The name of the user that submits the job. • The name of the user that actually runs the job.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Data (YYYY-MM-DD)	Comment
0a24c8e	2016-07-11	MAPR-23948: Oozie jobs no longer fail with the following error: `java.lang.NoSuchFieldError: HADOOP_CLASSPATH`.
bf46e56	2016-07-01	MAPR-23558: Oozie now stores PID files in the following directory: `/opt/mapr/pid`.
96efbda	2016-04-14	MAPR-23037: When you set the `user.name` parameter in the `job.properties` file and user impersonation is enabled, the oozie.log file includes the name of the user that submits the job and the user that actually runs the job.
696f2e2	2016-02-24	MAPR-22703: Log messages about installing Oozie extensions no longer display when you install and remove MapR's Oozie packages.

Oozie 4.2.0-1602 Release Notes

Below are release notes for the Oozie component included in the MapR Distribution for Apache Hadoop.

Oozie Version	4.2.0
Release Date	March 2, 2016
MapR Version Interoperability	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Oozie Support Matrix on page 5636

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Data (YYYY-MM-DD)	Comment
2e3367a	2016-02-24	MAPR-22703: Log messages about installing Oozie extensions no longer display when you install and remove MapR's Oozie packages.
cd2770e	2016-02-13	MAPR-22592: oozie-setup.sh no longer hangs when it is unable to download the extjs library.

Oozie 4.2.0-1601 Release Notes

Below are release notes for the Oozie component included in the MapR Distribution for Apache Hadoop.

Oozie Version	4.2.0
Release Date	February 1, 2016
MapR Version Interoperability	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Oozie Support Matrix on page 5636

Source on GitHub	https://github.com/mapr/oozie/tree/4.2.0-mapr-1601
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-oozie-4.2.0.201601281619-1.noarch.rpm • mapr-oozie_4.2.0.201601281619_all.deb • mapr-oozie-internal-4.2.0.201601281619-1.noarch.rpm • mapr-oozie-internal_4.2.0.201601281619_all.deb

New in this Release

This release of Apache Oozie includes the following behavior change that is specific to MapR:

- Whenever you upgrade or get the latest Oozie package, you must update the shared libraries on the MapR filesystem. When you restart Oozie, the shared libraries are no longer automatically updated unless you change the cluster MapReduce mode or the default sharedlib directory (/oozie/share/) does not exist. See MapR's Oozie upgrade documentation for details.

For details on the features available in the open source version of this component, see the Apache Oozie 4.2.0 changelog or the Apache Oozie project homepage.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Data (YYYY-MM-DD)	Comment
5e596f4	2016-01-22	MAPR-22258: When Oozie restarts, the sharedlib is not updated unless the default sharedlib directory does not exist or the cluster MapReduce mode was changed.
a416cf9	2016-01-08	MAPR-21606: oozie-setup.sh automatically installs the ExtJS jar if it does not exist on the node.
9cb6c59	2015-12-28	MAPR-21466: Oozie jobs no longer fail with error: E0721: `Invalid signal/transition, decision node [decision_node] signal [OK]`
106b426	2015-12-23	MAPR-21814: Backported Oozie-2380 so that Oozie jobs do not fail with the FileNotFoundException.
030d3f9	2015-12-18	MAPR-21848: Duplicate instances of Oozie jobs no longer get submitted after an HTTP connection reset.
e49cf00	2015-12-11	MAPR-21755: On a MapR cluster that uses Kerberos authentication, Oozie jobs no longer fail the following error: `java.lang.NoClassDefFoundError: org/apache/hive/hcatalog/api/HCatClient`
c73fe4e	2015-12-03	MAPR-21654: Oozie is now able to submit jobs to HiveServer2.

Oozie 4.2.0-1510 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.2.0 changelog or the Apache Oozie project homepage.

Source on GitHub	https://github.com/mapr/oozie/tree/4.2.0-mapr-1510
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-oozie-4.2.0.201511171640-1.noarch.rpm • mapr-oozie_4.2.0.201511171640_all.deb • mapr-oozie-internal-4.2.0.201511171640-1.noarch.rpm • mapr-oozie-internal_4.2.0.201511171640_all.deb

New in This Release

This release of Apache Oozie includes the following behavior change that is specific to MapR:

- Oozie uses the oozie-setup.sh script to copy shared libraries to MapR File System.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Data (YYYY-MM-DD)	Comment
795fb7c	2015-10-29	MAPR- 21184: Oozie now uses the oozie-setup.sh script to copy shared libraries to MapR File System.
813be78	2015-10-16	MAPR- 20358: The path to the tmp directory was changed from a relative path to an absolute path.
580b058	2015-10-08	MAPR- 20945: The Oozie admin command no longer displays the "Unknown hadoop version" message when HADOOP_HOME is set.

Oozie 4.2.0-1508 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.2.0 changelog or the Apache Oozie project homepage.

last-updated: Apr 11, 2022

New in This Release

This is the initial release of Oozie 4.2.0 for MapR. It includes the following behavior changes:

- The oozie-site.xml is empty by default. All default configuration properties located at oozie-default.xml. You can add your customized properties to oozie-site.xml. See Oozie-1890 for more information.
- The Oozie 4.2.0-1508 package includes shared libraries for the following components: Hive 1.2, Spark 1.4.1, Pig 0.15, and Sqoop 1.4.6.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
63f02b4	2015-08-21	MAPR-19942 Hiveserver2 jobs submitted by Oozie no longer fail when Hive is configured to use MapR-SASL.
75e8204	2015-08-21	MAPR-19819: Oozie includes shared libraries for the following components: Hive 1.2, Spark 1.4.1, Pig 0.15, Sqoop 1.4.6

Oozie 4.1.0 Release Notes

The following Oozie 4.1.0 component release notes are included in the MapR Converged Data Platform.

Oozie 4.1.0-1606 Release Notes

Below are release notes for the Oozie component included in the MapR Converged Data Platform.

Oozie Version	4.1.0
Release Date	July 1, 2016

Package Names	The following packages are associated with this release: • mapr-oozie-4.1.0.201606271017-1.noarch.rpm • mapr-oozie_4.1.0.201606271017_all.deb • mapr-oozie-internal-4.1.0.201606271017-1.noarch.rpm • mapr-oozie-internal_4.1.0.201606271017_all.deb

New in this Release

This release of Apache Oozie includes the following behavior change that is specific to MapR:

Logging Enhancement	When you set the `user.name` parameter in the `job.properties` file and user impersonation is enabled, the `oozie.log` file indicates the following information for each job:

- The name of the user that submits the job.
- The name of the user that actually runs the job.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Data (YYYY-MM-DD)	Comment
4e3ea4b	2016-04-14	MAPR-23037: When you set the `user.name` parameter in the `job.properties` file and user impersonation is enabled, the oozie.log file includes the name of the user that submits the job and the user that actually runs the job.
a011a11	2016-04-07	MAPR-23036: Since Oozie is managed by Warden, Oozie init files are no longer included in MapR's Oozie packages.

Oozie 4.1.0-1601 Release Notes

Below are release notes for the Oozie component included in the MapR Distribution for Apache Hadoop.

Oozie Version	4.1.0
Release Date	February 1, 2016
MapR Version Interoperability	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Oozie Support Matrix on page 5636
Source on GitHub	https://github.com/mapr/oozie/tree/4.1.0-mapr-1601
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-oozie-4.1.0.201601281728-1.noarch.rpm • mapr-oozie_4.1.0.201601281728_all.deb • mapr-oozie-internal-4.1.0.201601281728-1.noarch.rpm • mapr-oozie-internal_4.1.0.201601281728_all.deb

New in this Release

This release of Apache Oozie includes the following behavior change that is specific to MapR:

- Whenever you upgrade or get the latest Oozie package, you must update the shared libraries on the MapR File System. When you restart Oozie, the shared libraries are no longer automatically updated unless you change the cluster MapReduce mode or the default sharedlib directory (/oozie/share/) does not exist. See MapR's Oozie upgrade documentation for details.

For details on the features available in the open source version of this component, see the Apache Oozie 4.1.0 changelog or the Apache Oozie project homepage.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

last-updated: Apr 11, 2022

GitHub Commit	Data (YYYY-MM-DD)	Comment
3cc5d64	2016-01-22	MAPR-22258: When Oozie restarts, the sharedlib is not updated unless the default sharedlib directory on the MapR filesystem does not exist or the cluster MapReduce mode was changed.
7a93809	2016-01-21	MAPR- 21184: Oozie now uses the oozie-setup.sh script to copy shared libraries to MapR filesystem.
f5e4fdf	2016-01-14	MAPR-20515: A stale PID file no longer prevents configure.sh -R from rebuilding the WAR file.
6423a90	2016-01-14	MAPR-21606: oozie-setup.sh automatically installs the ExtJS jar if it does not exist on the node.
b4315f3	2015-12-18	MAPR-21848: Duplicate instances of Oozie jobs no longer get submitted after an HTTP connection reset.
70fb5bf	2015-11-21	MAPR-21466: Oozie jobs no longer fail with error: E0721: Invalid signal/transition, decision node [decision_node] signal [OK]
a8ab0ba	2015-10-13	MAPR- 20945: The Oozie admin command no longer displays the "Unknown hadoop version" message when HADOOP_HOME is set.

Oozie 4.1.0-1506 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.1.0 changelog or the Apache Oozie project homepage.

Version	4.1.0
Release Date	July 10, 2015
Source on GitHub	https://github.com/mapr/oozie.git
GitHub Release Tag	4.1.0-mapr-1506
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Oozie Support Matrix on page 5636..
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

This is a re-release of Oozie 4.1.0 for MapR which includes the following:

- Support for Spark jobs.

Important: When Oozie 4.1 runs on a MapR 5.0 cluster, it can automatically detect the active ResourceManager. Oozie 4.1 jobs no longer fail with the following exception when Zero Configuration Failover is configured for the ResourceManager:

```
java.lang.RuntimeException: Unable to determine ResourceManager service
address from Zookeeper at localhost:5181
```

Upgrade Notes

Before you upgrade to Oozie 4.1.0-1506 and above, you must remove `org.apache.oozie.action.hadoop.EmailActionExecutor` from `oozie.service.ActionService.executor.ext.classes` in the oozie-site.xml.

For complete upgrade instructions, see MapR's documentation for Oozie.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
cfd1dd3	2015-05-08	OOZIE-1983: Added a spark action executor.
a95f110	2015-05-08	OOZIE-2071: Added a Spark example.
f10551a	2015-05-15	Added MapR Zookeeper to the Spark share lib.
c566e95	2015-05-27	MAPR-18989: Oozie 4.1.0 is now able to work with mapr-core 5.0.0.
98b676f	2015-06-23	Changed the Spark version to 1.3.1 in the Oozie share lib.

Oozie 4.1.0-1502 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Oozie 4.1.0 changelog or the Apache Oozie project homepage.

Version	4.1.0
Release Date	March 6, 2015
Source on GitHub	https://github.com/mapr/oozie.git
GitHub Release Tag	4.1.0-mapr-1502
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Oozie Support Matrix on page 5636.
Maven Artifacts	https://repository.mapr.com/maven/

Upgrade Notes

Before upgrading from Oozie 4.0.1 to Oozie 4.1.0, remove the old share libraries and examples from:

```
maprfs://oozie/share
        maprfs://user/${user.name}/examples
```

For more details, see the complete MapR's Oozie documentation for upgrade instructions.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
21f4ac7	2014-12-23	MAPR-16541: A distcp job failed when MapR was running in classic mode (MRv1).

Pig Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

last-updated: Apr 11, 2022

The release notes for Pig component, included in the MapR Converged Data Platform, contains notes specific to MapR only. More details are available on the Apache Pig website.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Pig 0.17.0.0 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following Pig 0.17.0.0 component release notes are included in the MapR distribution for Apache Hadoop.

Pig 0.17.0.100 - (EEP 8.0.0) 2110 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Pig. You may also be interested in the Apache Pig 0.17.0 changelog or the Apache Pig homepage.

Pig Version	0.17.0.100
Release Date	October 2021
Source on GitHub	https://github.com/mapr/pig/
GitHub Release Tag	0.17.0.100-eep-800
Version Compatibility	See EEP Components and OS Support on page 5536
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

- None.

Fixes

This release by HPE includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
226ae101a	2021-09-14	MAPR-PIG-61 : Error messages during starting Pig with using Hcatalog option
7e29a0fdf	2021-09-10	MAPR-PIG-60 : Unable to enter pig shell after updating jars to eep suffix
1dfec233f	2021-09-03	MAPR-PIG-59 : Update the maven artifact version strings to eep

Known Issues and Limitations

- None.

Resolved Issues

- None.

Pig 0.17.0.0 - (EEP 7.0.0) 2009 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Distribution for Apache Pig. You may also be interested in the Apache Pig 0.17.0 changelog or the Apache Pig homepage.

Pig 0.16.0-1912 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Pig 0.16.0 changelog or the Apache Pig homepage.

Pig Version	0.16
Release Date	December 2019
Source on GitHub	https://github.com/mapr/pig/tree/0.16-mapr-1912
MapR Version Compatibility	See EEP Components and OS Support on page 5536
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

Important: The Pig-0.16 MEP-6.3.0 release is designed to work with Hive-2.3.6 MEP-6.3.0 and contains a fix that adds com.mapr.web.security.SslConfig class to Pig classpath. This fix allows Pig-0.16 MEP-6.3.0 to be successfully integrated with Hive-2.3.6 MEP-6.3.0 when HCatalog is used. If you use Hive-2.3.6 MEP-6.3.0 with older Pig-0.16 releases, this may cause an exception when HCatalog is used:

```
Caused by: java.lang.ClassNotFoundException:
com.mapr.web.security.SslConfig$SslConfigScope
        at
java.net.URLClassLoader.findClass(URLClassLoader.java:382)
        at java.lang.ClassLoader.loadClass(ClassLoader.java:424)
        at
sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:349)
        at java.lang.ClassLoader.loadClass(ClassLoader.java:357)
        ... 17 more
```

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
d213b20b	2019-11-19	MAPR-PIG-22: Replacing joda-time-*.jar with joda-time-2.10.3.jar
83339ac9	2019-11-18	MAPR-PIG-20: Drop support of MR 1 in Pig for MEP-6.3.0
6e9c93b5	2019-08-27	MAPR-PIG-18 : Add com.mapr.web.security.SslConfig to Pig job classpath
f832e6d71	2019-08-14	MAPR-PIG-17 : java.lang.NoClassDefFoundError: MapRDbJsonException. during Pig + Hive + Hcatalog integration
d74aea0a	2019-05-22	MAPR-PIG-10 : REGISTER statement does not work with maprfs file paths as expected

Known Issues and Limitations

- MAPR-PIG-25 – Pig 0.16 failed to use ORC Storage. Pig - Hive dependency issue – MapR Pig does not support MapR Hive ORC integration.

Resolved Issues

- None.

Commit	Date (YYYY-MM-DD)	Comment
06747e5	2016-10-28	MAPR-24456: The issue that caused illustrate query to fail in Pig, when used with MRv1, is now fixed. Pig now includes different pig-core JAR files for MRv1 and Yarn and it will dynamically choose the necessary JAR based on the cluster's mode.
1ee180c	2016-09-13	PIG-5019: The issue that caused Pig to generate lots of warnings for UDF with warnings aggregation enabled is now fixed.

Pig 0.15.0-1608 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Pig 0.15.0 changelog or the Apache Pig homepage.

Pig Version	0.15
Release Date	September 1, 2016
Source on GitHub	https://github.com/mapr/pig/tree/0.15-mapr-1608
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Maven Artifacts	https://repository.mapr.com/maven/.
Package Names	The following packages are associated with this release: • `mapr-pig-0.15.201608291158-1.noarch.rpm` • `mapr-pig_0.15.201608291158_all.deb`

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
ff845f79f5	2016-07-29	MAPR-24080: The issue causing Pig jobs in Oozie to go into an infinite loop when JobTracker was not installed on the cluster is now fixed.

Pig 0.15.0-1607 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Pig 0.15.0 changelog or the Apache Pig homepage.

Pig Version	0.15
Release Date	July 29, 2016
Source on GitHub	https://github.com/mapr/pig/tree/0.15-mapr-1607

MapR Version Interoperability	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-pig-0.15.201607281405-1.noarch.rpm • mapr-pig_0.15.201607281405_all.deb

Fixes

This release by MapR includes the following fix on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
3b8ba56b	2016-07-27	MAPR-24027: Backported the following: • PIG-4961: The issue causing CROSS followed by LIMIT inside a nested foreach to drop data from the result has been fixed. • PIG-4683: The issue causing nested order to break (after PIG-3591) in some cases has been fixed.
93c994f	2016-07-12	MAPR-23915: The following issues with Hive and Pig integration are now fixed: • Incorrect placement of definition for $HIVE_HOME environment variable. • Missing datanucleus JARs in the PIG classpath.

Pig 0.15.0-1603 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Pig 0.15.0 changelog or the Apache Pig homepage.

Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

This is the initial release of Pig Version 0.14.0 for MapR.

This release adds support for ORC storage format. See Use ORC Storage with Pig in MapR's Pig documentation. Pig 0.14 and Hive 0.13 work with ORC storage.

Fixes

This release from MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
5fc4722	2015-02-10	MAPR-17046: A Pig job failed when using piggybank.jar to access Hive tables created in RCFile format.
0c66372	2015-02-05	MAPR-16221: Pig could not be installed on top of HBase 0.98.
d4f8db5	2015-01-14	MAPR-6086: The default logging directory was changed to the user home directory.

Sentry Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for Sentry component included in the MapR Converged Data Platform contains notes specific to MapR only.

Important: MapR support for Sentry is limited to Impala users.

You may also be interested in the Apache Sentry project homepage.

Sentry 1.7.0 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Sentry 1.7.0.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following release notes for the Sentry 1.7.0 component are included in the MapR distribution for Apache Hadoop.

Sentry 1.7.0 - 2101 (MEP 7.0.1) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Sentry.

Version	1.7.0
Release Date	January 2021
MapR Version Interoperability	SeeMEP Components and OS Support
Source on GitHub	https://github.com/mapr/sentry
GitHub Release Tag	1.7.0-mapr-mep-7.x-2101
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	SeePackage Names for MapR Ecosystem Packs (MEPs)

New in This Release

Sentry 1.7.0 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit	Date (YYYY-MM-DD)	Comment
700fc2b	2020-10-08	MAPR-SEN-86 : DESC command failing with Sentry 1.7
d485c97	2020-12-29	MAPR-SEN-90: Upgrading 'ant' dependency due to CVE-2020-1945
88f6020	2020-12-31	MAPR-SEN-76: CVE-2019-0205: Upgrade to version org.apache.thrift:libthrift:0.13.0
3377632	2021-01-06	MAPR-SEN-48: [Sentry-1.7.0] incorrect /conf directories in sentry HOME dir
85474d7	2021-01-11	MAPR-SEN-93: Errors during removing Sentry package on Ubuntu
a817b83	2021-01-12	MAPR-SEN-94: Errors while trying install / remove Sentry when Hive is not installed on the node

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- Refer to Sentry Known Issues on page 3819.

Resolved Issues

- None.

Sentry 1.7.0 - 2009 (MEP 7.0.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.7.0
Release Date	September 2020

Release Date	February 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/sentry
GitHub Release Tag	1.7.0-mapr-1901
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

Added support of backticks in Sentry tokens.

Fixes

This MapR release includes the following new fixes since the latest MapR Sentry 1.7.0 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
8acff7b	2018-11-05	MAPR-SEN-20 : Configure Sentry JUnit tests to run locally
a00dfae	2018-11-05	MAPR-SEN-19 : Add support of backticks to Sentry
320b118	2018-01-14	MAPR-SEN-13: Can't create admin role for sentry DB model
1a2b10f	2018-01-18	MAPR-SEN-23 : Remove maprfs jars from Sentry package to avoid potential issues
01a0559	2018-01-22	MAPR-SEN-25 : Update version of the hadoop jars for Sentry MEP-6.0.1+

Known Issues and Limitations

None.

Resolved Issues

None.

Sentry 1.7.0-1901 (EEP 5.0.1, EEP 4.1.3, and EEP 3.0.5) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.7.0
Release Date	February 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/sentry/
GitHub Release Tag	1.7.0-mapr-1901
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

Added support of backticks in Sentry tokens.

Fixes

This MapR release includes the following new fixes since the latest MapR Sentry 1.7.0 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
8acff7b	2018-11-05	MAPR-SEN-20 : Configure Sentry JUnit tests to run locally
a00dfae	2018-11-05	MAPR-SEN-19 : Add support of backticks to Sentry
320b118	2018-01-14	MAPR-SEN-13: Can't create admin role for sentry DB model
20c01b3	2018-01-18	MAPR-SEN-23 : Remove maprfs jars from Sentry package to avoid potential issues
e20f771	2018-01-24	MAPR-SEN-22 : Cannot pass server privileges to an admin role

Known Issues and Limitations

None.

Resolved Issues

None.

Sentry 1.7.0-1808 (EEP 6.0.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.7.0
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536

Source on GitHub	https://github.com/mapr/sentry/tree/1.7.0-mapr-1808
GitHub Release Tag	1.7.0-mapr-1808
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

Implemented preserving configuration during package update.

Fixes

None.

Known Issues and Limitations

None.

Resolved Issues

None.

Sentry 1.7.0-1803 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	1.7.0
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/sentry/
GitHub Release Tag	1.7.0-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

None.

Fixes

This MapR release includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
c9764d0	2018-03-06	SEN-6 Changes to NOTICE.txt
fb881cd	2018-01-22	Update hive versions

Known Issues and Limitations

None.

Resolved Issues

None.

Sentry 1.7.0-1703 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	1.7.0
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/sentry/
GitHub Release Tag	1.7.0-mapr-1703
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)
API Changes for this Version	See Sentry 1.7.0 API Changes on page 3835.

New in This Release

Sentry 1.7.0-1703 introduces the following enhancements or MapR platform-specific behavior changes:

- Sentry integration with Hive authorization framework v2
- Create simple shell for Sentry
- Upgrade Hive plugin v2 for Hive 2.1.1

Fixes

This MapR release includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
0850531	2016-08-29	MAPR-24381 - Sentry Simple Shell doesn't work on a MAPR-SASL cluster.
87d4627	2017-01-24	MAPR-25862 - Sentry 1.7.0 should be built with the hive2 profile by default.
4aab063	2017-01-30	MAPR-25936 - Sentry 1.7.0 should work with Hive 2.1.1 instead of Hive 2.0.
00707be	2017-01-30	MAPR-25941 - Tables in Impala are invisible after configuration on Sentry.
9694425	2017-01-31	MAPR-25949 - Sentry can't start.
eb4dc39	2017-02-01	MAPR-25964 - Sentry 1.7 cannot be compiled.
58e8949	2017-02-02	MAPR-25964 - Sentry 1.7 cannot be compiled, missed provided.
6532fbe	2017-03-14	MAPR-26432 [Sentry 1.7] - Failed to perform USE query through Hive Thrift.

Known Issues and Limitations

Important: MapR support for Sentry is limited to Impala users.

Resolved Issues

None.

Sentry 1.6.0 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Sentry 1.6.0.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following release notes for the Sentry 1.6.0 component are included in the MapR distribution for Apache Hadoop.

Sentry 1.6.0-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Sentry 1.6.0-1707.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Important: MapR support for Sentry is limited to Impala users.

The notes below relate specifically to the MapR Distribution for Apache Hadoop.

Version	1.6.0
Release Date	July 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/sentry/
GitHub Release Tag	1.6.0-mapr-1707
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)
API Changes for this Version	None

New in This Release

No new features.

Fixes

This MapR release includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number	Description
10ef983	2017-05-26	MAPR-27524	Hue becomes unresponsive after multiple HiveServer2 requests.
f6cb28c	2017-06-09	MAPR-26432	Failed to perform USE query through Hive Thrift.

Known Issues and Limitations

MapR support for Sentry is limited to Impala users.

Resolved Issues

None.

Sentry 1.6.0-1606 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Sentry component included in the MapR Converged Data Platform.

Version	1.6.0
Release Date	June 30, 2016
Works with MapR Version	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/sentry
GitHub Release Tag	1.6.0-mapr-1606
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs) if you are running 5.2 and install EEP 1.1.1, EEP 2.0, or any subsequent EEP release. The following packages are associated with Sentry 1.6.0-1606 if you are running 5.0 or 5.1 and you install Sentry from the https://package.mapr.com/releases/ecosystem-5.x/ repository, or if you are running 5.2 and install EEP 1.0.0 or 1.1.0: • mapr-sentry-1.6.0.201602231135-1.noarch.rpm • mapr-sentry_1.6.0.201602231135_all.deb

New in this Release

This release of Apache Sentry includes support for the RELOAD command.

Fixes

GitHub Commit	Date (YYYY-MM-DD)	Comment
6b98733	2016-05-25	SENTRY-1003 - When Hive issues the RELOAD command, Sentry gets the updated aux JAR path from "hive.reloadable.aux.jars.path".
b4705c9	2016-05-25	MAPR-23468 - Added a dependency for org.datanucleus.javax.jdo.

Sentry 1.6.0-1602 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Sentry component included in the MapR Converged Data Platform.

last-updated: Apr 11, 2022

Version	1.6.0
Release Date	February 24, 2016
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/incubator-sentry/tree/1.6.0-mapr-1602
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-sentry-1.6.0.201602231135-1.noarch.rpm • mapr-sentry_1.6.0.201602231135_all.deb

New in this Release

This release of Apache Sentry includes the following behavior change that is specific to MapR:

- Database storage model is now supported. It was not supported in the Sentry 1.4.0-1412 release.

For details on the features available in the open source version of this component, see the Apache Sentry 1.6.0 changelog or the Apache Sentry project homepage.

Fixes

GitHub Commit	Date (YYYY-MM-DD)	Comment
4125954	2015-12-14	MAPR-21571: The Sentry service periodically renews the server Kerberos ticket.
cb8daf8	2015-12-08	MAPR-21241: The Sentry service can be managed by the MCS.
d83b67b	2015-12-09	MAPR-21701: The Sentry is installed with file-based mode configurations by default.

Sentry 1.4.0 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Sentry 1.4.0.

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The following release notes for the Sentry 1.4.0 component are included in the MapR distribution for Apache Hadoop.

Sentry 1.4.0-1509 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Version	1.4.0
Release Date	Oct 5, 2015
Source on GitHub	https://github.com/mapr/incubator-sentry/tree/1.4.0-mapr-1509

MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	See Maven Repository
Package Names	The following packages are associated with this release: • mapr-sentry-1.4.0.201510011040-1.noarch.rpm • mapr-sentry_1.4.0.201510011040_all.deb

New in this Release

This release of Apache Sentry includes the following behavior changes that are specific to the MapR:

- Hive home directory is now determined correctly.
- Hive is no longer automatically installed with Sentry. Sentry requires Hive. Therefore, on nodes where Sentry is installed, verify that Hive 0.13 is installed or install Hive 0.13 manually.

For details on the features available in the open source version of this component, see the Apache Sentry 1.4.0 changelog or the Apache Sentry project homepage.

Sentry 1.4.0-1501 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sentry 1.4.0 changelog or the Apache Sentry project homepage.

Version	1.4.0
Release Date	January 21, 2015
Source on GitHub	https://github.com/mapr/incubator-sentry
GitHub Release Tag	1.4.0-mapr-1501
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Compatibility with Other Ecosystem Components

In this release, Sentry only works in combination with certain other components, as shown:

- Sentry 1.4.0 is only supported with Impala 1.4.1 and Hive 0.13.
- Sentry with Solr (or any other framework) is not supported in this release.

For more information, see MapR's Sentry documentation.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
6dee41e	2014-12-16	MAPR-16084: Running a Hive query from Hue returned an error when Hive was configured to work with Sentry.

Sentry 1.4.0-1410 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sentry 1.4.0 changelog or the Apache Sentry project homepage.

Version	1.4.0
Release Date	November 19, 2014
Source on GitHub	https://github.com/mapr/incubator-sentry
GitHub Release Tag	1.4.0-mapr-1410
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Maven Artifacts	https://repository.mapr.com/maven/

Compatibility with Other Ecosystem Components

This is the first release of Sentry in the MapR Distribution for Apache Hadoop. In this release, Sentry only works in combination with certain other components, as shown:

- Sentry 1.4.0 is only supported with Impala 1.4.1 and Hive 0.13.
- When using Hive 0.13 with MapR version 3.1.1, Hive 0.13 is not compatible with Tez.
- Sentry with Solr (or any other framework) is not supported in this release.

For more information, see the MapR's Sentry documentation.

Spark Release Notes

The release notes for Spark component (included in the MapR Data Platform) contains notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Spark 3.2.0.0 - 2201 (EEP 8.1.0) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 3.2.0.0.

The notes below relate specifically to the MapR Technologies Distribution for Apache Hadoop. For more information, you may also want to consult the open-source Spark 3.2.0 Release Notes.

These release notes contain only MapR Technologies specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	3.2.0.0

Release Date	January 2022
HPE Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	3.2.0.0-eep-810
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the KeyStore and TrustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your data-fabric cluster, HPE scripts automatically configure Spark security features.
- Beginning with Core 6.2 and EEP 7.0, Spark supports SSL for WebUI.

Hive Support

- Starting from Spark 3.1.2, Spark supports Hive 2.3.

Delta Lake Support

Spark 3.2.0 provides Delta Lake support on MapR Data Platform. See Apache Spark Feature Support on page 4027.

New in This Release

- For a complete list of new features, see the open-source Spark 3.2.0 Release Notes.

Fixes

This HPE release includes the following new fixes since the latest Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
7c727c3	2021/11/04	MapR[SPARK-960] Update Hadoop in Spark-3.2.x
d53fe9f	2021/11/19	MapR [SPARK-979] Backport all needed 3.1.2 EEP commits tp 3.2 branch
e85b0ce	2021/11/22	MapR [SPARK-982] Update Spark version in warden files
5693d20	2021/11/22	MapR [SPARK-972] STS start fail due to java.lang.NoSuchMethodError
3b6cb09	2021/11/25	MapR [SPARK-981] Select from table with data storing as a local file fails

31ead44	2021/11/29	MapR [SPARK-950] Can't start spark job/services with enabled FIPS
85b3d44	2021/12/07	MapR [SPARK-952] Spark services can't start on cluster with enabled FIPS
9cfd68c	2021/12/07	MapR [SPARK-963] select from hbase table which was created via hive fails
82bfd4d	2021/12/09	MapR [SPARK-966] Streaming application with the latest offset read 1 message from mapr stream which was produced before application start
96a3e9d	2021/12/10	MapR [SPARK-964] MapRDBSourceConfig.CreateTableOption=true causes structured streaming application fail
697e7f9	2021/12/24	MapR [SPARK-985] Spark and Livy application fails if spark main package is not installed on each node
5e8401a	2021/12/28	MapR [SPARK-986] log4j-1.2.17.jar vulnerability:CVE-2019-17571
f951c10	2021/12/28	MapR [SPARK-975] Spark CVE fixes for Jan 2022 release
0c07103	2021/12/30	MapR [SPARK-921] Replace sudo command with maprexecute in Spark
6a38156	2021/12/30	MapR [SPARK-984] Select from temp view which was created under orc df fails
279f325	2022/01/11	MapR [SPARK-965] Spark Structured Streaming application fails when need to recovery from checkpoint
6060b6c	2022/01/14	MapR [SPARK-994] Update jackson-mapper-asl v1.9.13 to 1.9.13-atlassian-5
1636a6e	2022/01/17	MapR [SPARK-992] STS doesn't work on cluster with enabled FIPS
1661404	2022/01/18	MapR [SPARK-995] Write to parquet fails.
5b4c35f	2022/01/25	MapR [SPARK-1001] Update log4j v1 to the 1.3.1-mapr
a919353	2022/01/25	MapR [SPARK-1002] Spark WebUI not work on FIPS cluster
5fa1feb	2022/01/28	MapR [SPARK-1000] Spark's -Djava.library.path misses hadoop native libs

Known Issues and Limitations

- The JDBC driver for Microsoft SQL Server does not support WITH CTE query on Spark.
- When you enable the SSL in a mixed (FIPS and non-FIPS) configuration, Spark application run fails. To run Spark applications, set `spark.ssl.ui.enabled` option to `false` in `spark-defaults.conf` configuration file.

- If you are using Spark SQL with Derby database without Hive or Hive Metastore installation, you will see the Java Runtime Exception. See Apache Spark Feature Support on page 4027 for workaround. Spark 3.2.0 does not support `log4j1.2` logging on MapR Data Platform.
- MapR Data Platform does not support GPU aware scheduling feature on Spark 3.2.0. See Apache Spark Feature Support on page 4027.

Resolved Issues

- None.

Spark 3.1.2.0 - 2110 (EEP 8.0.0) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 3.1.2.0.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. For more information, you may also want to consult the open-source Spark 3.1.2 Release Notes.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	3.1.2.0
Release Date	October 2021
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	3.1.2.0-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the KeyStore and TrustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your data-fabric cluster, HPE scripts automatically configure Spark security features.
- Beginning with Core 6.2 and EEP 7.0, Spark supports SSL for WebUI.

Hive Support

- Starting from Spark 3.1.2, Spark supports Hive 2.3.

Delta Lake Support

Starting from EEP 8.0.0, Delta Lake support is available for Apache Spark 3.1.2 on MapR Data Platform. See Apache Spark Feature Support on page 4027.

last-updated: Apr 11, 2022

New in This Release

- For a complete list of new features, see the open-source Spark 3.1.2 Release Notes.

Fixes

This HPE release includes the following new fixes since the latest Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY/MM/DD)	HPE Fix Number and Description
22b57ce	2021/07/29	MapR [SPARK-811] Updating to Spark 3.x

715edb7	2021/09/22	MapR [SPARK-947] Error when using Spark SQL with derby db

Known Issues

- If you are using Spark SQL with Derby database without Hive or Hive Metastore installation, you will see the Java Runtime Exception. See Apache Spark Feature Support on page 4027 for workaround. Spark 3.1.2 does not support `log4j1.2` logging on MapR Data Platform.
- MapR Data Platform does not support GPU aware scheduling feature on Spark 3.1.2. See Apache Spark Feature Support on page 4027.

Resolved Issues

- None.

Spark 2.4.7.100 - 2104 (EEP 7.1.0) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.7.100.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.4.7 Release Notes.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.7.100
Release Date	April 2021
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.7.100-mapr-2104
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your data-fabric cluster, HPE scripts automatically configure Spark security features.
- Beginning with Core 6.2 and EEP 7.0, Spark supports SSL for WebUI.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the Spark documentation for details.

last-updated: Apr 11, 2022

New in This Release

- For a complete list of new features, see the open-source Spark 2.4.7 Release Notes.
- Service verifier

Fixes

This HPE release includes the following new fixes since the latest data-fabric Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY/MM/DD)	HPE Fix Number and Description
ea8a479	2021/01/27	[SPARK-32723][WEBUI] Upgrade to jQuery 3.5.1
98ced49	2021/02/02	MapR [SPARK-701] CVE-2019-17571 security vulnerability for for log4j-1.2.17
a2b10a6	2021/02/08	MapR [SPARK-845] Update hadoop dependency for Spark-2.4.7
0dc3f73	2021/02/16	MapR [SPARK-843] Improve logging for SSL certs generation
ed0be85	2021/02/16	MapR [K8S-2129] Spark ignores impersonation in K8s
759896a	2021/02/17	MapR [SPARK-847] Spark can't read data from symlink
ea1a325	2021/03/01	MapR [K8S-2215] backport mapr-specific k8s commits from 2.4.5
584881f	2021/03/19	MapR [SPARK-846] Add service verifier to Spark package
127da25	2021/03/24	MapR [SPARK-856] Update Spark dependencies to latest artifacts for MEP-7.0.1 release
9d1e83d	2021/03/29	MapR [SPARK-861] Error logs in spark-historyserver
2ffdd06	2021/03/29	MapR [SPARK-859] Excessive logs for spark job
8b7abe5	2021/03/31	MapR [SPARK-863] Interaction with HBase via hbase spark connector fails
6b9d305	2021/04/05	MapR [SPARK-841] Backport SPARK-32723
ea9fc35	2021/04/08	MapR [SPARK-851] Spark SQL transient FS error handling when writing output
6e2aff7	2021/04/13	MapR [SPARK-869] fix logging location
976b271	2021/04/13	MapR [SPARK-867] Spark Hive Example fails from simple user
2bcc0c0	2021/04/13	MapR [SPARK-870] Can't download event logs from SHS twice

Known Issues

- SPARK-865: If you run a `configure.sh` command to configure HBase after Spark configuration, then you must manually copy the `hbase-site.xml` configuration file from the HBase configuration directory to the Spark configuration directory.

Resolved Issues

- None.

Spark 2.4.7.0 - 2101 (EEP 7.0.1) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.7.0.

The notes below relate specifically to the HPE Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.4.7 Release Notes.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.7
Release Date	January 2021
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.7-mapr-2101
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your data-fabric cluster, HPE scripts automatically configure Spark security features.
- Beginning with MapR 6.2 and EEP 7.0, Spark supports SSL for WebUI.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the MapR Spark documentation for details.

New in This Release

- For a complete list of new features, see the open-source Spark 2.4.7 Release Notes.

Fixes

This HPE release includes the following new fixes since the latest data-fabric Spark release. For details, refer to the commit log for this project in GitHub.

Spark 2.4.5-2009 (EEP 7.0.0) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.5.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.4.5 Release Notes.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.5
Release Date	September 2020
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.5-mapr-2009
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your MapR cluster, MapR scripts automatically configure Spark security features.
- Beginning with EEP 6.3.0, the Spark MapRDB JSON connector supports secondary indexes.
- Beginning with EEP 6.3.0, Spark supports configurable HTTP security headers.
- Beginning with MapR 6.2 and EEP 7.0, Spark supports SSL for WebUI.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the MapR Spark documentation for details.

New in This Release

- For a complete list of new features, see the open-source Spark 2.4.5 Release Notes.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark release. For details, refer to the commit log for this project in GitHub.

last-updated: Apr 11, 2022

GitHub Commit	Date (YYYY-MM-DD)	Comment
e13fc5a	2020/08/28	MapR [SPARK-791] Spark does not work on non-secure cluster
c932822	2020/09/01	MapR [SPARK-793] Update Zookeeper to 4 digits version

Known Issues

- MapR [SPARK-688] - The Spark Web UI does not display properly using Spark 2.4.5 in EEP 7.0.0. **Workaround:** Display the Spark job through the YARN ResourceManager UI by setting the `spark.ui.reverseProxy` property to `true`. Note that when the property is set to `true`, the Spark worker and application UI is not accessible directly. You can only access the UI through the Spark Master or proxy public URL. This behavior is described in the Apache Spark documentation.
- MapR [SPARK-742] - On a secure cluster, if `spark.ssl.ui.enabled` is not set or is set to `true`, you cannot access the Spark job through the YARN ResourceManager UI. You can access the Spark job using the URL (`https://<node.name>:4440`). **Workaround:** Set `spark.ssl.ui.enabled` to `false`. When `spark.ssl.ui.enabled` is set to `false`, you can access the Spark UI directly by using the URL (`http://<node.name>:4040`) or by using the YARN ResourceManager UI.

Resolved Issues

- None.

Spark 2.4.4.500 - 2201 (EEP 6.3.6) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.4.

The notes below relate specifically to the MapR Technologies Distribution for Apache Hadoop. For more information, see open-source Spark 2.4.4 Release Notes.

These release notes contain only MapR Technologies specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.4.500
Release Date	January 2022
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.4.500-mapr-636
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the MapR Spark documentation for details.

New in This Release

- For a complete list of new features, see the open-source Spark 2.4.4 Release Notes.

Fixes

This HPE release includes the following new fixes since the latest data-fabric Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY/MM/DD)	HPE Fix Number and Description
1cb0587	2021/12/26	MapR [SPARK-986] log4j-1.2.17.jar vulnerability:CVE-2019-17571
0580236	2021/12/29	MapR [SPARK-975] Spark CVE fixes for Jan 2022 release
7bec164	2022/01/14	MapR [SPARK-994] Update jackson-mapper-asl v1.9.13 to 1.9.13-atlassian-5
b3eef67	2022/01/25	MapR [SPARK-1001] Update log4j v1 to the 1.3.1-mapr

Known Issues

- None.

Resolved Issues

- None.

Spark 2.4.4.400 - 2110 (EEP 6.3.5) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.4.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.4.4 Release Notes.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.4.400
Release Date	October 2021
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.4.400-mapr-635
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the MapR Spark documentation for details.

New in This Release

- For a complete list of new features, see the open-source Spark 2.4.4 Release Notes.

Fixes

This HPE release includes the following new fixes since the latest data-fabric Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY/MM/DD)	HPE Fix Number and Description
ce96abb	2021/05/24	MapR [SPARK-874] DStream: Spark processes queued time=t+interval batch even if time=t batch failed
1d80bac	2021/06/02	[SPARK-30225][CORE] Correct read() behavior past EOF in NioBufferedFileInputStream
53ae06b	2021/06/04	MapR [SPARK-847] Spark can't read data from symlink

GitHub Commit Number	Date (YYYY/MM/DD)	HPE Fix Number and Description
87516c8	2021/06/09	MapR [SPARK-894] Hadoop artifacts should be taken from the cluster
35bb433	2021/06/10	MapR [SPARK-892] Customer's question about several CVE's impact
e0dd5d4	2021/08/12	MapR [SPARK-900] Introduce configuration option for symlink support
c6be19f	2021/09/15	MapR [SPARK-941] Problem with count via spark-shell
c442957	2021/09/17	MapR [SPARK-914] CVE-2020-13956, WS-2017-3734 vulnerabilities in http-client

Known Issues

Resolved Issues

- None.

Spark 2.4.4.300 - 2104 (EEP 6.3.4) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.4.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.4.4 Release Notes.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.4.300
Release Date	April 2021
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.4.300-mapr-2104
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the MapR Spark documentation for details.

New in This Release

- For a complete list of new features, see the open-source Spark 2.4.4 Release Notes.

Fixes

This HPE release includes the following new fixes since the latest data-fabric Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY/MM/DD)	HPE Fix Number and Description
f2fae47	2021/01/08	MapR [SPARK-833] Spark thriftserver can't start after the latest commit
55646ea	2021/01/08	MapR [SPARK-812] Update Ant version to 1.10.9 to avoid CVE-2020-1945
888a055	2021/01/27	[SPARK-32723][WEBUI] Upgrade to jQuery 3.5.1
54ffbd2	2021/04/05	MapR [SPARK-841] Backport SPARK-32723
6ee1b8a	2021/04/05	MapR [SPARK-862] Excessive messages for spark processes

Known Issues

- SPARK-865: If you run a `configure.sh` command to configure HBase after Spark configuration, then you must manually copy the `hbase-site.xml` configuration file from the HBase configuration directory to the Spark configuration directory.

Resolved Issues

- None.

Spark 2.4.4.200 - 2101 (EEP 6.3.2) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.4.

The notes below relate specifically to the HPE Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.4.4 Release Notes.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.4
Release Date	January 2021
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.

Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.4-mapr-2101
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the MapR Spark documentation for details.

New in This Release

- For a complete list of new features, see the open-source Spark 2.4.4 Release Notes.

Fixes

This HPE release includes the following new fixes since the latest data-fabric Spark release. For details, refer to the commit log for this project in GitHub.

Spark 2.4.4-2009 (EEP 6.3.1) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.4.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.4.4 Release Notes.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.4
Release Date	September 2020
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.4-mapr-2009
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your MapR cluster, MapR scripts automatically configure Spark security features.
- Beginning with EEP 6.3.0, the Spark MapRDB JSON connector supports secondary indexes.
- Beginning with EEP 6.3.0, Spark supports configurable HTTP security headers.
- Beginning with MapR 6.2 and EEP 7.0, Spark supports SSL for WebUI.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the MapR Spark documentation for details.

New in This Release

- For a complete list of new features, see the open-source Spark 2.4.4 Release Notes.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark release. For details, refer to the commit log for this project in GitHub.

Spark 2.4.4.0-1912 Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.4.0.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.4.4 Release Notes.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.4.0
Release Date	December 2019
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.4.0-mapr-630
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Beginning with EEP 6.0.0, the keyStore and trustStore password can be removed from `spark-defaults.conf` and set in `/opt/mapr/conf/ssl-client.xml`.
- Beginning with EEP 6.0.0, after an upgrade, the previous version's configuration files are saved in the `/opt/mapr/spark` directory.
- MapR 6.1.0 with EEP 6.0.0 and later support simplified security. If you enable security on your MapR cluster, MapR scripts automatically configure Spark security features.
- Beginning with EEP 6.3.0, the Spark MapRDB JSON connector supports secondary indexes.
- Beginning with EEP 6.3.0, Spark supports configurable HTTP security headers.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- MapR Spark ACLs behave like Apache Spark ACLs. For details, see the ACL Configuration for Spark documentation.
- For a complete list of new features, see the open-source Spark 2.4.4 Release Notes.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
47147db	2019/09/20	MapR [SPARK-609] Port Apache Spark-2.4.4 changes to the MapR Spark-2.4.4 branch
b41bbe0	2019/09/25	MapR [SPARK-614] Error in sparkR while reading avro and parquet file formats
ca0c9c4	2019/10/07	MapR [SPARK-618] Update hive dependencies for spark-2.4.4 to 2.3.6 version
2827bed	2019/10/07	MapR [SPARK-619] Move absent commits from 2.4.3 branch to 2.4.4
118c6c5	2019/10/09	MapR [SPARK-620] Replace core dependency in Spark-2.4.4
c996bb0	2019/10/09	MapR [SPARK-595] Spark cannot access hs2 through zookeeper
e758a24	2019/10/11	MapR [SPARK-621] Add custom http header support. Improve work with security headers.

last-updated: Apr 11, 2022

GitHub Commit	Date (YYYY-MM-DD)	Comment
4000048	2019/10/16	MapR [SPARK-617 Can't use ssl via spark beeline
d3a0ec5	2019/10/22	MapR [SPARK-340] Jetty web server version at Spark should be updated to v9.4.X
c7e076e	2019/10/22	MapR [SPARK-626] Update kafka dependencies for Spark 2.4.4.0 in release MEP-6.3.0
c5cbbcc	2019/10/23	MapR [MS-925] After upgrade to MEP 6.2 (Spark 2.4.0) can no longer
5eaced8	2019/11/07	MapR [SPARK-629] Spark UI for job lose CSS styles
b0d5ee9	2019/11/11	MapR [SPARK-639] Default headers are adding two times
c99e9c9	2019/11/15	MapR [SPARK-627] SparkHistoryServer-2.4 is getting 403 Unauthorized home page for users(spark.ui.view.acls) via spark-submit

Known Issues

- MapR [SPARK-593], MapR [SPARK-558] - A Spark job can hang and the job output can be redirected to the `/opt/mapr/logs/pam.log` file if you use the spark-shell during login to the Spark Driver UI or if you try to open the Spark Web UI before it is initialized.
- MapR [SPARK-573] - A Spark job on a standalone node fails via the mapr-client. This happens because the `spark-defaults.conf` file can't be configured by Spark `configure.sh` because core `configure.sh` doesn't call it. **Workaround:** Two workarounds are possible:
  - Copy the `spark-defaults.conf` file from `/opt/mapr/spark/spark-<version>/conf/` into the same folder on the client node.
  - Run Spark `configure.sh` directly.

  The first workaround is more secure and stable, but both workarounds can be unreliable:
  - In some cases, copying the `spark-defaults.conf` file may be not enough.
  - Spark `configure.sh` is not documented for external use. In addition, Spark `configure.sh` is run implicitly by core `configure.sh`, and running it directly with the wrong commands can break the Spark configuration

Resolved Issues

- None.

Spark 2.4.0.0-1904 (EEP 6.2.0) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.4.0.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. This release of Spark has backward-compatibility changes, see the open-source Spark 2.4.0.0 Release Notes for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.4.0.0
Release Date	April 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.4.0.0-mapr-1904
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Starting with EEP 6.0.0, `keyStore` and `trustStore` passwords can be removed from the `spark-defaults.conf` file and can be set in the `/opt/mapr/conf/ssl-client.xml` file.
- Starting with EEP 6.0.0, after an upgrade, configuration files of previous versions are saved in the `/opt/mapr/spark` directory.
- The MapR 6.1 and EEP 6.0.0 release introduces "Simplified Security". If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- For a complete list of all new features, refer to the open source documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.3.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment

28ddfe9e	2019/05/17	MapR [SPARK-541] Avoid duplication of the first unexpired record

The following tickets are back-ported from Spark 2.4.1:

- SPARK-26709 - OptimizeMetadataOnlyQuery does not correctly handle the files with zero record

last-updated: Apr 11, 2022

- SPARK-26080 - Unable to run worker.py on Windows
- SPARK-26873 - FileFormatWriter creates inconsistent MR job IDs
- SPARK-26745 - Non-parsing Dataset.count() optimization causes inconsistent results for JSON inputs with empty lines
- SPARK-26677 - Incorrect results of not(eqNullSafe) when data read from Parquet file
- SPARK-26708 - Incorrect result caused by inconsistency between a SQL cache's cached RDD and its physical plan
- SPARK-26267 - Kafka source may reprocess data
- SPARK-26706 - Fix Cast$mayTruncate for bytes
- SPARK-26078 - WHERE .. IN fails to filter rows when used in combination with UNION
- SPARK-26233 - Incorrect decimal value with java beans and first/last/max... functions
- SPARK-27097 - Avoid embedding platform-dependent offsets literally in whole-stage generated code
- SPARK-26188 - Spark 2.4.0 Partitioning behavior breaks backwards compatibility
- SPARK-25921 - Python worker reuse causes Barrier tasks to run without BarrierTaskContext

Known Issues

- `pyspark.sql.utils.AnalysisException` - Python OJAI connector failure caused by incorrect resolution of python user-defined function calls by Spark SQL parser.

  The same SQL expressions from SELECT clause and GROUP BY clause resolves to different expression IDs.

  Sample SQL query that leads to `pyspark.sql.utils.AnalysisException`, the `stringtodate1(yelping_since)` expression is used in SELECT and GROUP BY, `stringtodate1` is python user-defined function:

  ```
  SELECT business_id, stringtodate1(yelping_since) AS startyear,
  avg(stars) AS avgstars FROM temp_table_name GROUP BY business_id,
  stringtodate1(yelping_since)
  ```

  Workaround: `stringtodate1(yelping_since)` expression in GROUP BY is replaced with alias `startyear`.

  ```
  SELECT business_id, stringtodate1(yelping_since) AS startyear, avg(stars)
  AS avgstars FROM temp_table_name GROUP BY business_id, startyear
  ```

Resolved Issues

- None.

Spark 2.3.3.0-1904 (EEP 6.1.1 and EEP 6.0.2) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.3.3.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. This release of Spark has backward-compatibility changes, see the open-source Spark 2.3.3 Release Notes for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.3.3
Release Date	April 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.3.3-mapr-1904
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Starting with EEP 6.0.0, `keyStore` and `trustStore` passwords can be removed from the `spark-defaults.conf` file and can be set in the `/opt/mapr/conf/ssl-client.xml` file.
- Starting with EEP 6.0.0, after an upgrade, configuration files of previous versions are saved in the `/opt/mapr/spark` directory.
- The MapR 6.1 and EEP 6.0.0 release introduces "Simplified Security". If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- For a complete list of all new features, refer to the open source documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.3.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
63acd83	2019/01/23	MapR [SPARK-374] Spark Hive example fails when we submit job from another(simple) cluster user
9a634a7	2019/01/23	MapR [SPARK-396] Interface change of sendToKafka
2b2c934	2019/01/25	MapR [SPARK-357] consumer groups are prepeneded with a "service_" prefix

Spark 2.2.1 - 2101 (EEP 5.0.6) Release Notes

The notes below relate specifically to the MapR Data Platform distribution for Apache Hadoop. You may also be interested in the open source Spark 2.2.1 Release Notes.

Spark Version	2.2.1
Release Date	January, 2021
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.2.1-mapr-2101
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Package Names for MapR Ecosystem Packs (MEPs)

Important Notes

- Although Spark 2.2 can connect to Hive Metastore 2.1, features of Hive that were added after Hive 1.2 are not supported by Spark.

  As of Spark 2.2.1 and EEP 5.0, Spark uses Kafka-1.0.1.

- Spark Yarn and standalone modes are only supported on clusters in MRv2 (YARN) mode. Spark Yarn and standalone modes not supported on clusters in MRv1 (classic) mode.

- Core 6.0 and EEP 5.0 introduce "Simplified Security." If you are using these versions and enable security in your cluster, scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.

- Spark-SQL is supported, but not fully compatible with Hive. See the Apache Spark documentation and the HPE Spark documentation for details.

last-updated: Apr 11, 2022

Fixes

This release includes the following new patches since the latest HPE Spark 2.2.1 release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
5c6b8d6	2020/11/04	MapR [SPARK-804] sparkContext.loadFromMapRDB throwing RuntimeException in scala code
aecb512	2020/11/23	MapR [SPARK-798] Structured Streaming rewinds offset to 0 upon re-subscription
db7098c	2021/01/11	MapR [SPARK-834] Backport SPARK-795 into Spark 2.2.1 (MEP 5.x)

Known Issues and Limitations

None.

Resolved Issues

None.

Spark 2.2.1-2009 (EEP 5.0.5) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.2.1.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. For more information, you may also wish to consult the open-source Spark 2.2.1 release notes.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.2.1
Release Date	September 2020
MapR Version Interoperability	See Component Versions for Released EEPs on page 5586 and EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.2.1-mapr-2009
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Although Spark 2.2 can connect to Hive Metastore 2.1, Hive features added after Hive 1.2 are not supported by Spark.
- Beginning in Spark 2.2.1 and EEP 5.0. Kafka-1.0.1 is using by Spark.
- Spark Yarn and Standalone modes are only supported on clusters in MRv2 (YARN) mode. It is not supported on clusters in MRv1 (classic) mode.
- MapR 6.0 and EEP 5.0 introduce "Simplified Security." If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive, but has the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but is not fully compatible with Hive. See the Apache Spark documentation and the MapR Spark documentation for details.

New in This Release

- For a complete list of new features, see the open-source Spark 2.2.1 release notes.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
ee0107a	2020/02/25	MapR [SPARK-675] SSL truststore password should NOT be logged
aeeb51b	2020/03/10	MapR [SPARK-677] No TLS protocol logging for Spark thrift server & spark history server

5979337	2020/04/30	MapR [SPARK-704] Backporting netty update from SPARK-22324
692f67d	2020/08/20	MapR [SPARK-787] HCP usage should be turn off by default

Known Issues

- None.

Resolved Issues

- None.

Spark 2.2.1-1912 (EEP 5.0.4) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.2.1.

last-updated: Apr 11, 2022

The notes below relate specifically to the MapR Distribution for Apache Hadoop. This release of Spark has backward-compatibility changes, see the open-source Spark 2.2.1 Release Notes for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.2.1
Release Date	December 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.2.1-mapr-1912
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Spark 2.2 can connect to Hive Metastore 2.1, but features of Hive added after Hive 1.2 are not supported by Spark.
- Starting from Spark 2.2.1 and EEP 5.0.0, Spark uses Kafka version 1.0.1.
- Spark Yarn and Standalone modes are supported only on clusters in MRv2 (YARN) mode. They are not supported on clusters in MRv1 (classic) mode.
- MapR 6.0 and EEP 5.0 and later introduce security by default. If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

Spark 2.3.2.0-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.3.2.0.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. This release of Spark has backward-compatibility changes, see the open-source Spark 2.3.2.0 Release Notes for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.3.2.0
Release Date	February 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.3.2-mapr-1901
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Starting with EEP 6.0.0, `keyStore` and `trustStore` passwords can be removed from the `spark-defaults.conf` file and can be set in the `/opt/mapr/conf/ssl-client.xml` file.
- Starting with EEP 6.0.0, after an upgrade, configuration files of previous versions are saved in the `/opt/mapr/spark` directory.
- The MapR 6.1 and EEP 6.0.0 release introduces "Simplified Security". If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

For a complete list of all new features, refer to the open source documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.3.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
fddc84f	2018/10/01	MapR [SPARK-325] Add examples for work with the MapR-DB JSON connector into the Spark project
a2b88ef	2018/10/16	MapR [SPARK-331] Remove snapshot versions of MapR dependencies from Spark
4f380b4	2018/10/23	[MAPR-32263] Seek called on unsubscribed partitions
e8d59b9	2018/10/24	[MAPR-32290] Spark processing offsets when messages are already TTL in the first batch
58b3115	2018/11/14	MapR [SPARK-352] Spark shell fails with "NoClassDefFoundError: org/apache/hadoop/fs/FSDataInputStream" if java is not available in PATH
fcee5ab	2018/11/15	MapR [SPARK-350] Deprecate Spark Kafka-09 package
a2a3a0f	2018/11/19	MapR [SPARK-326] Investigate possibility of writing Java example for the MapR-DB OJAI connector
da4e0b3	2018/11/27	MapR [SPARK-356] Merge MapR changes from kafka-09 package into the kafka-10
3608c7b	2018/11/29	MapR [SPARK-319] Fix for SparkR version check
2aaa6a5	2018/12/03	MapR [SPARK-349] Update OJAI client to v3 for Spark MapR-DB JSON connector
71f6153	2018/12/10	MapR [SPARK-137] Analyze the warning during compilation of OJAI connector
f62df7a	2018/12/13	MapR [SPARK-369] Spark 2.3.2 fails with error related to zookeeper

last-updated: Apr 11, 2022

cd75768	2018/12/27	MapR [SPARK-372] Support 4 digits version scheme for Spark
182a7b1	2019/01/08	[MSPARK-24355] Spark external shuffle server improvement to better handle block fetch requests.
6b28052	2019/01/09	MapR [SPARK-381] Kafka version changed to '1.1.1-mapr-SNAPSHOT'
fec2162	2019/01/11	MapR [SPARK-374] Spark Hive example fails when we submit job from another(simple) cluster user
609c0a8	2019/01/11	MapR [SPARK-363] Hive requests fail with ClassNotFoundException
e6a8a6b	2019/01/17	MapR [SPARK-410] All submitted jobs fail for Spark 2.3.2.0
f032694	2019/01/18	MapR [SPARK-363] Hive version changed to '1.2.0-mapr-spark-MEP-6.0.0'
2686b34	2019/01/21	MapR [SPARK-373] Unexpected behavior during job running in standalone cluster mode
b991202	2019/01/22	MapR [SPARK-419] Update hive-maprdb-json-handler jar for spark 2.3.2.0
63acd83	2019/01/23	MapR [SPARK-374] Spark Hive example fails when we submit job from another (simple) cluster user

Known Issues

- None.

Resolved Issues

- None.

Spark 2.3.1-1808 (EEP 6.0.0) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.3.1-1808.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. This release of Spark has backward-compatibility changes, see the open-source Spark 2.3.1 Release Notes for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.3.1
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536.

Source on GitHub	https://github.com/mapr/spark/tree/2.3.1-mapr-1808
GitHub Release Tag	2.3.1-mapr-1808
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Starting with EEP 6.0.0, `keyStore` and `trustStore` passwords can be removed from the `spark-defaults.conf` file and can be set in the `/opt/mapr/conf/ssl-client.xml` file.
- Starting with EEP 6.0.0, after an upgrade, configuration files of previous versions are saved in the `/opt/mapr/spark` directory.
- The MapR 6.1 and EEP 6.0.0 release introduces "Simplified Security". If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.
- The encryption algorithms used to Configure SSL Encryption for Spark on YARN on page 4037 are no longer available for your web service to pick up. You need to remove the `spark.ssl.enabledAlgorithms TLS_RSA_WITH_AES_128_CBC_SHA,TLS_RSA_WITH_AES_256_CBC_SHA` line to let parties negotiate the matching ciphers.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

For a complete list of all new features, refer to the open source documentation.

The following features of Spark 2.3.1 are **NOT officially supported**:

- Continuous Processing in Structured Streaming
- Stream-Stream Joins in Structured Streaming
- Spark on Kubernetes support

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.3.1 release. For details, refer to the commit log for this project in GitHub.

832411e	2018/08/14	[SPARK-306] Kafka clients 1.0.1 present in jars directory for Spark 2.3.1
c1ee416	2018/08/15	[MAPR-32014] Spark Consumer fails with java.lang.AssertionError

Known Issues

- You cannot connect to a Spark Thrift Server on a Kerberos-secured cluster as Kerberos and SSL are not compatible.

  Workaround: Modify the `hive.server2.use.SSL` to `false` in the `hive-site.xml` file.

- When you install a secure (MapR-SASL) cluster using the MapR Installer, the `configure.sh` script configures Hive after Spark. As a result, Spark copies the wrong `hive-site.xml` file and the Spark and Hive integration may not work correctly and you may have problems connecting to Spark beeline.

  Workaround: Check the `hive-site.xml` file in the Spark home directory, and, if needed, rerun the `configure.sh` script or copy the `hive-site.xml` file from your Hive home directory and restart services.

Resolved Issues

None.

Spark 2.2.1-1901 (EEP 5.0.2) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.2.1.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. This release of Spark has backward-compatibility changes, see the open-source Spark 2.1.0 Release Notes for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.2.1
Release Date	February 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.2.1-mapr-1901
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Spark 2.2 can connect to Hive Metastore 2.1. But, features of Hive added after Hive 1.2 are not supported by Spark.
- Starting from Spark 2.2.1 and EEP 5.0.0 Kafka version is updated to 1.0.1.
- Spark Yarn and Standalone modes are supported only on clusters in MRv2 (YARN) mode. It is not supported on clusters in MRv1 (classic) mode.
- MapR 6.0 and EEP 5.0 and later introduce security by default. If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

None.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.2.1 release. For details, refer to the commit log for this project in GitHub.

fe84d4b	2018/08/30	MapR [SPARK-279] Can't connect to spark thrift server with new Spark and Hive packages

Known Issues

- You cannot connect to a Spark Thrift Server on a Kerberos-secured cluster as Kerberos and SSL are not compatible.

  Workaround: Modify the `hive.server2.use.SSL` to `false` in the `hive-site.xml` file.

- When you install a secure (MapR-SASL) cluster using the MapR Installer, the `configure.sh` script configures Hive after Spark. As a result, Spark copies the wrong `hive-site.xml` file and the Spark and Hive integration may not work correctly and you may have problems connecting to Spark beeline.

  Workaround: Check the `hive-site.xml` file in the Spark home directory, and, if needed, rerun the `configure.sh` script or copy the `hive-site.xml` file from your Hive home directory and restart services.

- Spark versions up to and including 2.3.0 have the following security vulnerability:
  - CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 2.1.0-1904 (EEP 4.1.4) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.1.0.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. This release of Spark has backward-compatibility changes, see the open-source Spark 2.1.0 Release Notes for more information.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Spark Version	2.1.0
Release Date	April 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.1.0-mapr-1904
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Spark 2.2 can connect to Hive Metastore 2.1. But, features of Hive added after Hive 1.2 are not supported by Spark.
- Spark Yarn and Standalone modes are supported only on clusters in MRv2 (YARN) mode. They are not supported on clusters in MRv1 (classic) mode.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- For a complete list of all new features, refer to the open source documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.3.1 release. For details, refer to the commit log for this project in GitHub.

This MapR release includes the following new fixes since the latest MapR Spark 2.2.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
6fb5a8d	2018/04/25	[MAPR-31202] Spark History Server bug fixed. Redundant 'jsr311-api' artifact excluded
40d7890	2018/05/02	[MAPR-31274] Spark SQL Thrift Server cannot access hive-maprdbjson table
244a07c	2018/05/26	MapR [SPARK-226] Spark - pySpark Security Vulnerability
43d2314	2018/05/30	MapR [SPARK-214] Hive-2.1 poperties can't be read from a hive-site.xml as Spark uses Hive-1.2
a6b5a92	2018/06/13	[MAPR-31632] RM UI showing broken page for Spark jobs
232dbad	2018/07/18	[WEBUI] Avoid possibility of script in query param keys
455a796	2018/08/02	MapR [SPARK-300] Update Hive dependencies for spark 2.1.0
ec8bd03	2018/08/08	[SPARK-302] Local privilege escalation

GitHub Commit	Date (YYYY-MM-DD)	Comment
2a1db27	2018/08/28	[SPARK-16986][WEB-UI] Converter Started, Completed and Last Updated to client time zone in history page
55195ae	2018/08/30	MapR [SPARK-279] Cannot connect to Spark Thrift Server with new Spark and Hive packages

Known Issues

- You cannot connect to a Spark Thrift Server on a Kerberos-secured cluster as Kerberos and SSL are not compatible.

  Workaround: Modify the `hive.server2.use.SSL` to `false` in the `hive-site.xml` file.

- When you install a secure (MapR-SASL) cluster using the MapR Installer, the `configure.sh` script configures Hive after Spark. As a result, Spark copies the wrong `hive-site.xml` file and the Spark and Hive integration may not work correctly and you may have problems connecting to Spark beeline.

  Workaround: Check the `hive-site.xml` file in the Spark home directory, and, if needed, rerun the `configure.sh` script or copy the `hive-site.xml` file from your Hive home directory and restart services.

- Spark versions up to and including 2.3.0 have the following security vulnerability:
  - CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 2.2.1-1803 (EEP 5.0.0) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.2.1-1803.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.2.1 Release Notes.

Spark Version	2.2.1
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.2.1-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Spark 2.2 can connect to Hive Metastore 2.1. But, features of Hive added after Hive 1.2 are not supported by Spark.
- Starting from Spark 2.2.1 and EEP 5.0.0 Kafka is updated to 1.0.1.
- MapR 6.0 and EEP 5.0 and later introduce built-in security. If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.
- Spark Master port was changed to 8580.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- Support for Structured Streaming. See Structured Spark Streaming.
- Structured Streaming MapR Database OJAI Sink. See Structured Spark Streaming.
- PAM for Spark Web UIs on secure clusters. See PAM Authentication for Spark.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.2.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
5430a1d	2018/01/22	MapR [SPARK-16] Spark 2.2.1 porting
b3a4ffa	2018/01/22	[MAPR-30228] Spark example job failed with "/opt/mapr/conf/ssl_keystore (Permission denied)" error on Spark 2.1.X EEP 4.0 - MapR SASL security enabled
aeb9e9d	2018/01/22	MapR [SPARK-144] Add insertToMapRDB method for rdd for Java API
489e21d	2018/01/23	MapR [SPARK-16] Change Spark version in Warden files and configure.sh
548e492	2018/02/01	MapR [SPARK-143] Added PAM for Spark UIs for secure clusters
2499aba	2018/02/06	MapR [SPARK-135] Spark 2.2 with MapR Streams (Kafka 1.0)
1b37b08	2018/02/07	MapR [SPARK-21] Structured Streaming MapR Database Sink created

GitHub Commit	Date (YYYY-MM-DD)	Comment
2d9e466	2018/02/07	[MAPR-30583] InMemoryFileIndex changed to getFileBlockLocations in a parallel way
1a2e864	2018/02/08	MapR [SPARK-152] Incorrect date string parsing fixed
cca410c	2018/02/15	MapR [SPARK-153] Exception in spark job with configured labels on yarn-client mode
6f83937	2018/02/20	MapR [SPARK-159] Added possibility to configure secure ports as part of security by default
f341e85	2018/02/20	MapR [SPARK-155] Changed Spark Master port from 8080
f417a68	2018/02/26	MapR [SPARK-161] Include Kafka Structured streaming jar to Spark package
77ed36f	2018/02/28	MapR [SPARK-164] Update Kafka version to 1.0.1-mapr in Spark Kafka Producer module
5a390c1	2018/03/07	MapR [SPARK-170] StackOverflowException in equals method in DBMapValue
45cea4a	2018/03/19	MapR [SPARK-154] Spark R NoSuchElementException during start
3725eed	2018/03/21	MapR [SPARK-191] Incorrect work of MapR Database Sink 'complete' and 'update' modes fixed
844642e	2018/03/23	MapR [SPARK-143] Spark History Server does not require login for secured-by-default clusters
71cd6d2	2018/03/25	MapR [SPARK-194] Redirect to Spark History server
1c093b1	2018/03/26	MapR [SPARK-188] Could not connect to thrift server via spark beeline on kerberos cluster
4eff5df	2018/04/02	[SPARK-198] Update hadoop dependency version to 2.7.0-mapr-1803 for Spark 2.2.1
d324bfa	2018/04/04	[SPARK-205] Change Kafka dependencies versions

Known Issues

Spark versions up to and including 2.3.0 have the following security vulnerability:

- CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

last-updated: Apr 11, 2022

Spark 2.1.0-1803 (EEP 4.1.1) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.1.0-1803.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.1.0 Release Notes.

Spark Version	2.1.0
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.1.0-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Spark 2.2 can connect to Hive Metastore 2.1. But, features of Hive added after Hive 1.2 are not supported by Spark.
- Spark Yarn and Standalone modes are supported only on clusters in MRv2 (YARN) mode. It is not supported on clusters in MRv1 (classic) mode.
- MapR 6.0 and EEP 4.1 and later introduce built-in security. If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- PAM for Spark Web UIs on secure clusters.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.2.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
0a08b10	2018/01/18	[MAPR-30536] Spark SQL queries on Map column failed after upgrade
f160e85	2018/02/01	MapR [SPARK-143] Added PAM for Spark UIs for secure clusters

last-updated: Apr 11, 2022

GitHub Commit	Date (YYYY-MM-DD)	Comment
46da505	2018/02/07	[MAPR-30583] PartitioningAwareFileIndex changed to getFileBlockLocations in a parallel way
bf7296a	2018/02/08	MapR [SPARK-152] Incorrect date string parsing fixed
4c01f15	2018/03/01	[SPARK-21181] Release byteBuffers to suppress netty error messages
9473a5f	2018/03/07	MapR [SPARK-171] StackOverflowException in equals method in DBMapValue
3b5d608	2018/03/19	MapR [SPARK-190] Spark R NoSuchElementException during start
3e3f07e	2018/03/23	MapR [SPARK-143] Spark History Server does not require login for secured-by-default clusters
44f7810	2018/03/25	MapR [SPARK-194] Redirect to Spark History server

Known Issues

Spark versions up to and including 2.3.0 have the following security vulnerability:

- CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

Bug 25770: Removed invalid error message displayed at times during the running of Spark application:

```
ERROR MapRFileSystem: Failed to delete path, error: No such file or
directory
          (Tickets: MapR-28620, MapR-25770, MFS-1897)
```

Spark 2.1.0-1803 (EEP 3.0.3) Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.1.0-1803.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.1.0 Release Notes.

Spark Version	2.1.0
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.1.0-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Spark 2.2 can connect to Hive Metastore 2.1. But, features of Hive added after Hive 1.2 are not supported by Spark.
- Spark Yarn and Standalone modes are supported only on clusters in MRv2 (YARN) mode. It is not supported on clusters in MRv1 (classic) mode.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- None.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.2.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
0a08b10	2018/01/18	[MAPR-30536] Spark SQL queries on Map column failed after upgrade
46da505	2018/02/07	[MAPR-30583] PartitioningAwareFileIndex changed to getFileBlockLocations in a parallel way
bf7296a	2018/02/08	MapR [SPARK-152] Incorrect date string parsing fixed
4c01f15	2018/03/01	[SPARK-21181] Release byteBuffers to suppress netty error messages

3b5d608	2018/03/19	MapR [SPARK-190] Spark R NoSuchElementException during start

Known Issues

- The following error is displayed at times during the running of Spark application:

```
ERROR MapRFileSystem: Failed to delete path, error: No such file or
directory
(Tickets: MapR-28620, MapR-25770, MFS-1897)
```

- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 2.1.0-1801 Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.1.0-1801.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.1.0 Release Notes.

Spark Version	2.1.0
Release Date	February 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.1.0-mapr-1801
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Full support of MapR Streams is available only on MapR 5.2 and later clusters.
- Spark 2.1 can connect to Hive Metastore 2.1. But, features of Hive added after Hive 1.2 are not supported by Spark.
- Spark Standalone and Spark on YARN can only run on clusters in MRv2 (YARN) mode. They are not supported on clusters in MRv1 (classic) mode.
- MapR 6.0 and EEP 4.0 and later introduce built-in security. If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- Support for Java and Python APIs for MapR Database OJAI connector. See MapR Database OJAI Connector for Apache Spark.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.1.0 release. For details, refer to the commit log for this project in GitHub.

last-updated: Apr 11, 2022

7e3e1e7	2017/12/14	MapR [SPARK-121] Spark OJAI JAVA: Update functionality removed
5f2dd1d	2017/12/26	MapR [SPARK-140] Change the option name "tableName" to "tablePath" in the Spark/MapR Database connectors
c7f2f8a	2017/12/28	MapR [SPARK-139] Remove "update" related APIs from connector
496f040	2017/12/28	[SPARK-21321][SPARK CORE] Spark very verbose on shutdown
0a08b10	2018/01/18	[MAPR-30536] Spark SQL queries on Map column fails after upgrade

Known Issues

- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

Users logged in with a normal user account (not mapr or root) can run spark jobs on the cluster without disabling Spark SSL.

Spark 2.1.0-1710 Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.1.0-1710.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.1.0 Release Notes.

Spark Version	2.1.0
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.1.0-mapr-1710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

Important:

- Full support of MapR Streams is available only on MapR 5.2 and later clusters.
- Spark 2.1 can connect to Hive Metastore 2.1. But, features of Hive added after Hive 1.2 are not supported by Spark.
- Spark Standalone and Spark on YARN can only run on clusters in MRv2 (YARN) mode. They are not supported on clusters in MRv1 (classic) mode.
- MapR 6.0 and EEP 4.0 introduce "Simplified Security". If you are using these versions and enable security on your MapR cluster, MapR scripts automatically configure Spark security features.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

- Simplified Security - Starting in the MapR 6.0 and EEP 4.0 releases, you can use the "Enable Security" check box in the installer to enable security for the core platform and the installed ecosystem components. Alternatively, running `configure.sh -R` enables Spark security features if you have enabled security on your MapR cluster. See Security with Spark Standalone on page 4032 and Security with Spark on YARN on page 4036 for more information.

last-updated: Apr 11, 2022

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.1.0 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
f1a4e96	2017/08/03	[SPARK-16845][SQL] Fix code generation to prevent `GeneratedClass$SpecificOrdering` from growing beyond 64 KB
13def70	2017/08/07	[MAPR-28339] Fix race condition resulting in delete failures, when Spark SQL queries use "SaveAsTable" API
c64da80	2017/08/09	[MAPR-20331][SQL] Enhance Hive partition pruning predicate pushdown
b27ea82	2017/08/17	[MAPR-28705] Fix late arriving message
c170554	2017/08/17	[MAPR-18971][CORE] Upgrade Netty to 4.0.43.Final version
0de12ba	2017/08/18	[MAPR-28659] Fix issue where executor threads in Spark executor are stuck in a lock state
6a33e6f	2017/08/28	[MAPR-19307][PYSPARK] Ensure user conf is propagated to SparkContext
85004b1	2017/08/29	[MAPR-28460] Fix impersonation when data read from MapR Database via Spark-Hive
a75bbe8	2017/08/29	[SPARK-39] Remove ambiguous dependencies from Spark classpath
c5a87b0	2017/09/06	[MAPR-29052] Use waitForConsumerAssignment() instead of consumer.poll(0) to avoid initialization error in MapR Event Store For Apache Kafka client
cf96fdd	2017/09/11	[MAPR-29106] - Fix unsafe deserialization in Apache Spark launcher API
7942de3	2017/09/18	[SPARK-18991][CORE] Change ContextCleaner.referenceBuffer to use ConcurrentHashMap to make it faster
3d44f64	2017/09/18	[SPARK-45] Move Spark-OJAI connector code to Spark github repo
e2a4e2a	2017/09/25	[SPARK-20358][CORE] Fix executors failing stage on interrupted exception by cancelled tasks
e39c4b7	2017/10/03	[SPARK-69] Fix license problem when reading from JSON and writing to MapR Database
d444627	2017/10/06	[MAPR-29014]Fix message offset for MapR Core 6.0

Known Issues

- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 2.1.0-1707 Release Notes

This section provides reference information, including new features, patches, and known issues for Spark 2.1.0-1707.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.1.0 Release Notes.

Spark Version	2.1.0
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.1.0-mapr-1707
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Note:

- Full support of MapR Streams is available only on MapR 5.2 and later clusters.
- Spark 2.1 can connect to Hive Metastore 2.1. But, features of Hive added after Hive 1.2 are not supported by Spark.
- Spark Standalone and Spark on YARN can only run on clusters in MRv2 (YARN) mode. They are not supported on clusters in MRv1 (classic) mode.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

New in This Release

Spark 2.1.0-1707 introduces the following enhancement:

- Spark on Mesos

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.1.0 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
40dca4e	2017/07/28	[MAPR-28441] - Fix Spark Streaming's handling of zero offsets from Kafka 0.9
99daf6b	2017/06/30	[SPARK-19182][DSTREAM] Optimize the lock in `StreamingJobProgressListener` to not block UI when generating streaming jobs.
8e3b9ed	2017/06/27	Revert earlier fix for MAPR-25770.
52b06b9	2017/06/23	[MAPR-27845] Fix the manner in which Spark determines Hive's security configuration.
6917681	2017/06/14	[MAPR-27840] Fix wrong type casting when importing data from Oracle.
17f311e	2017/06/06	[SPARK-20393][WEBU UI] Strengthen Spark to prevent XSS vulnerabilities.
e10e660	2017/05/30	Revert [SPARK-16736][CORE][SQL] to avoid superfluous filesystem calls.
d8f8657	2017/05/29	[SPARK-18949][SQL] [BACKPORT-2.1] Add `recoverPartitions` API to `Catalog` interface.
7733a1c	2017/05/29	[SPARK-19459][SQL][BRANCH-2.1] Support nested char and varchar fields in ORC.
f31976e	2017/05/22	[MAPR-27519] Improve performance of calculating web UI counters for Kafka-streaming.
6a3b683	2017/05/22	[SPARK-19276][CORE] Expose `FetchFailure` exceptions hidden by user exceptions.
333371c	2017/05/22	[SPARK-19597][CORE] Add a test case for task deserialization errors.
377e2ea	2017/05/22	[SPARK-17931] Eliminate unnecessary task serialization.
0788b14	2017/05/22	[SPARK-18662] Move resource managers to their own sub-directories.
fb5fca1	2017/05/22	Fix Mesos build breakage for Scala 2.10.
e05a1e9	2017/05/22	[SPARK-17062][MESOS] Add conf option to Mesos disfixer.
e48f72e	2017/05/22	[SPARK-18836][CORE] Improve performance by serializing a single copy of the task metrics in the `DAGScheduler`.
807ba4d	2017/05/22	[SPARK-18761][CORE] Introduce a "task reaper" to oversee killing of tasks in executors.

GitHub Commit	Date (YYYY-MM-DD)	Comment
54413bd	2017/05/22	[SPARK-20359][SQL] Avoid unnecessary execution in `EliminateOuterJoin` that can lead to NPE.
c919bdb	2017/05/22	[SPARK-19893][SQL] Avoid running DataFrame set operations on map types.
bd90640	2017/05/22	[SPARK-18863][SQL] Return an error if a subquery's output contains non-aggregate expressions without GROUP BY.
b898e28	2017/05/22	[SPARK-20280][CORE] Fix `FileStatusCache Weigher` to avoid integer overflow.
7c3b1b2	2017/05/22	[SPARK-19748][SQL] Fix refresh of an `InMemoryFileIndex` with `FileStatusCache`. Correct the order of operations.
58f2250	2017/05/22	[SQL] Improve the readability of partition handling code.
b3430f7	2017/05/22	[SPARK-20059][YARN] Use the correct classloader for `HBaseCredentialProvider`.
285be99	2017/05/19	[SPARK-20043][ML] Fix the `DecisionTreeModel` so the `ImpurityCalculator` builder handles uppercase impurity type Gini.
9c60a4d	2017/05/19	[SPARK-20125][SQL] Fix conversion of an Option type to a DataSet, when the Option contains a map type.
6663ca6	2017/05/19	[SPARK-18717][SQL] Fix code generation when mapping to an immutable Scala Map.
d602458	2017/05/19	[SPARK-20086][SQL] Fix `CollapseWindow` so it does not collapse dependent adjacent windows.
4755b36	2017/05/19	[SPARK-19925][SPARKR] Fix SparkR `spark.getSparkFiles` to avoid failures when called on executors.
dac1c4a	2017/05/19	[SPARK-19237][SPARKR][CORE] Fix `spark-submit` on Windows to handle the case where Java is not installed.
f48a43a	2017/05/19	SPARK-20017][SQL] Fix the `str_to_map` and `explode` functions to avoid NPEs. Change the nullability of the `StringToMap` function from false to true.

148167b	2017/05/16	[MAPR-26414] Fix Spark History Server memory leak.
1a9b364	2017/05/15	Update dependencies after ECO-1703 release.
3554f31	2017/05/04	[SPARK-33] Fix streaming example.

GitHub Commit	Date (YYYY-MM-DD)	Comment
3ae224b	2017/04/28	[SPARK-19019][PYTHON] [BRANCH-2.0] Fix hijacked `collections.namedtuple`. Port cloudpickle changes needed for PySpark to work with Python 3.6.0.
4584170	2017/04/28	[SPARK-19146][CORE] Drop more elements when `stageData.taskData.size` > retainedTasks.
a259c8e	2017/04/28	[MAPR-26287] Remove unnecessary code from `hadoop-version-picker.sh`.
c0c94e5	2017/04/28	[MAPR-26414] Fix Spark History Server memory leak.

Known Issues

- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 2.1.0-1703 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.1.0 Release Notes.

Spark Version	2.1.0
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.1.0-mapr-1703
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)
API Changes for this Version	See Spark API Changes on page 4123.

Note: For some important Spark limitations, See "Known Issues and Limitations" later in this release note.

New in This Release

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
f4bf0f5	2017/03/16	[MAPR-26060] Fixed case when mapr-streams make gaps in offsets (#97).
b6f643d	2017/03/09	Ported features from kafka 10 to kafka 9
b2d468e	2017/03/09	Merge remote-tracking branch 'origin/branch-2.1.0-mapr' into branch-2.1.0-mapr.
8aba33a	2017/03/06	Merge pull request #95 from mapr/spark-2.1.1-critical-backport.
c64db71	2017/03/06	[SPARK-18589][SQL] Fix Python UDF accessing attributes from both side of join.
417eca2	2017/03/06	[SPARK-19120] Refresh Metadata Cache After Loading Hive Tables.
0422b78	2017/03/06	[SPARK-18700][SQL] Add StripedLock for each table's relation in cache.
a45edcc	2017/03/06	[SPARK-19129][SQL] SessionCatalog: Disallow empty part col values in partition spec.
b6529d8	2017/03/06	[SPARK-19520][STREAMING] Do not encrypt data written to the WAL.
edfa296	2017/03/06	[SPARK-19750][UI][BRANCH-2.1] Fix redirect issue from http to https.
0c13e47	2017/03/06	[SPARK-19652][UI] Do auth checks for REST API access (branch-2.1).
2e3fcd3	2017/03/06	[SPARK-19220][UI] Make redirection to HTTPS apply to all URIs. (branch-2.1).
bfb75e5	2017/03/06	[SPARK-19766][SQL] Constant alias columns in INNER JOIN should not be folded by FoldablePropagation rule.
611e920	2017/03/01	[MAPR-26289][SPARK-2.1] Streaming general improvements (#93).
519f6f6	2017/02/27	Merge pull request #92 from mapr/mapr-26258.
9841429	2017/02/27	Set default HBase version to 1.1.8.
8c85366	2017/02/27	[MAPR-26258] hbasecontext.HBaseDistributedScan Example fails.
82a01e7	2017/02/13	Changes from Kafka10 package were ported to Kafka09 package.

GitHub Commit	Date (YYYY-MM-DD)	Comment
7577dd7	2017/02/09	Merge pull request #88 from mapr/mapr-26076-spark-2.1.0.
a90ea6e	2017/02/09	[SPARK-15844][CORE] HistoryServer doesn't come up if spark.authenticate = true.
3a83ddb	2017/02/08	Merge pull request #87 from mapr/mapr-26053.
608e920	2017/02/08	[MAPR-26053] Include MapR Classes to the default value of spark.sql.hive.metastore.sharedPrefixes.
5fca03a	2017/01/23	Merge pull request #85 from mapr/mapr-24068.
33830be	2017/01/23	[MAPR-24068] YARN throws exception when label expression set.
e4263dc	2017/01/17	Merge pull request #84 from mapr/mapr-25807.
c9a53dc	2017/01/17	[MAPR-25807] Spark-Warehouse path computes incorrectly.
f7b6fcc	2017/01/16	Merge pull request #83 from mapr/thrift-maprsasl-spark-2.1.0.
ad8a592	2017/01/16	Add MapR-SASL support for Thrift Server.
a0d8c09	2017/01/12	Adding scala library.
a5f1bb2	2017/01/12	[MAPR-25713] Spark might try to load MapR Class Loader multiple times and fail.
6683ffc	2017/01/12	[SPARK-18528][SQL] Fix a bug to initialise an iterator of aggregation buffer.
ed5b22f	2017/01/12	[MAPR-25311] Bump Spark dependencies after ECO-1611 release.
effc5ba	2017/01/12	[MINOR] Fix spark-jars.sh script.
fa6f142	2017/01/12	[MAPR-24603] Could not launch beeline shell after starting Spark thrift server.
fc17f1a	2017/01/12	fixed syntax error in V09DirectKafkaWordCount example (#75).
c7de39f	2017/01/12	Spark 2.0.1 MAPR-streams Python API (#73).
e338b71	2017/01/12	[MAPR-24415] SPARK_JAVA_OPTS is deprecated (#71).
de237dc	2017/01/12	Kafka streaming producer added. (#66).
adb91d4	2017/01/12	Fixed Scala Style for SparkHiveExample.

GitHub Commit	Date (YYYY-MM-DD)	Comment
5e4ba56	2017/01/12	[MAPR-24491] HBase classpath might contain Hive libraries.
6935a9a	2017/01/12	Minor fix for previous commit.
14902af	2017/01/12	Added script for MAPR-24374.
ae730d2	2017/01/12	Some minor changes to spark-defaults.conf.
0d2545c	2017/01/12	Changed default HBase version to 1.1.1 in compatibility.version.
dfda5f3	2017/01/12	Streaming example was refactored.
583a764	2017/01/12	[MAPR-24470] HiveFromSpark test fails in yarn-cluster mode.
f03efbe	2017/01/12	Changed Hive execution version to 1.2.0.
e2dc96b	2017/01/12	Added spark streaming integration with kafka 0.9 and mapr-streams.
b6d6609	2017/01/12	Added MapR Repo.
6e2f22e	2017/01/12	[MAPR-23559] Spark PID in /opt/mapr/pid.
4bbbfc1	2017/01/12	[MAPR-22940] Failed to connect Spark beeline (after Spark thrift server is started) on Kerberos cluster.
979a663	2017/01/12	Remove Hive jars from generated classpath for Hive.
3bc9863	2017/01/12	Fix hardcoded Hive library path.
8801758	2017/01/12	[MAPR-23203] Remove derby jars from generated Hive classpath.
4e9bd0f	2017/01/12	[MAPR-18865] Unable to submit Spark apps from Windows client.
12d25e8	2017/01/12	Skip maven clean task on the parent module.
9ef2527	2017/01/12	New: Issue with running Hive commands in Spark.
66002ec	2017/01/12	Spark warden.services.conf should have dependency on CLDB.
ddcbed7	2017/01/12	Remove DFS shuffle settings.
b7cc4bb	2017/01/12	Fix bugs in the logic to avoid SSH for localhost.
1495ce6	2017/01/12	Copy every file in the conf directory into the distribution package.
647579b	2017/01/12	Create spark-defaults.conf for MapR.
f05c39b	2017/01/12	Avoid SSH to localhost when stopping secondary instances.
500a83c	2017/01/12	Add htrace jar to Spark classpath for hbase 0.98.

last-updated: Apr 11, 2022

GitHub Commit	Date (YYYY-MM-DD)	Comment
e19480e	2017/01/12	Support hbase classpath computation in util script.
8d8db1e	2017/01/12	Created ext-util.
1b5e0d3	2017/01/12	Adding external conf and scripts.
de9bdaf	2017/01/12	Enable SPARK_HIVE mode while building.
f64b395	2017/01/12	Build Spark on MapR.
de78691	2017/01/12	Spark Master failed to start in HA mode.
d9eef52	2017/01/12	The datanucleus jar in Spark need to be updated for Bug 21228.
89e1555	2017/01/12	Change dependencies to MapR and bump Hadoop version.
9e41ce0	2017/01/12	Change Spark version.

Known Issues and Limitations

- Spark 2.1 does not support Spark Structured Streaming.
- Full support of MapR Event Store For Apache Kafka is available only on clusters with MapR 5.2 and later.
- Spark 2.1 is able to connect to Hive Metastore 2.1, but features of Hive that were added after Hive 1.2 are not supported by Spark.
- Spark is not able to submit jobs to YARN when the cluster is in "classic" mode, even if YARN is installed and configured.
- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-26254:** Spark Standalone is not fully supported on Kerberos-secured clusters.
- **MAPR-26039:** Spark does not propagate mapr_sec_enabled variable to Driver.
- **MAPR-25770:** MapR-FS logs ERROR when Spark is trying to delete an already-deleted file.
- Filter push-down is not supported with MapR Database.
- The MapR Database Binary Connector for Apache Spark supports MapR Database binary tables except for the "bulk load" operation (SPARK-7).
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 2.0.1-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Spark 2.0.1-1707.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.0.1 Release Notes.

Spark Version	2.0.1
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.0.1-mapr-1707
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Important:

- Full support of MapR Streams is available only on MapR 5.2 and later clusters.
- You cannot submit Spark jobs in YARN mode when the cluster is running in MRv1(classic) mode. This applies even if you have installed and configured YARN in your cluster.
- When integrating Hive with Spark 2.0.1-1707, use Hive 1.2.-1707, which contains the fix for MAPR-26310.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 2.0.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
bcb1640	2017/05/22	[MAPR-27519] Improve performance of calculating web UI counters for Kafka-streaming.
ab0a3f2	2017/05/16	[SPARK-19019][PYTHON] [BRANCH-2.0] Fix hijacked `collections.namedtuple`. Port cloudpickle changes needed for PySpark to work with Python 3.6.0.
9faac4a	2017/05/05	[MAPR-26414] Fix Spark History Server memory leak.
46b1913	2017/05/04	[SPARK-33] Fix streaming example.
ab1f040	2017/05/04	[SPARK-19146][CORE] Drop more elements when stageData.taskData.size > retainedTasks.
5e61eb7	2017/05/04	[MAPR-26287] Remove unnecessary code from hadoop-version-picker.sh.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
2b16ad3	2017/05/04	[MAPR-26414] Fix Spark History Server memory leak.

Known Issues and Limitations

- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-25052:** Spark Thrift Server does not start on clusters secured by MapR-SASL.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 1.6.1-1707 Release Notes

This section provides reference information, including new features, fixes, known issues, and limitations for Spark 1.6.1-1707.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 1.6.1 Release Notes.

Spark Version	1.6.1
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	1.6.1-mapr-1707
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Important:

- To integrate Spark 1.6.1 with MapR Streams, you must install the latest Kafka 0.9.0.0 package.
- Full support of MapR Streams is available only on MapR 5.2 and later clusters.
- When integrating Hive with Spark 2.0.1-1707, use Hive 1.2.-1707, which contains the fix for MAPR-26310.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 1.6.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	MapR Fix Number and Description
c352e23	2017/05/16	[MAPR-27339] Fix failures when Spark jobs write to Hive tables.
0fdd46e	2017/05/15	[SPARK-16664][SQL] Fix persist calls on DataFrames with more than 200 columns.

Known Issues and Limitations

- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-19761:** On a secure cluster, MapR software does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 2.0.1-1703 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.0.1 Release Notes.

Spark Version	2.0.1
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.1.0-mapr-1703
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)
API Changes for this Version	See Spark API Changes on page 4123.

Note: For some important Spark limitations, See "Known Issues and Limitations" later in this release note.

New in This Release

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark release. In addition, Spark 2.0.1-1703 includes backports of all the fixes contained in Apache Spark 2.0.2. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
b5fdf9e	**2017/03/01**	Merge pull request #94 from mapr/mapr-26289-spark-2.0.1.
f75cad8	2017/03/01	Set default poll timeout to 120s.
1cf7251	2017/03/01	Added include-kafka-09 profile to Assembly.
c9c6030	2017/02/24	[MAPR-26060] Fixed case when mapr-streams make gaps in offsets (#91).
36debc8	2017/02/09	Merge pull request #89 from mapr/mapr-26076-spark-2.0.1.
ed262d0	2017/02/09	[SPARK-15844][CORE] HistoryServer doesn't come up if spark.authenticate = true.
674f9bd	2017/02/08	Merge pull request #86 from mapr/spark-2.0.2-porting.
529e51b	2017/02/08	Fixed version for Kafka 0.10 SQL.
e680ec2	2017/02/06	[SPARK-18283][STRUCTURED STREAMING][KAFKA] Added test to check whether default starting offset in latest.
a68148e	2017/02/06	[SPARK-18125][SQL][BRANCH-2.0] Fix a compilation error in codegen due to splitExpression.
316f706	2017/02/06	[SPARK-17849][SQL] Fix NPE problem when using grouping sets.
01f3743	2017/02/06	[SPARK-17693][SQL] [BACKPORT-2.0] Fixed Insert Failure To Data Source Tables when the Schema has the Comment Field.
a996282	2017/02/06	[SPARK-17981][SPARK-17957][SQL] [BACKPORT-2.0] Fix Incorrect Nullability Setting to False in FilterExec.
6d9dee4	2017/02/06	[SPARK-18189][SQL][FOLLOWUP] Move test from ReplSuite to prevent java.lang.ClassCircularityError.
cdd189c	2017/02/06	[SPARK-17337][SPARK-16804][SQL] [BRANCH-2.0] Backport subquery related PRs.
681a839	2017/02/06	[SPARK-18200][GRAPHX] [FOLLOW-UP] Support zero as an initial capacity in OpenHashSet.
cb68e70	2017/02/06	[SPARK-18200][GRAPHX] Support zero as an initial capacity in OpenHashSet.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
42d7574	2017/02/06	[SPARK-18111][SQL] Wrong approximate quantile answer when multiple records have the minimum value(for branch 2.0).
95aeff9	2017/02/06	[SPARK-18160][CORE][YARN] spark.files & spark.jars should not be passed to driver in yarn mode.
37fcf10	2017/02/06	[SPARK-16796][WEB UI] Mask spark.authenticate.secret on Spark environ.
b1723aa	2017/02/06	[SPARK-18133][BRANCH-2.0] [EXAMPLES][ML] Python ML Pipeline Exampl.
a7be955	2017/02/06	[SPARK-18144][SQL] logging StreamingQueryListener$QueryStartedEvent.
724a6e3	2017/02/06	[SPARK-18114][HOTFIX] Fix line-too-long style error from backport of SPARK-18114.

159c854	2017/02/06	[SPARK-17753][SQL] Allow a complex expression as the input a value based case statement.
ca37182	2017/02/06	[SPARK-17587][PYTHON][MLLIB] SparseVector __getitem__ should follow __getitem__ contract.
825c9e3	2017/02/06	[SPARK-17736][DOCUMENTATION] [SPARKR] Update R README for rmarkdown,…
258b068	2017/02/06	[MINOR][DOC] Add an up-to-date description for default serialization during shuffling.
92cd75c	2017/02/06	Updated the following PR with minor changes to allow cherry-pick to branch-2.0.
60d2ac2	2017/02/06	[SPARK-17721][MLLIB][ML] Fix for multiplying transposed SparseMatrix with SparseVector.
e6d1fbe	2017/02/06	[SPARK-17672] Spark 2.0 history server web Ui takes too long for a single application.
90df14b	2017/02/06	[SPARK-17712][SQL] Fix invalid pushdown of data-independent filters beneath aggregates.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
7120a46	2017/02/06	[SPARK-16343][SQL] Improve the PushDownPredicate rule to pushdown predicates correctly in non-deterministic condition.
539f476	2017/02/06	[MINOR][DOCS] Fix th doc. of spark-streaming with kinesis.
27de1d4	2017/01/05	Merge pull request #81 from mapr/mapr-25713.
8ea6501	2017/01/05	[MAPR-25713] Spark might try to load MapR Class Loader multiple times and fail.
7e9e5f4	2016/12/26	Merge pull request #80 from mapr/mapr-25638.
965975c	2016/12/26	[SPARK-18528][SQL] Fix a bug to initialise an iterator of aggregation buffer.
96b1fea	2016/12/12	Merge pull request #79 from mapr/mapr-25311.
c5f682b	2016/12/12	[MAPR-25311] Bump Spark dependencies after ECO-1611 release.

Known Issues and Limitations

- Spark 2.0.1 does not support Spark Structured Streaming.
- Full support of MapR Event Store For Apache Kafka is available only on clusters with MapR 5.2 and later.
- Spark is not able to submit jobs to YARN when the cluster is in "classic" mode, even if YARN is installed and configured.
- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-25052:** Spark Thrift Server does not start on clusters secured by MapR-SASL.
- **MAPR-26039:** Spark does not propagate mapr_sec_enabled variable to Driver.
- Spark versions up to and including 2.3.0 have the following security vulnerability:CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 1.6.1-1703 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 1.6.1 Release Notes.

Spark Version	1.6.1
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536.

Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	1.6.1-mapr-1703
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

Note: For some important Spark limitations, See "Known Issues and Limitations" later in this release note.

New in This Release

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive-on-Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive. For details, see the Apache Spark documentation and the MapR Spark documentation.

Fixes

This MapR release includes the following new fixes since the latest MapR Spark 1.6.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	MapR Fix Number and Description
9275605	2017/03/16	Fixed gap handling.
dbf3b16	2017/03/10	Removed overridden methods count, countApprox, isEmpty from kafkaRDD.
3014abc	2017/03/07	[MAPR-26040] Kafka streaming module was refactored (#96).
62def95	2017/03/06	[BUILD][1.6] Fix compilation.
e092b35	2017/02/23	Merge pull request #90 from mapr/spark-1.6.3-porting.
04cbcb0	2017/02/23	[SPARK-17696][SPARK-12330] [CORE] Partial backport of to branch-1.6.
9be6167	2017/02/13	[SPARK-14357][CORE] Properly handle the root cause being a commit denied exception.
566a5a9	2017/02/13	[SPARK-16182][CORE] Utils.scala -- terminateProcess() should call Process.destroyForcibly() if and only if Process.destroy() fails.
31843fc	2017/02/13	[SPARK-17618] Fix invalid comparisons between UnsafeRow and other row formats.
2781e0b	2017/02/13	[SPARK-8428][SPARK-13850] Fix integer overflows in TimSort.

Known Issues and Limitations

- To integrate Spark 1.6.1 with MapR Event Store For Apache Kafka, you must install the latest Kafka 0.9.0.0 package.

- Full support of MapR Event Store For Apache Kafka is available only on clusters with MapR 5.2 and later.
- MAPR-17271: On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- MAPR-19761: On a secure cluster, MapR software does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 2.0.1-1611 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 2.0.1 Release Notes.

Spark Version	2.0.1
Release Date	December 9, 2016
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	2.0.1-mapr-1611
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive on Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive; for details, see the Apache Spark documentation and the MapR Spark documentation.

Note: For the API changes in this version, see Spark 2.0.1 API.

Fixes

This MapR release includes the following new fixes on top of the Apache Spark 2.0.1 release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
bed0ba9	2016-11-14	[MINOR] Fixed the spark-jars.sh script.
287a9b2	2016-11-09	[MINOR] Removed the unused config template.
b05ddad	2016-11-09	[MAPR-24603] Could not launch the Beeline shell after starting the Spark Thrift Server.
b64908b	2016-11-07	Fixed a syntax error in V09DirectKafkaWordCount example (#75).
b6788d0	2016-11-01	Spark 2.0.1 MapR-Streams Python API (#73).

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
b1dff21	2016-10-31	[MAPR-24415] SPARK_JAVA_OPTS was deprecated (#71).
361effd	2016-10-26	[MAPR-24863] Added spark-defaults template for installer (#69).
a1e0492	2016-10-20	[MAPR-25002] FileNotFoundException during SparkHiveExample (#68).
7357889	2016-10-12	Added the Kafka streaming producer (#66).
d0c05d4	2016-10-07	[SPARK-17707][WEBUI] The Web UI prevented the spark-submit application from finishing.
23f9305	2016-09-08	[SPARK-15487][WEBUI] Spark Master UI to reverse proxy Application and Workers UI.
d99c601	2016-10-05	Fixed Scala style for SparkHiveExample.
fb327ad	2016-10-05	Changed the Kafka 0.9 version to 2.0.1.
cd374ce	2016-10-05	Changed version to 2.0.1-mapr-SNAPSHOT.
73a298a	2016-09-20	[MAPR-24491] The HBase classpath might contain Hive libraries.
f010164	2016-09-14	Minor fix for previous commit.
f3ec15a	2016-09-14	Added script for MAPR-24374.
4292173	2016-09-13	Some minor changes to spark-defaults.conf.
36e847d	2016-09-13	Changed the default HBase version to 1.1.1 in compatibility.version.
d721e09	2016-09-12	Refactored a streaming example.
9aba5a1	2016-09-12	[MAPR-24470] HiveFromSpark test failed in yarn-cluster mode.
70809c9	2016-09-08	Changed the Hive execution version to 1.2.0.
acabece	2016-09-01	Added spark streaming integration with Kafka 0.9 and Mapr-Streams.
641faa3	2016-08-31	Added MapR Repo.
1a2e25e	2016-08-22	[MAPR-23559] Spark PID in /opt/mapr/pid.
690788c	2016-05-25	[MAPR-22940] Failed to connect Spark Beeline (after Spark Thrift Server is started) on Kerberos cluster.
fe2c1ce	2016-05-03	Removed Hive jars from generated classpath for Hive.
85c45d1	2016-05-03	Fixed hardcoded Hive library path.
1124353	2016-04-29	[MAPR-23203] Removed derby jars from the generated Hive classpath.
3bc0cd4	2016-04-13	[MAPR-23068] Spark samples failed in Hue 3.9.
506bce9	2016-03-16	[MAPR-18865] Unable to submit Spark apps from Windows client.
9c2fda0	2015-10-20	Skip maven clean task on the parent module.
b699ada	2015-07-30	New: Issue with running Hive commands in Spark.
49d106a	2015-07-28	Spark warden.services.conf should have a dependency on the CLDB.
d7425bd	2015-05-20	Removed DFS shuffle settings.
5ed864c	2015-04-19	Fixed bugs in the logic to avoid SSH for localhost.
ad12fcf	2015-04-14	Copied every file in the conf directory into the distribution package.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
4b15fb8	2015-04-10	Created spark-defaults.conf for MapR.
e9e4ab1	2015-04-08	Avoided SSH to localhost when stopping secondary instances.
c8405cd	2015-02-25	Added htrace jar to Spark classpath for HBase 0.98.
c502093	2015-02-25	Added the Scala library.
254aecf	2015-02-25	Supported HBase classpath computation in util script.
f6319e4	2015-02-24	Created ext-util.
c850a32	2015-02-24	Added external conf and scripts.
93279f6	2015-02-06	Enabled SPARK_HIVE mode while building.
c851ac8	2015-10-12	Built Spark on MapR.
7e1b86c	2015-11-25	Spark Master failed to start in HA mode.
bcf7665	2015-02-04	Updated the datanucleus jar in Spark for Bug 21228.
fbaf081	2015-08-22	Changed the dependencies for MapR and increased the Hadoop version from 2.2.0 to 2.7.0.

Known Issues and Limitations

Known issues:

- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-25052:**The Spark Thrift Server does not start on clusters secured by MapR-SASL.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Limitations:

- Spark 2.0.1 Standalone mode is supported only on clusters in MRv2 (YARN) mode.
- Full support of MapR Event Store For Apache Kafka is available only on clusters with MapR 5.2 and later.

Resolved Issues

None.

Spark 1.6.1-1611 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open-source Spark 1.6.1 Release Notes.

Spark Version	1.6.1
Release Date	December 9, 2016
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	1.6.1-mapr-1611
Package Names	The following packages are associated with this release:

	• mapr-spark-1.6.1.201612010646-1.noarch.rpm • mapr-spark-master-1.6.1.201612010646-1.noarch.rpm • mapr-spark-historyserver-1.6.1.201612010646-1.noarch.rpm • mapr-spark_1.6.1.201612010646_all.deb • mapr-spark-master_1.6.1.201612010646_all.deb • mapr-spark-historyserver_1.6.1.201612010646_all.deb

New in This Release

This version of Spark supports integration with Hive and MapR Event Store For Apache Kafka. However, note the following exceptions:

- Hive on Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive; for details, see the Apache Spark documentation and the MapR Spark documentation.
- If you want to integrate Spark 1.6.1 with MapR Event Store For Apache Kafka, you must install the latest Kafka 0.9.0.0 package.
- Full support of MapR Event Store For Apache Kafka is available only on MapR 5.2 clusters.

Fixes

This MapR release includes the following new fixes since the previous release of MapR Spark 1.6.1. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
50fbc6b	2016-09-23	[SPARK-17210][SPARKR] The sparkr.zip archive is not distributed to executors when running sparkr in RStudio.
bba4dfa	2016-09-29	MAPR-24602: Spark RStudio jobs failed with a java.net.SocketTimeoutException.
e837cec	2016-10-10	[MAPR-24635] The Spark History Server takes a long time to display the stage details.
847bc6f	2016-10-24	[MAPR-24870] Reverted changes that were made in MAPR-23243.
3edeef6	2016-10-28	[MAPR-24415] SPARK_JAVA_OPTS is deprecated.
175c9b5	2016-11-04	[MAPR-13522] [CORE] Executor should kill itself when it is unable to send a heartbeat to the driver more than *n* times.
92e042e	2016-11-04	[MAPR-13522] [CORE] Fixed the exit log place for heartbeat.
26990db	2016-11-11	[MAPR-25223] SparkR did not work.

Known Issues and Limitations

- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark Master and Spark History Server.
- **MAPR-19761:** On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift Server will not start.

- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Resolved Issues

None.

Spark 1.6.1-1609 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the open source Spark 1.6.1 Release Notes

Spark Version	1.6.1
Release Date	September 30, 2016
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Spark Support Matrix on page 5636.
Source on GitHub	https://github.com/mapr/spark/tree/1.6.1-mapr-1609
GitHub Release Tag	1.6.1-mapr-1609
Package Names	The following packages are associated with this release: • `mapr-spark-1.6.1.201609271200-1.noarch.rpm` • `mapr-spark_1.6.1.201609271200_all.deb` • `mapr-spark-historyserver-1.6.1.201609271200-1.noarch.rpm` • `mapr-spark-historyserver_1.6.1.201609271200_all.deb` • `mapr-spark-master-1.6.1.201609271200-1.noarch.rpm` • `mapr-spark-master_1.6.1.201609271200_all.deb`

Important Notes

- If you want to integrate Spark 1.6.1-1609 with MapR Event Store For Apache Kafka, you must install the Kafka 0.9.0-1607 package.
- Full support of MapR Event Store For Apache Kafka is available only on MapR 5.2 clusters.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive on Spark is not supported.
- Spark-SQL is supported, but it is not fully compatible with Hive; see the Apache Spark documentation and MapR Spark documentation for details.

Fixes

This release by MapR includes the following new fixes since the previous release of MapR Spark 1.6.1. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comments
2b4ae57	2016-09-19	[MAPR-24603] This fix fixes the issue where a beeline shell could not be launched after starting Spark.

last-updated: Apr 11, 2022

GitHub Commit	Date (YYYY-MM-DD)	Comments
b2d53e7	2016-09-20	[MAPR-24491] This fix fixes the issue where the HBase classpath might contain Hive libraries.
b9de0fb	2016-09-26	[MAPR-24678] This fix fixes the issue where PySpark is unable to consume from MapR Event Store For Apache Kafka.

Known Issues

- **MAPR-17271**: On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-19761:** On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark 1.6.1-1608 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the open source Spark 1.6.1 Release Notes

Spark Version	1.6.1
Release Date	September 1, 2016
MapR Version Interoperability	See the Interoperability Matrices on page 5519, Ecosystem Support Matrix (Pre-5.2 releases) on page 5625, and Spark Support Matrix on page 5636.
Source on GitHub	https://github.com/mapr/spark/tree/1.6.1-mapr-1608
Package Names	The following packages are associated with this release: • `mapr-spark-master-1.6.1.201608302253-1.noarch.rpm` • `mapr-spark-master_1.6.1.201608302253_all.deb`

Important Notes

If you want to integrate Spark 1.6.1-1608 with MapR Event Store For Apache Kafka, you must install the Kafka 0.9.0-1607 package.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive on Spark is not supported.
- Spark-SQL is supported but it is not fully compatible with Hive; see the Apache Spark documentation and MapR's Spark documentation for details.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comments
3024b71	2016-08-01	MAPR-24129: Backported SPARK-16796 so that passwords are now masked on the Environment page of the Spark History Server UI.
7755848	2016-08-16	[MARP-24264] The following fixes have been backported to resolve the Spark vulnerability to code injection in the `toCommentSafeString` method: • [SPARK-11352][SQL][BRANCH-1.5] Escape */ in the generated comments. • [SPARK-12138][SQL] Escape \u in the generated comments of codegen • [SPARK-15165][SQL] Codegen can break because toCommentSafeString is not actually safe For more information, see Spark Vulnerability with the toCommentSafeString Method.
04c451a	2016-08-18	[MAPR-24292] MapR Event Store For Apache Kafka consumer no longer fails to read the first message when the message contains a single string.
12df59b	2016-08-25	[MAPR-24263] The Spark assembly and example JAR files no longer include a dependency on MapR-FS libraries.

Known Issues

- **MAPR-17271**: On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-19761:** On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark 1.6.1-1607 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the open source Spark 1.6.1 Release Notes

Spark Version	1.6.1
Release Date	July 29, 2016
MapR Version Interoperability	See the Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Spark Support Matrix on page 5636.
Source on GitHub	https://github.com/mapr/spark/tree/1.6.1-mapr-1607

Package Names	The following packages are associated with this release: • mapr-spark-1.6.1.201607242143-1.noarch.rpm • mapr-spark_1.6.1.201607242143_all.deb • mapr-spark-historyserver-1.6.1.201607242143-1.noarch.rpm • mapr-spark-historyserver_1.6.1.201607242143_all.deb • mapr-spark-master-1.6.1.201607242143-1.noarch.rpm • mapr-spark-master_1.6.1.201607242143_all.deb

New in This Release

This release of Apache Spark includes the following behavior change that is specific to MapR:

Poll Time for Consuming MapR Event Store For Apache Kafka	When Spark consumes MapR Event Store For Apache Kafka messages, the default poll time is 1000 milliseconds. Previously, the default was 100 milliseconds.

Important Notes

If you want to integrate Spark 1.6.1-1607 with MapR Event Store For Apache Kafka, you must install the Kafka 0.9.0-1607 package.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
c0bb193	2016-06-08	MAPR-23559: Spark now stores PID files in the following directory: `/opt/mapr/pid`
42d163f	2016-06-08	MAPR-22541: Spark now adds the working directory to the CLASSPATH.
4d048420	2016-06-24	MAPR-23612: Spark no longer hangs due to an incorrect offset configuration for MapR Event Store For Apache Kafka.
941e206	2016-06-30	MAPR-23122: Spark Streaming uses `streams.consumer.zerooffset.on.eof` to calculate the offset for MapR Event Store For Apache Kafka.
25621e4	2016-07-04	MAPR-22940: Spark Thrift Server is now able to start on a node where Hive is not running. However, when HiveServer2 uses Kerberos authentication, the Spark Thrift Server must run on the same node as HiveServer2. Otherwise, beeline will not be able to connect to the Spark Thirft Server.

GitHub Commit	Date (YYYY-MM-DD)	Comment
2a3abdb	2016-07-13	MAPR-23854: Spark is now able to retrieve messages from MapR Event Store For Apache Kafka.
6d8d5d6	2016-07-19	MAPR-24011: Backported SPARK-14699 and SPARK-13352 to improve Spark performance.
4df099e	2016-07-19	MAPR-24005: Backported Spark 14699 so that Spark standalone Pi jobs no longer generate "Executor lost" errors.

Known Issues

- **MAPR-17271**: On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-19761:** On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark 1.6.1-1605 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the open source Spark 1.6.1 Release Notes

Spark Version	1.6.1
Release Date	June 6, 2016
MapR Version Interoperability	See the Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Spark Support Matrix on page 5636.
Source on GitHub	https://github.com/mapr/spark/tree/1.6.1-mapr-1605
Package Names	The following packages are associated with this release: • mapr-spark-1.6.1.201605311547-1.noarch.rpm • mapr-spark_1.6.1.201605311547_all.deb • mapr-spark-historyserver-1.6.1.201605311547-1.noarch.rpm • mapr-spark-historyserver_1.6.1.201605311547_all.deb • mapr-spark-master-1.6.1.201605311547-1.noarch.rpm • mapr-spark-master_1.6.1.201605311547_all.deb

New in this Release

This release of Apache Spark for MapR includes the following behavior changes:

- On clusters that run Spark on YARN, SASL encryption between all SparkWorker and SparkMaster nodes is enabled by default.
- SSL encryption between all SparkWorker and SparkMaster nodes is disabled by default.

last-updated: Apr 11, 2022

For details on the features available in the open source version of this component, see the Apache Spark documentation.

Important Notes

This release of Apache Spark for MapR includes the following shared library dependencies:

- Mesos version: 0.21.1
- HBase version: 0.98.12-mapr-1506
- Flume version 1.6.0
- Zookeeper version: 3.4.5-mapr-1503
- Hive version: 1.2.0-mapr-1603
- Hive parquet version: 1.6.0
- Kafka version: 0.9.0.0
- Kafka clients version: 0.9.0.0-mapr-1602

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
151ee01	2016-05-17	MAPR-23355: On clusters that run Spark on YARN, authentication between all SparkWorker and SparkMaster nodes is configured to use Spark SASL encryption by default.
e80140d	2016-05-18	MAPR-23243: datanucleus.schema.autoCreateAll is programatically set to true when Hive uses the embedded derby metastore.
c0741cb	2016-05-18	MAPR-23298: Spark SSL encryption is now disabled by default.

Known Issues

- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark 1.6.1-1604 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the open source Spark 1.6.1 Release Notes

Spark Version	1.6.1
Release Date	May 4, 2016
MapR Version Interoperability	See the Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Spark Support Matrix on page 5636.
Source on GitHub	https://github.com/mapr/spark/tree/1.6.1-mapr-1604

last-updated: Apr 11, 2022

Package Names	The following packages are associated with this release: • mapr-spark-1.6.1.201605031407-1.noarch.rpm • mapr-spark_1.6.1.201605031407_all.deb • mapr-spark-historyserver-1.6.1.201605031407-1.noarch.rpm • mapr-spark-historyserver_1.6.1.201605031407_all.deb • mapr-spark-master-1.6.1.201605031407-1.noarch.rpm • mapr-spark-master_1.6.1.201605031407_all.deb

New in this Release

This is the initial release of Spark Version 1.6.1 for MapR.

For details on the features available in the open source version of this component, see the Apache Spark documentation.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
d0b2386	2016-04-13	Backported SPARK-13599 to remove transitive groovy dependencies from spark-hive and spark-hiveserver.
9ded88e	2016-04-13	MAPR-23068: Spark now uses Py4J version 0.8.2.1.
a37d88b	2016-04-13	MAPR-23093: The Spark KafkaProducerExample no longer fails when it is submitted in yarn-client mode on a secure cluster that uses Kerberos authentication.
6f4ca35	2016-04-28	MAPR-23203: HiveFromSpark example no longer fails with a `datanucleus.schema.autoCreateTables` error when it is submitted in yarn-cluster mode.

Known Issues

- **MAPR-17271**: On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-19761:** On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- **MAPR-22940/SPARK-11851:** On clusters that use Kerberos authentication, Spark Thrift Server is unable to connect to beeline.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

last-updated: Apr 11, 2022

Spark 1.5.2-1608 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the open source Spark 1.5.2 Release Notes.

Spark Version	1.5.2
Release Date	September 1, 2016
MapR Version Interoperability	See the Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Spark Support Matrix on page 5636.
Source on GitHub	https://github.com/mapr/spark/tree/1.5.2-mapr-1608
Package Names	The following packages are associated with this release: • `mapr-spark-master-1.5.2.201608302219-1.noarch.rpm` • `mapr-spark-master_1.5.2.201608302219_all.deb`

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive on Spark is not supported.
- Spark-SQL is supported but it is not fully compatible with Hive; see the Apache Spark documentation and MapR's Spark documentation for details.

Important Notes

This release of Apache Spark for MapR includes the following shared library dependencies:

- Mesos version: 0.21.1
- HBase version: 0.98.12-mapr-1506
- Flume version 1.6.0
- Zookeeper version: 3.4.5-mapr-1503
- Hive version: 1.2.0-mapr-1603
- Hive parquet version: 1.6.0
- Kafka version: 0.9.0.0
- Kafka clients version: 0.9.0.0-mapr-1602

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comments
ac11283	2016-08-02	MAPR-24129: Backported SPARK-16796 so that passwords are now masked on the Environment page of the Spark History Server UI.
0bda0b9	2016-08-18	MARP-24264: The following fixes have been backported to resolve the Spark vulnerability to code injection in the `toCommentSafeString` method:

GitHub Commit	Date (YYYY-MM-DD)	Comments
		• [SPARK-11352][SQL][BRANCH-1.5] Escape */ in the generated comments. • [SPARK-12138][SQL] Escape \u in the generated comments of codegen • [SPARK-15165][SQL] Codegen can break because toCommentSafeString is not actually safe For more information, see Spark Vulnerability with the toCommentSafeString Method.
fc72384	2016-08-22	MAPR-24318: Backported SPARK -1191 and SPARK-11311 so that Spark is now able to create UDF's using the Hive Thrift Service.
681dcf4	2016-08-24	MAPR-24263: The Spark assembly and example JAR files no longer include a dependency on MapR-FS libraries.

Known Issues

- **MAPR-17271:** On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-19761**: On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- **MAPR-22940/SPARK-11851**: On clusters that use Kerberos authentication, Spark Thrift Server is unable to connect to beeline.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark 1.5.2-1605 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the open source Spark 1.5.2 Release Notes.

Spark Version	1.5.2
Release Date	June 6, 2016
MapR Version Interoperability	See the Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Spark Support Matrix on page 5636.
Source on GitHub	https://github.com/mapr/spark/tree/1.5.2-mapr-1605
Package Names	The following packages are associated with this release: • mapr-spark-master-1.5.2.201606021619-1.noarch.rpm • mapr-spark-master_1.5.2.201606021619_all.deb • mapr-spark-historyserver-1.5.2.201606021619-1.noarch.rpm • mapr-spark-historyserver_1.5.2.201606021619_all.deb

New in this Release

This release of Apache Spark for MapR includes the following behavior change:

- SSL encryption between all SparkWorker and SparkMaster nodes is disabled by default.

For details on the features available in the open source version of this component, see the Apache Spark documentation.

Important Notes

This release of Apache Spark for MapR includes the following shared library dependencies:

- Mesos version: 0.21.1
- HBase version: 0.98.12-mapr-1506
- Flume version 1.6.0
- Zookeeper version: 3.4.5-mapr-1503
- Hive version: 1.2.0-mapr-1603
- Hive parquet version: 1.6.0
- Kafka version: 0.9.0.0
- Kafka clients version: 0.9.0.0-mapr-1602

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
4578d0e	2016-06-31	MAPR-23298: Spark SSL encryption is now disabled by default.

Known Issues

- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark 1.5.2-1603 Release Notes

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the open source Spark 1.5.2 Release Notes.

Spark Version	1.5.2
Release Date	April 4, 2016
MapR Version Interoperability	See the Ecosystem Support Matrix (Pre-5.2 releases) on page 5625 and Spark Support Matrix on page 5636.

Source on GitHub	https://github.com/mapr/spark/tree/1.5.2-mapr-1603
Package Names	The following packages are associated with this release: • mapr-spark-1.5.2.201604040801-1.noarch.rpm • mapr-spark_1.5.2.201604040801_all.deb • mapr-spark-historyserver-1.5.2.201604040801-1.noarch.rpm • mapr-spark-historyserver_1.5.2.201604040801_all.deb • mapr-spark-master-1.5.2.201604040801-1.noarch.rpm • mapr-spark-master_1.5.2.201604040801_all.deb

New in This Release

This release of Apache Spark for MapR includes the following new features or behavior changes:

- You can submit Spark jobs from a Windows client node.
- On a secure cluster that runs Spark on YARN, SSL encryption between SparkWorker and SparkMaster nodes is automatically enabled.
- On a secure cluster that runs Spark on YARN, authentication between SparkWorker and SparkMaster nodes is automatically enabled.

For details on the features available in the open source version of this component, see the Apache Spark documentation.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
03b314	2016-03-04	MAPR-21699: When you run Spark on YARN on a secure cluster, encryption and authentication now are enabled by default.
fbfaf1	2016-03-16	MAPR-18865: `spark-env.cmd` script is now included in the `conf` directory so that it can determine the hadoop classpath.
d9a0e3	2016-03-16	[MAPR-21699] When you run Spark on YARN on a secure cluster, SSL encryption is automatically enabled for Akka, broadcast, and MapR filesystem connections.

Known Issues

- **MAPR-17271**: On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.

last-updated: Apr 11, 2022

- **MAPR-19761:** On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark 1.5.2-1602 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open source Spark 1.5.2 Release Notes.

Spark Version	1.5.2
Release Date	February 29, 2016
MapR Version Interoperability	See the Spark Support Matrix on page 5636 and the Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.
Source on GitHub	https://github.com/mapr/spark/tree/1.5.2-mapr-1602
Package Names	The following packages are associated with this release: • mapr-spark-1.5.2.201602261506-1.noarch.rpm • mapr-spark_1.5.2.201602261506_all.deb • mapr-spark-historyserver-1.5.2.201602261506-1.noarch.rpm • mapr-spark-historyserver_1.5.2.201602261506_all.deb • mapr-spark-master-1.5.2.201602261506-1.noarch.rpm • mapr-spark-master_1.5.2.201602261506_all.deb

New in This Release

This release of Apache Spark for MapR includes the following feature:

- Support for MapR Event Store For Apache Kafka through Kafka 0.9.0 API. This is a beta feature.

For details on the features available in the open source version of this component, see the Apache Spark documentation.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
784ad2e	2016-01-13	MAPR-22122: Spark now supports the Kafka 0.9.0 Streaming Consumer API.

Known Issues

- **MAPR-17271**: On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.

- **MAPR-19761:** On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- **MAPR-22522:** Spark jobs fail when Hive uses Kerberos authentication on a secure cluster that also uses Kerberos authentication.

  Workaround: Add "-Dhadoop.login=hybrid" to SPARK_SUBMIT_OPTS in spark-env.sh ($SPARK_HOME/conf/spark-env.sh). For example:

```
 if [ "$MAPR_SECURITY_STATUS" = "true" ]; then
SPARK_SUBMIT_OPTS="$SPARK_SUBMIT_OPTS -Dmapr_sec_enabled=true -Dhadoop.log
in=hybrid"
fi
```

- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark 1.5.2-1512 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open source Spark 1.5.2 Release Notes.

Spark Version	1.5.2
Release Date	December 21, 2015
MapR Version Interoperability	See Spark Support Matrix on page 5636.
Source on GitHub	https://github.com/mapr/spark
Package Names	The following packages are associated with this release: • `mapr-spark-1.5.2.201512161339-1.noarch.rpm` • `mapr-spark_1.5.2.201512161339_all.deb` • `mapr-spark-historyserver-1.5.2.201512161339-1.noarch.rpm` • `mapr-spark-historyserver_1.5.2.201512161339_all.deb` • `mapr-spark-master-1.5.2.201512161339-1.noarch.rpm` • `mapr-spark-master_1.5.2.201512161339_all.deb`

New in This Release

This release of Apache Spark for MapR includes the following features:

- Support for SparkR (R on Spark)

For details on the features available in the open source version of this component, see the Apache Spark documentation.

Hive Support

This version of Spark supports integration with Hive. However, note the following exceptions:

- Hive on Spark is not supported.

- Spark-SQL is supported but it is not fully compatible with Hive; see the Apache Spark documentation and the MapR Spark documentation for details.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
a7dad34	2015-11-25	MAPR-21570: The Spark Master no longer fails to start when it is configured to be highly available.
cdd328a	2015-11-19	MAPR-21525: The HBase version is now set to 0.98.12 in the `/opt/mapr/spark/spark-1.5.2/mapr-util/compatibility.version` file.
0d4c58e	2015-11-02	MAPR-21243: With Spark on YARN, `spark.sql.hive.metastore.sharedPrefixes` is now set automatically based on the mode that is used to submit the job.

Known Issues

- **MAPR-17271**: On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
- **MAPR-19761:** On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.
- **MAPR-20263:** On a secure cluster, MapR does not support submitting jobs that interacts with Hive Metastore on yarn-cluster mode. When the cluster is secure, jobs will not complete successfully.
- Spark versions up to and including 2.3.0 have the following security vulnerability: CVE-2018-1334 Apache Spark local privilege escalation vulnerability

Spark and Spark on YARN 1.4.1-1508 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open source Spark 1.4.1 Release Notes.

Spark Version	1.4.1
Release Date	Sept 9, 2015
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	1.4.1-mapr-1508
MapR Version Interoperability	See Spark Support Matrix on page 5636.

New in This Release

This is the initial MapR release of Spark 1.4.1.

Hive Support

- This version of Spark supports Spark-SQL with Hive 0.13. However, Hive on Spark is not supported.
- Spark-SQL is not fully compatible with Hive; see the Apache Spark documentation for details.

Known Issues

MAPR-17271:	On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.
MAPR-19761:	On a secure cluster, MapR does not support the Spark SQL Thrift JDBC server. When the cluster is secure, the Spark Thrift server will not start.

Spark and Spark on YARN 1.3.1-1505-r1 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the open source Spark 1.3.1 Release Notes.

Version	Spark 1.3.1-1505
Release Date	June 2, 2015
Source on GitHub	https://github.com/mapr/spark
GitHub Release Tag	1.3.1-mapr-1505-r1
MapR Version Compatibility	See Ecosystem Support Matrix (Pre-5.2 releases) on page 5625.

New in This Release

This is the initial MapR release of Spark 1.3.1.

For instructions on installing or upgrading to Spark 1.3.1, see the MapR's Spark documentation.

Hive Support

This version of Spark supports Spark-SQL with Hive 0.13. Other versions of Hive, including Hive 1.0, are not supported with Spark-SQL.

Note: Spark-SQL is not fully compatible with Hive; see the Apache Spark documentation for details.

Event Logging in Spark 1.3.1

In both Spark 1.2.1 and Spark 1.3.1, event logging is enabled by default. However, Spark 1.3.1 also checks that the event directory is present on MapR filesystem (where the logs are written):

`maprfs:///apps/spark`

Create this directory whether or not the History Server is enabled. Alternatively, disable event logging by setting `spark.eventLog.enabled` to `false`.

If you are using MapR Version 4.0.x, applications that are run by a non-mapr user may not be visible in the History Server UI. To work around this problem, manually update the file ownership under `/apps/spark` to `mapr:mapr` for those applications:

```
hadoop fs -chown -R mapr:mapr /apps/spark/app-XYZ
```

This workaround is not required if you are using MapR Version 4.1.

Known Issues

MAPR-17271:	On secure clusters, the MapR Control System (MCS) does not display links for Spark-Master and Spark-HistoryServer.

last-updated: Apr 11, 2022

MAPR-15970:	If RM HA is set up on the cluster and the AM for the YARN job runs on a node other than the RM node, the AM link in the RM UI returns an error and does not bring up the AM UI. See the MapR's Spark documentation for a workaround.

Fixes

This release from MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
53ad194	2015-05-27	**MAPR-17554:** Spark services can now be stopped during an uninstall.
2c2b216	2015-05-20	**MAPR-18750:** DFS shuffle-related properties are no longer placed in the spark-defaults.conf file by default.
2c2b216	2015-05-20	**MAPR-18360:** When Spark is uninstalled, only secnodary instances running on localhost are stopped.
ed8b996	2015-05-27	**MAPR-18793:** Spark-SQL now works with the Hive Metastore on a secure MapR cluster.
feb4cce		
7c71cf2	2015-05-27	**MAPR-18794:** Spark users can now access the YARN logs via https when MapR security is enabled.
979a73f	2015-06-01	**MAPR-18912:** Hadoop 2.5 did not contain a curator jar required by Spark Master HA.

Sqoop Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for the Sqoop component (included in the MapR Converged Data Platform) contain notes specific to MapR only. More details are available on the Apache Sqoop Project page.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Sqoop 1.4.7 - 2110 (EEP 8.0.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Data Platform Distribution for Apache Sqoop. You may also be interested in the Apache Sqoop changelog and the Apache Sqoop home page.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes.

Version	1.4.7

Release Date	October 2021
HPE Version Interoperability	See EEP Components and OS Support
Source on GitHub	https://github.com/mapr/sqoop

Maven Artifacts	http://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names.

New in This Release

Sqoop 1.4.7 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
e226e3a	2021-05-27	SQOOP-105: Fix FileSystemCounters counter variable in the ImportJobBase class

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

.

Sqoop 1.4.7 - 2104 (EEP 7.1.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Sqoop. You may also be interested in the Apache Sqoop 1.4.7 changelog or the Apache Sqoop project homepage.

Version	1.4.7
Release Date	April 2021
HPE Version Interoperability	See MEP Components and OS Support
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.7.0-mapr-710
Maven Artifacts	http://repository.mapr.com/maven/
Package Names	SeePackage Names for MapR Ecosystem Packs (MEPs)

New in This Release

Sqoop 1.4.7 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Bug fixes and updates but no significant new features.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
c1c73b3c	2021-03-31	SQOOP-103: Change driver class to 'com.mysql.cj.jdbc.Driver'
04b6d16b	2021-03-30	SQOOP-102: Sqoop shuffles columns names for export to mysql
b39ded9b	2021-03-24	SQOOP-88: Moving Sqoop to 4-digit version
bd41899b	2021-03-24	SQOOP-101: Updated HBase dependency to 1.4.13.0-mapr-SNAPSHOT
4b316fc6	2021-03-22	SQOOP-98 - cleaned avro dependencies
8a4d9d97	2021-03-22	SQOOP-100: Updated Hadoop dependencies for MEP 7.1.0 release
6f995942	2021-03-17	SQOOP-99: Updated Sqoop dependencies to use jackson v2.X
25fdf52e	2021-03-09	SQOOP-97: Updated Parquet to 1.11.0
85d20320	2021-03-09	SQOOP-95: Fix Hive import as parquet file job
6f7fa989	2021-03-09	Backported SQOOP-3329: Remove Kite dependency from the Sqoop project
97dc41a9	2021-03-09	Backported SQOOP-3338: Document Parquet support
7aa36ed6	2021-03-09	Backported SQOOP-3335: Add Hive support to the new Parquet writing implementation (Szabolcs Vasas via Boglarka Egyed)
d637ad6c	2021-03-09	Backported SQOOP-3328: Implement an alternative solution for Parquet reading and writing(Szabolcs Vasas via Boglarka Egyed)
8f210cb1	2021-03-09	Backported SQOOP-3319: Extract code using Kite into separate classes (Szabolcs Vasas via Boglarka Egyed)
324caa98	2021-03-09	Backported SQOOP-3318: Remove Kite dependency from test cases (Szabolcs Vasas via Boglarka Egyed)

last-updated: Apr 11, 2022

6e3d1f89	2021-03-09	Backported SQOOP-3273: Removing com.cloudera.sqoop packages (Szabolcs Vasas via Anna Szonyi)
3981197c	2021-03-09	Backported SQOOP-90: Update Avro to 1.9.2 version

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- For Avro format, you must use `-Dmapreduce.job.user.classpath.first parameter=true` in the command when you import into the MapR File System.

.

Sqoop 1.4.7 - 2101 (EEP 7.0.1) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Sqoop 1.4.7 - 2101 (EEP 6.3.2) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Sqoop. You may also be interested in the Apache Sqoop 1.4.7 changelog or the Apache Sqoop project homepage.

Version	1.4.7
Release Date	January 2021
HPE Version Interoperability	MEP Components and OS Support
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.7-mapr-632
Maven Artifacts	http://repository.mapr.com/maven/
Package Names	SeePackage Names for MapR Ecosystem Packs (MEPs)

New in This Release

Sqoop 1.4.7 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

Commit	Date (YYYY-MM-DD)	Comment
5ec4037	2020-10-12	MAPRSQOOP-87: Reduce excessive mutations
271b5d7	2020-12-31	MAPRSQOOP-89: Updated common-compress to 1.20

For complete details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- For Avro format, you must use `-Dmapreduce.job.user.classpath.first parameter=true` in the command when you import into the filesystem.

Resolved Issues

- None.

Sqoop 1.4.7 - 2009 (EEP 6.3.1) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.7 changelog or the Apache Sqoop project home page.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.4.7
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.7-mapr-2009
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
79c4038	2020-03-26	MAPR-SQOOP-62 Parse hive database name from hive table name for compatibility
76e512e 9777a43	2020-04-01 2020-04-24	MAPR-SQOOP-61 Reduce excessive write permissions for sqoop files
997459a	2020-05-11	MAPR-SQOOP-75 Update Maprfs and HBase, exclude unused Fasterxml Jackson
af87490	2020-07-13	MAPR-SQOOP-82 Use static tools-list instead of running Sqoop Java Task
f073e25	2020-08-04	MAPR-SQOOP-83 Backport SQOOP-3267 to Sqoop 1.4.7

Commit	Date (YYYY-MM-DD)	Comment
51a50fc	2020-08-18	MAPR-SQOOP-85 Exclude slf4j from distribution

Known Issues and Limitations

- Use `-Dmapreduce.job.user.classpath.first=true` in your command for import to MapR file system in Avro format.

Sqoop 1.4.7-1904 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.7 changelog or the Apache Sqoop project home page.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.4.7
Release Date	April 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.7-mapr-1904
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names. The following packages are associated with this release: • mapr-sqoop-1.4.7.<>.noarch.rpm • mapr-sqoop_1.4.7.<>all.deb

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
2af0268	2019-01-31	SQOOP-52: Sqoop incremental import into parquet file fails with "Directory not empty" error

Known Issues and Limitations

- Use `-Dmapreduce.job.user.classpath.first=true` in your command for import to MapR filesystem in Avro format.

Resolved Issues

- None.

Sqoop 1.4.7-1808 (EEP 6.0.0) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.7 changelog or the Apache Sqoop project home page.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.4.7
Release Date	September 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/sqoop/tree/1.4.7-mapr-1808
GitHub Release Tag	1.4.7-mapr-1807
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names. The following packages are associated with this release: • mapr-sqoop-1.4.7.<>.noarch.rpm • mapr-sqoop_1.4.7.<>all.deb

New in This Release

- Backported Apache Sqoop 1.4.7.
- TDCH updates:
  - TDCH version is updated to v1.5.4.
  - Added time datatype support.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
a74b6bd	2018-04-17	MAPR-SQOOP-40: Updated TDCH version at Sqoop 1.
5087bab	2018-06-26	MAPR-SQOOP-49: Sqoop job create failed with NPE.

Known Issues and Limitations

Use `-Dmapreduce.job.user.classpath.first=true` in your command for import to MapR filesystem in Avro format.

Resolved Issues

None

Sqoop 1.4.6-1904 (EEP 5.0.3 and EEP 4.1.4) Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.6 changelog or the Apache Sqoop project home page.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	1.4.6
Release Date	April 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.6-mapr-1904
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
94a1a1d4	2019-05-20	SQOOP-52: Sqoop incremental import into parquet file fails with "Directory not empty" error
7a959be	2019-05-15	SQOOP-56: SQOOP HCAT import is not working

Known Issues and Limitations

- None.

Resolved Issues

- None.

Sqoop 1.4.6-1904 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.6 changelog or the Apache Sqoop project home page.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

New in This Release

- TDCH updates:
  - Added support for time datatype.
  - TDCH version is updated to v1.5.4.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
0ae8ff0	2018-06-27	MAPR-31814: Fixed dataset URI for parquet file

Known Issues and Limitations

None

Resolved Issues

None

Sqoop 1.4.6-1803 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.6 changelog or the Apache Sqoop project home page.

Version	1.4.6
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.6-mapr-1803
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names. The following packages are associated with this release: • mapr-sqoop- 1.4.6.<>.noarch.rpm • mapr-sqoop_1.4.6.<>all.deb

New in This Release

- None

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
789a1ac	2018-01-29	MAPR-30627: Unset hive.metastore.sasl.enabled property for non-secure cluster

Known Issues and Limitations

None

Resolved Issues

None

Sqoop 1.4.6-1710 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.6 changelog or the Apache Sqoop project home page.

Version	1.4.6
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.6-mapr-1710
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- The release includes backports of the following issues from the Apache release:
  - SQOOP-2400: hive.metastore.sasl.enabled should be set to true for Oozie integration
  - SQOOP-2103: Not able define Decimal(n,p) data type in map-column-hive option

- SQOOP-2406:Add support for secure mode when importing Parquet files into Hive
- SQOOP-2597: Missing method AvroSchemaGenerator.generate()
- SQOOP-2372: Import all tables as parquet will throw NPE
- SQOOP-3071: Fix OracleManager to apply localTimeZone correctly in case of Date objects too
- SQOOP-2723: Oracle connector not working with lowercase columns
- SQOOP-2783: Query import with parquet fails on incompatible schema
- SQOOP-2737: Cannot import table from Oracle with column with spaces in name
- SQOOP-2909: Oracle related ImportTest fails after SQOOP-2737
- SQOOP-3066: Introduce an option + env variable to enable/disable SQOOP-2737 feature
- SQOOP-2863: Properly escape column names for generated INSERT statements
- SQOOP-2911: Fix failing HCatalogExportTest caused by SQOOP-2863
- SQOOP-2971: OraOop does not close connections properly
- SQOOP-3033: Sqoop option --skip-dist-cache is not saved as a parameter when saving Sqoop Job
- SQOOP-3152: --map-column-hive to support DECIMAL(xx,xx)
- SQOOP-3157: Improve regex introduced in [SQOOP-3152] thus not causing column mapping and AVRO issues
- SQOOP-3123: Import from oracle using oraoop with map-column-java to avro fails if special characters encounter in table name or column name
- SQOOP-3159: Sqoop (export + --table) with Oracle table_name having '$' fails with error (ORA-00942 or java.lang.NoClassDefFoundError)
- SQOOP-3158: Columns added to Mysql after initial sqoop import, export back to table with same schema fails

- Support for a new `--ignore-alias` option, which imports data using column names from the source table rather than the default column alias names.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
f443f5f	2017-07-10	MAPR-28281: Fixes codegen to use column names instead of column labels
8dd25f2	2017-08-04	MAPR-28662: Fixes loss in precision due to Sqoop treating Number data type in Oracle as Double in Hive
c26a90d	2017-08-10	MAPR-28773: Fixes error in `import-all-tables` when using `--as-parquetfile` option

last-updated: Apr 11, 2022

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
8e83fd1	2017-08-10	MAPR-28783: Fixes Hive connection problem when using `import-all-tables` tool

Known Issues and Limitations

None

Resolved Issues

None

Sqoop 1.4.6-1707 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.6 changelog or the Apache Sqoop project home page.

Version	1.4.6
Release Date	August 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.6-mapr-1707
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

- New import and export options in the MapR Connector for Teradata. See MapR Connector Import and Export Options on page 4140.
- Support for TDCH 1.5.2.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
c687f59	2017-05-23	MAPR-SQOOP-7: Adds support for Teradata database to sqoop create-hive-table tools
a0b709e	2017-05-24	MAPR-SQOOP-9: Updates TDCH version to 1.5.2
6918d71	2017-06-02	MAPR-27525: Adds missing tez jars in sqoop classpath when running sqoop-Hive on tez import job

Known Issues and Limitations

None.

Resolved Issues

None.

Sqoop 1.4.6-1703 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.6 changelog or the Apache Sqoop project home page.

Version	1.4.6
Release Date	April 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.6-mapr-1703
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

None.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
cda64ea	2016-12-13	MAPR-25491: Sqoop import fails after TCP connection reset if split by datetime column.

Known Issues and Limitations

None.

Resolved Issues

None.

Sqoop 1.4.6-1611 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.6 changelog or the Apache Sqoop project home page.

Version	1.4.6

last-updated: Apr 11, 2022

Release Date	December 9, 2016
MapR Version Interoperability	See EEP Components and OS Support on page 5536 and Ecosystem Support Matrix (Pre-5.2 releases) on page 5625
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.4.6-mapr-1611
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

This version of Sqoop includes the MapR Connector for Teradata (powered by the Teradata Connector for Hadoop). The MapR Connector for Teradata is supported for use only on MapR 5.2 EEP 2.0 or later.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
000e138	2016-12-05	Added Sqoop Teradata Connector for Hadoop (TDCH) dependencies.

Known Issues and Limitations

None.

Resolved Issues

None.

Sqoop1.4.6-1609 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Sqoop component included in the MapR Distribution for Apache Hadoop.

Version	1.4.6
Release Date	September 30, 2016
MapR Version Interoperability	See Interoperability Matrices on page 5519
Source on GitHub	https://github.com/mapr/sqoop/tree/1.4.6-mapr-1609
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • `mapr-sqoop-1.4.6.201609271407-1.noarch.rpm` • `mapr-sqoop_1.4.6.201609271407_all.deb`

Fixes

This release from MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
55a3bdd	2016-08-15	SQOOP-2783: (MAPR-24254) The issue causing query import into parquet to fail has been fixed by changing the default avro schema name to `AutoGeneratedSchema`.
208fd2c	2016-08-15	SQOOP-2582: (MAPR-24254) The issue causing query import into parquet to fail has been fixed.

Sqoop1.4.6-1607 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Sqoop component included in the MapR Distribution for Apache Hadoop.

Version	1.4.6
Release Date	July 29, 2016
MapR Version Interoperability	See Interoperability Matrices on page 5519
Source on GitHub	https://github.com/mapr/sqoop/tree/1.4.6-mapr-1607
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • `mapr-sqoop-1.4.6.201607271059-1.noarch.rpm` • `mapr-sqoop_1.4.6.201607271059_all.deb`

Fixes

This release from MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
28786c5	2016-06-24	MAPR-23789: Sqoop will no longer lose parts of data during import from MySQL, if data type of primary key in MySQL table is double.

Sqoop 1.4.6-1601 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Below are release notes for the Sqoop component included in the MapR Distribution for Apache Hadoop.

Version	1.4.6
Release Date	February 1, 2016
MapR Version Interoperability	See Interoperability Matrices on page 5519
Source on GitHub	https://github.com/mapr/sqoop/tree/1.4.6-mapr-1601
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release:

	• mapr-sqoop-1.4.6.201601281607-1.noarch.rpm • mapr-sqoop_1.4.6.201601281609_all.deb

For details on the features available in the open source version of this component, see the Apache Sqoop 1.4.6 changelog or the Apache Sqoop homepage.

Fixes

This release from MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
a7a609b	2015-01-20	MAPR-22204: Sqoop 1.4.6 no longer fails to import data to HBase 1.1.1.
f410696	2015-11-09	MAPR-21284: Sqoop 1.4.6 no longer throws an NullPointerException while importing from mysql using the --query option.
17957b4	2015-10-23	MAPR-20263: On a secure cluster, Sqoop 1.4.6 no longer fails to import data with the parquet format into Hive.

Sqoop 1.4.6-1509 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Version	1.4.6
Release Date	Oct 5, 2015
Source on GitHub	https://github.com/mapr/sqoop/tree/1.4.6-mapr-1509
MapR Version Compatibility	See Interoperability Matrices on page 5519.
Maven Artifacts	Maven Repository
Package Names	The following packages are associated with this release: • mapr-sqoop-1.4.6.201510011045-1.noarch.rpm • mapr-sqoop_1.4.6.201510011045_all.deb

New in this Release

This release of Sqoop includes the following new behavior changes that are specific to the MapR:

- Kite now includes support for MapR- FS.

For details on the features available in the open source version of this component, see the Apache Sqoop 1.4.6 changelog or the Apache Sqoop homepage.

Fixes

This release from MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
1a05f49	2015-09-04	Sqoop now uses kite version 1.1.0.

Commit	Date (YYYY-MM-DD)	Comment
91405f0	2015-08-05	MAPR-19680: Sqoop no longer throws the following exception when you import a MySQL table with parquet format to the MapR-FS: `org.kitesdk.data.DatasetNotFoundException: Unknown dataset URI pattern`

Known Issues

MAPR-20263:	Sqoop 1.4.6 fails to import data in parquet format to Hive on a secure MapR cluster.

Sqoop 1.4.6-1506 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.4.6 changelog or the Apache Sqoop homepage.

Version	1.4.6
Release Date	July 10, 2015
Source on GitHub	https://github.com/mapr/sqoop.git
MapR Version Compatibility	See Interoperability Matrices on page 5519.
GitHub Release Tag	mapr-1.4.6-1506
Maven Artifacts	https://repository.mapr.com/maven/

New in This Release

This is the initial release of Sqoop 1.4.6 for MapR. This release adds support for the following connectors:

- Netezza Connector
- JDBD-based Connector for Cubrid

Sqoop2 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for the Sqoop2 component included in the MapR Converged Data Platform contain notes specific to MapR only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Sqoop2 1.99.7-1803 Release Notes

last-updated: Apr 11, 2022

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.99.7 changelog or the Apache Sqoop project home page.

Version	1.99.7
Release Date	March 2018
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.99.7-mapr-1803
Maven Artifacts	See the Maven Repository and the Maven Artifacts for MapR.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
0bae356	2017-12- 03	MAPR-SQOOP- 33: Export mapruserticket in restart script on a secure cluster

Known Issues and Limitations

- Integration between Sqoop 1.99.7 and Oracle database is not supported.
- The Kafka connector is not supported.

Resolved Issues

None

Sqoop2 1.99.7-1710 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.99.7 changelog or the Apache Sqoop project home page.

Version	1.99.7
Release Date	November 2017
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.99.7-mapr-1710

Maven Artifacts	See the Maven Repository and the Maven Artifacts for MapR.
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- Simplified Security - Starting in the MapR 6.0 and EEP 4.0 releases, you can use the "Enable Security" check box in the installer to enable security for the core platform and the installed ecosystem components. Alternatively, you can use the configure.sh -secure command to enable security for the core and the ecosystem components. See Configuring Sqoop2 on page 3680 for details on how this impacts Sqoop2.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
86f4fc0	2017-04-14	MAPR-SQOOP-11: Fixes Sqoop 2 client so it does not return a "Permission denied" warning if not running as admin user
654b594	2017-07-04	MAPR-SQOOP-10: Adds configuration changes to support default security

Known Issues and Limitations

- Integration between Sqoop 1.99.7 and Oracle database is not supported.
- The Kafka connector is not supported.

Resolved Issues

None

Sqoop2 1.99.7-1611 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Sqoop 1.99.7 changelog or the Apache Sqoop project home page.

Version	1.99.7
Release Date	December 9, 2016
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.99.7-mapr-1611
Maven Artifacts	See the Maven Repository and the Maven Artifacts for MapR.
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

This release of Sqoop2 for MapR includes the following new features or behavior changes:

SSL Encryption	You can configure SSL to enable encrypted communications between the Sqoop2 server and its clients.
Repository Encryption	You can configure the Sqoop2 repository to encrypt password data.
Connectors	The following connectors are supported: `ftp-connector`, `kite-connector`, and `sftp-connector`. The `hdfs-connector` supports the parquet data format.
Location of the sqoop.properties file	The sqoop.properties file is now in the following directory: `/opt/mapr/sqoop/sqoop-<version>/conf/`. In Sqoop 1.99.6, the `sqoop.properties` file was in the following directory: `/opt/mapr/sqoop/sqoop-<version>/server/conf/`.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
6a23544	2016-09-29	MAPR-24576: Kite Connector now supports MapR-FS.
fc2e624	2016-10-31	MAPR-25097: Jobs no longer fail in classic mode.

Known Issues and Limitations

- Integration between Sqoop 1.99.7 and Oracle database is not supported.
- The Kafka connector is not supported.
- The Kite connector cannot be used to connect to Hive on secure clusters.

Resolved Issues

None.

Sqoop2 1.99.6-1607 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Converged Data Platform. You may also be interested in the the Apache Sqoop 1.99.6 changelog or the Apache Sqoop project homepage.

Version	1.99.6
Release Date	July 29, 2016
Source on GitHub	https://github.com/mapr/sqoop/tree/1.99.6-mapr-1607
MapR Version Compatibility	See Interoperability Matrices on page 5519.
Maven Artifacts	https://repository.mapr.com/maven/

last-updated: Apr 11, 2022

Package Names	The following packages are associated with this release: • mapr-sqoop2-server-2.0.0.201607271151-1.noarch.rpm • mapr-sqoop2-server_2.0.0.201607271151_all.deb • mapr-sqoop2-client-2.0.0.201607271151-1.noarch.rpm • mapr-sqoop2-client_2.0.0.201607271151_all.deb

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYYY-MM-DD)	Comment
9e8e0d6	2016-07-05	MAPR-23887: The link to Sqoop2 in the MCS no longer fails with the following error: `Service: sqoop2 does not have reachable URL`.

Sqoop2 1.99.6-1507 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the the Apache Sqoop 1.99.6 changelog or the Apache Sqoop project homepage.

Version	1.99.6
Release Date	August 5, 2015
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.99.6-mapr-1507
MapR Version Compatibility	See Interoperability Matrices on page 5519.
Maven Artifacts	https://repository.mapr.com/maven/

New in this Release

This release adds support for MapR-SASL.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
4fe3883	2015-05-20	Sqoop2 automatically detects the hadoop version and sets the hadoop configuration directory in the sqoop.properties file.
7c25f5c	2015-07-23	MAPR-19634: Sqoop2 now supports MapR-SASL.

Sqoop2 1.99.3-1409 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the the Apache Sqoop project homepage.

Version	1.99.3
Release Date	September 30, 2014
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.99.3-mapr-1409
MapR Version Compatibility	See Interoperability Matrices on page 5519.
Maven Artifacts	See MapR Maven Repository for Sqoop2 Artifacts

New in this Release

Sqoop2 1.99.3-1409 supports MapR version 4.0.1, which includes Hadoop 1.x (JobTracker and TaskTracker architecture) and Hadoop 2.x (ResourceManager and NodeManager architecture).

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
aff8146	2014-09-26	`sqoop.sh` script add common.loader property to `catalina.properties`.
e88bbd0	2014-09-24	Added `catalina.loader` for MapR 4.0.1.
ff6b77d	2014-09-09	BUG-14580: Fixed Sqoop2 export to MSSQL.

Sqoop2 1.99.3-1405 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the the Apache Sqoop 1.99.3 changelog or the Apache Sqoop project homepage.

Version	1.99.3
Release Date	June 11, 2014
Source on GitHub	https://github.com/mapr/sqoop
GitHub Release Tag	1.99.3-mapr-1405
MapR Version Compatibility	See Interoperability Matrices on page 5519.
Maven Artifacts	See MapR Maven Repository for Sqoop2 Artifacts

New in this Release

Sqoop2 addresses security concerns by introducing Admin and Operator roles. In Sqoop2, create access for Connections is restricted to Admins and execute access is limited to Operators.

Here are some other differences between Sqoop and Sqoop2:

- Connectors are no longer restricted to the JDBC model - they can define their own vocabulary
- Sqoop2 offers a REST API for operation and management, which integrates better with external systems such as Oozie
- Sqoop2 works with Hue, an interactive web-based UI
- Sqoop2 is installed and configured server-side, while Sqoop is installed and configured client-side.

For a comprehensive list of differences between Sqoop and Sqoop2, see MapR's Sqoop2 documentation.

Storm Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The release notes for Storm component (included in the MapR Converged Data Platform) contains notes specific to MapR only.

Note: Apache Storm is supported on pre-6.0 clusters but is not supported on MapR 6.0 or later. To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Storm 0.10.0-1703 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Storm homepage.

Note: This release of Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

Version	0.10.0
Release Date	April 2017
MapR Version Interoperability	See the Interoperability Matrix.
Source on GitHub	https://github.com/mapr/incubator-storm/
GitHub Release Tag	0.10.0-mapr-1703
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

This version supports integration with Hive 2.1.

last-updated: Apr 11, 2022

Fixes

For details on the features available in the open-source version of this component, see the Apache Storm homepage and the Apache Storm 0.10.2 changelog.

GitHub Commit Number	Date (YYYY-MM-DD)	MapR Fix Number and Description
b3abc36	2017-02-24	[MAPR-26080] Storm 0.10.0 - Hive 2.1 on Tez integration issue.

Known Issues and Limitations

Apache Storm is supported on pre-6.0 clusters but is not supported on MapR 6.0 or later.

Resolved Issues

None.

Storm 0.10.0-1611 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Storm homepage.

Note: This release of Storm 0.10.0 includes backports of all the patches included in Apache Storm 0.10.2.

Version	0.10.0
Release Date	December 9, 2016
MapR Version Interoperability	See the Interoperability Matrix.
Source on GitHub	https://github.com/mapr/incubator-storm/
GitHub Release Tag	0.10.0-mapr-1611
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

No new features.

Fixes

For details on the features available in the open-source version of this component, see the Apache Storm homepage and the Apache Storm 0.10.2 changelog.

Known Issues and Limitations

None.

Resolved Issues

None.

Storm 0.10.0-1609 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Storm Version	0.10.0
Release Date	September 30, 2016

New in this Release

This release of Storm 0.10.0 includes backports of all the patches included in Storm 0.10.1.

For details on the features available in the open source version of this component, see Apache Storm homepage and Apache Storm 0.10.1 changelog.

Storm 0.10.0-1602 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Storm Version	0.10.0
Release Date	February 29, 2016
MapR Version Interoperability	See Interoperability Matrices on page 5519
Source on GitHub	https://github.com/mapr/incubator-storm/tree/0.10.0-mapr-1602
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-storm-0.10.0.201602252228-1.noarch.rpm • mapr-storm_0.10.0.201602252228_all.deb • mapr-storm-nimbus-0.10.0.201602252228-1.noarch.rpm • mapr-storm-nimbus_0.10.0.201602252228_all.deb • mapr-storm-supervisor-0.10.0.201602252228-1.noarch.rpm • mapr-storm-supervisor_0.10.0.201602252228_all.deb • mapr-storm-ui-0.10.0.201602252228-1.noarch.rpm • mapr-storm-ui_0.10.0.201602252228_all.deb

New in this Release

This initial release of Storm 0.10.0 and it includes the following behavior change that is specific to MapR:

- Support for MapR Event Store For Apache Kafka through the Kafka 0.9 API.
- Examples were updated to support Kerberos authentication and multi-node clusters.

last-updated: Apr 11, 2022

For details on the features available in the open source version of this component, see the Apache Storm 0.10.0 changelog or the Apache Storm homepage.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

GitHub Commit	Date (YYY-MM-DD)	Comment
554c968	2016-01-11	MAPR-22227: Using the Kafka 0.9 API, Storm now supports a non-autocommit spout for MapR Event Store For Apache Kafka.
1cf0ed21	2015-12-25	MAPR-22227: Storm now includes a MapR Event Store For Apache Kafka example.
40cbaca9	2015-12-28	A Hive and JDBC (MySQL) example is now included in the Storm package.

Known Issues

- MAPR-22311: Storm does not securely communicate with Zookeeper on a secure cluster that uses MapR-SASL authentication.

Storm 0.9.4-1509 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

Version	0.9.4
Release Date	Oct 5, 2015
Source on GitHub	https://github.com/mapr/incubator-storm/tree/0.9.4-mapr-1509
MapR Version Compatibility	See Interoperability Matrices on page 5519
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	The following packages are associated with this release: • mapr-storm-0.9.4.201510010912-1.noarch.rpm • mapr-storm_0.9.4.201510010912_all.deb • mapr-storm-nimbus-0.9.4.201510010912-1.noarch.rpm • mapr-storm-nimbus_0.9.4.201510010912_all.deb • mapr-storm-supervisor-0.9.4.201510010912-1.noarch.rpm • mapr-storm-supervisor_0.9.4.201510010912_all.deb • mapr-storm-ui-0.9.4.201510010912-1.noarch.rpm • mapr-storm-ui_0.9.4.201510010912_all.deb

New in this Release

This release of Storm includes the following behavior change that is specific to MapR:

last-updated: Apr 11, 2022

- When you install the Storm packages on a node, dependent packages on that node are also installed or upgraded to match the Storm package that you installed.

For details on the features available in the open source version of this component, see the Apache Storm 0.9.4 changelog or the Apache Storm homepage.

Storm 0.9.4-1507 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Storm 0.9.5 changelog or the Apache Storm homepage.

Version	0.9.4
Release Date	August 5, 2015
Source on GitHub	https://github.com/mapr/incubator-storm.git
GitHub Release Tag	0.9.4-mapr-1507
MapR Version Compatibility	See Interoperability Matrices on page 5519
Maven Artifacts	See MapR Maven Repository for Sqoop2 Artifacts

Fixes

This release from MapR includes the following fixes on the base Apache release. These fixes were back-ported from Storm Version 0.9.5. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
3f2e0e3	2015-06-11	STORM-745: Fixed storm.cmd to evaluate 'shift' correctly with 'storm jar'.
7991e72	2015-06-11	STORM-796: Added support for "error" command in ShellSpout.
a3187c8	2015-06-11	STORM-790: When a task is null in transfer-fn, Storm no longer lets the worker process die. Instead, it logs a "task is null" message.
a3187c8	2015-06-11	STORM-130: Supervisor no longer gets killed due to java.io.FileNotFoundException: `File '../stormconf.ser' does not exist.`

Storm 0.9.4-1504 Release Notes

Important: This component is deprecated. HPE recommends using an alternate product. For more information, see Discontinued Ecosystem Components on page 5584.

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Storm 0.9.4 changelog or the Apache Storm homepage.

Version	0.9.4
Release Date	May 6, 2015
Source on GitHub	https://github.com/mapr/incubator-storm

GitHub Release Tag	0.9.4-mapr-1504
MapR Version Compatibility	See Interoperability Matrices on page 5519
Maven Artifacts	See MapR Maven Repository for Storm Artifacts

New in This Release

This is the first release of Storm 0.9.4 in the MapR Distribution for Apache Hadoop.

For information about using Storm and installation instructions, see Storm (Versions 0.9.3-1501 and 0.9.4). For information about upgrading to Storm 0.9.4, see MapR's Storm documentation.

Tez Release Notes

The release notes for the Tez component contain notes specific to MapR software only.

Note: To identify the EEP to which a specific release note belongs, see EEP Release Notes on page 5658. To see which operating systems support the ecosystem components in a specific EEP, see EEP Components and OS Support on page 5536. To view release notes for prior MapR releases, see Previous Versions on page 6578.

Tez 0.9.2 - 2201 (EEP 8.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Tez. You may also be interested in the Apache Tez changelog and the Apache Tez home page.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.9.2
Release Date	January 2022
Version Interoperability	See EEP Components and OS Support on page 5536

Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names.

New in This Release

Tez 0.9.2 - 2201 is a defect-repair release.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
f5c03c004	2022-01-25	EEP-TEZ-215: Upgrade Log4J version to '1.3.1-mapr'
32dfb6f5a	2021-12-23	EEP-TEZ-208: CVE-2019-10744, CVE-2020-8203, CVE-2021-23337 : lodash-*.js

1cadfeed3	2021-12-23	EEP-TEZ-210: CVE-2021-25329: tomcat-catalina-9.0.36.jar & CVE-2020-13934, CVE-2020-17527, CVE-2021-25122, CVE-2021-41079: tomcat-coyote-9.0.36.jar
24fe8da63	2021-12-23	EEP-TEZ-213: log4j-1.2.17.jar vulnerability: CVE-2019-17571
6f5bfee01	2021-12-17	EEP-TEZ-209: High: WS-2020-0408 ; 3 Medium: CVE-2021-21290: netty*.jar
e0f57eec9	2021-12-10	EEP-TEZ-207: CVE-2019-10172, CVE-2019-10202: jackson-mapper-asl-1.9.13.jar
56d130d53	2021-12-06	EEP-TEZ-212: Upgrade Jetty to 9.4.44.v20210927 to sync with Hadoop
21d777f71	2021-11-23	EEP-TEZ-211: Hive on Tez job failed for core 7 with FIPS enabled. Can't find HmacSHA1 algorithm.
97da9f716	2021-11-23	EEP-TEZ-205: Update hadoop version to 2.7.6.200-eep-810-SNAPSHOT
27b2b96f3	2021-10-08	MAPR-TEZ-203: Backport Apache Jira TEZ-3951 and add timeout logic for cancellation

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

None.

Resolved Issues

None.

Tez 0.9.2 - 2110 (EEP 8.0.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Tez. You may also be interested in the Apache Tez changelog and the Apache Tez home page.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.9.2
Release Date	October 2021
Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	https://github.com/mapr/tez
GitHub Release Tag	0.9.2.300-eep-800
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP (MEP) and OS to view the list of package names.

New in This Release

Tez 0.9.2 - 2110 introduces the following enhancements or HPE platform-specific behavior changes:

None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
c4e33daed	2021-09-03	MAPR-TEZ-201: Update the maven artifact version strings to eep.
c98eef1fd	2021-08-17	MAPR-TEZ-200: Change project version from 0.9.2-mapr-SNAPSHOT to 0.9.2.0-mapr-SNAPSHOT for development artifacts.
c2264efc9	2021-08-09	MAPR-TEZ-199: Update Hadoop version to 2.7.6.0-mapr-720-SNAPSHOT.
93a750b7e	2021-07-26	MAPR-TEZ-172: Add Hbase jars to maprfs:/apps/tez/tez-0.9/hbase during Tez configuration via configure.sh.

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

None.

Note: In the previous release note (Tez 0.9.2 - 2104 (EEP 7.1.0) Release Notes on page 6483), you can see that MAPR-TEZ-172 was part of the known issues. In this release, MAPR-TEZ-172 has been fixed, and the commit reference is 93a750b7e.

Resolved Issues

None.

Tez 0.9.2 - 2104 (EEP 7.1.0) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Tez. You may also be interested in the Apache Tez changelog and the Apache Tez home page.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.9.2
Release Date	April 2021
Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.2.200-mapr-710
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

Tez 0.9.2 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- Additional logs for configuration.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
e2fb3f5d3	2021-03-31	MAPR-TEZ-194: Sync Jetty version with MAPRHADOOP-2.7.5.0-mapr-710.
eafbec476	2021-03-25	MAPR-TEZ-193 : Update Hadoop version to 2.7.5.0-mapr-710.
29030a603	2021-02-24	MAPR-TEZ-189: Fixing the unit test org.apache.tez.common.TestTezCommonUtils.
3b1a23627	2021-02-24	MAPR-TEZ-191: Fixing the unit test org.apache.hadoop.mapred.split.TestGroupedSplits.
2f270a759	2021-02-12	MAPR-TEZ-187 : Update Hadoop version to 2.7.4.0-mapr-710.
e9be5ed6f	2021-02-12	MAPR-TEZ-188: Upgrade async-http-client which uses deprecated Netty header methods.
29a9cbcc4	2021-02-12	MAPR-TEZ-99: Add logging for configure.sh in Tez.
f8f8f1662	2021-02-09	TEZ-185: Cherry picking TEZ-3929 - Upgrade Jersey to 1.19 (Eric Wohlstadter via jeagles).
2a7eaf824	2021-01-26	IN-2782: Tez UI is not configured correctly via UI installer on secure cluster.
faa6e4caf	2021-01-26	MAPR-TEZ-183: Fixing the warning “/opt/mapr/tez/tez-0.9/conf.*_*’: No such file or directory” during the execution of the Tez configure.sh script.

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- HIVE-947: If you add `tez.history.logging.service.class` and `tez.tez-ui.history-url.base` properties to `tez-site.xml` file, Hive applications will fail in EEP 7.1.0. To fix this issue, remove these properties from the `tez-site.xml` configuration file.
- TEZ-172: HBase + Hive + Tez integration in EEP 7.1.0 you may face this exception “Caused by: java.lang.ClassNotFoundException”

- TEZ-172: An HBase + Hive + Tez integration in EEP 7.1.0 may result in the following exception:

```
Caused by: java.lang.ClassNotFoundException:
org.apache.hadoop.hbase.client.mapr.BaseTableMappingRules
    at java.base/
jdk.internal.loader.BuiltinClassLoader.loadClass(BuiltinClassLoader.java:5
81)
    at java.base/
jdk.internal.loader.ClassLoaders$AppClassLoader.loadClass(ClassLoaders.jav
a:178)
    at java.base/java.lang.ClassLoader.loadClass(ClassLoader.java:522)
    ... 39 more
```

  This exception is due to a new Tez classloader implemented in the Tez project. To fix this issue, put these additional JARs into the `/apps/tez/tez-0.9` filesystem folder.

  Run the following commands before you run the HBase + Hive + Tez integration in EEP 7.1.0:

```
hadoop fs -mkdir /apps/tez/tez-0.9/hbase
hadoop fs -put /opt/mapr/hbase/hbase-1.4.13/lib/* /apps/tez/tez-0.9/hbase/
```

  Add the following property to `/opt/mapr/tez/tez-0.9/conf/tez-site.xml`:

```
<property>
<name>tez.lib.uris</name>
<value>${fs.defaultFS}/apps/tez/tez-0.9,${fs.defaultFS}/apps/tez/tez-0.9/
lib,${fs.defaultFS}/apps/tez/tez-0.9/hbase/</value>
 </property>
```

  This information is based on the assumption that Hive version is 2.3, Hbase version is 1.4.13, Tez version is 0.9, Hadoop version is 2.7.5.0, Zookeeper version is 3.5.6.0, and ecosystem release is 2104.

Resolved Issues

- None.

Tez 0.9.2 - 2101 (EEP 7.0.1) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Tez. You may also be interested in the Apache Tez changelog and the Apache Tez home page.

Version	0.9.2
Release Date	January 2021
HPE Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.2.100-mapr-701
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your MEP and OS to view the list of package names.

New in This Release

Tez 0.9.2 - 2101 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
ec9528e	2020-12-11	MAPR-TEZ-125: Fix io.netty vulnerability
1a225f6	2020-11-23	MAPR-TEZ-175: Replacing maprcli command with Yarn API to get RM url address
4f3d2f3 d7ff176	2020-11-05	MAPR-TEZ-150: Set configuration back-ups limit
b1b6c87	2020-10-23	MAPR-TEZ-153: Fixed commons-beanutils-core vulnerability CVE-2014-0114
9f37a2b	2020-10-04	MAPR-TEZ-165: Corrected path to logs of Tez-UI in warden file
451d8de	2020-10-02	MAPR-TEZ-173: reduced Tez package size

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- TEZ-172: HBase + Hive + Tez integration in MEP-7.0.1 you may face this exception “Caused by: java.lang.ClassNotFoundException”

- TEZ-172: An HBase + Hive + Tez integration in MEP 7.0.1 may result in the following exception:

```
Caused by: java.lang.ClassNotFoundException:
org.apache.hadoop.hbase.client.mapr.BaseTableMappingRules
    at java.base/
jdk.internal.loader.BuiltinClassLoader.loadClass(BuiltinClassLoader.java:5
81)
    at java.base/
jdk.internal.loader.ClassLoaders$AppClassLoader.loadClass(ClassLoaders.jav
a:178)
    at java.base/java.lang.ClassLoader.loadClass(ClassLoader.java:522)
    ... 39 more
```

  This exception is due to a new Tez classloader implemented in the Tez project. To fix this issue, put these additional JARs into the `/apps/tez/tez-0.9` filesystem folder.

  Run the following commands before you run the HBase + Hive + Tez integration in MEP-7.0.1:

```
hadoop fs -mkdir /apps/tez/tez-0.9/hbase
hadoop fs -put /opt/mapr/hbase/hbase-1.4.12/lib/* /apps/tez/tez-0.9/hbase/
```

  Add the following property to `/opt/mapr/tez/tez-0.9/conf/tez-site.xml`:

```
<property>
<name>tez.lib.uris</name>
<value>${fs.defaultFS}/apps/tez/tez-0.9,${fs.defaultFS}/apps/tez/tez-0.9/
lib,${fs.defaultFS}/apps/tez/tez-0.9/hbase/</value>
 </property>
```

  This information is based on the assumption that Hive version is 2.3, Hbase version is 1.4.12, Tez version is 0.9, Hadoop version is 2.7.4, Zookeeper version is 3.5.6.0, and ecosystem release is 2101.

Resolved Issues

- None.

Tez 0.9.2-2009 (EEP 7.0.0) Release Notes

The notes below relate specifically to the data-fabric distribution for Apache Tez. You may also be interested in the Apache Tez changelog and the Apache Tez home page.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.9.2
Release Date	September 2020
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.2-mapr-2009
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- Tomcat server updated to v9.0.36.

- Java 11 support

Fixes

This data-fabric release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	Data Fabric Fix Number and Description
3e82ada	2019-07-11	MAPR-TEZ-76 : Make Tez-UI server manageable by MCS
873df67	2019-07-08	MAPR-TEZ-95 : Web Application Potentially Vulnerable to Clickjacking
3c3e375	2020-01-20	MAPR-TEZ-97: Protobuf upgrade for 6.2 to Protobuf v3.11.1 in Tez
2f60580	2020-04-30	MAPR-TEZ-126: Vulnerability with commons-beanutils
B9a91d6 4f3f002	2020-05-04 2020-06-09	MAPR-TEZ-113: Add security headers for TezUI.
1c4095d	2020-05-12	MAPR-TEZ-127: Update moment*.js version to 2.25.2
9391f29	2020-05-14	MAPR-TEZ-138: Update Guava version to 28.2-jre
027fa33	2020-05-25	MAPR-TEZ-132: Updated 3d-patry libraries.
4e7d752	2020-06-09	MAPR-TEZ-139: Disable AJP connector
5b26d36	2020-06-09	MAPR-TEZ-125: Update netty to version 4.1.50.Final
835e5ab	2020-06-09	MAPR-TEZ-143 : Error while running rez job: Unrecognized VM option 'PrintGCTimeStamps'
f91729e	2020-06-22	MAPR-TEZ-147: Update Tomcat to 9.0.36 version
438c78d	2020-07-08	MAPR-TEZ-149: Fixed redirection from root url
6932a41	2020-06-09	MAPR-TEZ-142: Changed value of Content-Security-Policy header for fixing TezUI
a5a35a3	2020-08-10	MAPR-TEZ-164: Fixed TezUI status script
a11af9c	2020-08-25	MAPR-TEZ-159: Configure server.xml for TezUI
72658ba	2020-09-03	MAPR-TEZ-170 : Update ZK version to 3.5.6.0
db7e74b	2020-09-03	TEZ-4223 - Adding new jars or resources after the first DAG runs does not work.
ef1dc7d	2020-09-03	TEZ-4228 : TezClassLoader should be used in TezChild and for Configuration objects
c011227a	2020-06-09	TEZ-3860. JDK9: ReflectionUtils may not use URLClassLoader
bafc5b7	2019-07-04	TEZ-4057: Fix Unsorted broadcast shuffle umasks

Known Issues and Limitations

- TEZ-172: If you use HBase + Hive + Tez integration in MEP-7.0.0, you may encounter this exception:

```
Caused by: java.lang.ClassNotFoundException:
org.apache.hadoop.hbase.client.mapr.BaseTableMappingRules
    at java.base/
jdk.internal.loader.BuiltinClassLoader.loadClass(BuiltinClassLoader.java:5
81)
```

```
    at java.base/
jdk.internal.loader.ClassLoaders$AppClassLoader.loadClass(ClassLoaders.jav
a:178)
    at java.base/java.lang.ClassLoader.loadClass(ClassLoader.java:522)
    ... 39 more
```

This exception happens because of the new Tez classloader implemented in the Tez project.
Workaround: To fix the issue, you need to put these additional jars into the data-fabric file-system folder `/apps/tez/tez-0.9`.

This is the list of JARs and operations you need to execute before running HBase + Hive + Tez integration in MEP-7.0.0:

```
hadoop fs -mkdir /apps/tez/tez-0.9/hbase
hadoop fs -put /opt/mapr/hbase/hbase-1.4.12/lib/* /apps/tez/tez-0.9/hbase/
```

Add the following property to `/opt/mapr/tez/tez-0.9/conf/tez-site.xml`:

```
<property>
<name>tez.lib.uris</name>
<value>${fs.defaultFS}/apps/tez/tez-0.9,${fs.defaultFS}/apps/tez/tez-0.9/
lib,${fs.defaultFS}/apps/tez/tez-0.9/hbase/</value>
</property>
```

This example assumes the following software versions:

- Hive version is 2.3
- HBase version is 1.4.12
- Tez version is 0.9
- Hadoop version is 2.7.4
- Zookeeper version is 3.5.6.0
- MEP release is 2009

Resolved Issues

- None.

Tez 0.9.1 - 2201 (EEP 6.3.6) Release Notes

The notes below relate specifically to the MapR Data Platform Distribution for Apache Tez. You may also be interested in theApache Tez changelog and the Apache Tez home page.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes.

Version	0.9.1
Release Date	January 2022
HPE Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.1-mapr-2201
Maven Artifacts	https://repository.mapr.com/maven/

Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your MEP and OS to view the list of package names.

New in This Release

Tez 0.9.1 - 2201 is a defect-repair release.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
c71dc37e4	2022-01-25	EEP-TEZ-215: Upgrade Log4J version to '1.3.1-mapr'
c9d2c75c9	2021-12-23	EEP-TEZ-208: CVE-2019-10744, CVE-2020-8203, CVE-2021-23337 : lodash-*.js
edc36b95b	2021-12-23	EEP-TEZ-210: CVE-2021-25329: tomcat-catalina-9.0.36.jar & CVE-2020-13934, CVE-2020-17527, CVE-2021-25122, CVE-2021-41079: tomcat-coyote-9.0.36.jar
c0cc5bae8	2021-12-23	EEP-TEZ-213: log4j-1.2.17.jar vulnerability: CVE-2019-17571
239132474	2021-12-17	EEP-TEZ-209: High: WS-2020-0408 ; 3 Medium: CVE-2021-21290: netty*.jar
c8411eb7e	2021-12-10	EEP-TEZ-207: CVE-2019-10172, CVE-2019-10202: jackson-mapper-asl-1.9.13.jar
6ee9d869e	2021-10-08	MAPR-TEZ-203: Backport Apache Jira TEZ-3951 and add timeout logic for cancellation
198d0b67b	2021-10-08	TEZ-3953: Restore ABI-compat for DAGClient for TEZ-3951 (Sergey Shelukhin via Gopal V)
ac5c1e9a4	2021-10-08	TEZ-3951. TezClient wait too long for the DAGClient for prewarm; tries to shut down the wrong DAG (Sergey Shelukhin via Harish Jaiprakash)
4176270ed	2021-10-08	TEZ-3943. TezClient leaks DAGClient for prewarm (Sergey Shelukhin via jlowe)
14d1b5b77	2021-10-08	TEZ-3892: getClient API for TezClient (Eric Wohlstadter via Gopal V)

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Tez 0.9.1 - 2104 (EEP 6.3.4) Release Notes

The notes below relate specifically to the MapR Data Platform Distribution for Apache Tez. You may also be interested in theApache Tez changelog and the Apache Tez home page.

These release notes contain only HPE-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes.

Version	0.9.1
Release Date	April 2021
HPE Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.1-mapr-2104
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate tohttps://package.mapr.hpe.com/releases/MEP/ and select your MEP and OS to view the list of package names.

New in This Release

Tez 0.9.1 - 2104 introduces the following enhancements or HPE platform-specific behavior changes:

- None.

Fixes

This HPE release includes the following fixes on the base release:

GitHub Commit Number	Data (YYYY-MM-DD)	HPE Fix Number and Description
a1d77867e	2021-03-30	MAPR-TEZ-154: (CVE) Update httpclient to version 4.5.3.
2d9ad8317	2021-02-12	MAPR-TEZ-188: Upgrade async-http-client which uses deprecated Netty header methods.
9a5c14d94	2021-02-12	MAPR-TEZ-99: Add logging for configure.sh in Tez.
593ac26bb	2021-02-09	MAPR-TEZ-186 : Exclude jersey 1.9 to avoid conflict with MapR core patch.
c1e923989	2021-02-09	TEZ-185: Cherry picking TEZ-3929 - Upgrade Jersey to 1.19 (Eric Wohlstadter via jeagles).
4fd588216	2021-01-26	IN-2782: Tez UI is not configured correctly via UI installer on secure cluster.
4ccb9cd3d	2021-01-26	MAPR-TEZ-183: Fixing the warning “/opt/mapr/tez/tez-0.9/conf.*_*’: No such file or directory” during the execution of the Tez configure.sh script.

last-updated: Apr 11, 2022

For details, refer to the commit log for this project in GitHub.

Known Issues and Limitations

- None.

Resolved Issues

- None.

Tez 0.9.1 - 2101 (EEP 6.3.2) Release Notes

The notes below relate specifically to the HPE Ezmeral Data Fabric Distribution for Apache Tez. You may also be interested in theApache Tez changelog and the Apache Tez home page.

Version	0.9.1
Release Date	January 2021

New in This Release

- Tomcat server updated to v9.0.36.

Fixes

This data-fabric release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	Data Fabric Fix Number and Description
3949420	2020-04-30	MAPR-TEZ-126: Vulnerability with commons-beanutils
4ad13dc 1a3a1e8	2020-05-04 2020-07-08	MAPR-TEZ-113: Add security headers for TezUI.
c112408	2020-05-12	MAPR-TEZ-127: Update moment*.js version to 2.25.2
88f6937	2020-05-25	MAPR-TEZ-132: Updated 3d-patry libraries.
b900108	2020-05-25	MAPR-TEZ-139: Disable AJP connector
5f03f95	2020-05-25	MAPR-TEZ-125: Update netty to version 4.1.50.Final
118aa78	2020-06-22	MAPR-TEZ-147: Update Tomcat to 9.0.36 version
1576c16	2020-07-08	MAPR-TEZ-149: Fixed redirection from root url
42ac06a	2020-07-20	MAPR-TEZ-142: Changed value of Content-Security-Policy header for fixing TezUI

last-updated: Apr 11, 2022

C5d0fcd 2468a39 8538854	2020-08-25 2020-08-26 2020-09-03	MAPR-TEZ-159: Configure server.xml for TezUI

Known Issues and Limitations

- None

Resolved Issues

- None.

Tez 0.9.1-1912 (EEP 6.3.0) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Tez changelog and the Apache Tez home page.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.9.1
Release Date	December 2019
MapR Version Interoperability	See EEP Components and OS Support on page 5536
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.1-mapr-1912
Maven Artifacts	https://repository.mapr.com/maven/
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names.

New in This Release

- None.

Fixes

This MapR release includes the following fixes on the base Apache release. For details, refer to the commit log for this project in GitHub.

GitHub Commit Number	Data (YYYY-MM-DD)	MapR Fix Number and Description
7e2c008	2019-07-08	MAPR-TEZ-95: Web Application Potentially Vulnerable to Clickjacking
5bececf	2019-07-05	MAPR-TEZ-100: Add to configure.sh configuration of tez-site.xml permission policy
23b4937	2019-06-25	MAPR-TEZ-75: Tez-UI Tomcat is deployed with examples

Known Issues and Limitations

- None.

Resolved Issues

- None.

Tez 0.9.1-1904 (EEP 6.2.0, EEP 6.1.1, and EEP 6.0.2) Release Notes

The release notes for Apache Tez 0.9.1-1904 relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Tez changelog and the Apache Tez homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.9.1
Release Date	April 2019
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.1-mapr-1904

Maven Artifacts	See Maven Artifacts for MapR on page 4155
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Minor changes backported from Apache Tez 0.9.2 which fix bugs and increase stability.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date	Comment
76882f3	2018-09-20	TEZ-3982: DAGAppMaster and tasks should not report negative or invalid progress
447f09e	2018-07-07	TEZ-3963: Possible InflaterInputStream leaked in TezCommonUtils and related classes
2cf9b40	2018-07-12	TEZ-3964: Inflater not closed in some places
40d42ba	2018-09-19	TEZ-3972: Tez DAG can hang when a single task fails to fetch
e744258	2018-09-25	TEZ-3981: UnorderedPartitionedKVWriter.getInitialMemoryRequirement may return negative memory
289c919	2018-10-11	TEZ-3990: The number of shuffle penalties for a host/inputAttemptIdentifier should be capped
f39dab4	2018-08-10	TEZ-3974: Correctness regression of TEZ-955 in TEZ-2937

Known Issues and Limitations

- None.

Resolved Issues

- None.

Tez 0.9.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes

last-updated: Apr 11, 2022

The release notes for Apache Tez 0.9.1-1901 (MapR Ecosystem Pack 6.1.0) relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Tez changelog and the Apache Tez homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.9.1
Release Date	January 2019
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.1-mapr-1901
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Maven Artifacts	See Maven Artifacts for MapR on page 4155
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Added Shuffle SSL encryption configuration of Tez with `/opt/mapr/server/configure.sh -R`.
- Hadoop jars are excluded from Tez libraries.

Changes in Security with Default Configuration

Added the encryption properties to the `tez-site.xml` configuration file by default on a secured cluster:

Property	Value
`tez.runtime.shuffle.ssl.enable`	true
`tez.runtime.shuffle.keep-alive.enabled`	true

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date	Comment
7fe4dff	2018-12-13	MAPR-TEZ-53: Add Shuffle SSL encryption by default for secure cluster
c761f356	2018-12-24	MAPR-TEZ-54: Remove hadoop-yarn jars from Tez package

Known Issues and Limitations

None.

Resolved Issues

None.

Tez 0.9.1-1808 (EEP 6.0.0) Release Notes

The release notes for Apache Tez 0.9.1-1808 (MapR Ecosystem Pack 6.0.0) relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Tez changelog and the Apache Tez homepage.

These release notes contain only MapR-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

Version	0.9.1
Release Date	September 2018
Source on GitHub	Not Applicable
GitHub Release Tag	0.9.1-mapr-1808
MapR Version Interoperability	See EEP Components and OS Support on page 5536.
Maven Artifacts	See Maven Artifacts for MapR on page 4155
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

- Implemented preserving configuration during package update. For more information, see Pre-Upgrade Steps for Tez on page 349.
- Implemented RM HA for the new Tez UI.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date	Comment
38cf581	2018-07-06	MAPR-TEZ-44: org.apache.hadoop.hive.ql.exec.mr.MapRedTask expecting non-static method org.apache.hadoop.yarn.client.RMProxy
d8faa09	2018-06-14	MAPR-TEZ-39: Cannot obtain application information using link (Application Tracking URL) in TEZ UI on TEZ-0.9
175083e	2018-06-14	MAPR-TEZ-37: Tomcat configurations example missing quotes for TEZ-0.9
ec5cf16	2018-06-07	MAPR-TEZ-33: Incorrect log link in DAG information for Tez 0.9
224211d	2018-05-24	MAPR-TEZ-28: Implement RM HA for new Tez UI
881eaa5	2018-04-20	MAPR-TEZ-31: Change hadoop-common dependency to the latest version

last-updated: Apr 11, 2022

Known Issues and Limitations

None.

Resolved Issues

None.

Tez 0.8.4-2009 (EEP 5.0.5) Release Notes

The notes below relate specifically to the data-fabric distribution for Apache Tez. You may also be interested in the Apache Tez changelog and the Apache Tez home page.

These release notes contain only data-fabric-specific information and are not necessarily cumulative in nature. For information about how to use the release notes, see Ecosystem Component Release Notes on page 5658.

New in This Release

Added support for RM HA in the Tez user interface.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
d25f5db	2018-03-18	MAPR-TEZ-15: TIMELINE_BASE_URL in configs.js remains unchanged after installing Tez via the Installer
5debdd3	2018-02-09	MAPR-TEZ-11: Cannot obtain log information via Tez UI on MapR-secure cluster

Commit	Date (YYYY-MM-DD)	Comment
3aa1b7b	2018-02-19	MAPR-TEZ-7: Tomcat configuration example was missing quotes
2211002	2018-01-30	MAPR-TEZ-13: Cannot obtain real job progress via TEZ UI while RM HA is enabled
e09f228	2018-03-12	MAPR-TEZ-9: Tez should clean up all working dirs and stop Tomcat service (and remove dir) after removing Tez from a cluster
47dceb8	2018-03-14	MAPR-TEZ-12: Warnings during removing

Known Issues and Limitations

None.

Resolved Issues

None.

Tez 0.8.4-1803 (EEP 3.0.3) Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Tez changelog and the Apache Tez homepage.

Version	0.8.4
Release Date	March 2018
Source on GitHub	N/A
GitHub Release Tag	0.8.4-mapr-1803
MapR Version Interoperability	See EEP Components and OS Support on page 5536.

New in This Release

None.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
47dceb8	2018-03-14	MAPR-TEZ-12: Warnings during removing

Known Issues and Limitations

None.

Resolved Issues

None.

Tez 0.8-1710 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Tez changelog and the Apache Tez homepage.

Version	0.8
Release Date	November 2017
Source on GitHub	N/A
Maven Artifacts	See Maven Artifacts for MapR on page 4155
Package Names	Navigate to https://package.mapr.hpe.com/releases/MEP/ and select your EEP and OS to view the list of package names

New in This Release

The Tez user interface relies on the timeline server, which serves as a backing store for the application data generated during the lifetime of a YARN application. The Tez user interface uses the timeline server to display both a live and historical view of the Tez application inside a Tez web application.

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
f2fb43b	2017-10-05	MAPR-TEZ-5: Add dependency on apache-tomcat to Tez package

Known Issues and Limitations

Tez 0.8 is supported only for Hive 2.1 use cases.

Resolved Issues

None.

Tez 0.8-1703 Release Notes

The notes below relate specifically to the MapR Distribution for Apache Hadoop. You may also be interested in the Apache Tez changelog and the Apache Tez homepage.

Version	0.8
Release Date	April 2017
Source on GitHub	https://github.com/mapr/private-tez/tree/branch-0.8-mapr-1703
Maven Artifacts	See Maven Artifacts for MapR on page 4155
Package Names	See Package Names for MapR Ecosystem Packs (EEPs)

New in This Release

There are no new features in this release.

last-updated: Apr 11, 2022

Fixes

This release by MapR includes the following fixes on the base Apache release. For complete details, refer to the commit log for this project in GitHub.

Commit	Date (YYYY-MM-DD)	Comment
8c1bf5a	2017-03-15	MAPR-26499: The error when building tez-0.8 is now fixed.
1d6a461	2017-03-13	MAPR-26033: The issue that caused Hive action on Tez in Oozie to fail with exception is now fixed.
b7d98ac	2017-02-07	MAPR-26038: The version for all artifacts now include "-mapr" suffix.
9ef001b	2017-01-06	MAPR-25723: For DAG submission with already existing resource and mismatched sizes, you will get WARN message now instead of a runtime exception and the job will continue to run.
19b6014	2017-01-11	MAPR-25714: Tez will now use the correct dependency maprfs.jar file.

Known Issues and Limitations

Tez 0.8 is supported only for Hive 2.1 use cases.

Resolved Issues

None.

MapR Ecosystem Pack (EEP) Reference

This section contains links to information that is specific to a given EEP.

Note that the *MapR Ecosystem Pack (MEP)* has been renamed as the *Ezmeral Ecosystem Pack (EEP)*. For more information about MapR Data Platform terminology, see Documentation Enhancements in What's New in Version 6.1.0 on page 34.

EEP 8.1.0 Reference Information

This section contains links to release notes and other reference information for EEP 8.1.0.

Related concepts

Package Names for MapR Ecosystem Packs (EEPs) on page 5737
This page describes how to view the the package names for each MapR Ecosystem Pack (EEP) release.

Maven Artifacts for EEP 8.1.0 on page 4177
Listed are all Maven artifacts for EEP 8.1.0 components.

Related reference

MapR Ecosystem Pack 8.1.0 Release Notes on page 5658
This topic contains information about the components included in MapR Ecosystem Pack 8.1.0.

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

EEP 8.1.0 Components and OS Support on page 5536
This topic lists the ecosystem and MapR-monitoring components that are included in EEP 8.1.0 and shows the operating system support for each component.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 8.1.0
Summarizes the new features and product updates in MapR Ecosystem Pack (EEP) 8.1.0.

EEP 8.1.0 can be used with core 6.2.0 and core 7.0.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

EEP 8.1.0 Versions and Features

EEP 8.1.0 introduces a new component, Airflow, to the HPE Ezmeral MapR Ecosystem Pack and provides significant updates to Spark. Other components received minor updates. The following table summarizes the significant version updates in EEP 8.1.0:

Component	EEP 8.0.0 Version	EEP 8.1.0 Version
Airflow	N/A	2.2.1.0
Data Access Gateway	3.0.0.0	4.0.0.0
Spark	3.1.2	3.2.0

To compare the versions of various components in different EEPs, see Component Versions for Released EEPs on page 5586.

FIPS Support

When used with release 7.0.0, most EEP 8.1.0 components support the Federal Information Processing Standard (FIPS) 140-2 Level 1. The following table summarizes EEP 8.1.0 component support for FIPS:

EEP 8.1.0 Component	FIPS Support
Airflow	No
Data Access Gateway	Yes
Drill	Yes
HBase	Yes*
Hive	Yes
HTTPFS	Yes
Hue	No
Kafka REST	Yes
Kafka Schema Registry	Yes
Kafka Connect HDFS	Yes
Kafka Connect JDBC	Yes
KSQL	Yes
Kafka Streams	Yes
Livy	Yes**
Oozie	Yes

last-updated: Apr 11, 2022

EEP 8.1.0 Component	FIPS Support
Spark	Yes**
Tez	Yes
YARN	Yes

*HBase cannot be used in a mixed (FIPS and non-FIPS) configuration. For example, a non-FIPS client node cannot communicate with a FIPS server node.

**In a mixed (FIPS and non-FIPS) configuration, there is a known issue related to Spark and Livy applications when the Spark UI is enabled. See the Spark and Livy release notes.

For release note information, see the MapR Ecosystem Pack 8.1.0 Release Notes on page 5658.

Discontinued Components

S3 Gateway, Oozie, and Data Science Refinery (DSR) were added to the list of discontinued components. For more information, see Discontinued Ecosystem Components on page 5584.

Terminology Changes

Beginning with EEP 8.0.0, the MapR Data Platform product documentation includes the following terminology changes:

Old Name	New Name
Ecosystem Pack (MEP)[1]	Ezmeral Ecosystem Pack (EEP)
HPE Ezmeral Data Fabric XD Distributed File and Object Store	MapR XD Distributed File and Object Store
Object Store with S3-Compatible API	S3 Gateway

[1]In some areas, *MEP* continues to be used instead of EEP. To minimize issues for longtime MEP users, the package repository for released EEPs continues to use the *MEP* abbreviation in the directory names. See https://package.mapr.com/releases/MEP/. In addition, *MEP* remains in some documentation URLs to ensure that bookmarks and links to the URLs continue to work.

For more information about data-fabric terminology, see Documentation Enhancements in What's New in Version 6.1.0 on page 34.

Support for Ubuntu 18.04 and 20.04 (But Not Ubuntu 16.04)

EEP 8.1.0 can be used with core 6.2.0 on Ubuntu 18.04 and 20.04 but is not supported with core 6.2.0 on Ubuntu 16.04. For a list of the operating systems that each EEP can support, see EEP Components and OS Support on page 5536. For a list of the operating systems that different versions of core can support, see Operating System Support Matrix on page 5522.

Installer Support for EEP 8.1.0

Installer 1.17.0.x supports EEP 8.1.0 and previously released EEPs on core 6.2.0 only. Installer 1.17.0.x cannot be used on core 7.0.0. For a list of the EEPs that are supported by different versions of the Installer, see MapR Installer EEP Support on page 5602.

Installer 1.17.0.x cannot be used with older versions of Ubuntu. For more information, see Selecting an Installer Version to Use on page 5402.

last-updated: Apr 11, 2022

EEP Upgrades

If your cluster is currently running EEP 5.x or 6.x, you can upgrade to MapR Ecosystem Pack 6.3.5. If your cluster is running EEP 7.0.x or 7.1.x, you can upgrade to MapR Ecosystem Pack 7.1.1 or 8.x.x.

For information about upgrading EEPs, see:

- Checking the EEP Version on page 5413
- EEP Support and Lifecycle Status on page 5531
- Upgrading MapR Ecosystem Packs on page 335

For information about upgrading to core 7.0.0 and EEP 8.1.0, see:

- Installation Notes (Release 7.0.0)
- Upgrade Notes (Release 7.0.0)

EEP 8.1.0 Ecosystem Components and Release Notes

For a list of the EEP 8.1.0 components and their release notes, see MapR Ecosystem Pack 8.1.0 Release Notes on page 5658.

Version Change for Hive JAR Artifacts

Beginning with EEP 8.1.0, JAR artifacts for Hive use four digits instead of three digits. For more information, see Hive 2.3.9.0 - 2201 (EEP 8.1.0) Release Notes on page 5883.

Availability of EEP 6.3.6

EEP 6.3.6 was released at the same time as EEP 8.1.0 to provide defect repair for EEP 6.3.x users. For more information, see EEP 6.3.6 Reference Information on page 6522.

API Server and Web Server Packages for EEP 8.1.0

EEP 8.1.0 can be used with release 7.0.0 and with release 6.2.0. However, the API server (`mapr-apiserver`) and web server (`mapr-webserver`) packages that you must apply are different depending on the core release version. And the packages for release 7.0.0 and release 6.2.0 reside in different locations. Use the following table to determine which packages to use:

For release	Use the API server and web server packages in the . . .
7.0.0	Releases repository for core 7.0.0: `http://package.mapr.hpe.com/releases/v7.0.0/`
6.2.0	EEP repository for EEP 8.1.0: `http://package.mapr.hpe.com/releases/MEP/MEP-8.1.0/`

For more information about the API server and web server packages, see Setting Up the Control System on page 423.

EEP 8.x.y Ecosystem JDK / JRE Support
Summarizes JDK and JRE build and run information for EEP 8.x.y data-fabric ecosystem components.

The "Different from Open-Source Equivalent" column highlights that while some open-source components are built with JDK 8, the data-fabric component is built with JDK 11 and will only run on JRE 11.

Ecosystem Components	Built Using JDK Version	Runs on JRE or JDK Version	Different from Open-Source Equivalent?
AsyncHBase 1.8.2.0	8	8-11	Yes (OSS version compiles with Java 6)
Data Access Gateway 3.0.0.0	11	11	N/A
Drill 1.16.1.300	11	11	Yes
Flume 1.9.0.200	11	11	Yes
Hadoop 2.7.6.100	11	11	Yes
HBase 1.4.13.100	11	11	Yes
Hive 2.3.9	11	11	Yes
HttpFS 1.1.0.100	11	11	Yes
Hue 4.6.0.200	Not a Java component		
Kafka Rest 6.0.0.0	11	11	Yes
Kafka Schema Registry 6.0.0.0	11	11	Yes
Kafka Connect HDFS 10.0.0.0	11	11	Yes
Kafka Connect JDBC 10.0.1.0	11	11	Yes
KSQL 6.0.0.0	11	11	Yes
Livy 0.7.0.100	11	11	Yes
Oozie 5.2.1.100	11	11	No
Pig 0.17.0.100	11	11	Yes
S3 Gateway 2.2.0.0	Not a Java component		
Spark 3.1.2.0	11	11	Yes
Sqoop 1.4.7	11	11	No
Tez 0.9.2	11	11	Yes
MapR Monitoring Components			
Collectd 5.12.0.300	11	11	Yes
Elasticsearch 6.8.8.400	12	11	No
Fluentd 1.10.3.300	N/A	N/A	N/A
Grafana 7.5.10.300	N/A	N/A	N/A
Kibana 6.8.8.400	N/A	N/A	N/A
OpenTSDB 2.4.1.300	11	11	Yes

EEP 8.0.0 Reference Information

This section contains links to release notes and other reference information for EEP 8.0.0.

last-updated: Apr 11, 2022

 **Notice:** HPE recommends using EEP 8.1.0 instead of EEP 8.0.0. For more information about EEP 8.1.0, see EEP 8.1.0 Reference Information on page 6504.

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

EEP 8.0.0 Components and OS Support on page 5537
This topic lists the ecosystem and MapR-monitoring components that are included in EEP 8.0.0 and shows the operating system support for each component.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 8.0.0
Summarizes the new features and product updates in MapR Ecosystem Pack (EEP) 8.0.0.

 **Notice:** HPE recommends using EEP 8.1.0 instead of EEP 8.0.0. For more information about EEP 8.1.0, see EEP 8.1.0 Reference Information on page 6504.

EEP 8.0.0 can be used only with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

EEP 8.0.0 Versions and Features

The following component versions changed significantly for EEP 8.0.0:

Component Group	Component	EEP 7.1.0 Version	EEP 8.0.0 Version
Hadoop	Hadoop	2.7.5.0	2.7.6.100
Kafka	Kafka Connect	5.1.2.200	10.0.0.0
	Kafka REST	5.1.2.200	6.0.0.0
	Kafka Schema Registry	5.1.2.200	6.0.0.0
	Kafka Streams	2.1.1.200	2.6.1.0
Monitoring	Collectd	5.10.0.0	5.12.0.300
	Grafana	7.5.2.200	7.5.10.300
	Open TSDB	2.4.0	2.4.1.300
S3 Gateway	S3 Gateway	2.1.0.0	2.2.0.0
Spark	Spark	2.4.7.100	3.1.2.0

To compare the versions of various components in different EEPs, see Component Versions for Released EEPs on page 5586.

Hadoop Updates

last-updated: Apr 11, 2022

Hadoop 2.7.6.100 includes numerous fixes and enhancements contained in the Apache Hadoop base release. For more information, see Hadoop 2.7.6.100 - 2110 (EEP 8.0.0) Release Notes on page 5836.

Kafka and Streams Updates

EEP 8.0.0 delivers the following Kafka and Streams improvements:

- Kafka and Streams
  - MirrorMaker 2 support.
  - Consumers no longer read any topic data when the Consumer application calls `consumer.poll` and the timeout (`request.timeout.ms`) is set to 0. Previously, Consumers read one message.
- Kafka Schema Registry
  - Support for JSON Schema and Protobuf formats in addition to Avro.
- Kafka REST Proxy
  - REST Proxy API v3 HTTP Methods and URIs support. For more information, see API v3 HTTP Methods and URIs on page 3890. Note that REST Proxy API v1 HTTP Methods and URIs are no longer supported in Kafka Rest 6.0.0.

For more information, see the Kafka release notes in MapR Ecosystem Pack 8.0.0 Release Notes on page 5660.

Monitoring (Collectd, Grafana, Open TSDB) Updates

Monitoring updates for EEP 8.0.0 keep the components up to date with recent open-source releases. Open TSDB added a fourth digit to its version to be consistent with other data-fabric component versions. For more information, see Monitoring Components - EEP 8.0.0 Release Notes on page 6235.

S3 Gateway

The S3 Gateway, formerly called the *Object Store with S3-Compatible API*, includes various MinIO and LDAP updates. For more information, see S3 Gateway 2.2.0.0 - 2110 (EEP 8.0.0) Release Notes on page 6260.

Spark Updates

- EEP 8.0.0 updates the Spark version to 3.x. For more information see Spark 3.1.2.0 - 2110 (EEP 8.0.0) Release Notes on page 6347 and Spark 3.1.2 Release Notes.
- Delta Lake support is available for Spark 3.1.2 on MapR Data Platform. See Apache Spark Feature Support on page 4027.
- For information about upgrading to Spark 3.x, see this page.

Terminology Changes

Beginning with EEP 8.0.0, the MapR Data Platform product documentation includes the following terminology changes:

Old Name	New Name
Ecosystem Pack (MEP)[1]	Ezmeral Ecosystem Pack (EEP)
HPE Ezmeral Data Fabric XD Distributed File and Object Store	MapR XD Distributed File and Object Store
Object Store with S3-Compatible API	S3 Gateway

[1]In some areas, *MEP* continues to be used instead of EEP. To minimize issues for longtime MEP users, the package repository for released EEPs continues to use the *MEP* abbreviation in the directory names.

last-updated: Apr 11, 2022

See https://package.mapr.com/releases/MEP/. In addition, *MEP* remains in some documentation URLs to ensure that bookmarks and links to the URLs continue to work.

For more information about data-fabric terminology, see Documentation Enhancements in What's New in Version 6.1.0 on page 34.

Deprecated and Discontinued Ecosystem Components

Pig, Flume, and Sqoop are now *deprecated*, meaning that these components will be updated only for critical security flaws and will be discontinued within six months.

Impala and Sentry are *discontinued*, meaning that they are removed from EEP 8.0.0 and later for core 6.2.0. No maintenance is provided for discontinued components.

For more information, see Discontinued Ecosystem Components on page 5584 and Understand the EEP Lifecycle on page 5528.

Maven Artifact Version String

Beginning with EEP 8.0.0, *eep* replaces *mapr* in the Maven artifact version string. For example:

Old Version String

```
<groupId>org.apache.hive</groupId>
<artifactId>hive</artifactId>
<version>2.3.8-mapr-2104</version>
```

New Version String

```
<groupId>org.apache.hive</groupId>
<artifactId>hive</artifactId>
<version>2.3.9-eep-2110</version>
```

This change applies to EEP 8.0.0 and later EEPs and does not apply to previously published Maven artifacts.

Support for Ubuntu 18.04 (But Not Ubuntu 16.04)

EEP 8.0.0 can be used with core 6.2.0 on Ubuntu 18.04 but is not supported with core 6.2.0 on Ubuntu 16.04. For a list of the operating systems that each EEP can support, see EEP Components and OS Support on page 5536. For a list of the operating systems that different versions of core can support, see Operating System Support Matrix on page 5522.

Maintenance EEPs

At the release of EEP 8.0.0, EEPs 7.1.1 and 6.3.5 were released as maintenance EEPs. Maintenance EEPs provide defect repair and an upgrade path for previously released EEPs.

EEP 7.1.1 is identical to EEP 7.1.0 except for changes to the monitoring (Spyglass) components. For a list of monitoring fixes in EEP 7.1.1, see Monitoring Components - EEP 7.1.1 Release Notes on page 6236. To compare ecosystem component versions, see Component Versions for Released EEPs on page 5586. For reference information about specific EEPs, see MapR Ecosystem Pack (EEP) Reference on page 6504.

Installer Support for EEP 8.0.0

Installer 1.17.0.0 supports EEP 8.0.0 and maintenance EEPs 7.1.1 and 6.3.5, as well as previously released EEPs. For a list of the EEPs that are supported by different versions of the Installer, see MapR Installer EEP Support on page 5602.

Installer 1.17.0.0 cannot be used with older versions of Ubuntu. For more information, see Selecting an Installer Version to Use on page 5402.

last-updated: Apr 11, 2022

EEP Upgrades

The EEP 8.0.0 release includes EEP 8.0.0, EEP 7.1.1, and EEP 6.3.5, but no other EEP revisions. If your cluster is currently running EEP 5.x or 6.x, you can upgrade to MapR Ecosystem Pack 6.3.5. If your cluster is running EEP 7.0.x or 7.1.x, you can upgrade to MapR Ecosystem Pack 7.1.1 or 8.0.0.

For more information about upgrading EEPs, see:

- Checking the EEP Version on page 5413
- EEP Support and Lifecycle Status on page 5531
- Upgrading MapR Ecosystem Packs on page 335

For information about upgrading to core 6.2.0 and EEP 8.0.0, see Installation and Upgrade Notes (MapR 6.1.0) on page 39.

EEP 8.0.0 Ecosystem Components and Release Notes

For a list of the EEP 8.0.0 components and their release notes, see MapR Ecosystem Pack 8.0.0 Release Notes on page 5660.

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 7.1.0

Summarizes the new features in MapR Ecosystem Pack (EEP) 7.1.0.

EEP 7.1.0 provides defect repair and new features as described later on this page.

EEP 7.1.0 can be used with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

SLES Support

EEP 7.1.0 is supported on SLES 15 SP2 and core 6.2.0. For the certified operating systems, see Operating System Support Matrix on page 5522.

Control System Packages

Beginning with EEP 7.1.0, the `mapr-apiserver` and `mapr-webserver` packages are available in the EEP repository. For users of earlier EEPs, such as EEP 7.0.1, older versions of these packages continue to be available in the core 6.2.0.0 repository. However, users of EEP 7.1.0 on SLES 15 SP2 must obtain the `mapr-apiserver` and `mapr-webserver` packages from the EEP 7.1.0 repository because the core 6.2.0.7 repository does not contain the packages. In the event that the packages are present in both the core and EEP repositories that you have enabled for a node, the package manager will install the latest version of each package.

For Control System installation information, see Setting Up the Control System on page 423.

ObjectStore 2.1.0 Support

EEP 7.1.0 supports ObjectStore 2.1.0 on core 6.2.0.

Service Verifier

Certain ecosystem components in EEP 7.1.0 include a service verifier. See Using Service Verification on page 5454 for additional information.

last-updated: Apr 11, 2022

Installer Support for EEP 7.1.0

Installer 1.16.0.0 supports EEP 7.1.0 and maintenance EEPs 6.3.4 and 5.0.7, as well as previously released EEPs. For more information, see Release History for EEPs on page 5623 and MapR Installer Updates on page 5481.

EEP Upgrades

The EEP 7.1.0 release includes EEP 6.3.4 and EEP 5.0.7, but no other EEP revisions. If your cluster is currently running EEP 5.x or 6.x, you can upgrade to EEP 5.0.7 or EEP 6.3.4. If your cluster is running EEP 7.0.x, you can upgrade to EEP 7.1.0.

For more information about upgrading, see:

- Checking the EEP Version on page 5413
- EEP Support and Lifecycle Status on page 5531
- Upgrading MapR Ecosystem Packs on page 335

EEP 7.1.0 Ecosystem Components

This section lists the components that have been updated for EEP 7.1.0.

Drill 1.16.1.200	EEP 7.1.0 includes support for Drill 1.16.1.200. For a list of updates, see Drill 1.16.1.200-2104 (MEP 7.1.0) Release Notes.
Hadoop 2.7.5.0	EEP 7.1.0 includes support for Hadoop 2.7.5.0. For a list of updates, see Hadoop 2.7.5.0 - 2104 (MEP 7.1.0) Release Notes.
HBase 1.4.13.0	EEP 7.1.0 includes support for Apache HBase 1.4.13.0. For information about new features, patches, and known issues, see HBase 1.4.13.0 - 2104 (MEP 7.1.0) Release Notes. For HBase documentation, see HBase on page 3382.
Hive 2.3.8	EEP 7.1.0 includes support for Hive 2.3.8. For a list of new features and updates, see Hive 2.3.8 - 2104 (MEP 7.1.0) Release Notes.
HTTPFS 1.1.0.0	EEP 7.1.0 includes support for HTTPFS 1.1.0.0. For a list of new features and updates, see HttpFS 1.1.0.0 - 2104 (MEP 7.1.0) Release Notes.
Hue 4.6.0.0	EEP 7.1.0 includes support for Hue 4.6.0.0. For a list of new features and updates, see Hue 4.6.0.0 - 2104 (MEP 7.1.0) Release Notes.
Impala 2.12.0.500	EEP 7.1.0 includes support for Impala 2.12.0.500. The `mapr-impala` packages display a new version and provide support for SLES 15 SP2, but are otherwise unchanged from EEP 7.0.1. For a list of the EEP 7.0.1 features and updates, see Impala 2.12.0.400 - 2101 (EEP 7.0.1) Release Notes on page 6139.

last-updated: Apr 11, 2022

Livy 0.7.0.0	EEP 7.1.0 includes support for Livy Livy 0.7.0.0. For a list of new features and updates, see Livy 0.7.0.0 - 2104 (MEP 7.1.0) Release Notes.
Kafka Streams 2.1.1.200	EEP 7.1.0 includes support for Kafka Streams 2.1.1.200. For a list of updates, see Kafka Streams 2.1.1.200 - 2104 (MEP 7.1.0) Release Notes.
KSQL 5.1.2.200	EEP 7.1.0 includes support for KSQL 5.1.2.200. For a list of updates, see KSQL 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes.
Kafka Connect HDFS 5.1.2.200	EEP 7.1.0 includes support for Kafka Connect HDFS 5.1.2.200. For a list of updates, see Kafka Connect HDFS 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes.
Kafka REST Proxy 5.1.2.200	EEP 7.1.0 includes support for Kafka REST Proxy 5.1.2.200. For a list of updates, see Kafka REST Proxy 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes.
Kafka Schema Registry 5.1.2.200	EEP 7.1.0 includes support for Kafka Schema Registry 5.1.2.200. For a list of updates, see Kafka Schema Registry 5.1.2.200 - 2104 (MEP 7.1.0) Release Notes.
Monitoring	EEP 7.1.0 includes support for new versions of the monitoring components (Collectd, Elasticsearch, Fluentd, Grafana, Kibana, and OpenTSDB). For release-note information, see Monitoring Components - MEP 7.1.0 Release Notes.
Object Store with S3 Compatible API 2.1.0.0	EEP 7.1.0 includes support for Object Store with S3 Compatible API 2.1.0.0. For release-note information, see Object Store with S3-Compatible API 2.1.0.0 - 2104 (MEP 7.1.0) Release Notes.
Oozie 5.2.1.0	EEP 7.1.0 includes support for Oozie 5.2.1.0. For a list of updates, see Oozie 5.2.1.0 - 2104 (MEP 7.1.0) Release Notes.
Spark 2.4.7.100	EEP 7.1.0 includes support for Spark 2.4.7.100. For a list of new features and updates, see Spark 2.4.7.100 - 2104 (MEP 7.1.0) Release Notes.
Sqoop 1.4.7	EEP 7.1.0 includes support for Sqoop 1.4.7. For a list of updates, see Sqoop 1.4.7 - 2104 (MEP 7.1.0) Release Notes.
Tez 0.9.2	EEP 7.1.0 includes support for Tez 0.9.2. For a list of updates, see Tez 0.9.2 - 2104 (MEP 7.1.0) Release Notes.

last-updated: Apr 11, 2022

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 7.0.1

Summarizes the new features in MapR Ecosystem Pack (EEP) 7.0.1.

EEP 7.0.1 provides defect repair and new features as described later on this page.

EEP 7.0.1 can be used with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

No SLES Support

EEP 7.0.x is not supported on SLES because release 6.2.0 is not currently certified on a SLES release. For the certified operating systems, see Operating System Support Matrix on page 5522.

Installer Support for EEP 7.0.1

Installer 1.15.0.0 supports EEP 7.0.1 and maintenance EEPs 6.3.2 and 5.0.6, as well as previously released EEPs. For more information, see Release History for EEPs on page 5623 and MapR Installer Updates on page 5481.

EEP Upgrades

The EEP 7.0.1 release includes EEP 6.3.2 and EEP 5.0.6, but no other EEP revisions. If your cluster is currently running EEP 5.x or 6.x, you can upgrade to EEP 5.0.6 or EEP 6.3.2. If your cluster is running EEP 7.0.0, you can upgrade to EEP 7.0.1. However, no upgrades to core 6.2.0 are currently supported.

For more information about upgrading, see:

- Checking the EEP Version on page 5413
- EEP Support and Lifecycle Status on page 5531
- Upgrading MapR Ecosystem Packs on page 335

EEP 7.0.1 Ecosystem Components

This section lists the components that have been updated for EEP 7.0.1.

Drill 1.16.1.100	EEP 7.0.1 includes support for Drill 1.16.1.100. For a list of updates, see Drill 1.16.1.100-2101 (EEP 7.0.1) Release Notes on page 5751.
Flume 1.9.0.100	EEP 7.0.1 includes support for Flume 1.9.0.100. For a list of updates, see Flume 1.9.0.100-2101 (EEP 7.0.1) Release Notes on page 5820.
HBase 1.4.12.100	EEP 7.0.1 includes support for Apache HBase 1.4.12.100. For information about new features, patches, and known issues, see HBase 1.4.12.100 - 2101 (EEP 7.0.1) Release Notes on page 5860. For HBase documentation, see HBase on page 3382.
Hive 2.3.7	EEP 7.0.1 includes support for Hive 2.3.7. For a list of new features and updates, see Hive 2.3.7 - 2101 (EEP 7.0.1) Release Notes on page 5902.
HTTPFS 1.0	EEP 7.0.1 includes support for HTTPFS 1.0. For a list of new features and updates, see HttpFS 1.0 - 2101 (EEP 7.0.1) Release Notes on page 6054.
Impala 2.12.0.400	EEP 7.0.1 includes support for Impala 2.12.0.400. For a list of updates, see Impala 2.12.0.400 - 2101 (EEP 7.0.1) Release Notes on page 6139.
Kafka Schema Registry 5.1.2.100	EEP 7.0.1 includes support for Kafka Schema Registry 5.1.2.100. For a list of updates, see Kafka Schema Registry 5.1.2.100 - 2101 (MEP 7.0.1) Release Notes on page 6231.
KSQL 5.1.2.100	EEP 7.0.1 includes support for KSQL 5.1.2.100. For a list of updates, see KSQL 5.1.2.100 - 2101 (MEP 7.0.1) Release Notes on page 6187.
Monitoring	EEP 7.0.1 includes support for new versions of the monitoring components (Collectd, Elasticsearch, Fluentd, Grafana, Kibana, and OpenTSDB). For release-note information, see MapR Monitoring Components - EEP 7.0.1 Release Notes on page 6239.
Oozie 5.2.0.100	EEP 7.0.1 includes support for Oozie 5.2.0.100. For a list of updates, see Oozie 5.2.0.100 - 2101 (EEP 7.0.1) Release Notes on page 6272.
Sentry 1.7.0	EEP 7.0.1 includes support for Sentry 1.7.0. For a list of updates, see Sentry 1.7.0 - 2101 (MEP 7.0.1) Release Notes on page 6330.

last-updated: Apr 11, 2022

Spark 2.4.7.0	EEP 7.0.1 includes support for Spark 2.4.7.0. For a list of new features and updates, see Spark 2.4.7.0 - 2101 (EEP 7.0.1) Release Notes on page 6353.
Sqoop 1.4.7	EEP 7.0.1 includes support for Sqoop 1.4.7. For a list of updates, see Sqoop 1.4.7 - 2101 (EEP 7.0.1) Release Notes on page 6451.
Tez 0.9.2	EEP 7.0.1 includes support for Tez 0.9.2. For a list of updates, see Tez 0.9.2 - 2101 (EEP 7.0.1) Release Notes on page 6485.

EEP 7.0.0 Reference Information

This section contains links to release notes and other reference information for EEP 7.0.0.

Related concepts

EEP 7.0.0 Components and OS Support on page 5541
This topic lists the ecosystem and MapR-monitoring components that are included in EEP 7.0.0 and shows the operating system support for each component.

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 7.0.0

Summarizes the new features in MapR Ecosystem Pack (EEP) 7.0.0.

EEP 7.0.0 provides defect repair and new features as described later on this page.

EEP 7.0.0 can be used with core 6.2.0. For more information about EEP and core version support, see EEP Support and Lifecycle Status on page 5531.

Core Support for Red Hat / CentOS 8.1 and Ubuntu 16.04 and 18.04

The EEP 7.0.0 release adds support for new versions of Red Hat / CentOS and Ubuntu. For a complete list of supported operating systems, see Operating System Support Matrix on page 5522.

Installer Support for EEP 7.0.0

Installer 1.14.0.0 supports EEP 7.0.0 and maintenance EEPs 6.3.1 and 5.0.5, as well as previously released EEPs. For more information, see Release History for EEPs on page 5623 and MapR Installer Updates on page 5481.

EEP Upgrades

The EEP 7.0.0 release includes EEP 6.3.1 and EEP 5.0.5, but no other EEP revisions. If your cluster is currently running EEP 5.x or 6.x, you can upgrade to EEP 5.0.5 or EEP 6.3.1. However, no upgrades to core 6.2.0 or EEP 7.0.0 are currently supported.

For more information about upgrading, see:

- Checking the EEP Version on page 5413
- EEP Support and Lifecycle Status on page 5531
- Upgrading MapR Ecosystem Packs on page 335

EEP 7.0.0 Ecosystem Components

AsynchHBase 1.8.2	EEP 7.0.0 includes support for AsynchHBase 1.8.2. For release-note information, see AsyncHBase 1.8.2-2009 Release Notes on page 5739.
Data Access Gateway3.0.0.0	EEP 7.0.0 includes support for data Access Gateway 3.0.0.0. For release-note information, see Data Access Gateway 3.0 Release Notes on page 5744.
Drill 1.16.1	EEP 7.0.0 includes support for Drill 1.16.1. For a list of updates, see Drill 1.16.1.0-2009 (EEP 7.0.0) Release Notes on page 5753.
Flume 1.9.0.0	EEP 7.0.0 includes support for Flume 1.9.0.0. For a list of updates, see Flume 1.9.0.0-2009 Release Notes on page 5821.
Hadoop 2.7.4.0	Beginning with release 6.2.0 and EEP 7.0.0, Hadoop and YARN are removed from core and provided as a collection of ecosystem components. For release note information, see Hadoop 2.7.4.0-2009 (EEP 7.0.0) Release Notes on page 5843.
HBase 1.4.12.0	EEP 7.0.0 includes support for Apache HBase 1.4.12.0. For information about new features, patches, and known issues, see HBase 1.4.12.0-2009 (EEP 7.0.0) Release Notes on page 5861. For HBase documentation, see HBase on page 3382.
Hive 2.3	EEP 7.0.0 includes support for Hive 2.3. For a list of new features and updates, see Hive 2.3.7-2009 (EEP 7.0.0) Release Notes on page 5906.
Hue 4.6.0.0 with Livy 0.5.0	EEP 7.0.0 includes support for Hue 4.6.0.0 with Livy 0.5.0. For a list of new features and updates, see Hue 4.6.0.0 - 2009 (EEP 7.0.0) Release Notes on page 6075.

last-updated: Apr 11, 2022

Impala 2.12.0.200	EEP 7.0.0 includes support for Impala 2.12.0.200. For a list of updates, see Impala 2.12.0.200 - 2009 Release Notes on page 6140.
Kafka Schema Registry 5.1.2.0	Kafka Schema Registry 5.1.2.0 is released for general availability. For a list of updates, see Kafka Schema Registry 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes on page 6232.
KSQL 5.1.2.0	EEP 7.0.0 includes support for KSQL 5.1.2.0. This release includes the following security enhancements: • You can specify a custom SSL truststore file location through properties set from the command line or in the `ksql-server.properties` file. • Authentication, encryption (SSL/TLS), and impersonation are supported between the KSQL client and KSQL server. • For non-secure clusters, impersonation and authentication are disabled for Kafka REST and Kafka Connect, by default. To configure the custom truststore, see: KSQL Security on page 3845. For a list of updates, see KSQL 5.1.2.0 - 2009 (MEP 7.0.0) Release Notes on page 6188.
Monitoring	EEP 7.0.0 includes support for new versions of the monitoring components (Collectd, Elasticsearch, Fluentd, Grafana, Kibana, and OpenTSDB). In addition, new certificates added to release 6.2.0 simplify the installation of log monitoring. For a summary of the installation changes, see Installation and Upgrade Notes (MapR 6.1.0) on page 39. For release-note information, see MapR Monitoring Components - EEP 7.0.0 Release Notes on page 6240.
S3 Gateway 2.0.0.0	EEP 7.0.0 includes support for the 2.0.0.0 release of the S3 Gateway. For a list of new features, see S3 Gateway 2.0.0.0 - 2009 (EEP 7.0.0) Release Notes on page 6262.
Oozie 5.2.0.0	EEP 7.0.0 includes support for Oozie 5.2.0.0. For a list of updates, see Oozie 5.2.0.0 - 2009 (EEP 7.0.0) Release Notes on page 6274.
Pig 0.17.0.0	EEP 7.0.0 includes support for Pig 0.17.0.0. For a list of updates, see Pig 0.17.0.0 - (EEP 7.0.0) 2009 Release Notes on page 6315.
Sentry 1.7.0	EEP 7.0.0 includes support for Sentry 1.7.0. For a list of updates, see Sentry 1.7.0 - 2009 (MEP 7.0.0) Release Notes on page 6331.
Spark 2.4.5	EEP 7.0.0 includes support for Spark 2.4.5.0.

last-updated: Apr 11, 2022

	For a list of new features and updates, see Spark 2.4.5-2009 (EEP 7.0.0) Release Notes on page 6355.
Sqoop 1.4.7	EEP 7.0.0 includes support for Sqoop 1.4.7. For a list of updates, see Sqoop 1.4.7 - 2009 (EEP 7.0.0) Release Notes on page 6452.

Deprecated Components and Features

Metering	EEP 7.0.0 does not support metering.
Myriad	Myriad is not supported in EEP 7.0.0 and later. References to Myriad have been removed from the release 6.2.0 documentation.
Sqoop2	Sqoop2 is not supported in EEP 7.0.0 and later. References to Sqoop2 have been removed from the release 6.2.0 documentation.
Sqoop TDCH	The Connector for Teradata (Sqoop TDCH) is not supported in EEP 7.0.0 and later. References to the connector have been removed from the release 6.2.0 documentation.

EEP 7.x.y Ecosystem JDK / JRE Support

Summarizes JDK and JRE build and run information for EEP 7.x.y data-fabric ecosystem components.

The "Different from Open-Source Equivalent" column highlights that while some open-source components are built with JDK 8, the data-fabric component is built with JDK 11 and will only run on JRE 11.

Ecosystem Components	Built Using JDK Version	Runs on JRE or JDK Version	Different from Open-Source Equivalent?
AsyncHBase 1.8.2.0	8	8-11	Yes (OSS version compiles with Java 6)
Drill 1.16.1.0	11	11	Yes
Flume 1.9.0.0	11	11	Yes
HBase 1.4.12.0	11	11	Yes
Hive 2.3.7	11	11	Yes
HttpFS 1.0	11	11	Yes
Hue 4.6.0.0	Not a Java component		
Impala 2.12.0.200	Not a Java component		
KSQL 5.1.2.0	11	11	Yes
Kafka Rest 5.1.2	11	11	Yes
Schema Registry 5.1.2	11	11	Yes
Kafka Connect HDFS/ JDBC	11	11	Yes
MapR Data Access Gateway 3.0	11	11	N/A
MapR Object Store 2.0.0.0	Not a Java component		
Oozie 5.2.0.0	11	11	No

last-updated: Apr 11, 2022

Ecosystem Components	Built Using JDK Version	Runs on JRE or JDK Version	Different from Open-Source Equivalent?
Pig 0.17.0.0	11	11	Yes
Sentry 1.7.x	11	11	Yes
Spark 2.4.5.0	11	11	Yes
Sqoop 1.4.7	11	11	No
Hadoop 2.7.4.0	11	11	Yes
Livy 0.5.0	11	11	Yes
Tez 0.9.2	11	11	Yes
MapR Monitoring Components			
Collectd 5.10.0.0	11	11	Yes
Elasticsearch 6.8.8.0	12	11	No
Fluentd 1.10.3.0	N/A	N/A	N/A
Grafana 6.7.2.0	N/A	N/A	N/A
Kibana 6.8.8.0	N/A	N/A	N/A
OpenTSDB 2.4.0.x	11	11	Yes

last-updated: Apr 11, 2022

This topic lists the ecosystem and MapR-monitoring components that are included in EEP 6.3.3 and shows the operating system support for each component.

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 6.3.3
Summarizes the new features in MapR Ecosystem Pack (EEP) 6.3.3.

EEP 6.3.3 provides defect repair but no new features.

EEP 6.3.3 can be used with MapR core 6.1.1 and with 6.1.0 if the latest patches are applied to core 6.1.0. For more information about EEP and MapR core version support, see EEP Support and Lifecycle Status on page 5531.

MapR Support for SUSE 12 SP5

The EEP 6.3.3 release adds MapR core support for SUSE 12 SP5. For a complete list of supported operating systems, see Operating System Support Matrix on page 5522.

EEP 6.3.3 Ecosystem Components

Except for changes to the monitoring components, EEP 6.3.3 components are unchanged from EEP 6.3.2. The monitoring components and librdkafka have been natively compiled in SUSE 12 to work with SUSE 12 SP5. For monitoring changes, see:

- MapR Monitoring Components - EEP 6.3.3 Release Notes on page 6245

MapR Installer Support for EEP 6.3.0	Mapr Installer 1.15.0.1 supports EEP 6.3.3 and release 6.1.1. For more information, see MapR Installer Updates on page 5481.

What's New in EEP 6.3.0

Summarizes the new features in MapR Ecosystem Pack (EEP) 6.3.0.

EEP 6.3.0 provides defect repair and new features as described later on this page.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

MapR Core Support for Red Hat / CentOS 7.7 and Ubuntu 18.04

The EEP 6.3.0 release adds MapR Core support for new versions of Red Hat / CentOS and Ubuntu. For a complete list of supported operating systems, see Operating System Support Matrix on page 5522.

last-updated: Apr 11, 2022

Upgrades Recommended for EEP 4.x and EEP 6.x Installations

The EEP 6.3.0 release includes EEP 6.3.0 and EEP 5.0.4, but no other EEP revisions. Specifically, the EEP 6.3.0 release does not include updates for the following EEPs:

- EEP 4.0.x on MapR 6.0.1
- EEP 4.1.x on MapR 6.0.1
- EEP 6.0.x on MapR 6.1.0
- EEP 6.1.x on MapR 6.1.0
- EEP 6.2.x on MapR 6.1.0

If your cluster is currently running one of these EEPs and you want to upgrade to obtain new features or defect repair, you must upgrade to EEP 5.0.4 on MapR 6.01 or EEP 6.3.0 on MapR 6.1.0. For more information about upgrading, see:

- Checking the EEP Version on page 5413
- EEP Support and Lifecycle Status on page 5531
- Upgrading MapR Ecosystem Packs on page 335

Java OJAI Thin Client

EEP 6.3.0 adds a Java OJAI "Thin" Client to the list of lightweight client applications that use the MapR Data Access Gateway to send requests to the MapR data platform. These client applications, which include C#, Go, Python, and Node.js, provide lightweight libraries that support the OJAI API and function as an alternative to the Java OJAI client.

For more information, see these topics:

- Using the Java OJAI Thin Client on page 2670
- Understanding the MapR Data Access Gateway on page 750
- MapR Data Access Gateway 2.0 Release Notes on page 5745

EEP 6.3.0 Ecosystem Components

HBase Support	EEP 6.3.0 includes support for Apache HBase 1.1.13. Previously, the last HBase version supported with MapR Core was HBase 1.1.8. For information about new features, patches, and known issues, see HBase 1.1.13.0-1912 (EEP 6.3.0) Release Notes on page 5871. For Apache HBase new-feature and bug-fix information, see these Apache pages: • What's new in HBase 1.1.9 • What's new in HBase 1.1.10 • What's new in HBase 1.1.11 • What's new in HBase 1.1.12 • What's new in HBase 1.1.13 For upgrade considerations, see Considerations for Upgrading to HBase 1.1.13 on page 337.

	To configure MapR-SASL security, see Configure MapR-SASL Security (Authentication and Encryption) for HBase on page 3382. For MapR HBase documentation, see HBase on page 3382.
Drill 1.16.0.10	EEP 6.3.0 includes support for Drill 1.16.0.10. For a list of updates, see Drill 1.16.0.10-1912 (EEP 6.3.0) Release Notes on page 5762.
Hive 2.3.6	EEP 6.3.0 includes support for Hive 2.3.6. For a list of new features and updates, see Hive 2.3.6-1912 (EEP 6.3.0) Release Notes on page 5936.
Hue 4.3.0 with Livy 0.5.0	EEP 6.3.0 includes support for Hue 4.3.0 with Livy 0.5.0. For a list of new features and updates, see Hue 4.3.0.100-1912 (EEP 6.3.0) Release Notes on page 6085.
Impala 2.12.0.100	EEP 6.3.0 includes support for Impala 2.12.0.100. For a list of updates, see Impala 2.12.0.100-1912 Release Notes on page 6141.
Oozie 5.1.0.300	EEP 6.3.0 includes support for Oozie 5.1.0.300. For a list of updates, see Oozie 5.1.0.300-1912 (EEP 6.3.0) Release Notes on page 6281.
Spark 2.4.4.0	EEP 6.3.0 includes support for Spark 2.4.4.0. For a list of new features and updates, see Spark 2.4.4.0-1912 Release Notes on page 6368.
MapR Installer Support for EEP 6.3.0	Mapr Installer 1.13.0.0 supports EEP 6.3.0 and maintenance EEP 5.0.4, as well as previously released EEPs. For more information, see Release History for EEPs on page 5623 and MapR Installer Updates on page 5481.

This topic contains information about the components included with the MapR Ecosystem Pack 6.2.0.

EEP 6.2.0 Components and OS Support on page 5550
This topic lists the ecosystem and MapR-monitoring components that are included in EEP 6.2.0 and shows the operating system support for each component.

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 6.2.0
Provides a summary of the new functionality in MapR Ecosystem Pack (EEP) 6.2.0.

EEP 6.2.0 provides support for the following new features.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

EEP 6.2.0 Ecosystem Components

Hive Updates	EEP 6.2.0 includes support for MapR Database JSON projection push down without secondary indexes. The metrics report file `/tmp/hive_report.json` is split: `/tmp/hiveserver2_report.json` and `/tmp/hivemetastore_report.json` for HiveServer2 and Hive Metastore, respectively.
New Hue Version	EEP 6.2.0 includes support for Hue 4.3.0. For more information, see Hue 4.3.0-1904 (EEP 6.2.0) Release Notes on page 6087.
Oozie Updates	EEP 6.2.0 includes Oozie support for Spark artifacts version 2.4.0. Jetty version is upgraded to 9.3.25.v20180904. For more information, see Oozie 5.1.0.200-1904 (EEP 6.2.0) Release Notes on page 6282.
New Spark Version	EEP 6.2.0 includes support for Spark 2.4.0.0. For more information, see Spark 2.4.0.0-1904 (EEP 6.2.0) Release Notes on page 6370.
Drill 1.16.0.0	EEP 6.2.0 includes support for Drill 1.16.0.0. Drill 1.16.0.0 includes several new features, including new SQL commands that generate table statistics and define schema for text files, multiple Drill Web UI enhancements, and format plugins for LTSV files and SYSLOG. For a complete list of features and updates, see Drill 1.16.0.0-1904 (EEP 6.2.0) Release Notes on page 5763
MapR Installer Support for EEP 6.2.0	Mapr Installer 1.12.0.0 supports EEP 6.2.0 and maintenance EEPs 6.1.1, 6.0.2, 5.0.3, and 4.1.4. For more information, see Release History for EEPs on page 5623 and MapR Installer Updates on page 5481.

What's New in EEP 6.1.0

Provides a summary of the new functionality in MapR Ecosystem Pack (EEP) 6.1.0.

EEP 6.1.0 provides support for new features in MapR Database JSON.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

New Features in MapR Database JSON

C# and Go OJAI Clients	With EEP 6.1.0, you can use the C# and Go OJAI clients to write MapR Database JSON applications. Python and Node.js clients also are supported. These clients provide lightweight libraries that support the OJAI API and alternatives to the Java OJAI client. You can connect to MapR Database JSON from middleware components, and add, update, and query documents in a MapR Database JSON table. All

clients tailor their features to developers of those respective languages.

The following topics provide more information about these clients:

- Using the C# OJAI Client on page 2688
- Using the Go OJAI Client on page 2692
- Understanding the MapR Data Access Gateway on page 750
- MapR Data Access Gateway 2.0 Release Notes on page 5745

New Features in Apache Kafka

Support for Kafka Schema Registry

Kafka Schema Registry provides a RESTful interface for storing and retrieving Avro schemas.

For more information, see Kafka Schema Registry on page 3941.

New Features in Flume

Support for SSL By Default On Secure Clusters for Flume Avro Source and Sink

For more information, see Flume Thrift Security Parameters on page 3369.

New Features in Oozie

New Oozie Version

EEP 6.1.0 includes support for Oozie 5.1.0.0. See Oozie on page 3989 and Oozie 5.1.0.0-1901 (EEP 6.1.0) Release Notes on page 6284 for more information.

New Features in Tez

Support for Shuffle SSL Encryption Configuration of Tez

For more information, see Tez 0.9.1-1901 (EEP 6.1.0 and EEP 6.0.1) Release Notes on page 6495.

4-Digit Versions

Transition to 4-Digit Versions Begins with EEP 6.1.0

With EEP 6.1.0, version numbers for some ecosystem components and MapR tools use four – rather than three – digits. In future releases, more components and tools will transition to four digits as new versions of the components are introduced. Four-digit versions enable greater precision and flexibility in the delivery of packages, patches, and Maven artifacts for MapR software. The transition to four-digit versions will happen gradually. In EEP 6.1.0, the following components use four-digit versions:

- MapR Installer 1.11.0.0
- Drill 1.15.0.0
- Oozie 5.1.0.0

- Spark 2.3.2.0
- Collectd 5.8.1.0
- Elasticsearch 6.5.3.0
- Fluentd 1.3.2.0
- Grafana 5.4.2.0
- Kibana 6.5.3.0

For more information about component versions, see:

- MapR Ecosystem Pack 6.1.0 Release Notes on page 5688
- Component Versions for Released EEPs on page 5586

EEP 6.0.2 Reference Information

This section contains links to release notes and other reference information for EEP 6.0.2.

This topic lists the ecosystem and MapR-monitoring components that are included in EEP 6.0.0 and shows the operating system support for each component.

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 6.0.0

Provides a summary of the new functionality in MapR Ecosystem Pack (EEP) 6.0.0.

EEP 6.0.0 provides new features in MapR Database JSON; Amazon S3 API; and Apache Hadoop YARN, Kafka, Spark, Hive, Tez, Hue, Livy, Flume, Oozie, and Sqoop.

EEP 6.x can be used with MapR Core 6.1.0. For more information about EEP and MapR Core version support, see EEP Support and Lifecycle Status on page 5531.

New Features in MapR Database JSON

Node.js and Python OJAI Clients	With EEP 6.0.0, you can use the Node.js and Python OJAI clients to write MapR Database JSON applications. These clients provide lightweight libraries that support the OJAI API and alternatives to the Java OJAI client. You can connect to MapR Database JSON from middleware components, and add, update, and query documents in a MapR Database JSON table. Both clients tailor their features to developers of those respective languages. The following topics provide more information about these clients: • Using the Node.js OJAI Client on page 2673 • Using the Python OJAI Client on page 2678

last-updated: Apr 11, 2022

New Features in Apache Kafka

Support for Apache Kafka Streams

Kafka Streams is a programming library that enables you to create Java or Scala streaming applications and, specifically, building streaming applications that transform input topics into output topics.

Kafka Streams enables you to build moderately complex operational streaming applications faster by offloading common functions such as failure recovery, joins and enrichment, and aggregations and windowing.

See Kafka Streams on page 3854 and Kafka Streams 1.1-1808 Release Notes on page 6182 for more information.

Support for Apache Kafka KSQL

Streaming SQL for Apache Kafka (KSQL) is an open source streaming SQL engine that implements continuous, interactive queries. KSQL enables you to query, read, write, and process data in real time and scale, using SQL commands. KSQL interacts directly with the Kafka Streams API, removing the requirement of building a Java application. See KSQL on page 3843 and KSQL 4.1.1-1808 Release Notes on page 6191 for more information.

New Ecosystem Component

Support for S3 Gateway

The S3 Gateway (S3 gateway) provides you with a REST interface compatible with the Amazon S3 API standard to store and retrieve data from the MapR platform object store in the form of files. For more information, see S3 Gateway on page 3959.

New Features in YARN

YARN Resource Calculation Based on Labels

EEP 6.0.0 implements correct steady and instantaneous fair shares, headroom, and maximum resource calculation for queues with label-based scheduling (LBS). For more information, see YARN Resource Calculation Based on Labels on page 1278.

Support for Azure Data Lake Store

You can use Azure Data Lake Store (ADLS) as an input source or an output destination for all applications. For more information, see Support for ADLS on page 40.

New Features in Spark

New Spark Version

EEP 6.0.0 includes support for Spark 2.3.1. For more information, see Spark 2.3.1-1808 (EEP 6.0.0) Release Notes on page 6385.

New Features in Hive and Tez

New Hive and Tez Versions

EEP 6.0.0 includes support for Hive 2.3 and Tez 0.9. For more information, see Hive and Tez Integration on page 3502. You can also refer to Hive 2.3.3-1808 (EEP 6.0.0) Release Notes on page 5953 and Tez 0.9.1-1808 (EEP 6.0.0) Release Notes on page 6496.

last-updated: Apr 11, 2022

Support for UPDATE, INSERT INTO, and MERGE statements in Hive	• You can use the UPDATE statement to update primitive, complex, and complex nested data types in MapR Database JSON tables, using the Hive connector. For more information, see Understanding the UPDATE Statement on page 3469. • You can use the INSERT INTO statement to insert or overwrite rows in nested MapR Database JSON tables, using the Hive connector. For more information, see Understanding the INSERT INTO Statement on page 3473. • You can use the MERGE statement to efficiently perform record-level INSERT and UPDATE operations within Hive tables. For more information, see Understanding the MERGE Statement on page 3481.
Support for Splitting Hive Log Files	You can split Hive log files into HiveServer2 and Metestore log files by process ID. For more information, see Splitting Hive Logs into HiveServer2 and Metastore logs by Process ID on page 3606.
Support for SQL Standards-Based Hive Authorization	You can configure SQL standards-based authorization to enable fine-grained access control with SQL commands. For more information, see SQL Standards-Based Hive Authorization on page 3453.
Support for Auto-Generated PEM files for WebHCat REST API on a MapR-SASL cluster	For more information, see Requirements for Using Automatically Generated PEM Files on page 3498.
Support for Configuring JDBC Connection String with SSL Encryption Enabled or Disabled	For more information, see Configuring JDBC Connection String with SSL Encryption Enabled or Disabled on page 3521.
Support for Zero RM HA for the new Tez UI	For more information, see Hive-on-Tez User Interface on page 3506.

New Features in Hue and Livy

New Hue and Livy Versions	EEP 6.0.0 includes support for Hue 4.2.0 and Livy 0.5.0. For more information, see Hue 4.2.0-1808 (EEP 6.0.0) Release Notes on page 6093.
New Features for Livy Security	For more information, see Configure Livy with Security on page 3839.

New Feature in Flume

Support for SSL By Default On Secure Clusters for Flume Thrift Source and Sink	For more information, see Flume Thrift Security Parameters on page 3369.

New Feature in Oozie

Support for Encrypting the Oozie Database User Password	For more information, see Encrypt the Oozie Database User Password on page 3997.

last-updated: Apr 11, 2022

New Features in Sqoop

New Sqoop Version	EEP 6.0.0 includes support for Sqoop 1.4.7. The Teradata Connector for Hadoop (TDCH) version is updated to v1.5.4. For more information, see Sqoop 1.4.7-1808 (EEP 6.0.0) Release Notes on page 6458.

New Features in Upgrade

Support for Preserving User Configuration	With EEP 6.0.0 you can preserve user configuration in the Hive, Tez, Hue, Impala, Sentry, Oozie, Sqoop, Kafka, Spark, Livy, and HttP-FS components. For more information, see Preparing to Upgrade the MapR Ecosystem Pack on page 335.

What's New in EEP 5.0.0

Provides a summary of the new functionality in EEP 5.0.0.

EEP 5.0.0 includes support for MapR 6.0.1 and these new features:

New Features and Additions

MapR Database JSON REST API	The MapR Database JSON REST API allows you to use HTTP calls to perform basic operations on MapR Database JSON tables. For more information, see Using the MapR Database JSON REST API on page 2696.
Apache Spark 2.2.1 with support for Structured Streaming	Apache Spark Structured Streaming is a new stream processing API that makes creating real-time analytic applications easier than ever by providing a functional, SQL-like API. For more information, see Structured Streaming in Spark on page 3952.
Support for PAM Authentication for Apache Spark	PAM authentication for Apache Spark is supported on secure clusters. For more information, see PAM Authentication for Spark on page 4133.
New Drill Version	EEP 5.0.0 includes support for Drill 1.13. For more information, see Drill 1.13-1803 Release Notes on page 5784.
Support for RM HA in Tez User Interface	EEP 4.1.1 and EEP 5.0.0 supports RM HA in the Tez user interface. For more information, see Tez 0.8.4-1803 (EEP 4.1.1 and EEP 5.0.0) Release Notes on page 6501.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

What's New in EEP 4.1.0
Provides a summary of the new functionality in EEP 4.1.0.

EEP 4.1.0 includes support for MapR 6.0 and these new features:

New Features and Additions

Support for Java and Python APIs for MapR Database OJAI Connector for Apache Spark.	For more information, see Understanding the MapR Database OJAI Connector for Spark on page 4050.
Support for saving an Apache Spark Dataset to a MapR Database table.	For more information, see Saving an Apache Spark Dataset to a MapR Database JSON Table on page 4097.
Support for insertToMapRDB API to insert an RDD, Dataframe, or Dataset into a MapR Database table.	For more information, see Saving Data to a MapR Database JSON Table on page 4088.
New Drill Version	EEP 4.1.0 includes support for Drill 1.12. For more information, see Drill 1.12.0-1801 Release Notes on page 5790.

EEP 4.0.0 Reference Information

What's New in EEP 4.0.0
Provides a summary of the new functionality in EEP 4.0.0.

EEP 4.0.0 includes support for MapR 6.0 and these new features:

New Features and Additions

Enhanced Security	For more information, see Built-in Security in MapR.
Zeppelin Ecosystem Component	For more information, see Zeppelin on MapR on page 3033.
Enhancements to Parallelism in Drill 1.11	In previous versions of Drill, parallelism correlated with the number of tablets (table partitions) that MapR Database split a table into, and each tablet stored up to 4 GB of data. One minor fragment ran for each tablet. As of MapR 6.0 and Drill 1.11, parallelism correlates with the amount of data instead of the number of tablets. One minor fragment is created for approximately every 128 MB of data. For example, Drill creates 32 minor fragments for 4 GB of data. The planner.slice_target option determines the number of minor fragments that run in parallel. For more information, see: • maprdb Format Plugin for Drill on page 3255 • Modifying Query Planning Options

What's New in EEP 3.0

Provides a summary of the new functionality in EEP 3.0.

EEP 3.0 provides a series of stability and security fixes for Spark and improves the speed of ETL and batch processing with a faster version of Hive.

New Features and Additions

MapR Database OJAI Connector for Apache Spark

The MapR Database OJAI Connector for Apache Spark is a new API that makes it easier to build real-time or batch pipelines between your data and MapR Database and leverage Spark within the pipeline. This feature includes:

- Two new APIs that allow you to load data from a MapR Database JSON table to a Spark RDD or save a Spark RDD to a MapR Database JSON table
- A custom partitioner that allows you to partition data for better performance
- Data locality: when the connector reads data from MapR Database, it uses the data locality feature of MapR Database to spawn the Spark executors

For more information, see Understanding the MapR Database OJAI Connector for Spark on page 4050.

MapR Database Binary Connector for Apache Spark

The new MapR Database Binary Connector for Apache Spark allows you to write applications that consume HBase binary tables and use them in Spark. Features include:

- Writing directly to HBase HFiles for bulk insertion into HBase
- Spark SQL can draw on tables that are represented in HBase

For more information, see MapR Database Binary Connector for Apache Spark on page 4101.

MapR Event Store For Apache Kafka C Applications (librdkafka)

As of MapR maintenance release 5.2.1, you can develop C applications for MapR Event Store For Apache Kafka. The MapR Event Store For Apache Kafka C Client is a distribution of librdkafka that integrates with MapR Streams.

For more information, see MapR Event Store For Apache Kafka C Applications on page 2795.

MapR Event Store For Apache Kafka Python Applications

As of MapR 5.2.1, you can create Python applications for MapR Event Store For Apache Kafka using the MapR Streams Python client. The Streams Python client is a binding for librdkafka and contains support for high-level consumers.

For more information, see MapR Event Store For Apache Kafka Python Applications on page 2998.

Key Upgrades

Apache Spark 2.1.0

Spark 2.1 in the MapR converged data platform brings improvements in enterprise-ready stability and security, including:

- More than 1200 fixes on the Spark 2.x line

last-updated: Apr 11, 2022

- MapR-SASL support for encrypted Thrift-server connections
- Scalable partition handling
- Stable data-type APIs

For more information, see Apache Spark Feature Support on page 4027.

Apache Hive 2.1.1

EEP 3.0 provides a faster version of Hive to improve the speed of data-processing tasks, to reduce latency for interactive queries, and to increase throughput for batch queries. Key improvements include:

- 2x faster ETL through an enhanced cost-based optimizer (CBO), faster type conversions, and dynamic partition pruning
- New HiveServer UI with new diagnostics and monitoring tools
- Dynamically partitioned hash joins, which provide unsorted inputs in order to eliminate the sorting step.
- Vectorized query execution that greatly reduces the CPU usage for typical query operations, like scans, filters, aggregates, and joins

For more information, see Hive on page 3405.

Apache Drill 1.10

Continuing on the iterative releases, Drill 1.10 is another important milestone for Apache Drill. Numerous enhancements have been added to this release for BI tool integration, end-to-end security, performance, and usability enhancements. Highlights of this release include:

- Tableau native connectivity
- Support for Kerberos and MapR-SASL authentication between the client and Drillbit
- Support for the CREATE TEMPORARY TABLE AS (CTTAS) command
- Ability to query data with Hue 3.12 (experimental only)
- Improved compatibility with Hive/Spark-generated Parquet files

For more information, see the Drill Introduction.

This topic lists the ecosystem and MapR-monitoring components that are included in EEP 1.1 and shows the operating system support for each component.

Component Versions for Released EEPs on page 5586
The published MapR Ecosystem Packs (EEPs) contain different component versions with different features. Comparing the component versions can help you make decisions about installing or upgrading data-fabric software.

Release History for EEPs on page 5623
This section shows the original release dates for all MapR Ecosystem Packs (EEPs).

MapR Data Fabric for Kubernetes Release Notes

This section contains release notes for the MapR Data Fabric for Kubernetes.

MapR CSI Storage Plugin Release Notes

This section contains release notes for the Container Storage Interface (CSI) Storage Plugin.

MapR Container Storage Interface (CSI) Storage Plugin Release 1.2.x (FUSE POSIX)
These notes describe release 1.2.x of the MapR Container Storage Interface (CSI) Storage Plugin for FUSE POSIX.

You may also be interested in the Kubernetes Release Notes. For the latest 1.2.x version, see the `mapr-csi` github repository.

Version	1.2.x
Release Date	November 2020
MapR Version Interoperability	Compatible with release 6.1.0 and later.
Kubernetes Compatibility	Kubernetes 1.17.0 and later.*
OpenShift Compatibility	4.4 and later.
CSI Driver Downloads	See Downloads (CSI) on page 225 for more information.
Documentation	• Overview: MapR Container Storage Interface (CSI) Storage Plugin Overview on page 666 • Installation: Installing, Uninstalling, and Upgrading the MapR Container Storage Interface (CSI) Storage Plugin on page 228 • Supported Versions: CSI Version Compatibility on page 5596
Related Resources	https://www.hpe.com/us/en/resource-library.html

***** Kubernetes alpha features are not supported.

New in this Release

This release of the MapR Container Storage Interface (CSI) Storage Plugin increments the version of the `csi-kdfplugin` to 1.2.x. Release 1.2.x includes support for:

- Volume cloning for dynamic provisioning. For more information, see CSI Volume Cloning.
- Snapshot restore for dynamic provisioning. For more information, see Snapshot & Restore Feature.
- Dynamic and static provisioning of raw block volumes. For more information, see Raw Block Volumes on page 670.

You can access the `csi-kdfplugin` by installing the custom resource definition (CRD) using the `csi-maprkdf-v<version>.yaml` file. Or you can build your own container and point to the plugin on the Docker hub at `maprtech/csi-kdfplugin:<version>`. For installation information, see Installing, Uninstalling, and Upgrading the MapR Container Storage Interface (CSI) Storage Plugin on page 228.

Patches

None.

Limitations

Note the following limitations:

- CSI Driver version 1.2.x does not support coexistence with the FlexVolume Driver on the same Kubernetes cluster.
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support the following Linux distributions:
  - CentOS
  - RHEL (use CentOS configuration file)
  - Ubuntu
- The Container POSIX client package is included by default when you install the MapR Container Storage Interface (CSI) Storage Plugin. The Basic, Container, or Platinum POSIX client can be enabled by specifying a parameter in the pod spec.
- The CSI Driver does not include support for inline volumes in pods. It supports only PersistentVolumes.

Known Issues

Note the following known issues:

- Snapshot restore fails if the snapshot contains symlinks to other files in the directory.

Resolved Issues

Issue	Description
CSI-30	Enable memory profiling for fuse process w/ trackMemory : true option
CSI-241	Support volume clone for dynamic provisioning
CSI-242	Support snapshot restore for dynamic provisioning
CSI-243	Support for OpenShift 4.4, 4.5, 4.6+ & Kubernetes 1.17, 1.18, 1.19+

last-updated: Apr 11, 2022

Issue	Description
CSI-248	Retain fuse logs after pod delete w/ retainLogs: true option
REL-301	Update kdfplugin image w/ 6.2 release bits on centos8
CSI-254	Option 'numrpcthreads' added to configure Number of Client RPC threads (default:1, max:4).
CSI-258	DF client fixes & updates
CSI-259	Reduce verbose logging on CSI logfiles
CSI-262	[BETA] Support ticket-based authentication to apiserver. You can use MAPR_CLUSTER_TICKET instead of MAPR_CLUSTER_USER and MAPR_CLUSTER_PASSWORD. See REST Secrets on page 3168.
BDP-2631	Update to livenessprobe v2.2.0 image to remove level5 messages

MapR Container Storage Interface (CSI) Storage Plugin Release 1.0 (Loopback NFS)
These notes describe release 1.0.x of the MapR Container Storage Interface (CSI) Storage Plugin for Loopback NFS.

You may also be interested in the Kubernetes Release Notes. For the latest 1.0.x version, see the `mapr-csi` github repository.

Version	1.0.x
Release Date	November 2020
MapR Version Interoperability	Compatible with release 6.1.0 and later.
Kubernetes Compatibility	Kubernetes 1.17.0 and later.*
OpenShift Compatibility	4.4 and later.
CSI Driver Downloads	See Downloads (CSI) on page 225 for more information.
Documentation	• Overview: MapR Container Storage Interface (CSI) Storage Plugin Overview on page 666 • Installation: Installing, Uninstalling, and Upgrading the MapR Container Storage Interface (CSI) Storage Plugin on page 228 • Supported Versions: CSI Version Compatibility on page 5596
Related Resources	https://www.hpe.com/us/en/resource-library.html

***** Kubernetes alpha features are not supported.

New in this Release

This first release of the Container Storage Interface (CSI) Storage Plugin for NFS includes `.yaml` configuration files that can be installed onto a Kubernetes cluster. Once installed, these containers provide an NFS-based CSI Driver for the file-system volume plug-in and a Kubernetes Dynamic Volume Provisioner that permit static and dynamic provisioning of data-fabric storage from Kubernetes.

You can access the `csi-nfsplugin` by installing the custom resource definition (CRD) using the `csi-maprnfskdf-v<version>.yaml` file. Or you can build your own container and point to the plugin on the Docker hub at `maprtech/csi-nfsplugin:<version>`. For installation information, see Installing, Uninstalling, and Upgrading the MapR Container Storage Interface (CSI) Storage Plugin on page 228.

Release 1.0.x also includes support for dynamic and static provisioning of raw block volumes. For more information, see Raw Block Volumes on page 670.

Patches

None.

Limitations

Note the following limitations:

- CSI Driver version 1.0.x does not support coexistence with the FlexVolume Driver on the same Kubernetes cluster.
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support the following Linux distributions:
  - CentOS
  - RHEL (use CentOS configuration file)
  - Ubuntu
- The CSI Driver does not include support for inline volumes in pods. It supports only PersistentVolumes.

Known Issues

Note the following known issues:

- Snapshot restore fails if the snapshot contains symlinks to other files in the directory.

Resolved Issues

Issue	Description
CSI-30	Enable memory profiling for fuse process w/ trackMemory : true option
CSI-241	Support volume clone for dynamic provisioning
CSI-242	Support snapshot restore for dynamic provisioning
CSI-243	Support for OpenShift 4.4, 4.5, 4.6+ & Kubernetes 1.17, 1.18, 1.19+
CSI-248	Retain fuse logs after pod delete w/ retainLogs: true option
REL-301	Update kdfplugin image w/ 6.2 release bits on centos8
CSI-254	Option 'numrpcthreads' added to configure Number of Client RPC threads (default:1, max:4).
CSI-258	DF client fixes & updates
CSI-259	Reduce verbose logging on CSI logfiles
CSI-262	[BETA] Support ticket-based authentication to apiserver. You can use MAPR_CLUSTER_TICKET instead of MAPR_CLUSTER_USER and MAPR_CLUSTER_PASSWORD. See REST Secrets on page 3168.
BDP-2631	Update to livenessprobe v2.2.0 image to remove level5 messages

MapR Container Storage Interface (CSI) Storage Plugin Release 1.1.0

These notes describe Release 1.1.0 of the MapR Container Storage Interface (CSI) Storage Plugin.

You may also be interested in the Kubernetes Release Notes.

Version	1.1.0

last-updated: Apr 11, 2022

Release Date	August 2020
MapR Version Interoperability	Compatible with MapR 6.1.0 and later.
Kubernetes Compatibility	Kubernetes 1.16.0 and later.*
OpenShift Compatibility	4.2 and 4.3.
CSI Driver Downloads	See Downloads (CSI) on page 225 for more information.
Documentation	• Overview: MapR Container Storage Interface (CSI) Storage Plugin Overview on page 666 • Installation: Installing, Uninstalling, and Upgrading the MapR Container Storage Interface (CSI) Storage Plugin on page 228 • Supported Versions: CSI Version Compatibility on page 5596
Related Resources	https://www.hpe.com/us/en/resource-library.html

***** Kubernetes alpha features are not supported.

New in this Release

This release of the MapR Container Storage Interface (CSI) Storage Plugin increments the version of the `csi-kdfplugin` to 1.1.0. Release 1.1.0 includes support for all three MapR POSIX licenses (Basic, Container, and Platinum) and allows users to pass custom startup parameters to the FUSE process.

Release 1.1.0 also includes support for volume expansion for dynamic provisioning. For more information, see Example: Volume Expansion for Dynamic Provisioning Using MapR Container Storage Interface (CSI) Storage Plugin on page 3126.

You can access the new `csi-kdfplugin` by installing the custom resource definition using the `csi-maprkdf-v1.1.0.yaml` file. Or you can build your own container and point to the plugin on the Docker hub at `maprtech/csi-kdfplugin:1.1.0`. For installation information, see Installing, Uninstalling, and Upgrading the MapR Container Storage Interface (CSI) Storage Plugin on page 228.

Patches

None.

Limitations

Note the following limitations:

- CSI Driver version 1.1.0 does not support coexistence with the FlexVolume Driver on the same Kubernetes cluster.
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support the following Linux distributions:
  - CentOS
  - Red Hat (use CentOS configuration file)
  - Ubuntu

- The Container POSIX client package is included by default when you install the MapR Container Storage Interface (CSI) Storage Plugin. The Basic, Container, or Platinum POSIX client can be enabled by specifying a parameter in the pod spec. Only the FUSE-based POSIX client is supported. NFSv3 and NFSv4 are not supported.
- The CSI Driver does not include support for inline volumes in pods. It supports only PersistentVolumes.

Known Issues

Note the following known issues:

- On nodeplugin pod restart or upgrade scenario, the existing POSIX client(s) running in the CSI Driver container are killed. The workaround is to move/stop the container workload using MapR CSI Storage Plugin, restart/update the MapR CSI Storage Plugin and start using the MapR CSI Storage Plugin again.
- On Provisioner restart, Provisioner loses the information about the REST server where volume or snapshot should be deleted for existing volume and snapshots provisioned. The administrator must manually remove the volume and/or snapshot for provisioned volumes from the MapR Data Platform.
- Provisioned snapshot information is written to the provisioner log, but not available in the Kubernetes objects such as volumeSnapshots, VolumesnapshotContents etc.
- If you want read-only behavior, specify `readOnly` in the `volumeAttributes`. For example, the following is supported:

```
csi:
    nodePublishSecretRef:
      name: "mapr-ticket-secret"
      namespace: "test-csi"
    driver: com.mapr.csi-kdf
    volumeHandle: pv-securepv-test-read-only-id
    volumeAttributes:
      volumePath: "/user/root"
      cluster: "clusterA"
      cldbHosts: "10.10.10.210"
      securityType: "secure"
      readOnly: "true"
```

The following is not supported:

```
csi:
    nodePublishSecretRef:
      name: "mapr-ticket-secret"
      namespace: "test-csi"
    driver: com.mapr.csi-kdf
    volumeHandle: pv-securepv-test-read-only-id
    readOnly: true
    volumeAttributes:
      volumePath: "/user/root"
      cluster: "clusterA"
      cldbHosts: "10.10.10.210"
      securityType: "secure"
```

Resolved Issues

Issue	Description
K8S-844	[csi-driver] mapr k8s log rotation policy and clearing of unused mounts (more fixes)

Issue	Description
K8S-1199	Ship debugging tools with POSIX client in K8S world
K8S-1405	Support CSI driver for OpenShift 4.3
K8S-1694	[csi-driver] Implemement CSI Spec v1.3 for CSI Driver
K8S-1695	[csi-driver] Implement VolumeExpansion RPC
K8S-1696	[csi-driver] Update all side container images (support k8s 1.15+)

MapR Container Storage Interface (CSI) Storage Plugin Release 1.0.2
These notes describe Release 1.0.2 of the MapR Container Storage Interface (CSI) Storage Plugin.

You may also be interested in the Kubernetes Release Notes.

Version	1.0.2
Release Date	March 2020
MapR Version Interoperability	Compatible with MapR 6.1.0 or later.
Kubernetes Compatibility	Kubernetes 1.13.0 and later.*
OpenShift Compatibility	4.1 and 4.2
CSI Driver Downloads	See Downloads (CSI) on page 225 for more information.
Documentation	MapR Container Storage Interface (CSI) Storage Plugin Overview on page 666
Related Resources	https://www.hpe.com/us/en/resource-library.html

***** Kubernetes alpha features are not supported.

New in this Release

This release of the MapR Container Storage Interface (CSI) Storage Plugin increments the version of the `csi-kdfplugin` to 1.0.2. Release 1.0.2 adds support for all three MapR POSIX licenses (Basic, Container, and Platinum) and allows users to pass custom startup parameters to the FUSE process.

For new-feature information, see Example: Mounting a PersistentVolume for Static Provisioning on page 3113.

You can access the new `csi-kdfplugin` by installing the custom resource definition using the `csi-maprkdf-v1.0.2.yaml` file. Or you can build your own container and point to the plugin on the Docker hub at `maprtech/csi-kdfplugin:1.0.2`. For installation information, see Installing, Uninstalling, and Upgrading the MapR Container Storage Interface (CSI) Storage Plugin on page 228.

Patches

None.

Limitations

Note the following limitations:

- CSI Driver version 1.0 does not support coexistence with the FlexVolume Driver on the same Kubernetes cluster.
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support the following Linux distributions:
  - CentOS

  - Red Hat (use CentOS configuration file)
  - Ubuntu
- The Container POSIX client package is included by default when you install the MapR Container Storage Interface (CSI) Storage Plugin. The Basic or Platinum POSIX client can be enabled by specifying a parameter in the Pod spec. Only the FUSE-based POSIX client is supported. NFSv3 and NFSv4 are not supported.
- The CSI Driver does not include support for inline volumes in pods. It supports only PersistentVolumes.

Known Issues

Note the following known issues:

- On nodeplugin Pod restart or upgrade scenario, the existing POSIX client(s) running in the CSI Driver container are killed. The workaround is to move/stop the container workload using MapR CSI Storage Plugin, restart/update the MapR CSI Storage Plugin and start using the MapR CSI Storage Plugin again.
- On Provisioner restart, Provisioner loses the information about the REST server where volume or snapshot should be deleted for existing volume and snapshots provisioned. The administrator must manually remove the volume and/or snapshot for provisioned volumes from the MapR Data Platform.
- Provisioned snapshot information is written to the provisioner log, but not available in the Kubernetes objects such as volumeSnapshots, VolumesnapshotContents etc.
- If you want read-only behavior, specify `readOnly` in the `volumeAttributes`. For example, the following is supported:

```
csi:
    nodePublishSecretRef:
      name: "mapr-ticket-secret"
      namespace: "test-csi"
    driver: com.mapr.csi-kdf
    volumeHandle: pv-securepv-test-read-only-id
    volumeAttributes:
      volumePath: "/user/root"
      cluster: "clusterA"
      cldbHosts: "10.10.10.210"
      securityType: "secure"
      readOnly: "true"
```

  The following is not supported:

```
csi:
    nodePublishSecretRef:
      name: "mapr-ticket-secret"
      namespace: "test-csi"
    driver: com.mapr.csi-kdf
    volumeHandle: pv-securepv-test-read-only-id
    readOnly: true
    volumeAttributes:
      volumePath: "/user/root"
      cluster: "clusterA"
      cldbHosts: "10.10.10.210"
      securityType: "secure"
```

Resolved Issues

Issue	Description
K8S-844	MapR K8S log rotation policy and clearing of unused mounts
K8S-1068	Ability to modify the fuse.conf per container basis.
K8S-1208	PODs fail to mount MapR with /opt/mapr/k8s/hostname empty file error.

MapR Container Storage Interface (CSI) Storage Plugin Release 1.0

These notes describe the first release of the MapR Container Storage Interface (CSI) Storage Plugin.

You may also be interested in the Kubernetes Release Notes.

Version	1.0
Release Date	February 2019
MapR Version Interoperability	Compatible with MapR 6.1.0 or later.
Kubernetes Compatibility	Kubernetes 1.13.0 and later.*
OpenShift Compatibility	4.1 and 4.2
CSI Driver Downloads	See Downloads (CSI) on page 225 for more information.
Documentation	MapR Container Storage Interface (CSI) Storage Plugin Overview on page 666
Related Resources	https://www.hpe.com/us/en/resource-library.html

***** Kubernetes alpha features are not supported.

New in this Release

This first release of the MapR Container Storage Interface (CSI) Storage Plugin includes `.yaml` configuration files that can be installed onto a Kubernetes cluster. Once installed, these containers provide a CSI Driver for the MapR File System volume plug-in and a Kubernetes Dynamic Volume Provisioner that permit static and dynamic provisioning of MapR storage from Kubernetes.

Fixes

None.

Limitations

Note the following limitations:

- CSI Driver version 1.0 does not support coexistence with the FlexVolume Driver on the same Kubernetes cluster.
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support the following Linux distributions:
  - CentOS
  - Red Hat (use CentOS configuration file)
  - Ubuntu
- The Basic POSIX client package is included by default when you install the MapR Container Storage Interface (CSI) Storage Plugin. The Platinum POSIX client can be enabled by specifying a parameter in the Pod spec. Only the FUSE-based POSIX client is supported. NFSv3 and NFSv4 are not supported.

- The CSI Driver does not include support for inline volumes in pods. It only supports PersistentVolumes.

Known Issues

Note the following known issues:

- On nodeplugin Pod restart or upgrade scenario, the existing POSIX client(s) running in the CSI Driver container are killed. The workaround is to move/stop the container workload using MapR CSI Storage Plugin, restart/update the MapR CSI Storage Plugin and start using the MapR CSI Storage Plugin again.
- On Provisioner restart, Provisioner loses the information about the REST server where volume or snapshot should be deleted for existing volume and snapshots provisioned. The administrator must manually remove the volume and/or snapshot for provisioned volumes from the MapR Data Platform.
- Provisioned snapshot information is written to the provisioner log, but not available in the Kubernetes objects such as volumeSnapshots, VolumesnapshotContents etc.
- If you want read-only behavior, specify `readOnly` in the `volumeAttributes`. For example, the following is supported:

```
csi:
    nodePublishSecretRef:
      name: "mapr-ticket-secret"
      namespace: "test-csi"
    driver: com.mapr.csi-kdf
    volumeHandle: pv-securepv-test-read-only-id
    volumeAttributes:
      volumePath: "/user/root"
      cluster: "clusterA"
      cldbHosts: "10.10.10.210"
      securityType: "secure"
      readOnly: "true"
```

The following is not supported:

```
csi:
    nodePublishSecretRef:
      name: "mapr-ticket-secret"
      namespace: "test-csi"
    driver: com.mapr.csi-kdf
    volumeHandle: pv-securepv-test-read-only-id
    readOnly: true
    volumeAttributes:
      volumePath: "/user/root"
      cluster: "clusterA"
      cldbHosts: "10.10.10.210"
      securityType: "secure"
```

Resolved Issues

None.

MapR Data Fabric for Kubernetes FlexVolume Driver Release Notes

This section contains release notes for the MapR Data Fabric for Kubernetes FlexVolume Driver.

MapR Data Fabric for Kubernetes Release 1.1.0

These notes describe version 1.1.0 of the MapR Data Fabric for Kubernetes.

You may also be interested in the Kubernetes documentation.

Version	1.1.0
Release Date	December 2018
MapR Version Interoperability	Compatible with MapR 5.2.2 or later.  **Note:** If your installation requires MapR and Kubernetes software to coexist on the same nodes, you must use one of these versions: • Version 1.0.1 with MapR 6.0.1 or later • Version 1.1.0 with MapR 6.1.0 or later
OS Compatibility	The operating system (OS) on a node where the volume plug-in is installed must be a supported OS for the MapR version. For a list of supported OS versions, see Operating System Support Matrix on page 5522.
Kubernetes Compatibility	Kubernetes 1.9 or later.  **Note:** Kubernetes alpha features are not supported.
MapR Software Downloads	MapR installation (`.yaml`) files are located here: https://package.mapr.com/tools/KubernetesDataFabric
Source on GitHub	This repository contains Docker images, installation files, and examples: https://github.com/mapr/KubernetesDataFabric
Docker Hub	Docker containers for the MapR installation files are located here: • https://hub.docker.com/r/maprtech/kdf-provisioner/ • https://hub.docker.com/r/maprtech/kdf-plugin/
Documentation	MapR Data Fabric for Kubernetes FlexVolume Driver Overview on page 671
Related Resources	https://mapr.com/solutions/data-fabric/kubernetes/

New in This Release

Version 1.1.0 of the MapR Data Fabric for Kubernetes includes a new plug-in and provisioner and uses the updated version of the FUSE POSIX client included in MapR 6.1.0. Version 1.1.0 can be used on cluster nodes that:

- Are installed with MapR software only (MapR 5.2.2 or later)
- Have both MapR software (MapR 6.1.0 or later) and Kubernetes software

This release of the MapR Data Fabric for Kubernetes includes a set of Docker containers and their respective `.yaml` configuration files that can be installed onto a Kubernetes cluster. Once installed, these containers provide a Kubernetes FlexVolume Driver for MapR File System and a Kubernetes Dynamic Volume Provisioner that permit static and dynamic provisioning of MapR storage from Kubernetes.

To upgrade a previously installed version of the plug-in and provisioner to version 1.1.0, see Upgrading the MapR Data Fabric for Kubernetes on page 248.

Fixes

None.

Known Issues and Limitations

Note these limitations:

- Installations that require MapR and Kubernetes software to coexist on the same nodes must use one of the following:
  - Version 1.0.1 with MapR 6.0.1 or later
  - Version 1.1.0 with MapR 6.1.0 or later
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support these Linux distributions:
  - CentOS
  - RedHat (use CentOS configuration file)
  - SSE (use CentOS configuration file)
  - Ubuntu
- Docker for Mac with Kubernetes is not supported as a development platform for containers used with the MapR Data Fabric for Kubernetes.
- Volume plug-in files are supported for:
  - CentOS
  - Ubuntu
  - Microsoft Azure AKS
  - Red Hat OpenShift**
  - Google Kubernetes Engine (GKE)
- Amazon EKS is not supported.
- The Basic POSIX client package is included by default when you install the MapR Data Fabric for Kubernetes. The Platinum POSIX client can be enabled by specifying a parameter in the Pod spec. Only the POSIX client is supported. NFSv3 is not supported.

**OpenShift Origin is supported because it supports Kubernetes 1.9. The OpenShift Container Platform (formerly known as OpenShift Enterprise) can be used only if it supports Kubernetes 1.9 or later.

Resolved Issues

Issue	Description
K8S-310	Node restart causes the KDF driver to not update the volume mount.
K8S-315	Version 1.1.0 uses the FUSE POSIX client included in MapR 6.1.0.
K8S-332	On an upgrade from a previous version of the volume plug-in, POSIX can fail with the following error in the POSIX log file: `Create/Attach to stats shared memory failed.`
K8S-353	Kubelet restart causes the existing volume mount to fail.

Issue	Description
K8S-362	Version 1.1.0 provides compatibility with MapR 6.1.0 or earlier volume attributes, as provided in the storage class.
K8S-399	Version 1.1.0 provides ReadWriteMany support with the KDF volume driver.

MapR Data Fabric for Kubernetes Release 1.0.2
These notes describe version 1.0.2 of the MapR Data Fabric for Kubernetes.

You may also be interested in the Kubernetes documentation.

Version	1.0.2
Release Date	July 2018
MapR Version Interoperability	Compatible with MapR 5.2.2 or later.  **Note:** Version 1.0.2 does *not* support the coexistence of MapR and Kubernetes software on the same nodes. If your installation requires MapR and Kubernetes software to coexist on the same nodes, see the MapR Data Fabric for Kubernetes release notes to identify the latest version that supports coexistence.
OS Compatibility	The operating system (OS) on a node where the volume plug-in is installed must be a supported OS for the MapR version. For a list of supported OS versions, see Operating System Support Matrix on page 5522.
Kubernetes Compatibility	Kubernetes 1.9 or later.  **Note:** Kubernetes alpha features are not supported.
MapR Software Downloads	MapR installation (`.yaml`) files are located here: https://package.mapr.hpe.com/tools/KubernetesDataFabric
Source on GitHub	This repository contains Docker images, installation files, and examples: https://github.com/mapr/KubernetesDataFabric
Docker Hub	Docker containers for the MapR installation files are located here: • https://hub.docker.com/r/maprtech/kdf-provisioner/ • https://hub.docker.com/r/maprtech/kdf-plugin/
Documentation	MapR Data Fabric for Kubernetes FlexVolume Driver Overview on page 671
Related Resources	https://mapr.com/solutions/data-fabric/kubernetes/

New in This Release

Version 1.0.2 of the MapR Data Fabric for Kubernetes can only be used on cluster nodes that are installed with MapR software (MapR 5.2.2 or later). Version 1.0.2 cannot be used on cluster nodes having both MapR and Kubernetes software.

This release of the MapR Data Fabric for Kubernetes includes a set of Docker containers and their respective `.yaml` configuration files that can be installed onto a Kubernetes cluster. Once installed, these containers provide a Kubernetes FlexVolume Driver for MapR File System and a Kubernetes Dynamic Volume Provisioner that permit static and dynamic provisioning of MapR storage from Kubernetes.

Fixes

None.

Known Issues and Limitations

Note these limitations:

- Version 1.0.2 does *not* support the coexistence of MapR and Kubernetes software on the same nodes. If your installation requires MapR and Kubernetes software to coexist on the same nodes, see the MapR Data Fabric for Kubernetes release notes to identify the latest version that supports coexistence.
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support these Linux distributions:
  - CentOS
  - RedHat (use CentOS configuration file)
  - SSE (use CentOS configuration file)
  - Ubuntu
- Docker for Mac with Kubernetes is not supported as a development platform for containers used with the MapR Data Fabric for Kubernetes.
- Volume plug-in files are supported for:
  - CentOS
  - Ubuntu
  - Microsoft Azure AKS
  - Red Hat OpenShift**
  - Google Kubernetes Engine (GKE)
- Amazon EKS is not supported.
- The Basic POSIX client package is included by default when you install the MapR Data Fabric for Kubernetes. The Platinum POSIX client can be enabled by specifying a parameter in the Pod spec. Only the POSIX client is supported. NFSv3 is not supported.

**OpenShift Origin is supported because it supports Kubernetes 1.9. The OpenShift Container Platform (formerly known as OpenShift Enterprise) can be used only if it supports Kubernetes 1.9.

Resolved Issues

Issue	Description
K8S-139	Version 1.0.2 includes a fix for UID/GID handling in secure, non-impersonated environments. Before Version 1.0.2, if the UID/GID of the ticket was different from the UID/GID of the container, write operations could fail. With this fix, if the UID/GID of the ticket is different from the UID/GID of the container, all operations are performed using the UID/GID of the ticket.
K8S-164	In version 1.0.1, SELinux relabeling on the pod-container volume mounts caused an issue with the flexvolume-mounted filesystem. (SELinux relabeling is enabled by default for the volume plug-in in version 1.0.1.) In version 1.0.2, the volume plug-in resolves the issue by opting out of SELinux relabeling, reporting `selinux Relabel:false` in its `init` call.

last-updated: Apr 11, 2022

MapR Data Fabric for Kubernetes Release 1.0.1
These notes describe version 1.0.1 of the MapR Data Fabric for Kubernetes.

You may also be interested in the Kubernetes documentation.

Version	1.0.1
Release Date	May 2018
MapR Version Interoperability	Compatible with MapR 5.2.2 or later. **Note:** Version 1.0.1 supports installing MapR and Kubernetes software on the same nodes. However, not all versions of the MapR Data Fabric for Kubernetes support this feature. To identify other versions that support this feature, see the MapR Data Fabric for Kubernetes release notes.
OS Compatibility	The operating system (OS) on a node where the volume plug-in is installed must be a supported OS for the MapR version. For a list of supported OS versions, see Operating System Support Matrix on page 5522.
Kubernetes Compatibility	Kubernetes 1.9 or later. **Note:** Kubernetes alpha features are not supported.
MapR Software Downloads	MapR installation (`.yaml`) files are located here: https://package.mapr.hpe.com/tools/KubernetesDataFabric
Source on GitHub	This repository contains Docker images, installation files, and examples: https://github.com/mapr/KubernetesDataFabric
Docker Hub	Docker containers for the MapR installation files are located here: • https://hub.docker.com/r/maprtech/kdf-provisioner/ • https://hub.docker.com/r/maprtech/kdf-plugin/
Documentation	MapR Data Fabric for Kubernetes FlexVolume Driver Overview on page 671
Related Resources	https://mapr.com/solutions/data-fabric/kubernetes/

New in This Release

Version 1.0.1 of the MapR Data Fabric for Kubernetes can be used:

- On cluster nodes that are installed with MapR software only (MapR 5.2.2 or later)
- On cluster nodes having both MapR software (MapR 6.0.1 or later) and Kubernetes software

This release of the MapR Data Fabric for Kubernetes includes a set of Docker containers and their respective `.yaml` configuration files that can be installed onto a Kubernetes cluster. Once installed, these containers provide a Kubernetes FlexVolume Driver for MapR File System and a Kubernetes Dynamic Volume Provisioner that permit static and dynamic provisioning of MapR storage from Kubernetes.

Fixes

None.

Known Issues and Limitations

Note these limitations:

- Version 1.0.1 supports installing MapR 6.0.1 or later and Kubernetes software on the same nodes. However, not all versions of the MapR Data Fabric for Kubernetes support this feature. To identify other versions that support coexistence, see the MapR Data Fabric for Kubernetes release notes.
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support these Linux distributions:
  - CentOS
  - RedHat (use CentOS configuration file)
  - SSE (use CentOS configuration file)
  - Ubuntu
- Docker for Mac with Kubernetes is not supported as a development platform for containers used with the MapR Data Fabric for Kubernetes.
- Volume plug-in files are supported for:
  - CentOS
  - Ubuntu
  - Microsoft Azure AKS
  - Red Hat OpenShift**
  - Google Kubernetes Engine (GKE)
- Amazon EKS is not supported.
- The Basic POSIX client package is included by default when you install the MapR Data Fabric for Kubernetes. The Platinum POSIX client can be enabled by specifying a parameter in the Pod spec. Only the POSIX client is supported. NFSv3 is not supported.

**OpenShift Origin is supported because it supports Kubernetes 1.9. The OpenShift Container Platform (formerly known as OpenShift Enterprise) can be used only if it supports Kubernetes 1.9.

Resolved Issues

None

MapR Data Fabric for Kubernetes Release 1.0

These notes describe the first release of the MapR Data Fabric for Kubernetes.

You may also be interested in the Kubernetes documentation.

Version	1.0
Release Date	March 2018
MapR Version Interoperability	Compatible with MapR 5.2.2 or later.
OS Compatibility	The operating system (OS) on a node where the volume plug-in is installed must be a supported OS for the MapR version. For a list of supported OS versions, see Operating System Support Matrix on page 5522.
Kubernetes Compatibility	Kubernetes 1.9 and later.*

last-updated: Apr 11, 2022

Documentation	MapR Data Fabric for Kubernetes FlexVolume Driver Overview on page 671
Related Resources	https://mapr.com/solutions/data-fabric/kubernetes/

*Kubernetes alpha features are not supported.

New in This Release

This first release of the MapR Data Fabric for Kubernetes introduces a set of Docker containers and their respective `.yaml` configuration files that can be installed onto a Kubernetes cluster. Once installed, these containers provide a Kubernetes FlexVolume Driver for MapR File System and a Kubernetes Dynamic Volume Provisioner that permit static and dynamic provisioning of MapR storage from Kubernetes.

Fixes

None.

Known Issues and Limitations

Note these limitations:

- Version 1.0 does *not* support the coexistence of MapR and Kubernetes software on the same nodes. If your installation requires MapR and Kubernetes software to coexist on the same nodes, see the MapR Data Fabric for Kubernetes release notes to identify the latest version that supports coexistence.
- All nodes in the Kubernetes cluster must use the same Linux OS. Configuration files are available to support these Linux distributions:
  - CentOS
  - RedHat (use CentOS configuration file)
  - SSE (use CentOS configuration file)
  - Ubuntu
- Docker for Mac with Kubernetes is not supported as a development platform for containers used with the MapR Data Fabric for Kubernetes.
- Volume plug-in files are supported for:
  - CentOS
  - Ubuntu
  - Microsoft Azure AKS
  - Red Hat OpenShift**

  - Google Kubernetes Engine (GKE)
- Amazon EKS is not supported.
- The Basic POSIX client package is included by default when you install the MapR Data Fabric for Kubernetes. The Platinum POSIX client can be enabled by specifying a parameter in the Pod spec. Only the POSIX client is supported. NFSv3 is not supported.

**OpenShift Origin is supported because it supports Kubernetes 1.9. The OpenShift Container Platform (formerly known as OpenShift Enterprise) can be used only if it supports Kubernetes 1.9.

Resolved Issues

None

Patches for Known Issues

A notice of known issues is maintained on the MapR Support website. The website indicates if patches or workarounds are available for an issue.

For patch information, visit the Support notices of known issues, some with patches or workarounds.

To download patches, see Downloading a Patch on page 437.

MapR PACC Release Notes

This section contains release notes for the MapR Persistent Application Client Container (PACC).

PACC 6.2.0_7.0.0 Release Notes

These notes describe the MapR Persistent Application Container Client (PACC) for core 6.2.0 with EEP 7.0.0.

You may also be interested in the MapR Data Science Refinery Release Notes on page 5637.

Version	6.2.0_7.0.0
Release Date	October 2020
MapR Version Interoperability	Compatible with release 6.2.0 and EEP 7.0.0
Docker Hub	Docker containers for the data-fabric installation files are located here: • https://hub.docker.com/r/maprtech/pacc/tags/
Documentation	About the MapR Persistent Application Client Container (PACC) on page 403
Related Resources	HPE Ezmeral Data Fabric

New in This Release

This release provides support for core 6.2.0 with EEP 7.0.0 and compatibility with core 6.1.0.

This release provides an option during image configuration to specify additional packages. If you prefer to use existing images from the Docker hub, you can use an environmental variable to specify packages that are installed during startup. This option increases startup time and requires an Internet connection.

For more information, see Creating a MapR PACC Image Using mapr-setup.sh on page 409.

Fixes

CORE-497: mapr-thin-client-6.2.0*.tar.gz: kill_client_processes() function from mapr-fuse script invokes killproc with incorrect params.

Known Issues and Limitations

CORE-498: After installation of the `mapr-thin-client*.tar.gz`, the `mapr-posix-client-container` fails to start, and the following message appears in the `/opt/mapr/logs/posix-client-container.log`:

```
Failed to call init on library /tmp/libMapRClient_c.so.0
```

This issue is fixed in release 6.2 but might affect earlier PACC releases.

Workaround: Create the following file (the file can be empty), and retry the operation:

```
/opt/mapr/hadoop/hadoop-2.7.4/etc/hadoop/core-site.xml
```

For additional known issues, see MapR PACC Known Issues on page 417.

Resolved Issues

None.

PACC 6.1.0_6.0.0 Release Notes

These notes describe the MapR 6.1.0 EEP 6.0.0 release of the MapR PACC.

You may also be interested in the MapR Data Science Refinery Release Notes on page 5637.

Version	6.1.0_6.0.0
Release Date	September 2018
MapR Version Interoperability	Compatible with MapR 6.1.0 and EEP 6.0.0
Docker Hub	Docker containers for the MapR installation files are located here: • https://hub.docker.com/r/maprtech/pacc/tags/
Documentation	About the MapR Persistent Application Client Container (PACC) on page 403
Related Resources	MapR Persistent Application Client Container

New in This Release

This release provides support for MapR 6.1 with EEP 6.0.0. There are no significant new features in the PACC image itself.

Release notes for previous PACC images are not currently available.

Fixes

None.

Known Issues and Limitations

For known issues, see MapR PACC Known Issues on page 417.

Resolved Issues

None.

Security Vulnerabilities

This section describes potential security vulnerabilities in MapR software. Where necessary, appropriate workarounds are provided.

On the Support Portal, you can sign up to receive proactive notices about vulnerabilities. See MapR Support Portal: How do I sign-up for proactive email advisories on critical issues?

Web Browser Security Issues

This section describes security issues with web browsers.

Web browsers and web servers often need to update their security requirements and configurations to ensure secure communication. Sometimes when web browser security requirements change, the browser is no longer able to connect to the Control System or other web interfaces.

The following fixes are available to resolve browser connection issues caused by changes in browser security requirements, or by an organization's need to maintain legacy (insecure) protocols:

Issue	Affects MapR Version
Weak Ephemeral Diffie-Hellman Key	3.x, 4.x, and 5.0
Unable to Establish a Secure Connection	3.1.x, 4.0.x
Requirement to Enable Insecure Protocols (Not Recommended)	5.1

Note: Based on your MapR version, you may need to apply the fix for more than one issue.

Unable to Establish a Secure Connection

This section describes secure connection issues.

Recent versions of Safari and Chrome web browsers have removed support for older certificate cipher algorithms, including those used by some versions of MapR. Because of this, users of these new browser versions may lose the ability to log into the Control System.

A fix for this issue is available in MapR Versions 4.0.2 and later. Existing clusters can be patched to workaround this issue. Information and installation instructions for this patch are found later in this document. For additional fixes that you may also want to apply at this time, see Web Browser Security Issues.

Affected Versions

To determine whether you will be affected, your MapR version must be in the range listed in the MapR section below, and you must be accessing the Control System using a browser version listed in either the Safari or Chrome sections.

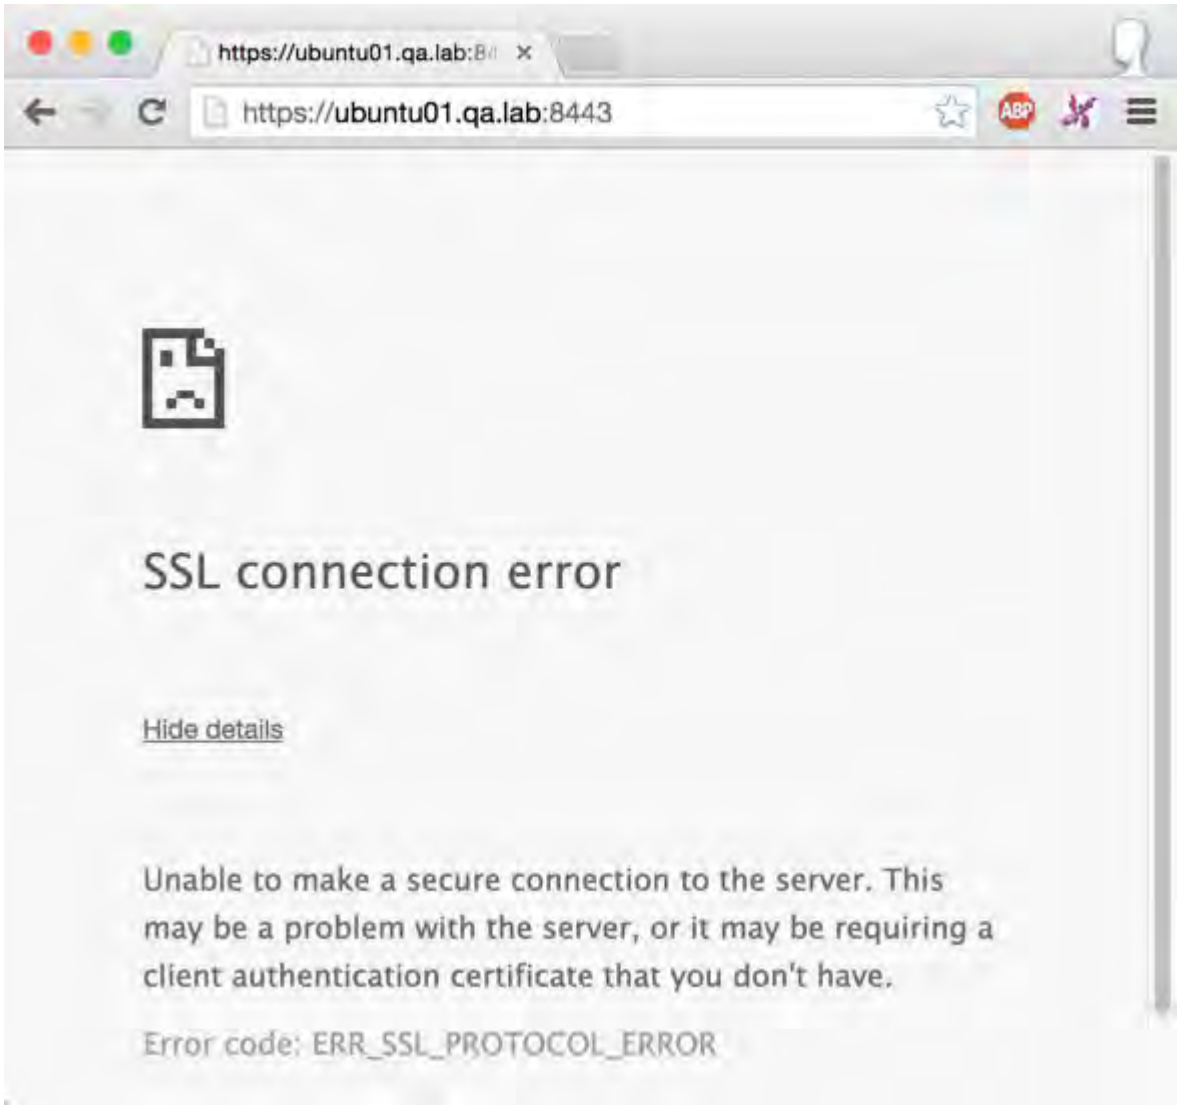
- MapR - Versions 3.1, 3.1.1, 4.0.0, and 4.0.1
- Safari - Versions 7.0 and higher.
- Chrome - Versions 39.0 and higher.

last-updated: Apr 11, 2022

Symptoms

Error message for Chrome:

```
          SSL connection error. Unable to make a secure connection to the
server.
          This maybe a problem with the server,
          or it may be requiring a client authentication certificate that
you don't have.
          Error code: ERR_SSL_PROTOCOL_ERROR
```



Error message for Safari

```
          Safari can't open the page <URL>
          because Safari can't establish a secure connection to the server
<server name>.
```

last-updated: Apr 11, 2022

Patching your Cluster

The steps to implement the fix for a secure cluster (cluster with wire-level security) differ from the steps to implement the fix on a non-secure cluster. However, in both cases, you will use the fixssl script to generate new versions of the ssl_keystore and ssl_truststore.

While you are implementing the fix on a non-secure cluster, the webserver will experience a brief downtime. The impact on a secure cluster will be greater, as more services will need to be restarted for the patch to take effect. You have a secure cluster if you use wire-level security to encrypt data transmission between the nodes in your cluster.

Patching a Non-Secure Cluster

The following steps show how to patch a secure cluster when you are unable to establish a secure connection. Once the fix is complete, no further action is required except to access the Control System and other web interfaces, such as the JobTracker UI and the ResourceManager UI.

1. Determine which nodes in the cluster run the webserver role. For example:

```
$ maprcli node list -columns configuredservice -filter
'[configuredservice==webserver]'
hostname  configuredservice                                    ip
centos21
webserver,nodemanager,cldb,fileserver,resourcemanager,hoststats
10.10.82.21
```

2. Perform the following steps on each webserver node:
   a) Download the script from the following location: https://package.mapr.hpe.com/scripts/mcs/

```
wget https://package.mapr.hpe.com/scripts/mcs/fixssl
```

   b) Run the following command to update the permissions on the file:

```
chmod 755 fixssl
```

last-updated: Apr 11, 2022

c) Run the following command to run the script:

```
sudo ./fixssl
```

Once you run the script, the following is displayed:

```
Webserver restarted. Issue should be resolved"
```

The fixssl script performs the following steps on a node in a secure cluster:

1. Updates manageSSLKeys.sh to use the new certificate cipher algorithm.
2. Backs up the existing certificates so that new versions can be generated with the new cipher algorithm:
   - `/opt/mapr/conf/ssl_keystore` is renamed to `/opt/mapr/conf/ssl_keystore_old`
   - `/opt/mapr/comf/ssl_truststore` is renamed to `/opt/mapr/comf/ssl_truststore_old`
3. Runs `/opt/mapr/server/configure.sh -R` to generate new versions of the keystore and truststore files.
4. Restarts the webserver.

Patching a Secure Cluster
Explains how to patch a secure cluster when you are unable to establish a secure connection.

Once the fix is complete, no further action is required except to access the Control System and other web interfaces, such as the JobTracker UI and the ResourceManager UI.

1. Perform the following steps on any cluster node:
   a) Download the script from the following location: https://package.mapr.hpe.com/scripts/mcs/ For example:

```
wget https://package.mapr.hpe.com/scripts/mcs/fixssl
```

   b) Run the following command to update the permissions on the file:

```
chmod 755 fixssl
```

c) Run the following command to run the script:

```
sudo ./fixssl
```

Once you run the script, the following is displayed

```
Creating 10 year self signed certificate with
subjectDN='CN=*.us-west-2.compute.internal'
Certificate stored in file </tmp/tmpfile-mapcert.3743>
Certificate was added to keystore

**********************************************************************
******************
* In order for your cluster to work, please copy the following files
in /opt/mapr/conf  *
* to all the nodes in the cluster, to the same directory:
ssl_keystore ssl_truststore   *
* After copying the files to the other nodes, please restart CLDB,
Webserver, and any   *
* other service that utilizes https (Jobtracker,
tasktracker)                                *
* (See doc for more details if you do not wish to have downtime in
your cluster)       *
**********************************************************************
******************
```

2. On each node in the cluster, back up existing certificates and copy the certificates to all other nodes in the cluster. For example:

```
$ maprcli node list -columns ip
 hostname ip
 ip-172-31-18-196.us-west-2.compute.internal 172.31.18.196
 ip-172-31-18-197.us-west-2.compute.internal 172.31.18.197
 ip-172-31-18-198.us-west-2.compute.internal 172.31.18.198
 ip-172-31-18-199.us-west-2.compute.internal 172.31.18.199
 ip-172-31-18-200.us-west-2.compute.internal 172.31.18.200

$ ssh 172.31.18.200 "mv /opt/mapr/conf/ssl_keystore /opt/mapr/conf/
ssl_keystoreold"

$ ssh 172.31.18.200 "mv /opt/mapr/conf/ssl_truststore /opt/mapr/conf/
ssl_truststoreeold"

 $ scp /opt/mapr/conf/ssl_keystore /opt/mapr/conf/ssl_truststore
mapr@172.31.18.200:/opt/mapr/conf
```

last-updated: Apr 11, 2022

3. Restart the CLDB secondary services. To do this, first you determine which cluster nodes are running the CLDB service and then determine which node is running the primary CLDB. The secondary instances are the non-primary CLDB nodes. For example:

```
$ maprcli node list -columns configuredservice -filter
'[configuredservice==cldb]'
 hostname
configuredservice                                    ip
 ip-172-31-18-198.us-west-2.compute.internal
webserver,cldb,fileserver,nfs,hoststats,jobtracker  172.31.18.198
 ip-172-31-18-199.us-west-2.compute.internal
webserver,cldb,fileserver,nfs,hoststats,jobtracker  172.31.18.199
 ip-172-31-18-200.us-west-2.compute.internal
webserver,cldb,fileserver,nfs,hoststats,jobtracker  172.31.18.200

 $ maprcli node cldbmaster

cldbmaster

 ServerID: 8868598593037642491 HostName:
ip-172-31-18-199.us-west-2.compute.internal

 $maprcli node services -cldb restart -nodes 172.31.18.198
172.31.18.200
```

4. Restart half of the TaskTracker and Nodemanager services.
   a) List all TaskTracker or NodeManager Hosts. For example:

```
 $ maprcli node list -columns configuredservice -filter
'[configuredservice==tasktracker]or[configuredservice==nodemanager]'
 hostname
configuredservice                       ip
 ip-172-31-18-196.us-west-2.compute.internal
fileserver,tasktracker,nfs,hoststats  172.31.18.196
 ip-172-31-18-197.us-west-2.compute.internal
fileserver,tasktracker,nfs,hoststats  172.31.18.197
```

   b) Restart TaskTracker and NodeManager services on half of the nodes that run those services. For example, the following command will restart both TaskTracker and NodeManager services on all nodes specified. If either service is not configured on that node, it will ignore it.

```
 $ maprcli node services -multi '[{ "name": "tasktracker", "action":
"restart"}, { "name": "nodemanager", "action": "restart"}]' -nodes
172.31.18.196
 ERROR (10002) -  Service: nodemanager is not configured on node:
ip-172-31-18-196.us-west-2.compute.internal
```

5. Restart JobTracker and ResourceManager services.

last-updated: Apr 11, 2022

a) List all nodes running JobTracker or ResourceManager. For example:

```
$ maprcli node list -columns configuredservice -filter
'[configuredservice==jobtracker]or[configuredservice==resourcemanager]
'
hostname
configuredservice                                      ip
ip-172-31-18-198.us-west-2.compute.internal
webserver,cldb,fileserver,nfs,hoststats,jobtracker  172.31.18.198
ip-172-31-18-199.us-west-2.compute.internal
webserver,cldb,fileserver,nfs,hoststats,jobtracker  172.31.18.199
ip-172-31-18-200.us-west-2.compute.internal
webserver,cldb,fileserver,nfs,hoststats,jobtracker  172.31.18.200
```

b) Restart JobTracker and ResourceManager services. For example, the following command will restart both JobTracker and ResourceManager services on the specified nodes. If either service is not configured on that node, it will ignore it.

```
$ maprcli node services -multi '[{ "name": "jobtracker",
"action": "restart"}, { "name": "resourcemanager", "action":
"restart"}]' -nodes 172.31.18.198 172.31.18.199 172.31.18.200
ERROR (10002) -  Service: resourcemanager is not configured on node:
ip-172-31-18-199.us-west-2.compute.internal
ERROR (10002) -  Service: resourcemanager is not configured on node:
ip-172-31-18-200.us-west-2.compute.internal
ERROR (10002) -  Service: resourcemanager is not configured on node:
ip-172-31-18-198.us-west-2.compute.internal
```

6. Restart remaining TaskTracker and NodeManager services. For example, the following command will restart both TaskTracker and NodeManager services on the specified nodes. If either service is not configured on that node, it will ignore it.

```
$ maprcli node services
-multi '[{ "name": "tasktracker", "action": "restart"}, { "name":
"nodemanager", "action": "restart"}]'
-nodes 172.31.18.197 ERROR (10002) -  Service: nodemanager is not
configured on node: ip-172-31-18-197.us-west-2.compute.internal
```

7. Restart additional secure services (Oozie, HistoryServer, Webserver, HiveServer2, Hue). For example, the following command can be run with the IPs or hostnames of all nodes in the cluster, as it will only restart the services that it finds:

```
$ maprcli node services
                    -multi '[{ "name": "hue", "action": "restart"},
                        { "name": "historyserver", "action": "restart"},
                        { "name": "webserver", "action": "restart"},
                        { "name": "oozie", "action": "restart"},
                        { "name": "hs2", "action": "restart"}]'
                    -nodes 172.31.18.198 172.31.18.199 172.31.18.200
172.31.18.196 172.31.18.197
```

8. Restart CLDB primary service. For example:

```
$ maprcli node cldbmaster
cldbmaster

ServerID: 8868598593037642491 HostName:
ip-172-31-18-199.us-west-2.compute.internal

$ maprcli node services -cldb restart -nodes 172.31.18.199
```

The fixssl script performs the following steps on a node in a secure cluster:

1. Updates manageSSLKeys.sh to use the new certificate cipher algorithm.
2. Backs up the existing certificates so that new versions can be generated with the new cipher algorithm:
   - `/opt/mapr/conf/ssl_keystore` is renamed to `/opt/mapr/conf/ssl_keystore_old`
   - `/opt/mapr/comf/ssl_truststore` is renamed to `/opt/mapr/comf/ssl_truststore_old`
3. Runs the following command to generate new versions of the keystore and truststore files:

```
/opt/mapr/manageSSLKey.sh  create -N <clustername> -ug
<maprusername>:<maprgroup>
```

   - The cluster name is retrieved from `/opt/mapr/conf/mapr-clusters.conf`.
   - The `mapr` user and `mapr` group is retrieved from `/opt/mapr/conf/daemon.conf`.

Weak Ephemeral Diffie-Hellman Key

Recently, some web browsers have updated their list of supported cipher algorithms which are used to ensure secure communication between the browser and web server. Due to this update, new browser versions may lose the ability to login to the Control System and other web interfaces since the ciphers supported by the web browser do not match the ciphers supported by the web servers.

Affected Versions

- MapR - Versions 3.x, 4.x, and 5.0
- Browsers - Latest versions such as Chrome 45 and Firefox 39

Symptoms

Users might see the following error messages if they encounter the issue:

Table

Browser	Error Message
Firefox	`An error occurred during a connection to <ip>:<port>. SSL received a weak ephemeral Diffie-Hellman key in Server Key Exchange handshake message. (Error code: ssl_error_weak_server_ephemeral_dh_key)`
Chrome	`Server has a weak ephemeral Dillie-Heffman public key` or `ERR_SSL_WEAK_EPHEMERAL_DH_KEY`

How to Fix the Issue

Based on the MapR Cluster version that you have, perform one of the following options to fix the issue:

last-updated: Apr 11, 2022

Table

MapR Version	Option(s)
4.x and 5.0	Apply the latest patch on every node in the cluster. -or- Edit the core-site.xml file on each node with a service that runs a web server.
3.x	Edit the core-site.xml file on each node with a service that runs a web server.

Applying Patches to Resolve Browser Connection Issues

With this option, you apply the latest patch on every node in the cluster and then restart all the services.

1. Download the latest patch from the following location: `https://package.mapr.hpe.com/patches/releases/v<version>/<os>/`

   For example: `wget https://package.mapr.hpe.com/patches/releases/v4.1.0/redhat/mapr-patch-4.1.<buildversion>.rpm`

2. Apply the patch on every node in the cluster.

Editing core-site.xml

With this option, you update the core-site.xml on each node with a service that runs a web server such as WebServer (Control System), ResourceManager, and HistoryServer nodes. Then, restart the services associated with the web servers. For example, you would need to restart the webserver service on the node that runs the Control System.

1. Add the following configuration to the core-site.xml on each node with a service that runs a web server:

```
<property>
  <name>hadoop.ssl.exclude.cipher.suites</name>
  <value>
SSL_DHE_RSA_EXPORT_WITH_DES40_CBC_SHA,SSL_RSA_EXPORT_WITH_DES40_CBC_SHA,S
SL_RSA_EXPORT_WITH_RC4_40_MD5,TLS_DHE_RSA_WITH_AES_128_CBC_SHA,TLS_DHE_RS
A_WITH_AES_256_CBC_SHA,TLS_DHE_RSA_WITH_AES_256_CBC_SHA256,TLS_DHE_DSS_WI
TH_AES_256_CBC_SHA256,TLS_DHE_DSS_WITH_AES_256_CBC_SHA,TLS_DHE_RSA_WITH_A
ES_128_CBC_SHA256,TLS_DHE_DSS_WITH_AES_128_CBC_SHA256,TLS_DHE_DSS_WITH_AE
S_128_CBC_SHA
 </value>
</property>
```

   - For MapR 3.x clusters, the core-site.xml file is in the following location: /opt/mapr/hadoop/hadoop-0.20.2/conf/
   - For MapR 4.x and 5.x clusters, the core-site.xml file is in the following location: /opt/mapr/hadoop/hadoop-2.x.x/etc/hadoop/

2. Restart services associated with web servers.

   For example:

   - To restart the Control System webserver: `maprcli node services -webserver restart -nodes <webserver nodes>`
   - To restart the ResourceManager service(s): `maprcli node services -name resourcemanager -action restart -nodes <space delimited list of resourcemanager nodes>`

last-updated: Apr 11, 2022

Requirement to Enable Insecure Protocols

MapR disables insecure protocols by default. For example, TLSv1 and SSLv3 are disabled by default due to their associated security risks. In the event that your client environment or crypto libraries cannot be upgraded, you can decide to enable insecure protocols.

Note: Enabling insecure protocols is not recommended as the security of communications between the browser and web server is put at risk.

To enable insecure protocols:

1. Based on your requirements, add one of the following configurations to the core-site.xml file on each node with a service that runs a web server:
   - To enable SSLv3:

     ```
     <property>
      <name>hadoop.ssl.exclude.insecure.protocols</name>
      <value>SSLV3</value>
     </property>
     ```

   - To enable TLSv1:

     ```
     <property>
      <name>hadoop.ssl.exclude.insecure.protocols</name>
      <value>TLSV1</value>
     </property>
     ```

   - To enable all insecure protocols that MapR disables by default:

     ```
     <property>
      <name>hadoop.ssl.exclude.insecure.protocols</name>
      <value></value>
     </property
     ```

   The core-site.xml is in the following location: `/opt/mapr/hadoop/hadoop-2.x.x/etc/hadoop/`
2. Restart services associated with web servers.

   Examples:
   - To restart the Control System webserver:

     ```
     maprcli node services -webserver restart -nodes <webserver nodes>
     ```

   - To restart the ResourceManager service(s):

     ```
     maprcli node services -name resourcemanager -action restart -nodes
     <space delimited list of resourcemanager nodes>
     ```

Previous Versions

This page contains links to the MapR documentation for releases that are currently supported or have recently reached end-of-life.

- MapR 6.0

last-updated: Apr 11, 2022

- MapR 5.2
- MapR 5.1

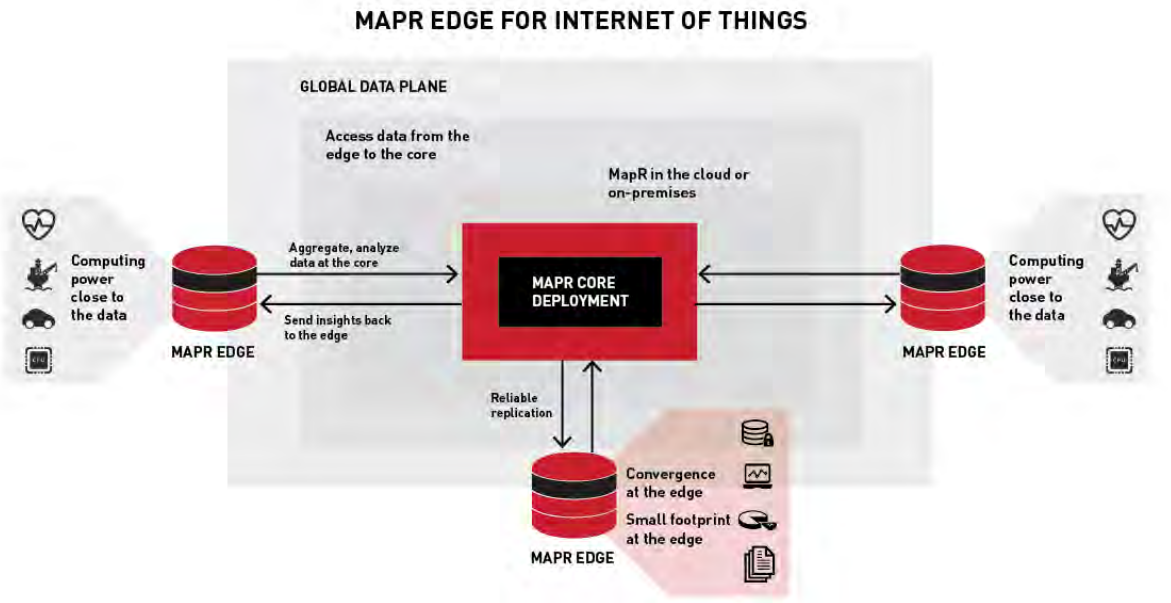
The "Other Docs" section contains MapR 6.1.0 documentation and documentation that applies to multiple releases (such as the interoperability matrix, release notes for ecosystem projects, user documentation for the MapR Installer, and information about security vulnerabilities).

MapR Edge

This section contains information about MapR Edge, which is a small footprint edition of the MapR Converged Data Platform designed to capture, process, and analyze IoT data close to the source.

MapR Edge is a small footprint edition of the MapR Converged Data Platform that you can use to capture, process, and analyze IoT data close to the source.

MapR Edge is a fully-functional MapR cluster that can be run on small form-factor commodity hardware, such as Intel NUCs. Edge clusters are supported in three- to five-node configurations. Each cluster supports the full capabilities of the MapR Converged Data Platform, including the capacity for files, tables, and streams, along with related data management and protection capabilities such as security, snapshots, mirroring, replication, and compression.



Installation, Configuration, and Management

You install, configure, and manage MapR Edge clusters and nodes the same way you handle traditional MapR clusters and nodes. Each cluster is managed and monitored independently.

When installing a MapR Edge cluster, you must ensure to configure the nodes according to the guidelines in the table below - MapR Edge Supported Cluster Configuration. Pay special attention to node hardware minimums and maximums, the number of supported storage pools, and caveats around upgrades and failure tolerance for different cluster sizes.

All MapR Edge clusters must be deployed in conjunction with a core MapR cluster. You must use one or more of the MapR Converged Data Platform's data replication features to synchronize data from Edge to Core, such as MapR mirroring, MapR Database table replication, or MapR Streams replication.

last-updated: Apr 11, 2022

MapR Edge Supported Cluster Configuration

Before you architect your system to use MapR Edge, consider these supported-configuration specifications:

Specification	Value		
Number of Nodes[1] Per Cluster	Three[2]	Four[2]	Five
Max No of Data Drives Per Node	Up to 4		
Storage Capacity (Usable)[3]	Min : 64GB Max : 10TB		
Replication Factor	Up to 3X		
No. of Storage Pools (per Node)	1		
Cluster Failure Tolerance [4]	1 node		2 nodes
Node Config Types	Homogeneous[5]		
Boot Disk Per Node	1 (Min 20GB)		
Processing Services	Spark, Drill		
Included Software	MapR File System, MapR Database, MapR Streams		
Node Hardware Specs	CPU-Type : x86(64Bit), Cores: 2 - 4, RAM: 16 - 32 GB, Disk-Type : SATA,SAS,SSD, vDisk Speed: 1Gb minimum, 10Gb		
Online Software Upgrade and Patching	Offline Upgrade or Rolling Upgrade		
Supported MapR Software Version	MapR 5.2 and later		
Supported Deployments	Bare Metal or Virtual Instances		

[1] Node is defined as “data node”, or node running a FileServer process, and responsible for storing data on behalf of the entire cluster. Nodes deployed with control-only services like CLDB and ZooKeeper do not count towards minimum node count, as they do not contribute to overall availability of data

[2] Clusters with less than 5 nodes may exhibit variable performance, especially during times of failure recovery when node resources are consumed with re-replication of data.

[3] Usable storage defined by total disk size divided by replication factor.

[4] This defines how many failures a cluster can sustain and still keep the cluster accessible to its clients/apps. Definition of failure includes anything that makes a node become unavailable, including hardware failure, software failure, disk failure, network failure, or power failure. MapR cannot assure data integrity for any additional failures beyond this count.

[5] All nodes must be exactly same in terms of capacity, including number of drives, amount of memory, type of cpu, etc.

Additional Design Considerations for Edge Clusters

The table above lists several unique considerations for clusters of less than 5 nodes. Carefully design your deployment to achieve a particular RPO/RTO, taking these considerations into account. Some strategies for increasing availability and RPO/RTO in case of smaller clusters include -

- Continuously moving critical data from the edge cluster to a core cluster using MapR replication features like mirroring, MapR Database table replication, and MapR Streams replication. This minimizes RPO/RTO in case of multi-failure scenarios.

last-updated: Apr 11, 2022

- Limiting reliance on any single point of failure infrastructure, such as chassis, power source, disk, or network device. Power and network redundancy are strongly recommended. This decreases the likelihood of a multiple failure scenario.

Installing the File Migration Service on the Edge Cluster

Describes how to install the File Migration service on CentOS nodes.

To install the package on CentOS, run the following command:

```
yum install mapr-filemigrate
```

Note: The File Migration service is only supported on CentOS. There are no packages for Debian-based OS.

Since the File Migration service provides for high availability, you can install it on as many nodes as you wish. Warden will ensure that it is always active on exactly one node.

After installation, a sample properties file, `FileMigrate.properties.default`, with default values is placed in the `/opt/mapr/filemigrate/filemigrate-1.0.0/conf` directory. To manually edit the properties file, follow the steps for Configuring the File Migration Service Using the Properties File on page 1009. Using the UI to configure the service, automatically creates the necessary file in the `maprfs:///var/mapr/filemigrate` directory. For more information, see Configuring File Migration Service Using the UI on page 1007.

Migrating Files From MapR Edge Cluster to AWS S3

The File Migration service for MapR Edge on page 6579 clusters monitors a set of configured directory trees (referred to as *policies* in the service UI) on the MapR cluster for new and changed files. When the service detects new or changed files, it automatically uploads them to AWS S3 (Amazon's storage environment) using the AWS SDK TransferManager object. The File Migration service is a long-running process that is controlled by Warden.

Note: For information on installing File Migration Service on your Edge cluster, see Installing the File Migration Service on the Edge Cluster on page 222.

Product Licensing

Provides information related to product licensing.

What's Included

Describes the products packaged with HPE Ezmeral Data Fabric.

HPE Ezmeral Data Fabric

HPE Ezmeral Data Fabric includes the following products and features:

HPE Ezmeral Data Fabric File Store (Formerly MapR-XD Enterprise Premier SSD and HDD)	• Auto-balancing • Cloud File Migration • Compression • Container Client including PACC, Flex Volume Plugin, CSI (unlimited client instances)* • Data Protection Replication

last-updated: Apr 11, 2022

	• Data tiering (Cold) to 3rd party external stores • Data tiering (Warm) to erasure coding • Data Topologies • Distributed datastore for files • External KMIP Keystore • Global Namespace • HDFS API and httpsfs • HPE Ezmeral Data Fabric Installer (Formerly MapR Installer) • HPE Ezmeral Data Fabric Management (Formerly MapR Management) using CLI, REST and GUI • HPE Ezmeral Data Fabric Monitoring (Formerly MapR Monitoring) • Mirroring of data (used for disaster recovery) • Multiple file server instances per node • Multi-site volume mirroring • Multi-tenancy • NFSv4 and NFSv3 • Platinum POSIX Client (unlimited client instances) • Policy-based security • POSIX Client (unlimited client instances) • Quotas • Resiliency and self-healing • Rolling upgrades • Snapshots • Support for HDD and SSD • Unified Security including authentication, authorization, encryption (wire and data-at-rest) and auditing
HPE Ezmeral Data Fabric Database (Formerly MapR Document Database Enterprise Premier)	(Requires purchase of HPE Ezmeral Data Fabric File Store) • Automatic compactions • Change Data Capture (CDC) • HPE Ezmeral Data Fabric DB Data Access Gateway (Formerly MapR-DB Data Access Gateway) • JSON document database using OJAI API

last-updated: Apr 11, 2022

	• Multi-master table replication • Multiple file servers instances per node • Multi-tenancy • Policy-based security • Resiliency and self-healing • Secondary indexes • Strong consistency • Table replication that can be used for disaster recovery and multi-site access • Unified Security including authentication, authorization, encryption (wire and data-at-rest) and auditing • Column-oriented database using HBase API
HPE Ezmeral Data Fabric Event Data Streams (Formerly MapR Event Data Streams Enterprise Premier)	(Requires purchase of HPE Ezmeral Data Fabric File Store) • Automatic partition balancing • Distributed publish-subscribe messaging infrastructure • Kafka API support • Kafka Connect • Kafka REST Proxy • Kafka Schema Registry • Kafka Streams • KSQL • Multi-site stream replication • Multi-tenancy • Unified Security including authentication, authorization, encryption (wire and data-at-rest) and auditing
HPE Ezmeral Data Fabric Analytics with Hadoop (Formerly MapR Analytics with Hadoop Enterprise Premier)	(Requires purchase of HPE Ezmeral Data Fabric File Store) • Apache Flume • Apache HBase • Apache Hive • Apache Hue • Apache MapReduce v2 (MapReduce v1 is not supported)

last-updated: Apr 11, 2022

	• Apache Oozie • Apache Pig • Apache Sqoop • Apache YARN • HPE Ezmeral Data Fabric DB OJAI Connector for Apache Hive (Formerly MapR-DB OJAI Connector for Apache Hive) • S3 Gateway on Ezmeral Data Fabric
HPE Ezmeral Data Fabric Advanced Analytics with Spark (Formerly MapR Advanced Analytics with Spark Enterprise Premier)	(Requires purchase of HPE Ezmeral Data Fabric File Store) • Apache Spark Core • Apache Spark MLlib • Apache Spark SQL • Apache Spark Streaming • Apache YARN • GraphX • HPE Ezmeral Data Fabric DB Binary Connector for Apache Spark (Formerly MapR-DB Binary Connector for Apache Spark) • HPE Ezmeral Data Fabric DB OJAI Connector for Apache Spark (Formerly MapR-DB OJAI Connector for Apache Spark) • HPE Ezmeral Data Fabric Streams Integration (Formerly MapR Streams Integration) • S3 Gateway on Ezmeral Data Fabric • SparkR • Spark Standalone and Spark on YARN support
HPE Ezmeral Data Fabric Interactive SQL Engine with Drill (Formerly MapR Interactive SQL Engine with Drill Enterprise Premier)	(Requires purchase of HPE Ezmeral Data Fabric File Store) • Drill Explorer • Drill Monitoring • Drill query and administration UI • Drill standalone and Drill-on-YARN support • File formats (Text,JSON,Parquet) • Impersonation • JDBC/ODBC drivers • Multiple data type support

last-updated: Apr 11, 2022

	• Queries on File • Queries on Hive tables and views • Queries on HPE Ezmeral Data Fabric Document Database tables and secondary indexes • REST API • S3 Gateway on Ezmeral Data Fabric • Schema-less ANSI-compliant distributed SQL query engine • SQLLine
HPE Ezmeral Data Fabric Platform Bundle (Formerly MapR Platform Bundle Enterprise Premier for SSD and HDD)	• HPE Ezmeral Data Fabric Advanced Analytics with Spark • HPE Ezmeral Data Fabric Analytics with Hadoop • HPE Ezmeral Data Fabric Database • HPE Ezmeral Data Fabric Event Data Streams • HPE Ezmeral Data Fabric File Store • HPE Ezmeral Data Fabric Interactive SQL Engine with Drill

HPE Ezmeral Container Platform

See What's Included in HPE Ezmeral Container Platform.

The HPE Ezmeral Data Fabric Converged Community Edition (Formerly MapR Converged Community Edition) is available free of cost with usage restrictions specified in the MapR End User License Agreement, and with community forum support.

HPE EZMERAL DATA FABRIC SOFTWARE LICENSING

Contains HPE Ezmeral Data Fabric software licensing information.

Your order includes both a license agreement and a quote. Detailed instructions for obtaining a software license key are available in the HPE support policy. Through the order package, HPE grants the licensee a nonexclusive license to use HPE Ezmeral Data Fabric software when the licensee lawfully obtains it, up to the level of authorized use specified in the customer contract.

SOFTWARE LICENSE KEYS

For each HPE Ezmeral Data Fabric installation, a software license key is created. This applies to both new and upgraded software. This license key is generated based on a cluster ID. The cluster ID is generated once the software is installed on a cluster.

HPE EZMERAL DATA FABRIC PRODUCT LICENSING

HPE licenses its software as a term-subscription for a fixed period of time that is outlined in the customer quote. Other terms that might be specific to your agreement will also be outlined in your quote. An HPE term-subscription typically authorizes the licensee to use the most current commercially available version, release, or update of HPE Ezmeral Data Fabric products.

last-updated: Apr 11, 2022

HPE Data Fabric products are sometimes sold based on capacity under management, which can be measured by terabyte or compute unit. The minimum for HPE Data Fabric File and Object Store is 250 terabytes of HDD or 100 terabytes of SSD, when purchased without other products. HPE Data Fabric requires a minimum of 5 compute units (or nodes) per cluster.

At the end of each fixed term [most commonly 36 months] the customer may choose to renew the licenses for an additional 36 months [at the prevailing price]. If the term-subscription is not renewed, the licensee will no longer have the rights to use the software, will no longer be entitled to the benefits of support, and must destroy all copies of the software.

DEFINITIONS

HDD Capacity Under Management Total hard disk capacity allocated to and managed by HPE Ezmeral Data Fabric products. Capacity Under Management is measured in terabytes 1TB.

SSD Capacity Under Management Total SSD capacity allocated to and managed by HPE Ezmeral Data Fabric products. Capacity Under Management is measured in TB. SSD is based on SATA and SAS interconnects and does not include PCIe-based NVME drives.

Client

A piece of computer software that embeds HPE Ezmeral Data Fabric software to access a service made available by an HPE Ezmeral Data Fabric server.

User

User means an individual authorized by the customer to use the software, regardless of whether the individual is actively using the programs at any given time.

Compute Unit

A compute unit is a server or virtual machine that does not exceed 1 motherboard, 4 CPU sockets, 32 total cores [including virtual cores) and 256GB of RAM. If a server or virtual machine exceeds any of these parameters, it will be counted as two or more compute units, depending on the factor by which the respective parameter[s) are exceeded.

Attribute	Quantity/Size
Motherboard	1
CPU Sockets	4
Sockets	32
Main memory	256GB

Motherboard

The motherboard is the main circuit board of your computer and is also known as the mainboard or logic board.

CPU Socket

The CPU socket is the connector on the motherboard that houses a CPU and forms the electrical interface and contact with the CPU.

CPU Core

Each physical processor contains smaller processing units called physical CPU cores. Some processors have two cores, some four, some six or eight, and so on.

Virtual Core

The unit of processing power in a virtual hardware system. A virtual core is the virtual representation of one or more hardware threads. The virtual Operating Systems Environments use one or more virtual cores. Note: for the purposes of licensing, 1 virtual cores will be counted as one physical core.

last-updated: Apr 11, 2022

Main Memory	The main memory is the area in a computer in which data is stored for quick access by the computer's processor. The term random access memory [RAM] often refers to this primary or main storage.
Node	A node is a server or virtual machine that does not exceed (a) one motherboard; (b) 4 CPU sockets; (c) 32 total cores; (d) 24 hard drives with up to 50 TB total hard drive capacity or 12 TB total flash or SSD capacity; (e) 2x10 GigE capacity; or (f) 256 GB of RAM. If a server or virtual machine exceeds any of these parameters, it will be counted as two or more nodes.
Per core licensing of HPE Ezmeral Data Fabric Platform Bundle	Each license allows the customer to deploy HPE Ezmeral Data Fabric for AI and Analytics on one Core and 2 terabytes of Storage Capacity. The customer must purchase more licenses if they exceed the allowable amount of Cores or Storage Capacity. Core means a part of a CPU that executes a single stream of compiled instruction code. Single-core processors can only process one instruction at a time. Multiple-core processors (CPUs) imply a processing system composed of two or more independent cores. Processing cores can be physical or virtual depending on whether the processor holding the cores is embedded in a physical machine or a virtual machine. For purposes of licensing, two virtual cores is equal to one physical core. Storage Capacity means the total storage capacity (HDD & SSD) allocated to and managed by HPE Products, measured in Terabytes (TB) of raw capacity. Includes space for data, data replication, erasure coding, snapshots, metadata, logs and other data that is stored in HPE Data Fabric.

HPE EZMERAL DATA FABRIC ADDITIONAL LICENSE AUTHORIZATION

Contains HPE Ezmeral Data Fabric additional licensing authorization information.

Last updated: January 17, 2020

THIS HPE EZMERAL DATA FABRIC ADDITIONAL LICENSE AUTHORIZATION ("ALA") IS BY AND BETWEEN HEWLETT PACKARD ENTERPRISE COMPANY ("HPE") AND ITS SUBSIDIARIES AND THE INDIVIDUAL OR LEGAL ENTITY USING THE APPLICABLE SOFTWARE MADE AVAILABLE BY HPE ("CUSTOMER") (WHETHER BY HPE OR AN AUTHORIZED HPE/MAPR PARTNER) AND GOVERNS ALL USE BY CUSTOMER OF THE HPE EZMERAL DATA FABRIC. IF LICENSED THROUGH AN AUTHORIZED HPE/MAPR PARTNER THIS ALA IS IN ADDITION TO AND SUPPLEMENTS THE HPE STANDARD EULA LOCATED AT https://www.hpe.com/us/en/software/licensing.html. THIS ALA (AND THE HPE STANDARD EULA IF LICENSED THROUGH AN AUTHORIZED HPE/MAPR PARTNER) ALSO SUPERSEDES ANY CLICKTHROUGH EULA EMBEDDED IN THE HPE EZMERAL DATA FABRIC. THIS ALA ALSO GOVERNS ALL USE BY CUSTOMER OF FREE SOFTWARE (AS DEFINED BELOW) PROVIDED BY HPE TO CUSTOMER. BY CLICKING ON THE "ACCEPT" BUTTON BELOW AND/OR A BUTTON OR CHECKBOX WITH SIMILAR DESIGNATION THAT DEMONSTRATES ACCEPTANCE OF THIS ALA (AND THE HPE STANDARD EULA IF LICENSED THROUGH AN AUTHORIZED HPE/MAPR PARTNER), OR BY DOWNLOADING, COPYING OR USING THE COMMERCIAL SOFTWARE OR FREE SOFTWARE, CUSTOMER EXPRESSLY ACCEPTS AND AGREES TO THE TERMS OF THIS ALA (AND THE HPE STANDARD EULA IF LICENSED THROUGH AN AUTHORIZED HPE/MAPR PARTNER), AND CONSENTS TO THE COLLECTION, USE AND TRANSFER OF DATA AS OUTLINED IN THE HPE PRIVACY STATEMENT (https://www.hpe.com/us/en/legal/privacy.html). CERTAIN PROVISIONS OF THIS ALA APPLY ONLY TO EITHER THE COMMERCIAL SOFTWARE OR THE FREE SOFTWARE, AS MORE PARTICULARLY SPECIFIED BELOW. BY WAY OF EXAMPLE, CUSTOMER MAY PURCHASE A COMMERCIAL SOFTWARE LICENSE KEY FROM HPE OR AN AUTHORIZED HPE/MAPR PARTNER AT ANY TIME AND CONVERT CUSTOMER'S COPY OF FREE SOFTWARE TO THE COMMERCIAL

SOFTWARE, IN WHICH CASE THE PROVISIONS APPLICABLE TO COMMERCIAL SOFTWARE WILL APPLY FROM THE TIME OF SUCH CONVERSION.

1. Definitions. The following capitalized terms shall have the meanings set forth below:

1.1. "Commercial Software" means the software identified in an order (either by HPE or an authorized HPE/MapR partner) and licensed for a fee, e.g., MapR Enterprise Edition or MapR Enterprise Database Edition software products when licensed for a fee. HPE may allow Customer to convert a copy of Free Software into Commercial Software by entering or installing a license Key for the Commercial Software purchased by Customer.

1.2. "Documentation" means the documentation and guides related to the Licensed Products freely available at https://docs.datafabric.hpe.com/home/.

1.3. "Feedback" means any comments or other feedback Customer may provide to HPE concerning the functionality and performance of the Licensed Products, including identification of potential errors and improvements.

1.4. "Free Software" means a software product that is provided by HPE to Customer free of charge for Customer's internal use for trial, evaluation, testing or similar non-production purposes, and is expressly identified by HPE as free, as evaluation software, as Not For Resale or NFR software, or any similar designation. For the purposes of this ALA, Free Software includes the MapR Community Edition software product or other MapR products made available by HPE on limited-time free, trial or Not For Resale basis.

1.5. "Free Software Term" means a thirty-day period of time that commences when Customer receives the applicable Free Software.

1.6. "Key" means the license key or similar control mechanism to help ensure compliance with the use and time limitations with respect to Licensed Products.

1.7. "Licensed Products" means the Commercial Software and Free Software.

1.8. License Metric: means the specific manner in which the applicable product(s), as defined in the MapR Licensing Data Sheet located at https://mapr.com/products/whats-included/assets/mapr-customerlicensing-01152020.pdf, are licensed.

1.9. "Open Source Software" means any third party software that is distributed as "free software", "open source software" or under a similar licensing or distribution model. Without limiting the generality of the foregoing, Apache Hadoop, Apache Solr and Apache Lucene are Open Source Software.

2. Standard Version. This Section 2 applies solely with respect to the Commercial Software, and not to Free Software:

2.1. License. Subject to the terms and conditions of this ALA, HPE hereby grants Customer a limited, non-exclusive, non-transferable, non-sublicensable license to install, copy and use the Commercial Software internally in the quantities set forth in the applicable License Metric quantity specified in the applicable order, during the applicable license term indicated in the order. For the avoidance of doubt, Customer may not install or use the Commercial Software on hardware which exceeds any License Metric quantities of the product component elements. For the further avoidance of doubt, Customer may not grant access to or transfer the use of the Commercial Software to any third party, whether on a standalone basis or as integrated into any other product, except with respect to third party consultants and service providers providing services to Customer.

2.2. Record Keeping. Customer shall establish and maintain complete and accurate records related to the location, access and use of the Commercial Software by Customer, its employees or its agents, and any such other information as reasonably necessary for HPE to verify compliance with the terms of this ALA. Such records shall be kept for at least 3 years following the end of the quarter to which they pertain.

3. Free Software.

3. This Section 3 applies solely with respect to Free Software, and not to the Commercial Software:

3.1. License. Subject to the terms and conditions of this ALA, HPE hereby grants Customer a limited, non-exclusive, non-transferable, non-sublicensable license to install, copy and use the Free Software

internally for trial, evaluation, testing or similar non-production purposes during the Free Software Term, subject to the use and time limitations specified by HPE, whether expressly or through the configuration of a Key. Customer may not grant access to or transfer the use of the Free Software to any third party, whether on a stand-alone basis or as integrated into any other product. If Customer decides to use the Free Software after the Free Software Term, Customer must obtain a license for the equivalent Commercial Software. If Customer decides not to obtain a license for the equivalent Commercial Software after the Free Software Term, Customer will cease using and will delete any such Free Software from its computer systems.

3.2. Termination of License. Either party may terminate the license granted in Section 3.1 for convenience upon 5 days notice.

3.3. No Support. Customer acknowledges that HPE is not obligated to provide any support, maintenance, updates or upgrades for and in connection with the Free Software.

3.4. Disclaimer. FREE SOFTWARE IS PROVIDED "AS-IS" AND WITHOUT ANY WARRANTY. CUSTOMER ACKNOWLEDGES AND AGREES THAT FREE SOFTWARE IS NOT SUITABLE FOR ANY PURPOSE OTHER THAN LIMITED INTERNAL TRIAL AND EVALUATION. HPE AND ITS LICENSORS AND SUPPLIERS SPECIFICALLY DISCLAIM ALL WARRANTIES, WHETHER IMPLIED, STATUTORY OR OTHERWISE, INCLUDING THE WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR SATISFACTORY QUALITY, AND ANY AND ALL WARRANTIES ARISING FROM COURSE OF DEALING OR USAGE IN TRADE. NO ADVICE OR INFORMATION, WHETHER ORAL OR WRITTEN, OBTAINED FROM HPE OR ELSEWHERE SHALL CREATE ANY WARRANTY NOT EXPRESSLY STATED IN THIS ALA. HPE AND ITS LICENSORS AND SUPPLIERS DO NOT WARRANT THAT THE FREE SOFTWARE WILL OPERATE WITHOUT ERROR OR INTERRUPTION. CUSTOMER ASSUMES ALL RESPONSIBILITY FOR THE SELECTION OF THE FREE SOFTWARE OR A SPECIFIC VERSION THEREOF TO ACHIEVE CUSTOMER'S INTENDED RESULTS, AND FOR THE OPERATION, USE AND RESULTS OF THE FREE SOFTWARE. THE FREE SOFTWARE IS NOT DESIGNED, INTENDED OR WARRANTED FOR USE IN HAZARDOUS ENVIRONMENTS REQUIRING FAIL-SAFE CONTROLS, INCLUDING WITHOUT LIMITATION, OPERATION OF NUCLEAR FACILITIES, AIRCRAFT NAVIGATION OR COMMUNICATION SYSTEMS, AIR TRAFFIC CONTROL, AND LIFE SUPPORT OR WEAPONS SYSTEMS.

The following provisions of this ALA shall apply to all Licensed Products:

4. Keys, Other Restrictions and Data Collection Notice.

4.1. License Keys. Customer shall not destroy, disable or circumvent, or attempt to destroy, disable or circumvent in any way the Key and/or the use and time limitations set by the Key or any Licensed Products. Customer acknowledges and agrees that any attempt to exceed the use of the Licensed Products beyond the limits configured into the Key will automatically and immediately terminate the licenses granted under this ALA.

4.2 Information Collection. The Licensed Products may contain functionality that automatically collect information concerning the use and configuration of the HPE Ezmeral Data Fabric and overall capacity of your cluster and transmit that information to HPE. The Licensed Products will not access, collect, store or transmit any personally identifiable information or business data files residing in your computer environment as part of this functionality. The Licensed Products only initiate outbound communications to HPE and do not listen for inbound communications. The Licensed Products collect and transmit the information above by default. Unless otherwise provided in the applicable order, Customer has the ability to configure the Licensed Products to turn off the transmission of such information to HPE. HPE may use the information transmitted by the Licensed Products for activities such as determining usage for billing and license compliance and helping improve upon and market its product and service offerings. HPE may retain this information in perpetuity.

5. Open Source Software. The Licensed Products may incorporate or be provided together with Open Source Software. Copyrights and other proprietary rights to the Open Source Software are held by the copyright holders identified in the applicable distribution or the applicable help, notices, about or source files. All Open Source Software is distributed to Customer under the terms of the applicable open source

last-updated: Apr 11, 2022

license agreements referenced in the applicable distribution or the applicable help, notices, about or source files.

6. Feedback. Customer hereby assigns to HPE all right, title, and interest in and to the Feedback, if any.

7. Open Source Components. To the extent the Licensed Products includes open source licenses, such licenses shall control over this ALA with respect to the particular open source component. To the extent Licensed Products includes the GNU General Public License or the GNU Lesser General Public License: (a) the software includes a copy of the source code; or (b) if you downloaded the software from a website, a copy of the source code is available on the same website; or (c) if you send HPE written notice, HPE will send you a copy of the source code for a reasonable fee.

8. Australian Consumers. If you acquired the software as a consumer within the meaning of the 'Australian Consumer Law' under the Australian Competition and Consumer Act 2010 then despite any other provision of this ALA, the terms at this URL apply: http://www.hpe.com/software/SWLicensing.

9. Russian Consumers. If you are based in the Russian Federation and the rights to use the software are provided to you under a separate license and/or sublicense agreement concluded between you and a duly authorized HPE partner, then this ALA shall not be applicable.

HPE CUSTOMER PASS THROUGH TERMS FOR MAPR SOFTWARE AND SERVICES

Contains HPE customer pass through terms for MapR software and services information.

HPE's obligations with respect to products or services supplied by HPE and procured by an end-user customer (hereinafter “Customer”) from authorized HPE/MapR Business Partners are limited to the terms and conditions in these HPE CUSTOMER PASS THROUGH TERMS (“Terms”) and the specific Supporting Material included with the HPE supplied products and services. HPE is not responsible for the acts or omissions of HPE Business Partners, for any obligations undertaken by them or representations that they may make, or for any other products or services that they supply to Customer.

1. **Orders.** “Order” means the accepted order including any HPE/MapR-branded supporting material which is identified as incorporated either by attachment or reference (“Supporting Material”). Supporting Material may include (as examples) product lists, hardware or software specifications, end user license agreements, service descriptions, data sheets and their supplements and statements of work (SOWs), HPE Packaged Support Service Agreement, published warranties and service level agreements, and may be available to Customer in hard copy or by accessing a designated HPE/MapR website.

2. **Support Services.** HPE’s support services will be described in the applicable Supporting Material, which will cover the description of HPE’s offering, eligibility requirements, service limitations and Customer responsibilities, as well as the Customer systems supported.

3. **Professional Services.** HPE will deliver any ordered IT consulting, training, or other services as described in the applicable Supporting Material.

4. **Professional Services Acceptance.** The acceptance process (if any) will be described in the applicable Supporting Material, will apply only to the deliverables specified, and shall not apply to other products or services to be provided by HPE.

5. **Eligibility.** HPE’s service, support and warranty commitments do not cover claims resulting from:

    - 1. improper use, site preparation, or site or environmental conditions or other non-compliance with applicable Supporting Material;
    - 2. modifications or improper system maintenance or calibration not performed by HPE or authorized by HPE;
    - 3. failure or functional limitations of any non-HPE software or product impacting systems receiving HPE support or service;

last-updated: Apr 11, 2022

- 4. malware (e.g. virus, worm, etc.) not introduced by HPE; or
- 5. abuse, negligence, accident, fire or water damage, electrical disturbances, transportation by Customer, or other causes beyond HPE's control.

6. **Dependencies.** HPE's ability to deliver services will depend on Customer's reasonable and timely cooperation and the accuracy and completeness of any information from Customer needed to deliver the services.

7. **Services Performance.** Services are performed using generally recognized commercial practices and standards. Customer agrees to provide prompt notice of any such service concerns and HPE will re-perform any services that fail to meet this standard.

8. **Services with Deliverables.** If Supporting Material for services defines specific deliverables, HPE warrants those deliverables will conform materially to their written specifications for 30 days following delivery. If Customer notifies HPE of such non-conformity during the 30 day period, HPE will promptly remedy the impacted deliverables and Customer will return those deliverables to HPE.

9. **Remedies.** These Terms state all remedies for warranty claims. To the extent permitted by law, HPE disclaims all other warranties.

10. **Confidentiality.** Information exchanged under these Terms will be treated as confidential if identified as such at disclosure or if the circumstances of disclosure would reasonably indicate such treatment. Confidential information may only be used for the purpose of fulfilling obligations or exercising rights under these Terms, and shared with employees, agents or contractors with a need to know such information to support that purpose. Confidential information will be protected using a reasonable degree of care to prevent unauthorized use or disclosure for 3 years from the date of receipt or (if longer) for such period as the information remains confidential. These obligations do not cover information that: i) was known or becomes known to the receiving party without obligation of confidentiality; ii) is independently developed by the receiving party; or iii) where disclosure is required by law or a governmental agency.

11. **Limitation of Liability.** HPE's liability to Customer under these Terms is limited to $1,000,000. Neither Customer nor HPE will be liable for lost revenues or profits, downtime costs, loss or damage to data or indirect, special or consequential costs or damages. This provision does not limit either party's liability for: unauthorized use of intellectual property, death or bodily injury caused by their negligence; acts of fraud; willful repudiation of these Terms; nor any liability which may not be excluded or limited by applicable law.

12. **Force Majeure.** Neither party will be liable for performance delays nor for non-performance due to causes beyond its reasonable control.

13. **General.** These Terms represent our entire understanding with respect to its subject matter and supersede any previous communication or agreements that may exist. To the extent there is any conflict between these Terms and any Supporting Material, these Terms should apply. Modifications to these Terms will be made only through a written amendment signed by HPE and Customer. These Terms will be governed by the laws of the country of the HPE affiliate delivering services to the Customer the courts of that locale will have jurisdiction. Customer and HPE agree that the United Nations Convention on Contracts for the International Sale of Goods will not apply. Claims arising or raised in the United States will be governed by the laws of the state of California, excluding rules as to choice and conflict of law.

14. **Data Protection.** Each party shall comply with their respective obligations under applicable data protection legislation. To the extent HPE processes personal data on your behalf in the course of providing the services, the HPE Support Services – Data Privacy and Security Agreement found at www.hpe.com/info/customerprivacy.html shall apply.

last-updated: Apr 11, 2022

15. **Media Sanitization.** You are responsible for properly sanitizing or removing data from products that may be replaced or returned to HPE as part of the repair process to ensure the safeguarding of your data. For more information on your responsibilities, go to https://www.hpe.com/us/en/about/support-drivers/privacydataprotection.html.

Glossary

List of terms (with description) used in MapR documentation.

.dfs_attributes

A special file in every directory, for controlling the compression and chunk size used for the directory and its subdirectories.

.rw

A special mount point in the root-level volume (or read-only mirror) that points to the writable original copy of the volume.

.snapshot

A special directory in the top level of each volume, containing all the snapshots for that volume.

access control expression (ACE)

A Boolean expression that defines a combination of users, groups, or roles that have access to an object stored natively such as a directory, file, or MapR Database table.

Access Control Expression (ACE)

last-updated: Apr 11, 2022

Note: An ACE (up to 64KB in length) is a combination of users, groups, and/or roles for whom access (to volume data) is defined using boolean expressions and sub expressions within single quotes. When you pass in an access type that has already been set, the new value replaces the existing value for that access type. There is no change to access types that are not passed in with the command, whether or not they were set. For more information, see Managing Access Control Expressions on page 1448.

ACE

access control list (ACL)

A list of permissions attached to an object. An ACL specifies users or system processes that can perform specific actions on an object.

Access Control List (ACL)

Note: An Access Control List (ACL) is a list of users or groups. Each user or group in the list is paired with a defined set of permissions that limit the actions that the user or group can perform on the object secured by the ACL. In MapR, the objects secured by ACLs are the job queue, volumes, and the cluster itself.

ACL

accountable entity (AE)

In the Control System, a user or group whose use of a volume can be subject to quotas. Using the Control System, you can set or modify quotas that limit the space used by all the volumes owned by an accountable entity.

Related information

accounting entity (AE) on page 6593

quota on page 6599

accounting entity (AE)

In the CLI, a user or group whose use of a volume can be subject to quotas. Using the CLI, you can set or modify quotas that limit the space used by all the volumes owned by the accounting entity.

Related information

accountable entity (AE) on page 6593

quota on page 6599

administrator

A user or users with special privileges to administer the cluster or cluster resources. Administrative functions can include managing hardware resources, users, data, services, security, and availability.

For more information, see 6.1 Administration on page 752. See also *MapR user*.

advisory quota

An advisory disk capacity limit that can be set for a volume, user, or group. When disk usage exceeds the advisory quota, an alert is sent.

last-updated: Apr 11, 2022

air gap

Physical isolation between a computer system and unsecured networks. To enhance security, air-gapped computer systems are disconnected from other systems and networks.

application containers

Lightweight, stand-alone executables that include verything needed to run an application. Application containers are typically available for Linux and Windows applications.

bitmask

A binary number in which each bit controls a single toggle.

chunk

Files in the filesystem are split into chunks (similar to Hadoop blocks) that are normally 256 MB by default. Any multiple of 65,536 bytes is a valid chunk size, but tuning the size correctly is important. Files inherit the chunk size settings of the directory that contains them, as do subdirectories on which chunk size has not been explicitly set. Any files written by a Hadoop application, whether via the file APIs or over NFS, use chunk size specified by the settings for the directory where the file is written.

cluster admin

The MapR user.

For more information, see MapR user on page 6598.

coalesce

The interval of time during which READ, WRITE, or GETATTR operations on one file from one IP address or UID are logged only once for a particular operation, if auditing is enabled.
For example, suppose that a client application reads a single file three times in 6 minutes, so that there is one read at 0 minutes, another at 3 minutes, and a final read at 6 minutes. If the coalesce interval is at least 6 minutes, then only the first read operation is logged. However, if the interval is between 4 and 6 minutes, then only the first and third read operations are logged. If the interval is 2 minutes, all three read operations are logged.

Now however, if the client was also writing to the file, irrespective of the coalesce interval for the read operation in the example stated previously, the write operation is logged, as it is a different operation from reading.

container

The unit of shared storage in a MapR cluster. Every container is either a name container or a data container.
Related information
application containers on page 6594
Docker containers on page 6596
YARN resource containers on page 6602

container location database (CLDB)

A service, running on one or more MapR nodes, that maintains the locations of services, containers, and other cluster information.

Note:

The Container Location Database (CLDB) service tracks the following information about every container in the filesystem:

- The node where the container is located
- Size of the container
- The volume to which the container belongs
- The policies, quotas, and usage for that volume

custom resource (CR)

In Kubernetes, the plan or blueprint for building and maintaining an application. Custom resources are specified as `.yaml` files.

A custom resource is a valid instance of a *custom resource definition (CRD)*. Along with controllers, custom resources form a Kubernetes *operator*.

custom resource definition (CRD)

In Kubernetes, a list of valid fields that defines the shape of a custom resource (CR).

CRDs enforce validation of a *custom resource (CR)* and should not be modified. CRDs are specified as `.yaml` files.

data compaction

A process that enables users to remove empty or deleted space in the database and to compact the database to occupy contiguous space.

Related information

log compaction on page 6597

data container

One of the two types of containers in a MapR cluster. Data containers typically have a cascaded configuration (master replicates to replica1, replica1 replicates to replica2, and so on). Every data container is either a master container, an intermediate container, or a tail container depending on its replication role.

desired replication factor

The number of copies of a volume that should be maintained by the MapR cluster for normal operation.

When the number of copies falls below the desired replication factor, but remains equal to or above the *minimum replication factor*, re-replication occurs after the timeout specified in the `cldb.fs.mark.rereplicate.sec` parameter.

last-updated: Apr 11, 2022

developer preview

A label for a feature or collection of features that have usage restrictions. Developer previews are not tested for production environments, and should be used with caution.

disk space balancer

The disk space balancer is a tool that balances disk space usage on a cluster by moving containers between storage pools. Whenever a storage pool is over 70% full (or a threshold defined by the `cldb.balancer.disk.threshold.percentage` parameter), the disk space balancer distributes containers to other storage pools that have lower utilization than the average for that cluster. The disk space balancer aims to ensure that the percentage of space used on all of the disks in the node is similar.

disktab

A file on each node, containing a list of the node's disks that have been configured for use by the filesystem.

Docker containers

The application containers used by Docker software. Docker is a leading proponent of OS virtualization using application containers ("containerization").

dump file

A file containing data from a volume for distribution or restoration. There are two types of dump files: *full* dump files containing all data in a volume, and *incremental* dump files that contain changes to a volume between two points in time.

full dump file

entity

A user or group. Users and groups can represent accounting or accountable entities.
Related information
accounting entity (AE) on page 6593
accountable entity (AE) on page 6593

epoch

A sequence number that identifies all copies that have the latest updates for a container. The larger the number, the most up-to-date the copy of the container. The CLDB uses the epoch to ensure that an out-of-date copy cannot become the master for the container.

filelet

A filelet, also called an fid, is a 256MB shard of a file. A 1 GB file for instance is comprised of the following filelets: 64K (primary fid)+(256MB-64KB)+256MB+256MB+256MB.

full dump file

Related information

dump file on page 6596

HBase

A distributed storage system, designed to scale to a very large size, for managing massive amounts of structured data. Apache HBase is deprecated.

heartbeat

A signal sent by each FileServer and NFS node every second to provide information to the CLDB about the node's health and resource usage.

incremental dump file

Related information

dump file on page 6596

log compaction

A process that purges messages previously published to a topic partition, retaining the latest version.

Related information

data compaction on page 6595

MapR core

The minimum complement of software packages required to construct a MapR cluster. These packages include `mapr-core`, `mapr-core-internal`, `mapr-cldb`, `mapr-apiserver`, `mapr-fileserver`, `mapr-zookeeper`, and others. Note that ecosystem components are not part of MapR core.

To view the "core" packages on a MapR cluster, you can use the `yum list installed` command, as shown in Checking the MapR Core Version on page 5415.

MapR filesystem

The NFS-mountable, distributed, high-performance MapR data-storage system.

Related concepts

File System on page 452

Discusses the features of the MapR distributed file system and compares it to the Hadoop Distributed File System (HDFS).

MapR administrator

The "MapR user." The user that cluster services run as (typically named `mapr` or `hadoop`) on each node.

last-updated: Apr 11, 2022

See *MapR user*.

MapR Data Access Gateway

A service that acts as a proxy and gateway for translating requests between lightweight client applications and the MapR cluster.

For more information, see Administering the MapR Data Access Gateway on page 1492.

MapR Data Fabric for Kubernetes

A set of Docker containers that provide persistent storage for Kubernetes objects through the MapR Filesystem. Once the Docker containers are installed, both a Kubernetes FlexVolume Driver and a Kubernetes Dynamic Volume Provisioner are available for static and dynamic provisioning of MapR storage.

MapR Ecosystem Pack (EEP)

A selected set of stable, interoperable, and widely used components from the Hadoop Ecosystem that are fully supported on the MapR platform. EEPs can include connectors and developer APIs that provide common Hadoop Ecosystem interfaces to MapR components (for example, Kafka Connect).

MapR gateway

A gateway that supports table and stream replication. The MapR gateway mediates one-way communication between a source MapR cluster and a destination cluster. The MapR gateway also applies updates from JSON tables to their secondary indexes and propagates Change Data Capture (CDC) logs.

For more information, see Administering MapR Gateways on page 1150.

MapR user

The user that cluster services run as (typically named `mapr` or `hadoop`) on each node. The MapR user, also known as the "MapR admin," has full privileges to administer the cluster. The administrative privilege, with varying levels of control, can be assigned to other users as well.

For more information, see Managing Users and Groups on page 752.

MAST Gateway

A gateway that serves as a centralized entry point for all the operations that need to be performed on tiered storage.

For more information, see Overview of MAST Gateway on page 472.

minimum replication factor

The minimum number of copies of a volume that should be maintained by the MapR cluster for normal operation. When the replication factor falls below this minimum, re-replication occurs as aggressively as possible to restore the replication level. If any containers in the CLDB volume fall below the minimum replication factor, writes are disabled until aggressive re-replication restores the minimum level of replication.

mirror

A read-only physical copy of a volume.

name container

A container in a MapR cluster that holds a volume's namespace information and file chunk locations, and the first 64 KB of each file in the volume.

Network File System (NFS)

A protocol that allows a user on a client computer to access files over a network as though they were stored locally.

node

An individual server (physical or virtual machine) in a cluster.

NodeManager (NM)

A data service that works with the ResourceManager to host the YARN resource containers that run on each data node.

operator

In Kubernetes, a way to install and manage an application. Kubernetes operators handle not just application installation, but also the entire application lifecycle, including complex upgrades. An operator consists of a combination of two real Kubernetes objects: a controller and a custom resource.

Persistent Application Client Container (PACC)

A Docker-based application container image that includes a container-optimized MapR client. The PACC provides seamless access to cluster services, including the MapR File System, MapR Database, and MapR Event Store For Apache Kafka. The PACC makes it fast and easy to run containerized applications that access data in cluster.

quota

A disk capacity limit that can be set for a volume, user, or group. When disk usage exceeds the quota, no more data can be written.

recovery point objective (RPO)

The maximum allowable data loss as a point in time. If the recovery point objective is two hours, then the maximum allowable amount of data loss that is acceptable is two hours of work.

last-updated: Apr 11, 2022

recovery time objective (RTO)

The maximum allowable time to recovery after data loss. If the recovery time objective is five hours, then it must be possible to restore data up to the recovery point objective within five hours.

Related information

recovery point objective (RPO) on page 6599

replication factor

The number of copies of a volume.

replication role

The replication role of a container determines how that container is replicated to other storage pools in the cluster.

A *name container* may have one of two replication roles: master or replica. A *data container* may have one of three replication roles: master, intermediate, or tail.

replication role balancer

The replication role balancer is a tool that switches the replication roles of containers to ensure that every node has an equal share of of master and replica containers (for name containers) and an equal share of master, intermediate, and tail containers (for data containers).

re-replication

Re-replication occurs whenever the number of available replica containers drops below the number prescribed by that volume's replication factor. Re-replication may occur for a variety of reasons including replica container corruption, node unavailability, hard disk failure, or an increase in replication factor.

ResourceManager (RM)

A YARN service that manages cluster resources and schedules applications.

role

The service that the node runs in a cluster. You can use a node for one, or a combination of the following roles: CLDB, JobTracker, WebServer, ResourceManager, Zookeeper, FileServer, TaskTracker, NFS, and HBase.

secret

A Kubernetes object that holds sensitive information, such as passwords, tokens, and keys. Pods that require this sensitive information reference the secret in their pod definition. Secrets are the method Kubernetes uses to move sensitive data into pods.

last-updated: Apr 11, 2022

secure by default

The MapR platform and supported ecosystem components are designed to implement security unless the user takes specific steps to turn off security options.

Related concepts

Security for Ecosystem Components on page 702

Whether you install MapR software by using the MapR Installer or by using manual steps, the platform and its ecosystem components are installed with security ON by default.

schedule

A group of rules that specify recurring points in time at which certain actions are determined to occur.

snapshot

A read-only logical image of a volume at a specific point in time.

storage pool

A unit of storage made up of one or more disks. By default, MapR storage pools contain two or three disks. For high-volume reads and writes, you can create larger storage pools when initially formatting storage during cluster creation.

Note: Storage pool refers to the combined storage capacity that is obtained by combining one or more storage devices. Storage devices can be anything from a very small disk drive to large arrays of disk drives (each containing 20-30 drives).

A storage pool is created to get a very large capacity of GBs/TBs/PBs available, from which users are provided needed amounts of storage

For example, one can combine 10 hard disk drives of 4TB each, totaling to 40TBs. Now, one can either directly use the 40TB as a single device or partition the space out to many smaller storage capacities such as 100GB, 1TB and so on from this 40TB and provide that access to different users.

stripe width

The number of disks in a storage pool. See *storage pool*.

super group

The group that has administrative access to the MapR cluster.

super user

The user that has administrative access to the MapR cluster.

ticket

In the MapR platform, a file that contains keys used to authenticate users and cluster servers. Tickets are created using the `maprlogin` or `configure.sh` utilities and are encrypted to protect their contents.

last-updated: Apr 11, 2022

Different types of tickets are provided for users and services. For example, every user who wants to access a cluster must have a user ticket, and every node in a cluster must have a server ticket.

ticket secret

A Kubernetes secret that contains a ticket.

See also *secret* and *ticket*.

volume

A tree of files and directories grouped for the purpose of applying a policy or set of policies to all of them at once.

Warden

A MapR process that coordinates the starting and stopping of configured services on a node.

For more information, see Warden on page 677.

YARN resource containers

A unit of memory allocated for use by YARN to process each map or reduce task.

ZooKeeper

ZooKeeper is a coordination service for distributed applications. It provides a shared hierarchical namespace that is organized like a standard filesystem.

For more information, see ZooKeeper on page 675.

Landing Page Nav Version 2

This file is a resource file used for creating a persona based overflow for common tasks.

HPE Ezmeral Data Fabric is a platform for data-driven analytics, ML, and AI workloads. The platform serves as a secure data store and provides file storage, NoSQL databases, object storage, and event streams. The patented filesystem architecture was designed and built for performance, reliability, and scalability. Learn more

File Store

Distributed filesystem for structured and unstructured data. Patented capabilities protect data and make data storage extremely reliable and scalable. Learn more

File System on page 452 Administer Files and Directories Administrator's Reference File Store APIs
